THE capacious hall of the Academy of Music was filled on the afternoon of the 27th ult. by an audience that greatly enjoyed the entertainment provided for them, and evinced their appreciation of the excellence of the performances by hearty and prolonged plaudits. The concert was given under the auspices of the *Tokyo Ongaku-gakko Gakuyukai* (Society of Lovers of Music, members of the Tokyo Academy of Music) and under the management of Mr. Muruoka, Director of the Academy, and of Mr. Dietrich, instructor in the institution. Every number of the programme was admirably rendered. It is hard to say which was enjoyed most among all the well selected pieces given. Special mention must, however, be made of No. 2 Part II., in which Professor Dietrich took the piano and two young ladies played the violin parts. This was the most ambitious piece for the violin hitherto ventured upon by any of the pupils of the Academy in public. The accuracy and feeling with which the two young ladies played, justified their undertaking such difficult music and won them a recall. Their performance was at once a treat and a surprise. The progress that these lady artistes have made is really astonishing. The audience consisted mainly of Japanese. They enthusiastically ap-

plauded the *Koto* playing and certainly it merited an ovation. The last piece on the programme was most beautiful and effective and received full justice from each and every one of the performers. Composed three hundred and fifty years ago, it is sublime enough to live for centuries to come. Thanks are due to the Director of the Academy, to Mr. Dietrich and to the members of the Society for a most enjoyable afternoon, and we congratulate them heartily upon their successful concert. But we may be permitted to suggest to the Director that something be done to improve the ventilation of the hall, for the experience of the 27th instant clearly demonstrated the need of improvement. Below we reproduce the programme:—

- PART I.
- Chorus in unison with Piano:
 - "Lorelei" (Hirafuruyama) Slicher.
 - "Ich hatt' einen Kameraden" (Ryōyū wo omon). Slicher.
 - Clarinet-Solo:
 - "Larghetto from a quintet" Mozart.
 - Koto with Violin:
 - "Saigyō" Yamato.
 - Piano-Solo:
 - "Concert-Mazurka" Scharwenka.
 - Chorus a capella:
 - "Night, O Sacred night" (Aki no Yo) Chwatal.
 - "Und schliefst du" (Kakusha sohatsu) Jensen.
 - Violins with Piano:
 - "Gavotte" Sitt.
 - "Waltz" Sitt.
- PART II.
- Organ-Duet:
 - "Funeral March" Chopin.
 - "March" Schubert.
 - Violin with Piano:
 - "Fantasia from Wagner's 'Tannhäuser'" Jansa.
 - Chorus with Piano:
 - "Waldestille" (Sancho Yukan) Boenicke.
 - "Zigeunerleben" (Satzumaga) Schumann.
 - Japanese Popular Koto-Music:
 - "Matsukunushi" Matsushima.
 - Piano: (for six hands)
 - "Andante from the Sinfonia with the Kettle-Drum's Stroke" Haydn.
 - "Turkish March" Mozart.
 - Violins with Piano:
 - "Siciliano" Handel-Hellmesberger.
 - Chorus with Violins, Cellos, Clarinet, Organs and Piano:
 - "Old Nethandish Festival Song" (Kogei no Uta) Lassus-Kremer.
- Words by Mr. Kurukawa.

THE "JIYU-TO" AND THE FIFTEENTH NATIONAL BANK.

It is reported that the *Jiyu-to* have determined to propose that the surplus accumulated in the Treasury be applied to repaying the debt due by the Government to the Fifteenth National Bank on account of funds lent by the latter at the time of the Satsuma Rebellion. The amount of the debt is 10,000,000 yen. It is further stated that the *Kaishin-to* has adopted the same programme, and that the Domei Club has promised to support the proposal. Under such circumstances the measure will probably pass the Lower House; but as to how it will fare in the Upper House there is much uncertainty. Be that as it may, the view taken by the *Jiyu-to* is that though the Fifteenth Bank was established for commercial purposes, it is organized by nobles, who have a special duty to consider—their moral obligation towards the country. Though the original agreement was to repay the loan in 1897, the present financial condition of the nation is not favourable to such a course. Whatever may have been the circumstances at the time when the loan was contracted, the Government cannot now afford to pay such a high interest for money as 7½ per cent. Hence, though the stipulated time for repayment has not yet arrived, the Bank should not refuse to receive the money at once. On the other hand, the chief shareholders of the Bank declare that they acknowledge no such moral obligation; that they intend to make the Government fulfil the original agreement, and that in case repayment is offered, they will absolutely refuse to accept it. Besides, the sum lent by the Bank was fifteen million yen at the outset, and the rate of interest was only 5 per cent., it being a condition of the loan that no payment by instalment should be made. But in 1883 the Government paid back 5,000,000 in contravention of the agreement, the return made to the Bank for this concession being that the rate of interest on the remaining sum should be 7½ per cent. and that it should stand

out until 1897. The Government has no right to violate the contract then made, merely because there happens to be money in the Treasury available to discharge the debt at once. Party politicians ignorant of the facts of the case, clamour for a measure which suits their own purposes, but the Bank will take no notice of their outcry.

Apart from this question of repayment, we find a statement of the Bank's position given by the vernacular press. The paid up capital of the bank is sixteen million yen, out of which a sum of 10,000,000 yen is in the form of a loan to the Government, six millions remaining in the possession of the Bank. Much difficulty is said to be experienced in employing the latter sum profitably. The Directors have purchased a large number of the Japan Railway Company's shares; and are now projecting the construction of a harbour at Kominato. The plain fact is that they are much embarrassed to find investments for the funds they hold now, and if a further sum of ten million yen were suddenly transferred to them by the Government, they would be wholly unable to employ it. Hence, they cannot possibly comply with the proposal of the Popular Party. The *Kokkai* publishes the above account on the authority of a broker whose name is not given.

The sympathy of the public can scarcely fail to be with the Bank in this matter. The question is not one of mere financial expediency. An agreement has been made by the State and every principle of honour requires that its terms should be observed. There has been no instance of a breach of faith on the part of the Meiji Government up to the present. Every one of its engagements has been punctually fulfilled. The consequence is that Japan's national credit stands very high, a result of incalculable value to her. But since the Diet came into existence, a tendency has been distinctly displayed by party politicians to play fast and loose with public obligations. In the first session, serious talk was heard about cutting down the subsidy which the State has pledged itself to pay to the Japan Mail Steamship Company for a fixed term of years, and now the *Fuyu-to* and *Kaishin-to* are said to contemplate a deliberate violation of the contract with the Fifteenth National Bank. We trust that the leaders of the two parties will set their faces steadily against such a suicidal policy. Nothing could be more fatal to the nation's credit than such displays of indifference to solemn engagements. The few thousands annually which might be gained by breaking faith with the Fifteenth National Bank would not weigh a grain of sand against the immense injury that Japan would suffer were the world persuaded that her legislators are without any sufficient sense of the binding nature of a contract. Moreover, lightly as party politicians talk now of the nation's violating its promise to the Nobles' Bank, it should not be forgotten that the assistance which the Bank rendered to the State at a most critical time deserves treatment very different from that now said to be contemplated. Honour and gratitude are opposed to the *Fuyu-to*'s project.

LOSS OF THE "CHISHIMA KAN."

A TELEGRAPHIC message despatched from Matsuyama in the Iyo Province on the 30th ult. at 1.45 p.m., has brought the startling intelligence of the total loss of the Japanese new war-vessel, *Chishima Kan*, which left Nagasaki on the 28th for Kobe en route to Tokyo. About 5 o'clock on Wednesday morning, when off the shore of Horie-mura, in the Wake District of Iyo, she was run into by the British steamer *Ravenna*, and immediately went to the bottom. Out of the crew of 90, only 16 persons, including Lieut. Kaburagi, Acting Commander of the ship, and Lieut. Tsuchiyama, 13 seamen, and a French employé were saved, the remaining 74, it is feared, being all drowned. Another message from Kobe reports that the *Maya Kan*, *Musashi Kan*, and *Katsuragi Kan* have left for the spot. On the receipt

of the intelligence of the loss of the *Chishima*, Viscount Niire, Minister of State for the Navy, proceeded at once to the Palace, and reported the incident to His Majesty the Emperor.

The *Chishima* was a despatch-vessel of 750 tons, 5,000 horse power, and carried a complement of 3 guns. She was built in France, and was to have been attached to the Sasebo Admiralty station on her arrival in Japan.

It was known in Yokohama next day that the catastrophe had occurred, but few knew of the sad loss of life attendant upon it. The *Ravenna* is at anchor at Oriye, near Kurishima, having sustained serious injuries to her bows. The steamer *Ancona*, which left Nagasaki yesterday, is carrying materials for repairs sufficient to allow of the *Ravenna* to proceed to Nagasaki to dock.

The loss of life by the sinking of H.I.J.M.'s ship *Chishima Kan* adds another heavy item to the list of casualties for which this winter is unhappily memorable. It was at first reported that sixteen lives had been saved, but a later telegram says that out of a total complement of 82 officers and men, 73 were lost and only 7 escaped. The *Nichi Nichi Shimbun*, however, gives the number on board as 90, and reports that 13 Japanese together with a French engineer who had been sent out by the constructors, were saved. The fact that the *Ravenna* managed to transfer her passengers to the *Empress of Japan*, which was passing at the time, whereas 76 out of 90 lost their lives in the *Chishima* will probably provoke some comment. But pending accurate details of the catastrophe, no inference of any kind is warrantable. We may be quite sure, however, that no effort was wanting on the part of either the *Ravenna* or the *Empress of Japan* to succour the crew of the war-ship. The *Ravenna* herself was too severely injured to render any effective aid. Her officers had to think first of the safety of those under their immediate care. The time of the accident was 4.58 a.m., many hours after the setting of the moon. Doubtless the scene was enveloped in complete darkness, and as the *Chishima* is reported to have sunk immediately, it is probable that even though the *Ravenna* had been able to lower boats immediately, a number of lives would have been lost. The most likely theory is that the *Empress of Japan* passed the place some time after the *Chishima* had gone to the bottom, and when there was no longer any possibility of succouring the crew of the latter. The *Chishima* was not insured, we understand. Delivery had been taken of her in France, and she was brought out at Japanese risk, being regarded as a unit of the Navy from the moment of her transfer to Japanese possession. She cost from seven to eight hundred thousand yen, so that, even from the point of view of pecuniary loss, the catastrophe hits Japan heavily. Truly there seems to be an evil genius presiding over the destiny of Japanese vessels built in France. The mysterious fate of the *Unbi Kan* is still fresh in our recollection, and now the *Chishima Kan* also has gone to the bottom. These are the only two ships, if we remember aright, lost by the Japanese Navy during the Meiji era. The *Chishima Kan* was ordered in November, 1887. We do not understand how it happens that a small vessel, whose construction did not offer any special difficulty and was not complicated by any novelty of design should have taken five years to come into possession of the Government for which she was built.

We received the following from the P. & O. Agent at this port Thursday night:—

1st December, 1892.

The Captain of the *Ravenna* telegraphs that he proposes to start for Nagasaki to-night after communicating with the *Ancona*, proceeding slowly.

The collision bulkhead is holding on, and da-

mage in the bow is being repaired as well as possible, and no cargo is damaged.

All hands in *Ravenna* quite well. Sixteen of the crew of the *Chishima* saved by the boats of the *Ravenna* and landed at Horiye, including the Commander and Engineer.

The latest news about the terrible collision by which the *Chishima Kan* was sunk is that the *Ravenna* ran full into her boilers and that an explosion immediately ensued, which tore the *Chishima* in two and sent her to the bottom in a moment. It is probable that a large number of those who lost their lives were fatally wounded, if not killed outright, at the moment of collision. Report says that all the rescued had been injured more or less severely. If this version be correct, the extent of the catastrophe is immediately accounted for.

MR. DE STRUVE.

THE *Washington Post* has the following reference to the departure from Washington of Mr. C. de Struve, who formerly represented Russia in Japan, and who seems to have become as great a favourite in the States as he was in this country:—

Within the next few days Mr. Charles de Struve, long time minister of Russia to the American Capital, will embark for Europe. He has been transferred from Washington to the Hague, and thus, after many years of residence here, after forming innumerable ties of sympathy and friendship, he leaves us to begin anew in a far-off land the formation of new associations.

It was known some months ago that such a change had been ordained, and *The Post* at that time gave utterance to what it then believed, to be the popular feeling of regret. Mr. de Struve has surrounded himself here with an affection and esteem such as few official sojourners to Washington, whether foreign or native, have ever enjoyed before or are likely to enjoy hereafter. Americans have for more than a quarter of a century cherished the warmest and most grateful recollection of Russia's unselfish loyalty to their country in the hour of its darkest need. Any representative of Russia coming here, therefore, must needs find a nation and a people prepared in advance to welcome him with genuine warmth. But Mr. de Struve has nursed that abstract predilection into something far finer—something much more real and tangible. He has not only given vitality and substance to the attachment already subsisting between the countries, but he has won for himself the personal respect and confidence of all with whom he had even the most casual contact.

We may mention here, without any impropriety, we trust, that the bereavement which has just befallen the Republic in the death of Mrs. Harrison prevented the consummation of a formal compliment to Mr. de Struve, the like of which, we think, no foreign envoy to Washington has ever experienced. Only a week or two ago some friends of his, members of the Metropolitan Club, of which he is a member, conceived the idea of tendering him a farewell dinner. The project soon took shape, and though its scheme included no one outside the club or within the ranks of the diplomatic corps, it was at once subscribed to by more than seventy gentlemen—all that the great banquetting-room of the establishment could possibly accommodate. Among Mr. de Struve's hosts were numbered Cabinet officers, judges, high officials of the Army and Navy, leaders in social and artistic circles, and citizens of every rank and class. It was not a perfunctory, it was a spontaneous and heartfelt demonstration to the kindly, courteous, and genuine gentleman whom all held in such affectionate esteem, and whose departure all regretted so profoundly. The time had been fixed for Wednesday evening, the 28th, the preparations had all been completed, and only the calamity already referred to prevented the realization of a demonstration without precedent in the history of Washington.

Mr. de Struve sails, we understand, within the next few days. We can but add that he takes with him the best wishes of all who knew him here for his welfare and his happiness wherever he may be.

THE BUDGET COMMITTEE.

THE composition of the Budget Committee in the House of Representatives, as elected on the 30th ultimo, is remarkable. But of the 45 members, 29 belong to the *Fuyu-to* and its affiliated parties; 10 belonging to the *Kaishin-to*, and only 6 can be counted as probable supporters of the Government. It is no longer possible, however, to predict the nature of a Committee's Report merely by determining the political party to which the majority of its members belong. The ten *Kaishin-to* Committee-men may be confidently expected to vote for large reductions of the ordinary expenditures, but the action of the *Fuyu-to* is uncertain, and evidently they command the situation.

A NEW TRIBUNAL.

It will be observed that among the Bills presented by the Government to the House of Peers, there is one providing for the establishment of a new tribunal, to be called *Kengen Sagt Saibapsho*, or tribunal for determining

Original from

questions relating to limits of competence. It is stated that a draft of law in this sense was projected by the Government before the opening of the first session, but that it has only now reached completion. The object of the new Court, so far as we can perceive, is to adjudicate upon questions of jurisdictional competence which arise between the Administrative Court, the ordinary Law Courts, and the heads of the Executive. Questions of this nature have hitherto been referred to the Privy Council, but the need of a special tribunal to determine them is said to be much felt.

THE VERNACULAR PRESS ON THE GOVERNMENT'S
DECLARATION OF POLICY.

THE *Hochi Shimbun* fails to discern in the speech delivered by Count Inouye, as acting Minister President, any enunciation of the administrative policy of the Government. The only impression left by the speech on the Progressionist organ's mind is that the Cabinet purposes to purchase the support of the Popular party to its Navy Bill by promising a reassessment of the taxable value of land. That is merely a strategic device which the Cabinet intends to employ in its combat with the Diet, and can hardly be called administrative policy. The *Hochi* is strongly opposed to the method which the Government proposes to pursue in making up the deficiency of revenue caused by the reassessment of the taxable value of land. The Popular party, it declares, will never consent to reassessment, unless the funds required for the reform are supplied by reductions in the ordinary expenditures of the Government. In conclusion, the Progressionist organ regrets that none of the leaders of the Popular party took the trouble to announce their opposition to the acting Premier's speech, which our contemporary describes as "nothing less than a declaration of war on the part of the Ministry." The *Hochi's* article is short, but breathes from beginning to end a tone of fearless defiance.

The *Yomiuri Shimbun* reserves to a future occasion its comments upon the details of the Declaration of Policy. But in a cursory review the philo-Progressionist journal observes that the Premier's plan of reassessing the taxable value of land indicates the Cabinet's readiness to comply with the wishes of the Popular Party. Therefore, the latter are heartily congratulated upon a signal victory. But the *Yomiuri* calls attention, on the one hand, to the uncertainty attending the fate of the Reassessment Bill in the House of Peers; and, on the other, to the fact that, besides the particular reform in question, there remain several others of equal importance which have not yet received the assent of the Cabinet. It recommends politicians of the Popular party to moderate their exultation over the partial victory they have just obtained.

The *Yiyu*, the Radical organ, writes in a perplexing strain. Apparently it shrinks from speaking out its whole mind. Having expressed much disappointment and regret because of the Premier's inability to announce the Cabinet's policy in person, it extends its dissatisfaction to the Acting Minister President's speech, on the ground that he did not show more oratorical talent by expounding the Government's policy in his own words, instead of reading from a document prepared by his chief. With the so-called "general policy to be pursued by the Government," the Radical organ is entirely at one, for there is no Party that does not aim at the promotion of the people's welfare and the elevation of the country's prestige. Then proceeding to the next passage wherein the Cabinet's intention is declared to carry out administrative reforms and remove obstacles from the path of the country's progress, the *Yiyu* observes that here it gets a glimpse of the administrative policy of the present Ministry. It finds that policy, thus enunciated, very good, but doubts whether the past conduct of the Cabinet is in conformity with its present declared intention. This doubt is founded on the Government's inability or unwillingness to deal radically and satisfactorily with the question

of official interference in elections. Passing to the Minister President's caution that administrative reforms must inevitably be carried out by degrees, the Radical organ professes to detect "a crafty stratagem" of the Government. "You reserve," says the *Yiyu* in effect, "the execution of your promise of reform to a future date, and yet you endeavour to induce the Popular Party to assist you in carrying out your administrative measures. Surely, that is not quite fair on your part." As to the practical questions of the increase of the Navy, the Revision of Treaties, the reassessment of the taxable value of land, and the improvement of river courses and embankments, the *Yiyu* disappoints its readers by abruptly refusing to make any comments whatever. "The attitude of our Party, towards these matters," it writes, "has already been fixed, but we do not consider it desirable to hazard any hasty remarks." With respect to the concluding passage of the speech, which emphasizes the duty of both Government and people to do their utmost "to complete the great work of the Restoration," the *Yiyu* does not hesitate to express unstinted applause of the Premier's statesman-like language. But the question, it remarks, is how the desired end shall be accomplished, and divergence of opinion as to practical methods is the starting point for all political discussions. The Radical organ, however, carefully abstains from declaring how far it differs from the Cabinet with regard to the practical measures proposed by the latter. It concludes with a hope that the Popular Party may ere long have the satisfaction of crossing weapons directly with Count Ito, the Minister President of State.

The *Kokumin Shimbun*, like the *Yomiuri*, seems to be afraid that the Popular party, elated by the success it has achieved on the question of reassessment, may too readily bend its knee to the Government. Even on this question, the Government, remarks our contemporary, is not prepared to go far enough, for the extreme section of the Popular party desires to have the tax reduced by more than 6 million yen. As to administrative reforms, the philo-Progressionist journal is entirely dissatisfied with the cautious manner in which the Cabinet proposes to carry them out. For the rest, the acting Minister President's speech is criticized as vague and colourless.

The *Yiji Shimpō* discusses the Declaration in a practical spirit. First, it expresses unreserved approval of the proposed construction of war-vessels, for, while refusing to give precedence to either the Army or the Navy, it believes in the pressing importance of increasing the latter. Secondly, the acting Premier's allusion to the question of Treaty Revision is criticized as insipid and vague. But the *Yiji* reposes confidence in the ability of the present Ministers of State to grapple with this difficult problem in a satisfactory manner. Thirdly, the *Yiji* is strongly opposed to the proposed reassessment of the taxable value of land. Reassessment, in whatever manner carried out, will serve, in our contemporary's opinion, to create fresh inequalities. Fourthly, as to riparian improvements, the *Yiji* approves the position taken by the Cabinet, and expresses a hope that the plan of the work will be so arranged as to prevent the recurrence of the mistakes too often incidental to engineering operations undertaken by preceding Ministries.

Nichi Nichi Shimbun praises the discretion and prudence shown by the Cabinet in keeping silence about its policy until the meeting of the Diet, and refers to the similar caution displayed by the present British Ministry, which refrains from divulging its views pending the meeting of Parliament. The principal features of the administrative policy are, in our contemporary's opinion, increase of the Navy and reassessment of the taxable value of land. The *Nichi Nichi* is ready to approve the proposed increase of the Navy. It has, indeed, been strongly urging the same measure upon the Government for a long time. But the suc-

cess of this important step depends upon its financial aspects, concerning which nothing has as yet been said by the Cabinet. The *Nichi Nichi* hopes that the whole scheme may be unfolded ere long. With regard to reassessment, our contemporary though not opposed to the measure in itself, is strongly inclined to doubt whether the present is a proper time for carrying it out. The constant opening of new facilities of transport is just now causing great changes in market prices throughout the country, and under these circumstances, there is ground to be sceptical as to the success of the reform which the Ministry proposes to carry out in the short space of 12 months. The *Nichi Nichi* fails to understand why the Cabinet has decided to take up this measure at the present moment, unless, indeed, the hands of Ministers have been forced by the persistent clamour of party politicians. The question of reassessment is in Japan, though on a smaller scale, what the Irish question is in English politics. All sound legislation is virtually impossible unless the problem be disposed of one way or the other. Perhaps this circumstance may have had weight in the councils of the Ministers of the Crown. Thus considered, the Reassessment Bill become intelligible only when viewed in connection with the Navy Bill. The Ministry will doubtless strongly insist on the acceptance of both measures at the same time. But in the event of the Diet's consenting to one and rejecting the other, will the Cabinet be strong enough to advise the sovereign to withhold sanction from a Bill introduced by itself? The *Nichi Nichi* answers this query by sincerely regretting that, instead of stooping to an inconvenient compromise, the Ministry did not map out for itself a manly and independent course of policy.

The *Choya Shimbun* is the only paper that approves the Declaration of Policy in its entirety. It specially applauds the Cabinet's intention to rise above the level of party politics and devote its whole energy to the development of national resources and the raising of the national prestige.

THE "JIYU-TO" AND THE "KAISHIN-TO."
A GENERAL meeting of the *Jiyu-to* was held on the 27th instant, for the purpose of considering the policy to be adopted towards the *Kaishin-to* in consequence of the ill-feeling which has grown out of Mr. Shimada Saburo's speech. After considerable discussion the following two resolutions were adopted:—

1. To cease, henceforward, the friendly intercourse hitherto held with the *Kaishin-to*, and to convey an intimation in that sense to the latter.
2. To continue the connection hitherto existing with the *Kaishin-to* in respect of political questions.

These resolutions are in accordance with public anticipation. The Radicals, though indignant against the Progressionists, do not propose to carry their indignation to the length of a political rupture. But when one Party has openly resolved to abstain from friendly intercourse with another, and has officially informed that other of the fact, efficient coöperation between the two for any purpose is not easy to conceive.

THE NEW "ULYSSES."

THE Ocean Steamship Company's new steamer *Ulysses* arrived here yesterday morning, says the *Hongkong Daily Press* of the 25th ult., from Liverpool on her maiden voyage to the Orient. The vessel is one of four sister ships which the well-known line have just built, two of which have not yet left the hands of Messrs. Scott & Co. of Greenock. They are steamers of a type quite new to the "Blue-funnel" Company and are likely to do great service in the Eastern trade. The *Ulysses* is 3,000 tons register, 356 feet length over all, 42 feet 6 in. beam, 30 feet depth, and has a nominal horse-power of 2,000. She is fitted with triple expansion engines and has a cargo carrying capacity of about 6,000 tons. Though essentially a cargo steamer she has excellent though limited cabin accommodation, and has proved herself on the run out to be a speedy and comfortable ship. The officers speak in terms of high satisfaction of her performance, as she made the passage out from Liver-

pool to Singapore in 30 days and the run up from the latter port to Hongkong in 5 days 16 hours. This new departure of the Company is likely to prove a successful and popular one, and we can only hope that the *Ulysses* will not be pursued by the evil fortune which has already overtaken two of the Company's steamers christened with that name.

A DAYLIGHT BURGLAR.

A cool and enterprising Japanese robber yesterday, at midday, selected as the scene of his exploit a Japanese house located in the compound of a business establishment in Main Street. Probably finding the outer gate ajar, he entered the yard and surveyed the prospect. He saw the housewife busily preparing the *hiru-gosen* at an outside kitchen, with her back turned toward him and three yards away from the house door which lay between them. Gently he entered the house and slid the *shoji* home, so as to cover his presence. Then his practised eye went a-roving in search of the most portable, and at the same time valuable, articles within reach. The clock—an attraction whose fascination no Japanese thief can resist—caught his fancy, and he quickly “lifted” it. Time pressed, or the mistress in the yard made a noise, as if returning to her domicile, for the house-breaker was content with this “swag” and forthwith made good his retreat. In passing through the gate he stumbled, and thus drew attention, but alas it was too late, for when the housewife and her nearest neighbours had reached the street they saw but the semblance of a fleeting heel disappearing round the corner into Biwa-cho.

SIR CECIL CLEMENTI SMITH.

The London correspondent of the *Singapore Free Press*, writing on the 14th ult., says:—“It is stated here, with what amount of truth I am unable to determine, that Sir Cecil Clementi Smith is desirous of being relieved of his duties as Governor of the Straits Settlements. What is more, Sir Clementi, it is declared, obstinately persists in resigning, notwithstanding that the Colonial Office has pressed him to remain, and the question is—will this resignation end his Colonial career? It is thought that after Singapore Sir Cecil would not accept any less onerous appointment than the Governorship of a first-class Colony.”

THE IMPERIAL NAVAL COLLEGE AT NANKING.

DR. FRYER writes as follows on the Imperial Naval College at Nanking, his report being reproduced in the columns of the *North China Daily News*:—

Sirs,—At your request I have examined the students of the First Divisions of the Navigation and Engineering branches on the different subjects in which they have been under instruction.

In handing you the list of names with the number of marks and order of merit, allow me to offer my congratulations upon the satisfactory results that have been achieved.

Considering that the College was only commenced two years ago, that it has been carried on under many difficulties and disadvantages, and that the present regular system of management was organised only in June last, the general progress that has been made is remarkable. It evinces in an unmistakable manner the excellence of the administration, the efficiency and assiduity of the foreign professors and native teachers, and the perseverance and natural abilities of the students. While these essential conditions are continued, it is easy to predict for the College an increasingly prosperous and useful career in the regular supply of well educated and intelligent officers for the Imperial Navy.

Glancing through the list of marks, it will be seen at once that those subjects which depend chiefly on the use of mathematics have received particular care and attention. Indeed, the acquirements of many of the students in algebra, geometry, trigonometry, navigation, nautical astronomy, etc., are unusual, and considerably beyond what might have been expected under the same circumstances from average English youths. But when it is further remembered that all their instruction has been imparted to them in a foreign language, and that all their examination papers were written under the same disadvantage, their attainments in these branches are not only extraordinary but are deserving of the highest commendation.

It is noticeable, however, that although some few can read, write, and speak English fairly well, the average attainment in this particular is perhaps hardly

so high as it ought to be, seeing that this language has been made the basis upon which their entire professional education rests. I would therefore venture to suggest that a higher standard of proficiency in the practical use of the English language should at once be aimed at; because the further the students advance in their courses the more will this necessity make itself felt.

The assistance rendered in this examination by Professors Penniell and Hearson in looking over the papers on their special subjects has been considerable, and deserves my grateful acknowledgment.

The general arrangement and regulations of the College, as well as order and discipline that prevail, it must be impossible for me to praise too highly. The kindness and courtesy extended to me by yourselves and every one connected with the establishment have combined to render this visit one of unmixed pleasure and gratification, and call for my warmest thanks.

I remain, Sirs, your obedient servant,

JOHN FRYER.

H.E. KURI, Commissioner.

H.E. SHUN, Director.
Imperial Naval College,
Nanking October, 27th 1892.

“BERI-BERI” ABROAD.

GREAT alarm was caused in New York, recently by the arrival of a ship, the *H.B. Cann*, with *beri-beri* aboard. The ship, after reporting off quarantine in New York, sailed out to Norfolk, Va., where besides two deaths, the first mate and seven men are said to be sick from the disease. As this disease is unknown in America the authorities are greatly perplexed, and, being told that it is a “contagious and fatal disease,” have put the ship in quarantine and keep close watch over all things and persons passing to and fro. The ship is laden with sugar and tea, 150 days out from Japan, from whence it is supposed the disease has been imported.

MR. CLEMENT SCOTT.

MR. CLEMENT SCOTT, theatrical critic, says the *London and China Express*, has decided to forsake London during the next twelve months in pursuit of a long-cherished wish to make *le tour du monde*. In some measure his loss will be compensated by the series of letters which Mr. Scott has undertaken to supply descriptive of his journeyings. During these, Egypt, India, China, Japan, America, and the Chicago Exhibition are to be visited, and in each instance vividly described.

DISEASE IN SPRINKLED STREETS.

DR. KOCH, the world renowned bacillist, recently stated that the sprinkling of streets in time of cholera epidemic is injurious, as the moisture is conducive to the growth of the bacilli. He has not yet stated his opinion with reference to the effect street sprinkling would have on other infectious diseases.

A LONG RIDE.

A RUSSIAN traveller, Prince Wyasemsky, has arrived at Bangkok from Bangpail, where he has been for a day or two the guest of the King of Siam. The Prince travelled overland from Peking on horseback coming *via* Indo-China and the Mekong.

MARRIAGE OF AN IMPERIAL PRINCE.

THE *Official Gazette* announces the marriage of His Imperial Highness Prince Kuninori with Lady Yoshiko, eldest daughter of Marquis Daigo. Prince Kuninori is the son and heir of H.I.H. Prince Kuni, and is now in his twenty-sixth year.

THE MEXICAN MINISTER.

WE are glad to be able to state that the Mexican Minister, who has been suffering for some days from severe indisposition, is now mending rapidly, and has recovered sufficiently to be able to leave his bed.

MR. CLARK THORNHILL.

PAPERS received by the mail of Oct. 21st state that Mr. T. B. Clark Thornhill, Secretary to the British Legation in Portugal, was seriously ill with typhus fever at Oporto.

THE MINISTER PRESIDENT'S POST.

HIS MAJESTY THE EMPEROR has ordered Count Inouye to discharge the duties of Minister President of State during the indisposition of Count Ito.

THE SPIRIT OF THE VERNACULAR PRESS DURING WEEK.

The Diet is now absorbing the attention of the metropolitan press. As yet it is impossible to make any positive forecast of the position which the Opposition will ultimately assume towards the Cabinet. From the election of the Chairman of the Committee of the whole House, as well as of the members of the Budget and other Committees, it is certain that the Radicals are arbiters of the situation. But the policy of the Radicals is shrouded in more or less obscurity, and even the organs of the Popular party refrain from indulging in any wild exultation over its apparent victory. What is clear beyond doubt about the present situation, as the *Choya Shimbun* observes, is that the extreme section of the Popular party, namely, the section pledged to a policy of wanton opposition to the Ministry, has been left out in the cold by a majority of politicians who now advocate the importance of pursuing a constructive course of policy. The *Choya* even holds out hope that the Radicals, who make up the bulk of the converts to the last-mentioned policy, and the National Unionists, who have followed such a policy from the beginning, may approach each other gradually until they unite together in firm alliance. Whether such a prospect is destined to be realized or not, is more than we can venture to foretell. But certainly there is little appearance of strong antipathy between the leaders of the two parties, and it is just possible that they may coöperate on certain questions.

The difficulty occasioned between the Radicals and the Progressionists by the speech of Mr. Shimada has ended very unsatisfactorily. The Radicals have plainly told the Progressionists that hereafter there shall be no friendly intercourse between them as political bodies. The Progressionist papers are doing all they can to soothe the wounded feelings of their former allies, but is not likely that the latter will easily forget the incident. Mr. Shimada has written a long article in the *Mainichi Shimbun* over his signature, trying to explain away the invidious inferences suggested by his speech. The attempt seems to be a failure, if indeed it has not aggravated the situation. Mr. Shimada pretends to congratulate himself on the “happy results” of the negotiations that have lately been going on between his Party and the *Jiyu-to* about “the misunderstanding” of his speech by the latter. What he states in two columns of his article may be reduced to a declaration that, although he criticized those who had substituted a constructive for a destructive policy, he did not intend to direct his criticism against any party in particular, there being many outside the *Jiyu-to* who advocate a similar policy. He even insinuates that, if the Radicals regard the allusion as directed against them solely and principally, so much the worse for them, since criticism is very often apt to hit just where it is most appropriate.

Of all the *Kaishin-to* journals, the *Yomiuri Shimbun* shows itself most indefatigable in recommending the Radicals and the Progressionists to be reconciled. The Progressionist organs know very well that, without the alliance of the Radicals, their Party will be nowhere, but most of them cannot speak out so plainly as the *Yomiuri*, because the latter claims to be an independent organ of the Popular Party. Its editor being an unequivocal Progressionist, the rôle assumed by his journal is evidently nominal, but still the *Yomiuri* can sometimes afford to give plain advice to both the *Kaishin-to* and the *Jiyu-to*. It will not do, says our contemporary, for the Progressionists to be on bad terms with the Radicals; but the latter ought not to place too much confidence in their numerical strength. Whether or not the Popular party will be able to attain its object in the present session of the Diet, depends upon the degree of cohesion maintained between its different sections. Petty quarrels like the one now going on between the Radicals and the Progressionists, are extremely dangerous, for they afford a unique opportunity to the artful

and ever vigilant opponents of the Popular Party to sow seeds of discord between the different branches of the Opposition.

The independent journals are inclined to reprove the conduct of the Radical leaders in connection with the above affairs. The Radicals are charged with being childish and unheroic since they allow themselves to be offended by such a trifling matter. But these journals forget, or fail to see, that the present difficulty between the two parties is the result of a long series of antecedent events. Mr. Shimada's speech only gave occasion for the pent-up umbrage of the Radicals to burst out. The rank and file of the two parties in provincial districts have been fighting each other all the while.

The comments of the vernacular press on the acting Minister President's Declaration of Policy illustrate the old adage that it is difficult to please everybody. The *Kaishin-to* organs are utterly opposed to the policy, and threaten that the Popular Party, namely the section composed of the Progressionists, will reject even the Re-assessment Bill. It is evident that the Progressionists will neither receive nor give quarter in their campaign against the Government. The position assumed by the Radical organ, the *Jiyu*, is very peculiar. It is neither disposed to approve nor prepared to condemn the Government's policy in any decided manner. Its hesitation to commit itself to any definite line is very significant. What attitude the Radicals will ultimately assume, no one ventures to predict, but it is very likely that most of them may be found willing to approve the Reassessment, and the Navy Bills, with certain modifications. At all events, such appears to be opinion of the *Kokumin Shimbun* and *Yomiuri Shimbun*, which manifest special anxiety lest the Popular Party be caught by the tempting bait offered by the Cabinet. The Independent journals, as well as the pro-Government, with the exception of the *Choya Shimbun*, are decidedly unfavourable to the Reassessment Bill, though they heartily approve the increase of the Navy.

The reception of the Budget by the Opposition press is not encouraging. The *Kaishin-to* organs maintain that, if the members of the Popular Party are at all consistent, they will not pass the Budget without introducing large reductions in its items. The *Jiyu-to* papers have not yet delivered their opinion on the subject. Everything now depends upon the position taken by that Party, for more than one half of the Budget Committee is made up of its members. The question is how far the implacable politicians of the Progressionist camp will be able to influence the Radicals. Under any circumstances there is little hope that the Budget will pass the House of Representatives in its original form. Its passage through the House of Peers will probably be easy enough, because there the majority are decidedly favourable to the present Ministry. The *Kokumin Shimbun*, however, pretends not to be altogether without hope of the Upper House's independence. The Peers, in our contemporary's opinion, are not on the whole subservient to the Cabinet, they are simply misled by crafty old officials who sit among them. They will before long find out their mistake, and then their exalted position and independent circumstances will make them true to the duties of their posts. Otherwise they are threatened with the vengeance of the whole people; a terrible menace, indeed, as though the Peers themselves formed no part of the nation.

The Hokkaido question engages public attention more and more. It is an old problem; nearly a hundred years of age. The eyes of the Japanese nation were first directed to the Northern Island in the beginning of the present century. But hitherto, as the *Nippon* remarks, the military side of the question alone has occupied public attention. Now, however, men are beginning to realize the vast extent of the natural resources of the island. Various associations were recently established for purposes

of investigation, while a number of the prominent citizens of the island have just arrived in Tokyo to present a petition to the Diet for the speedy development of the island by constructing railways and carriage-roads throughout its length and breadth. The *Nippon* strongly condemns the want of definite purpose in the administrative policy of the Government with respect to Hokkaido, and censures the Diet also for extreme indifference to the opening of the northern island. The Radicals have tried to get Local Assemblies established in Hokkaido. But this plan is pronounced impractical by the *Nippon*, which, while sympathizing with the Hokkaido folks now in the capital for the purpose of petitioning the Diet, refrains from expressing any opinion as to the feasibility of the plan proposed by them. Our contemporary is disposed to support the scheme of certain Peers who are going to move in the Upper House for the appointment of a Committee of Investigation to study the subject thoroughly.

The *Kokkai* is of nearly the same opinion as the last mentioned journal. It recommends the creation of a Council somewhat after the model of the Railway Council, the members to be drawn from both Houses of the Diet as well as from the principal inhabitants of Hokkaido. The Council would be placed under the control of the Minister President or the Minister of Home Affairs.

The disorderly conduct of several Local Assemblies, is receiving serious notice from the independent papers of the capital. Reports are pouring in from various localities. They plainly indicate that the agitation about official interference in elections, which long since spent its force in the metropolis, has found its way into provincial districts. Votes of want of confidence in Governors, Secretaries, and even Councillors, are now the order of the day. The *Nippon* has shown most commendable zeal in collecting news about the doings of the Local Assemblies, and presents to its readers a vivid picture of the lamentable state of things now prevailing in many places. Local Assemblies, observes our contemporary, are vying with one another to copy the conduct of the Imperial Diet, so much so that party politicians in the capital are easily able to vent their spleen upon the local authorities through the medium of these Assemblies. The same journal severely criticizes the Local Assemblies for neglecting their proper duties, and sacrificing the interests of the people of their localities by allowing themselves to be used as instruments of crafty party politicians.

The *Nichi Nichi Shimbun* also strongly condemns the foolish behaviour of members of Local Assemblies, who devote the limited time at their disposal to rendering aid to wire-pullers in the capital. In several localities, Governors have been forced to dissolve the Local Assemblies, while in others it will be necessary to veto indiscriminate reductions voted in the Estimates. Considering that the root of the evil lies with the Opposition members of the Diet, the *Nichi Nichi* reminds the latter of the serious consequences to which their inconsiderate example has led. As they themselves have already awakened to the importance of turning attention to a more profitable task than that of attacking the official class, they are earnestly recommended to correct the follies of their tools in the Local Assemblies.

The unfortunate accident that befell Count Ito on the 27th ultimo has elicited universal expressions of sorrow and regret from papers of all parties and factions. It is a noteworthy fact that the Opposition organs unanimously express their genuine disappointment at the consequent inability of the Minister President to attend the Diet for a considerable length of time.

The fatal collision of the newly arrived war vessel *Chishima Kan* with the British steamer *Ravenna*, is a subject of profound lamentation and regret. The papers are making strong appeals to public charity in behalf of the unfortunate families of the deceased officers and crew.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

In the current month, quiet has reigned in the press on all sides. Some of the leaders have spoken, but not on the vital topics of the day. The period seems to be one in which much is going on below the surface. Many opportunities have been afforded for that private exchange of views which must always precede the settlement of important questions. Assemblies of all sorts have been held. Among the Buddhists has occurred the general meeting of the Shingon sect, as well as a meeting of representatives from all sects to discuss the invitation for delegates to the World's Fair at Chicago. The important question was whether one or two delegates should be chosen to represent Japanese Buddhism as a whole, or whether each sect should send its own delegate. The meeting adopted by a large majority the latter plan. Doubtless, a plan which afforded a score of persons, and not merely to one or two, the opportunity of seeing the marvellous world of the West, would naturally possess greater attractions; but probably the chief motive was the unwillingness of each sect to commit its interests to the hands of any other. Unity of work and organization is one of the great topics of the day for both Buddhism and Christianity in Japan; but of the former it may be said that it is at present engaged in overcoming the vast inertia of a body at rest, while the latter has already passed this stage and is now occupied in increasing the momentum of a motion already perceptibly begun. The Annual Conference of the *Nihon Kirisuto Kyokwai* (Presbyterian) was held in Osaka, beginning November 2nd. This body, as is well known, is strongest here in the Eastern regions (the *Kumiai Kyokwai* being strongest towards the West), and the meetings of the former have usually been held in Tokyo, those of the latter in Osaka or Kyoto. This time they have reversed their practice, the former meeting now in Osaka, the latter next spring in Tokyo. After Mr. Ibuka's opening address on "Unity of Spirit," came the discussion of various topics, among them being "Evangelical Work," "Christian Education," "The Maintenance of the Church's Progress," "Theological Schools," and "The Mission to Korea." There has been also a District Conference of the *Kumiai* churches (Congregational) in Kyushu; a District Conference of the *Kumiai* churches of the Middle Provinces; and a report of the Evangelical Alliance (*Den-do-kwai*).

The assembly of the Shingon sect is the third of its kind during *Meiji*, and may perhaps be the last. The first came in *Meiji* 17, and the second in *Meiji* 19 (1886), when the present constitution was adopted. On the recent occasion everything seemed favourable at first. Scores of letters and proposals were laid before it, all tending to the end of abandoning a negative, defensive attitude, and taking up a positive, progressive attitude, in study as well as in propagandism. But the amendment of the constitution was the rock on which the assembly literally split. A certain article now reads: "Every *honsan* (chief temple) may manage all affairs under its jurisdiction without consultation with the lesser temples of the jurisdiction." A proposal was made to amend this as follows: "Every *honsan* shall manage all affairs under its jurisdiction, with the advice and consent of the lesser temples of the jurisdiction." This amendment was rejected, after much discussion; whereupon the defeated ones retired from the assembly, which subsequently dissolved without completing the work before it. A writer in a Shingon journal reproves those who are responsible for this dissension; they laughed, he says, at their brethren of the Sodo sect, when the Sodo assembly was rent with dissension, and now they find themselves equally culpable.

The leaders of Buddhism are represented by Mr. Otani, in his series of lectures on "Ethics" (*Bukkyo*) and by Mr. Nakanishi Goro, who gives a "Criticism of Religion on its Literary

Side" (*Dento*). Mr. Nakanishi evidently finds it necessary to emphasize the fact that he has not apostatized, after all, for we find him fervently praising the high qualities of Buddhist religious literature as compared with Christian. The former, in the first place, has more than 700 times the volume of the latter. Furthermore, in literary style it is not to be surpassed by any religious literature in the world. It has brilliant gems of dramatic, descriptive, and poetical form; and among them are works which stand above Plato's Dialogues, David's Psalms, Milton's Paradise Lost, and Shakspeare's plays. Mr. Otani's lectures are to be historical in form, and in this second instalment he takes up the Greek philosophy, runs over the list of names, beginning with Thales, and proceeds to dwell on the work of Socrates. Another series of articles showing research in Western philosophy is entitled "The Nature and Origin of Religion" (*Bukkyo*), and reviews the opinions of Hume, Constant, Waitz, Reinhardt, and others, as a preliminary to a discussion of the subject.

More or less is to be found every month on the subject of the Buddhist priesthood. A writer in *Bukkyo* names three prominent failings, — (1) idleness and inactivity, (2) immorality, (3) disloyalty to the faith. To-day is witnessing sad results for Buddhism, and they may be traced back to the faults of the priests. Especial inroads have been made upon Buddhism by the Unitarian faith. This differs in many points from orthodox Christianity, and comes closer to Buddhism. Many among the youth of to-day, though they do not care at all for Orthodoxy, are much attracted by Unitarianism, which shows how this faith suits the Japanese mind. We welcome it, because it opens the path to Buddhism; but the fact remains that by our idleness and sloth we are letting our own noble doctrine suffer defeat in the contest of religions. In the *Bukkyo Koron*, in the article on "The Future of the Priesthood," we are told that, though progress is the law of nature, the rule does not seem to apply to the *bosus*. Their mission is to exercise an uplifting influence on the laymen; but they cannot do this while there is, as now, a great gulf fixed between priests and people. The Christian ministers are more secular than the *bosus*, and among Christians, the Protestant more so than the Catholic. Our Buddhist priests must take note of this and must draw nearer to the people by becoming more secular in their ways. In the same journal, another writer complains that the younger priests of his sect (*Jodo*) laugh at the methods of the older generation, instead of aiding them with friendly assistance to strike out in better paths. In *Dogaku* (Shingon sect), is an article on "The Decay of Morality," the evil tendencies of the time are lamented, and the blame is attributed to the priesthood, who fail to check vice and to set an example of activity in good works. Another writer compares the Buddhist doctrine to a great capital-stock, with Shaka as the head of the house and the priests his clerks, and warns them that if the people have no confidence in the clerks, then no purchasers will come to the store.

We have more than once quoted extracts indicating that in Buddhist doctrine (as well as in Christian) there is a tendency to rationalize the accepted notions of Heaven and Hell. Two instances are afforded this month. In the *Hana no Sono* we find a specimen of Mr. Kato's peculiar Socratic preaching, and the subject dealt with is "The Aim of Buddhism." "Why," he asks, "do you believe in Buddhism? Why do you visit the temple? Is it that you may be rewarded by Buddha? That you may reach Heaven or avoid Hell? And this Heaven,—is it a place where houses last forever, where the sun always shines, and where nobody works and everybody has plenty of food and clothes? Is this your idea? If so, you are indeed of a gross and selfish nature. Truly such a Heaven is little better than a fine hotel." In *Bukkyo* an article on "Hell" begins by describing the temptations and sins that befall men in their youth, when they are

headstrong and self-willed. But this wickedness brings its own unhappiness. Death comes finally, and it is then that the recollection rushes over these men of the deeds done in the flesh, and his self-confidence disappears and remorse and inquietude take its place. This is the end of the hell of this world, and the entrance on the hell of the next.

The Buddhist press no longer teems with denunciation of Christianity; but once in a while the text is revived, that Christians are by their creed prevented from being patriots and loyal subjects. In the *Gokoku* (successor to *Dampo*), the special champion of patriotic religion (outside of Shintoist journals), we find a sermon on this text, in which the Popular Party comes in for a share of blame, on the ground that it has tried to mix religion and politics in connection with the Kumamoto school affair. Another article in the same journal, entitled "The Foundation of the Country," begins by postulating that the said foundation is Buddhism, and then goes on to ask a searching question concerning the Christian missionaries who have come here. Why, it says, have they left their own country, where there are still multitudes who do not profess to be Christians? The answer is that they find Christianity no longer advancing there, as must be the case in every nation of a high degree of civilization, and they go elsewhere in the hope of perpetuating its influence amid the more suitable surroundings of semi-civilizations. In ranking Japan among such nations they err greatly. Many Buddhists are, however, in danger of being trapped; for they think that if they became Christians they will get plenty of money and be able to perform miracles. This is a great mistake. These people cannot teach how to perform miracles; and they no longer spend money for converts and for helping the poor. They used to; but the times have changed.

In the *Fucho Shinshi* (Shinto) we find an article to the same purpose. There is a proverb, the writer says, that a man may build a house, but his grandson will sell it. The thought is that the man's son sees and remembers the labour of his father, and, when the father dies, the son keeps the family property intact, and amasses new wealth. But the grandson, never knowing the toil of the grandfather and never trained to work for himself, dissipates the patrimony and sells the homestead. This is what we have done to the heritage of our country. Forgetting or never learning the history of Jimmu Tenno's labours in the conquest of the country and the foundation of the empire, we turn to the history of foreign lands and condemn our own. Nay, more, we give our adherence to a religion which teaches that a man Christ is greater than our Emperor. Christianity is a cult taking its rise in a distant corner of Asia Minor, and has no connection with our country. For us the Emperor should be the living God, the living protector.

In the *Jiyu Kiristokyo Zasshi* (Universalist) Mr. Yoshimura writes on "Immoral Newspapers and Magazines." Some of these journals are full of indecent writings. Others make a specialty of personal gossip, selecting the peculiarity of some individual, magnifying, distorting, and ridiculing it in the most sensational manner. Mr. Yoshimura is not afraid to specify the offending journals, and names several of them. Mr. Yamada writes in timely fashion on "Enterprise and Stability." Many times have Japanese Christians established schools for the poor. But these charities have not always lasted. Started in an impulse of sympathy and benevolence, their promoters have lacked perseverance, and this quality they must cultivate in carrying out their undertakings.

In the *Rikugo Zasshi* (Congregational) Mr. Yokoi writes in a scholarly way on "The Prophet Jeremiah," describing his services to the Jewish nation. Mr. Miyake discusses "The

Development of the Idea of God." His essay is good reading; but it seems to follow closely the lines of Mr. Fiske's "Ideas of God." A review of Mr. Schmiedel's "Inspiration" confines itself to an exposition of the author's ideas, and avoids committing the critic to definite views. A correspondent indorses Mr. Asada's views, published last month, on the need of a revision of the Japanese translation of the Bible. It strikes us that these suggestions would have been much more seasonable if they had been made (and apparently they could have been) before the beginning of the expensive undertaking just completed,—the printing of the Romanized version of the Bible in Yokohama. Is it not a little inconsiderate to come in after its completion and proclaim the defects of the present translation?

The *Fukui Shimpo* (Presbyterian) prints Mr. Ibuka's address on "Unity of Spirit" at the *Kumiai* (Presbyterian) Conference. He refers to the formation of this single body out of six independent organizations; hopes that those who have been brought up amid the individualities of each separate creed will accommodate themselves to the broader tenets of the united body; and lays it down that toleration is the secret of unity. A writer on "Japanese Literature" exhorts his countrymen to pay more attention to their own literature. In purity and beauty of thought it surpasses, he thinks, anything they can find in Western literature. In the *Inochi* (Presbyterian) is an essay on "Individualism in Religions." Noting the contrasted types of individualism and socialism, the writer points out that, though the stage of socialistic development has been reached in the West, the essential phase of individualism has not yet been passed in Japan. What is still needed is earnest independent work by each Christian on his own account. In another number the complaint is raised, in some remarks addressed to "Teachers in Theological Schools," that many students, when they come to graduate, proclaim at the Commencement exercises, "I do not believe in the Divinity of Christ," and then go over to Unitarianism, evading in this way their pledge to preach for the church that has educated them. Such persons should never have been received at all. It is of no use to educate enemies, to give swords to robbers, and teachers should be more careful in this respect.

In the *Shinri* (German) we find this month no articles of Japanese authorship. The *Shukyo* (Unitarian) offers two well-known names on its list, those of Principal Inouye Enryo and of Mr. Ko Yeizo. The former takes as a subject, "Is there a Materialist Religion?" All true religions teach the immortality of the soul. But we find a compelling set of doctrines known as Materialism. It denies, however, that the soul is immortal. To this we cannot accord the name of religion. No one doubts that in a certain sense Materialism has rendered great services to religion, namely, by stimulating true religion to greater efforts, by leading an attack which could be repelled only by great exertions. But none the less is it true that Materialism is to-day the enemy; and the only great enemy, of religion. Christianity and Buddhism have alike to meet and defeat this powerful foe. Mr. Ko Yeizo writes on "Unitarianism as a Reconciling Influence in Japanese Religion." There are to-day in Japan four different religions, all struggling for mastery; they fall easily into two groups, however, Buddhism, Shintoism, and Confucianism on the one side, and Christianity on the other. Among these, who shall be the peacemaker, the reconciling influence? Unitarianism alone. In the eye of this faith there is but one religion. All the various sects and cults are but the different manifestations of the one universal religious spirit. Their source and their aims are the same in all. Paradise, *Gokurakuji* (Buddhist Heaven), *Takamagameadow* (Shinto), *Seiyeki* (Confucian),—what are these but different expressions for the same idea? The enemy of a religion is not any of its fellow religions. The real and only enemy of religion is Materialism.

Original from

THE CODES.

WE have already published a *résumé* of the opinions expressed by the vernacular press on the subject of the Bill for the postponement of the Civil and Commercial Codes. This matter has evidently cost the Government much thought and probably not a little perplexity, as well indeed it might, for no question of greater importance has occupied official attention since the commencement of the *Meiji* era. The Codes, against the immediate operation of which the Diet recorded its vote by a considerable majority last session, had been in process of compilation for fully fifteen years. They represented the outcome of the best expert labour that the resources of the State could command, and the necessity for their enactment was universally acknowledged. As to this latter point, there can be no second opinion. For though, at one time, the barristers of the English School and their following opposed the idea of codification altogether, their objection has long since been over-ruled by a general conviction that the nation's civilization will remain confessedly on a low level until a body of intelligible laws adapted to the country's modern requirements and in accord with the principles of Western jurisprudence, has been enacted and put into operation. Hence the Diet, while agreeing to postpone the operation of the Codes for a term of four years, was careful to make it quite clear that the object of postponement was not repeal but revision, and we now find the journalistic advocates of postponement declaring, in the least equivocal terms, that the speedy operation of the Codes stands second in point of importance to their revision only. On the other hand, the experience of foreign countries has shown that to postpone the operation of a Code of laws for the purpose of revision, means, in effect, to relegate it to a hermetically sealed pigeon-hole. If this experience be applicable to Japan's case, the decision of the Diet, if carried into effect, signifies that Japan must be content to remain for probably two or three decades longer without any satisfactory or sufficient body of Civil and Commercial laws. Therefore, the situation in which the present Government found itself when it came into office three months ago, was exceedingly difficult. The easiest and simplest course would have been to accept the decision of the Diet at once, and thus to transfer to the shoulders of the people's representatives all the responsibility of indefinitely interrupting the progress of useful legislation. But men like Count ITO and Count INOUE, who have directed, and for the most part inspired, Japan's modern development, were not likely to be satisfied with such a time-serving rôle. They themselves, as is well known, were not less persuaded than any member of the Diet of the necessity of revising the Codes.

But they were still more firmly persuaded of the necessity of equipping the country with a proper body of civil laws, since these constitute, in truth, the real basis of personal liberty. To many critics it has seemed that the best way to solve the problem would have been to give immediate effect to the Diet's Bill, and to take speedy steps for the revision of the Codes. But it is very conceivable that the Ministers of the Crown may have acted wisely in judging differently. It is now asserted that the deliberation shown by the very statesmen publicly known to favour revision, has served to make perfectly clear their resolve to ensure the final operation of the Codes, and not to allow postponement to be perverted into virtual rejection. The problem was one of immense gravity, and it may be assumed that all persons genuinely interested in Japan's welfare will sympathise with the difficulties her statesmen have had to encounter in solving it. The Cabinet has afforded its enemies an opportunity to accuse it of vacillation, and they have taken full advantage of the chance. Not honest advantage, indeed, for the principal *Kaishin-to* organ, the *Mainichi Shimbun*, with characteristic but suicidal anxiety to impart the worst possible complexion to every act of the Government, deliberately charges Count ITO with having changed his opinion three times during the past three months, whereas it is certain that for three years Count ITO has never wavered in his conviction that further revision of the Codes must precede their operation. But criticisms so obviously suggested by malice injure no one except their formulator. The Government unquestionably has laid itself open to a charge of hesitation. If valid reasons for its delay existed, the time has probably not yet come to publish them. The general, and apparently well founded, belief at present is that an official Bill will be presented to the Diet this session providing for the immediate operation of certain Sections of the Commercial Code, namely, the Sections relating to Companies, to Bills of Exchange, Promissary Notes and Cheques, and to Bankruptcy. Laws dealing with these subjects are sorely needed, and it seems likely that the Diet will pass such a Bill. The object of the Government in recently appointing the Committee of Investigation which caused such a commotion, is now clear: it was to obtain an expression of expert and political opinion as to the possibility of dividing the Codes in the above sense. One of the *Kaishin-to* organs does not hesitate to allege that the original intention of the Committee's appointment was to obtain a pretext for recommending the SOVEREIGN to withhold his Sanction from the Bill, but that notion is flatly contradicted by the clear explanations which Count ITO himself gave at the time. It will have been observed, also, that the *Shogyo Shimpô* regards as contrary to the express terms of the Diet's decision any

attempt to enforce the Codes piecemeal. We are wholly at a loss to comprehend such a contention, in view of the rider added to the Diet's Bill at the last moment—namely, that effect might be given to each portion of the Codes simultaneously with its revision and prior to the date of general postponement.

One satisfactory feature of the vernacular journals' comments is that they have abandoned the wild accusation perferred by some of them at the time of the appointment of the Investigation Committee; the accusation, namely, that the Cabinet contemplated keeping the Diet's Bill from the SOVEREIGN'S ken. It is scarcely conceivable how such a phantasy could be gravely asserted, for even supposing that the Constitution could be deliberately flouted by the Ministers of the Crown to the extent of virtually substituting their own sanction or veto for that of the Throne, the EMPEROR himself, as we pointed out at the time, takes far too keen an interest in, and has much too close a knowledge of, the great administrative problems of his realm to allow himself to be thus ignored. The suggestion was in reality an insult to the SOVEREIGN not to the Cabinet, and it is interesting to observe that the very journals which formulated it a month ago, now admit, either directly or by implication, that there never could have been any question as to submitting the Bill to the EMPEROR, and that nothing admitted of doubt except the time at which it should be submitted within the Constitutional limits, namely, between the date of its passage and the opening of the next session of the Diet.

It is impossible not to express the keenest regret that the postponement of the Codes has become an accomplished fact. Their operation is not only absolutely necessary in view of the radically altered conditions of civil, commercial, and industrial life in Japan, but would also mark a solid and conspicuous step of national progress. If any Japanese desires to gauge foreign opinion on this point, he has only to note that the very foreigners who habitually sneer at the Diet and its doings, have, in this instance, insisted most loudly on the inviolability of the Diet's decision; and that the very foreigners who persistently vilify Japan and implacably oppose Treaty Revision, are now most vehement in their congratulations that the Postponement Bill has been sanctioned. This is a small matter, but it is not a small matter that a distinctly retrogressive step has had to be taken in deference to an outburst of opinion, partly political, largely reactionary, and only fractionally sound.

JUSTICE ILLUSTRATED BY JOURNALISTIC METHODS.

IT is a common trick with certain local newspapers in Japan, when conducting against the *Japan Mail* the crusade which appears to be their easiest means of filling their columns, to attribute to this journal opinions which we never by any possibility could have held, and assertions diametrically the contrary of those really made by us. Needless to add that these imaginary views and statements are always calculated to represent us as fighting against the interests of our own countrymen or advocating some procedure hostile to foreigners generally. It seldom seems worth while to notice such unprincipled and dishonest tactics, but a recent case is too flagrant to be passed in silence. In August last, the *Hyogo News* undertook to prove that Japanese judges are wholly incompetent to administer justice, and that the Japanese people are "utterly incapable of grasping the ideas of Westerns with regard to what constitutes justice." In support of these sweeping assertions it adduced various examples from recent procedure in Japanese Law Courts; among other the case of Mr. ST. JOHN BROWNE, who had failed to obtain a judgment in the matter of a lease. We had already joined issue with the Japanese Court's view in this instance, but as the circumstances did not seem to warrant such an extreme inference as that drawn by the *Hyogo News*, we made the following comments:—

The third basis of the *Hyogo News'* condemnation is a recent decision of a Japanese tribunal that a perpetual lease on unchanging terms cannot be recognised by law. At the time when this verdict was rendered, we expressed strong disapproval of it, because, in the absence of any definite legal enactment to the contrary the plain terms of a contract ought, in our opinion, to be enforced by the Courts.

But it is none the less certain that the highest school of Western jurists decline to admit the propriety of perpetual leases. The new Civil Code, compiled from the best materials furnished by the Occident, does not recognise such leases, and makes special provision for converting into terminable contracts any obligation of the kind that may be in existence at the time of the Code's going into operation. The Court, in the absence of a written law, took the guidance of Japanese custom, and in so doing we cannot but think that it erred. As to the principle at stake, however, the indisputable fact is that the future law of the land, a law strictly in accord with Western jurisprudence, was anticipated, though harshly applied, by the Court. Evidently there is no ground here for alleging that "Japanese Judges have not the slightest idea of what Westerns consider justice."

We have italicized portions of the above in order to give prominence to the fact that we were strongly opposed to the ruling of the Japanese Court. Nothing could be plainer than our language. It admitted of no doubt whatever. August, however, is three months ago, and few persons remember the contents of a journal so accurately as to be able to correct a courageously falsified version three months later. Accordingly, we have the *Hyogo News* now writing thus:—

Some time since we had occasion in these columns to comment strongly on the injustice of the Japanese Courts whereby a perpetual lease was nullified. This was enough to rouse the ire of our warlike opponent, and we were freely taunted with absolute ignorance of all things Japanese. It was in vain that we urged that these perpetual leases were granted by the Government, and that irrespective of any precedent they must

on that ground alone be held valid. They were against all custom, said the Mail, and although, perhaps, it was somewhat unsatisfactory that a contract should be broken, still "no distinction between Japanese and foreigners was made," and "custom was held to be opposed to the demand preferred by the foreign lessor." "The Court, in the absence of a written law, took the guidance of Japanese custom." Here we have a very positive assertion that according to custom there was no such thing in existence in Japan as a perpetual lease. We have it in black and white on the Mail's own authority.

Then, having quoted some paragraphs from a series of articles on "New Laws and Old Customs" at present appearing in these columns, to show that perpetual tenancy was not unknown in old Japan, the *Hyogo News* concludes thus:—

In view of such a clear exposition as this, the judgment in Mr. St. John Browne's case seems iniquitous, and not the combined sophistries of a thousand Mail editors, all equally opposed to foreign rights, can make such a decision seem just.

Again we have used italics to make clear the position which the *Hyogo News* falsely assigns to us. It deliberately represents us as having concurred in the justice of the Japanese Court's judgment, whereas our words were that we "expressed strong disapproval of the judgment," that we thought "the plain terms of the contract should have been enforced by the Court," and that we were of opinion that "the Court had erred in taking the guidance of Japanese custom in the absence of written law." As to whether such things as perpetual leases had or had not existed at any time in Japan, we said nothing. The general custom of the country has always, we believe, been opposed to such leases, though they were granted under exceptional circumstances. At any rate, the Court's decision was based upon alleged custom, and while pronouncing it an erroneous decision, in our opinion, we declined to be so grossly prejudiced as to deduce from such a decision the inference that Japanese Judges are wholly incompetent to administer justice. Be the question of custom as it may, however, the point is that we were strongly opposed to the Court's verdict, and that we expressed our dissent in the plainest terms. Yet, now, the *Hyogo News* deliberately represents us as having been "roused to ire" in defence of the Court's action, and as having, in our "opposition to foreign rights," essayed a number of "sophistries" to make the decision seem just." Evidently no language admissible in the columns of this journal can adequately describe the conduct of a newspaper so unprincipled and so indifferent to the commonest rules of truth as the framer of these slanders. The *Hyogo News* must have had our article of last August before it when it wrote. It cannot plead the pretence of forgetfulness for it actually quotes, in inverted commas, sentences or portions of sentences, used in the article. Indeed, these very quotations show the daring fraudulence of its methods; for whereas we wrote, "the Court, in the absence of a written law, took the guidance of Japanese custom, and in so doing we cannot but think that it erred," the *Hyogo News* cuts off the words italicised and

makes us say simply "the Court, in the absence of a written law, took the guidance of Japanese custom." With our article before it then, with our unequivocal condemnation of the Court's verdict staring it in the face, the *Hyogo News* has deliberately resorted to the imposition of quoting fractions of our sentences in order to diametrically pervert the meaning of the whole, and in mendacious language of its own has falsely attributed to us views the very opposite of those we expressed in the simplest and plainest terms. Such falsehood and imposture may be the last resource at the command of the *Hyogo News*, but they must also mark the last notice it shall receive in these columns.

THE GOVERNMENT'S DECLARATION OF POLICY.

THE first day of actual deliberation in the House of Representatives was December 1st. Immediately after the various secretarial announcements which precede the Order of the Day, Count INOUE, Minister of State for Home Affairs, ascended the rostrum, and in his capacity of acting Minister President, made a declaration of the policy of the Cabinet. It was a written declaration, compiled by the Minister President, Count ITO, who could not himself attend on account of the injuries he received on the 27th instant. Count INOUE, though he occupies such a prominent place among the statesmen of the Meiji era, had never before stood in the rostrum of the House of Representatives, and apart from the great interest attaching to the matter of his speech, there was evidently much curiosity to see how he would bear himself. From the first, however, it was plain that neither the exceptionally responsible position in which he found himself nor the novelty of his surroundings, affected him at all inconveniently. The remarks with which he prefaced and supplemented the reading of the Declaration, were delivered with perfect self-possession, and the reading of the long document was marked by clear and emphatic elocution. Nevertheless, the vicarious element of the proceeding furnished opportunity to discontented members, one of whom showed sufficient pettiness to raise a point of order as to whether a Minister of State is entitled to read documents aloud in the House. There is a provision of the Standing Orders which forbids members to read out arguments or statements of opinion, and the cavilling member would fain have extended this prohibition to the case of a Minister of State reading a declaration of Cabinet policy written by the Minister President. This singularly childish objection was emphatically over-ruled by the President of the House, who pointed out that the plain purpose of the Standing Orders was to prevent members from reading out their speeches, and that it would be extravagant

to apply the interdict to the case of a Cabinet Minister commissioned to deliver a statement of policy on behalf of a Minister President who had been disabled by an accident. The House applauded this ruling, and laughed very heartily at another member of diminutive stature but vast cholera, who delivered himself of some shouting and puffing protests against the difficulty of comprehending a written declaration read aloud from the rostrum, and who betrayed an obstinate resolve to think that only boys in a primary school ought to be instructed in such a manner. Mr. INOUE KAKUGORO, with polite irony, reminded people of impatient understanding that they would have ample opportunity to peruse the Declaration that evening in the Stenographic Records, and to air their criticisms of it on the following day, but this did not deter the persistent Mr. TANAKA SHOZO from delivering himself of a brief diatribe, in the course of which he worked round to his inevitable red rag, Count GOTO, and simulated considerable excitement about trifles utterly out of place in the context of Count INOUE'S speech. The House, however, was in a laughing humour, and the vehement member for Tochigi descended from the rostrum amid a burst of merriment provoked by a particularly unhappy *lapsus linguae* in his peroration. Under these circumstances of more or less confusion, Mr. WATANABE, Minister of State for Finance, ascended the rostrum, and in his wonted tranquil yet impressive style of delivery, gave an interesting *exposé* of the Government's financial policy. Mr. WATANABE had a unique experience. Speaking as a Minister of State, he succeeded in eliciting the plaudits of the House. That is a record never before achieved by any member of the Cabinet. The success was not due in any sense to the fashion of his speech. He employed throughout language of the simplest and least pretentious character. The facts of the declaration were what pleased the members. They applauded vigorously when they heard that the Government intended to reassess the taxable value of land so as to lessen the burden of the Land Tax by 3½ million *yen*. They applauded the methods announced for meeting the deficiency thus caused in the income of the State. They applauded, also, when the Minister told them that the volume of exports had increased nearly 15 million *yen* since last year. Mr. WATANABE'S speech was certainly statesmanlike and well constructed. Among several striking facts which it contained, one will be found especially interesting by students of Japanese finance; namely, the remarkable achievement which stands to the credit of the Government in having gradually and smoothly reduced the whole volume of the national domestic debt from rates of interest varying between 6 and 8 per cent. to a uniform rate of 5 per cent. We call this a remarkable

achievement, and our readers will agree that the expression is not too strong. But of course the key-note of the whole speech, the chord which vibrated to the hearts of the *Fiyu-to*, was the announcement of a scheme for re-assessing the taxable valuation of land so as to reduce the volume of taxation by 3½ million *yen*. The *Fiyu-to* have the satisfaction of seeing the Government frankly adopt one of the two great fiscal measures for which they have so long been labouring.

With regard to the speech of the Acting Minister President of State, we reserve comments until our readers have had an opportunity of perusing it at leisure.

IMPERIAL PARLIAMENT.

TUESDAY, 29TH NOVEMBER.

THE official opening of the Diet having been fixed for the 29th instant, the Emperor left the Imperial Palace to proceed to the House of Peers at half-past ten on that morning. The procession, formed in accordance with the etiquette of a State ceremonial of the first order, reached the Diet at 10.45, where the Vice-President, Chief Secretary, and other Secretaries of the House of Peers, standing on the right hand side; and the President, Vice-President, Chief Secretary, and Secretaries of the House of Representatives on the left, received His Majesty with profound reverences. Marquis Hachisuka, President of the House of Peers, performed the same office at the entrance hall, and the Emperor proceeded to the Imperial Waiting Room under his guidance. After a short interval, His Majesty, accompanied by the Princes of the Blood, and preceded by Marquis Nabeshima, passed to the Throne in the debating chamber of the House of Peers. Thereupon Count Inoue, Minister of State for Home Affairs, acting for Count Ito, Minister President of State, stepped forward, and with the usual obeisance handed a scroll to the Sovereign, who opened it and read as follows:—

We announce to the Members of Our House of Peers and of Our House of Representatives—
That We are pleased to perform in person the ceremony of opening the present session of the Imperial Diet:

That We have directed Our Ministers of State to submit for deliberation by the Diet the Budget for the twenty-sixth year of Meiji, together with various important projects of laws. It is Our hope that you will exert your utmost energy in the discharge of your public duties, always preserving harmony and unity among yourselves.

His Majesty is suffering from a cold which was doubtless aggravated by passing along the draughty passages of the building, for his voice, usually clear and sonorous, sounded husky and the reading of the Speech was interrupted by coughing. On its conclusion, Marquis Hachisuka, President of the House of Peers, stepped forward to receive the scroll; and His Majesty left the Throne, setting out at 11.30 on his return journey to the Palace. In the Imperial suite were Marquis Tokudaiji, Grand Chamberlain, Viscount Hijikata, and Mr. Hanabusa, Minister and Vice-Minister respectively of the Imperial Household, Marquis Nabeshima, and Mr. Sannomiya, respectively Grand Master and Vice-Grand Master of Ceremonies, and many other high officials.

After the official ceremony had been concluded, the House of Representatives met for the discharge of business. The following reply to the Speech from the Throne was agreed to, and the President was instructed to present it:

May it please Your Majesty:—
We, Your Majesty's servants, members of the House of Representatives, desire humbly to address Your Majesty.

Respectfully and with all deference, we beg to express our gratitude that Your Majesty has been graciously pleased to honour us with Your Majesty's presence for the purpose of performing the

ceremony of opening of the present session of the Imperial Diet, and that we have further been honoured by Your Majesty's gracious Speech. We, Your Majesty's servants, humbly assure Your Majesty that we shall seek, with all respect, to discharge our responsibilities of deliberation, trusting thereby to show our sense of Your Majesty's great benevolence, and to justify the trust reposed in us by the people of Your Majesty's realm. Thus worshipfully do we venture to present our humble reply.

The President then reported the various changes that had taken place in the *personnel* of the House during the recess, as well as the names of the officials appointed to discharge the duty of Government Delegates. The following list of Bills which have been presented by members was then read out:—

Names of Presenters.	Subject of Bill.
Mr. Ito Daihachi and others.....	Amendment of the Public Meeting and Political Association Regulations.
Mr. Minoura Katauto and others.....	Amendment of the Press Regulations.
Mr. Kudo Kokan and others.....	Amendment of the Military Organization.
Mr. Amakasu Fumiye and others.....	Amendment of the Law for the Assessment of the Taxable Value of Land.
Mr. Sugita Tetsichi and others.....	Amendment of the Land Tax Regulations.
Mr. Kagami Kabei and others.....	Amendment of the Publications Regulations.
Mr. Node Shozaburo and others.....	Amendment of the Law No. 84 of the 33rd year of Meiji.
Mr. Node Shozaburo and others.....	Amendment of the Law of Registration.
Mr. Hatano Denzaburo and others.....	Amendment of the Land Tax Regulations.

The President then referred in sympathetic terms to the accident which had befallen Count Ito, the Minister President of State, and received the House's commission to address to His Excellency a message of condolence. The House rose at 11.45 a.m., the business for the following day having been announced to be the election of Chairman and Vice-chairman of the Committee of the Whole.

WEDNESDAY, 30TH NOVEMBER.

HOUSE OF PEERS.

The House met at 9.30 a.m. The President read out the draft of the House's Reply to the Speech from the Throne, as follows:—

May it please Your Majesty:—

We, Your Majesty's most loyal and faithful servants of the House of Peers desire humbly to address Your August and Enlightened Majesty. Your Majesty has been pleased to honour the Houses of the Diet with Your Majesty's presence for the purpose of performing the ceremony of opening the present session of the Imperial Diet, and has moreover condescended to address to us most benevolent words. We, Your Majesty's servants, will reverentially observe Your Majesty's august command, respectfully obey the provisions of the Great Constitution, and humbly preserve harmony and unity in the discharge of our public duties, to the end that we may be permitted, with all deference, to give utterance to our opinions for Your Majesty's wise consideration. Thus most worshipfully do we venture to present our humble reply to Your Majesty's benevolent speech.

The House approved this form and then proceeded to elect a Chairman of Committee of the Whole with the following results:—

Marquis Saionji	97 Votes
Prince Konoye	66 Votes

The President, meanwhile, had carried to the Palace the House's reply to the Speech from the Throne, and on his return reported that His Majesty, being ill, had deputed the Minister of the Imperial Household to represent him, and to transmit the following answer to the Peers reply:—

We approve the profound and earnest expression of Our House of Peers' loyalty.

The Chief Secretary then announced the receipt of the following:—

From the Government a Bill relating to the amendment of the Commercial Code, and of a part of the regulations for its enforcement, and to its enforcement.
Also, a Bill for the establishment of a Court to adjudicate questions as to limits of competence.

The House commissioned the President to make a visit of condolence to the Minister President of State on its behalf, and rose at 1.55 p.m., after electing the various Standing Committees.

HOUSE OF REPRESENTATIVES.

The House met at 1.10 p.m. The President announced that he had carried the House's

answer to the speech from the Throne to the Palace in the forenoon, but that the Emperor, being indisposed, had deputed the Minister of the Imperial Household to receive the document, His Majesty's reply being:—

We approve the profound and earnest expression of Our House of Representatives' loyalty.

The President announced that, as deputed by the House, he had proceeded to the residence of the Minister President, and enquired as to His Excellency's condition. Count Ito had been too unwell to receive him, but he had met Countess Ito, who had desired him to convey the thanks of the Minister President to the House, and to say that his injuries were rapidly mending. The election of the Chairman of Committee of the Whole was then proceeded with, the result being:—

Mr. Suzuki Shigetō	167
Mr. Watanabe Koki	101
Mr. Kono Hironaka	10
Mr. Abe Banko	5
Mr. Ando Kioka	1
Mr. Awaya Shimazo	1
Mr. Kusumoto Masataka	1

The House then proceeded to elect the standing Committees. The election took place by Sections, and the President announced a recess (2.15 p.m.) for the purpose. The results of the election were subsequently announced as follows:—

BUDGET COMMITTEE.

Mr. Minoura Katsuto	Kaishin-to.
Mr. Yamada Tōji	Fiyu-to.
Mr. Fukui Naokisli	Fiyu-to.
Mr. Ta Teikichi	Fiyu-to.
Mr. Kawashima Jun	Domei Club.
Mr. Hasegawa Tai	Fiyu-to.
Mr. Amakusa Fumiye	Fiyu-to.
Mr. Kato Masanosuke	Kaishin-to.
Mr. Katano Toshiro	Domei Club.
Mr. Sugita Teichi	Fiyu-to.
Mr. Nakanoji Yoheiji	Domei Club.
Mr. Takase Tōjiro	Fiyu-to.
Mr. Chiba Teitaro	Fiyu-to.
Mr. Shioji Hikoyemon	Kishu-ha.
Mr. Kawashima Uichiro	Domei Club.
Mr. Toyama To	Chuo Koshu-Kai.
Mr. Nagao Shiroyemon	Chuo Koshu-Kai.
Mr. Koto Kei	Kokumin Kyokai.
Mr. Takehiro Yoshimichi	Kokumin Kyokai.
Mr. Sugita Gengoro	Chuo Koshu-Kai.
Mr. Shiba Shiro	Min-to Mushosoku.
Mr. Ozaki Yukio	Kaishin-to.
Mr. Fujita Magoichi	Fiyu-to.
Mr. Iwazaki Manjiro	Fiyu-to.
Mr. Hashimoto Kiutaro	Kaishin-to.
Mr. Nakamura Yōroku	Domei Club.
Mr. Morino Tamegoro	Kaishin-to.
Mr. Kurata Jungoro	Kaishin-to.
Mr. Ishida Kwannosuke	Fiyu-to.
Mr. Kudo Kōkan	Fiyu-to.
Mr. Kono Hironaka	Fiyu-to.
Mr. Saito Keiji	Fiyu-to.
Mr. Shiota Okuzu	Fiyu-to.
Mr. Iungai Ki	Kaishin-to.
Mr. Hozumi Hisamieli	Kaishin-to.
Mr. Kusumoto Masataka	Domei Club.
Mr. Kaino Kōzō	Fiyu-to.
Mr. Hasebe Junko	Fiyu-to.
Mr. Takeichi Ansai	Fiyu-to.
Mr. Nakano Buyei	Kaishin-to.
Mr. Hayashida Tokuro	Domei Club.
Mr. Higashio Heitaro	Fiyu-to.
Mr. Okada Koroku	Fiyu-to.
Mr. Hatano Denzaburo	Kaishin-to.
Mr. Node Shozaburo	Fiyu-to.

The names of the Disciplinary and Petitions Committees were also announced. The Chief Secretary stated that the following had been received:—

- From Mr. Kashiwada Moribumi and others, a Question relating to materials for a Steel Foundry and experiments connected with the establishment of the same.
- From Mr. Kato Masanosuke and others, a Question relating to fishing by United States vessels at the Chishima Islands.
- Also, a Question relating to the management of sales of public land.
- Also, a Question relating to the granting of contracts for public works.
- Also, a Question relating to the taxation of marine products.
- From the Government, the Budget for the 26th year of Meiji, together with Estimates of Extraordinary Revenue and Expenditure for the same.

Also, a Supplementary Budget for the 25th year of Meiji.

Also, a Special Estimate of revenue and expenditure of the Imperial University and of the Upper Middle *Zoshikan* of Kagoshima for the 25th year of Meiji.

Also, an Estimate of Expenditures to be defrayed by the Treasury in consequence of agreements.

Also, a Barristers Law Bill.

Also, a Bill for the issue of Railway Bonds.

Also, a Bill relating to funds for the purchase of Railway Material.

From Mr. Inai Isoichiro, a Supplementary Bill relating to Weights and Measures.

From Mr. Motoda Hajime and others, a Bill relating to the Law of Public Meetings and Political Association, the Copyright Law and the Publication Law.

From Mr. Maki Bokushin, a Representation relating to funds for the Colonization of Hokkaido.

From Mr. Motoda Hajime, a Bill for amending the Organization of Law Courts.

From Mr. Sasaki Shozo and others, a Bill for amending the Law of Registration.

From Mr. Ooka Ikuzo and others, a Bill for the amendment of the Bailiffs Regulations.

From Mr. Kataoka Chokuan and others, a Bill relating to the transfer of Prison Expenditures to the charge of the Treasury.

The House rose at 3.30 p.m., the business for the 1st instant having been fixed as follows:

- (1) The First Reading of the Barristers Bill.
- (2) Election of a Special Committee to consider the same.
- (3) First Reading of the Government's Bill relating to the issue of Railway Bonds.
- (4) Election of a Special Committee to consider the same.
- (5) First Reading of the Government's Bill relating to funds for the purchase of Railway Material.
- (6) Election of a Special Committee to consider the same.

THURSDAY, 1ST DECEMBER.

HOUSE OF PEERS.

The House did not meet.

HOUSE OF REPRESENTATIVES.

The House met at 1.05 p.m. The Chief Secretary announced the receipt of the following:—

From the Government, a Bill for the Special Amendment of the Taxable Value of Land.

Also, a Bill for Amending a Part of the Income Tax Regulations.

Also, a Bill for Amending a Part of the *Sake* Brewing Tax Regulations.

Also, a Bill for Amending the Supplementary *Sake* Brewing Tax Regulations.

Also, a Bill for Amending a Part of Law 24, issued in the 22nd year of Meiji.

Also, a Bill for Amending the Tobacco Tax Regulations.

Also, a Bill relating to the Capital of the Central Finance Relief Fund.

From Mr. Shimizu Bunjiro, a Question relating to Game Licenses.

From Mr. Tomonaga Shinzo and others, a Bill for the amendment of the System of Urban and Prefectural Government.

From Mr. Yumoto Yoshinori, a Representation relating to Works of Irrigation connected with the Three Great Rivers, Kiso, Yodo, and Tone.

From Mr. Horiyama Kanuo and others, a Barristers' Bill.

From Mr. Saito Ryosuke and others, a Representation relating to the Management of Government Forests and Moors.

From Mr. Tsunoda Shunpei and others, a Supplementary Bill relating to City Government, and a Bill for rescinding Law No. 22 of the 22nd year of Meiji.

The President announced that Mr. Kono Hironaka had been elected chairman of the Budget Committee, Mr. Nishikawa Giyen, Chairman of the Disciplinary Committee, and Mr. Takata Sanaye, Chairman of the Petitions Committee.

The House having then proceeded to the

Order of the Day, Count Inouye, Minister of State for Home Affairs, representing the Minister President of State, ascended the rostrum and said:—

GENTLEMEN,—I count it very happy that my official duties give me the opportunity of meeting you all here to-day. Under ordinary circumstances, the Minister President, Count Ito, would have appeared in your House and given an accurate explanation of the Government's policy, but owing to severe injuries received by him in an accident, on the 27th of last month, he is confined to his house, and his physicians consider that he will not be able to resume the duties of his office for 30 or 40 days. You have been so good as to direct that sympathetic inquiries about his condition should be made in your name, and I doubt not that you share our regret for his inability to appear here to-day. The Minister President has, however, committed to writing a statement of the Government's policy, and this, having been duly debated by the Cabinet, I shall now have the honour of reading to you:—

GENTLEMEN,—It is only a few months since, in obedience to the gracious command of our Sovereign,

we were invested with the grave responsibilities of Ministers of State; and we consider it a special honour that we are able, in the present session of the Diet, to lay before you, in our official capacity, the views we entertain with regard to the course of policy to be pursued hereafter by the Government. The general course of policy to be pursued by the Government will be, at home, to promote the improvement of the administrative machinery by bringing its operations into practical conformity with the provisions of the Constitution, and, on the one hand, to strengthen the foundations of the State in conformity with the great policy of the realm; on the other, to promote the welfare of the people by protecting their rights. Abroad, the Government aims at elevating the prestige of the country *vis-à-vis* the different Foreign Powers, and thereby attaining the great object contemplated by the nation. As to administrative reforms, to talk about them is easy; but to carry them out is a task of the greatest difficulty. But be the task ever so difficult, it must not be deferred, or executed in an incomplete manner. We are resolved unhesitatingly to remove every obstacle that blocks the path of national progress. The work of improving administrative affairs and setting them in order can not be carried out without carefully considering the future and remote consequences of the measures taken. Speedy attainment is therefore difficult; success must be achieved by degrees. It is scarcely necessary to say that the successful conduct of national affairs depends upon harmonious coöperation between Government and people. It is, gentlemen, our earnest hope that the Government's sincere intention will command your appreciation and sympathy. The many countries which, like stars, dot the surface of the globe, are competing with each other in the development of their internal resources and in the extension of their foreign trade and intercourse. Despite occasional collisions and disturbances, these countries, during recent years, have generally succeeded in preserving the forms of peace, and have endeavoured to cultivate mutual friendship. But if we look at the other aspect of the situation, we find every nation occupied with the solution of the problem how to defend itself, and taxing its resources to the utmost for the purpose of completing its military equipment. Since the first dawn of a historical era, the world has never seen such gigantic armaments as are now witnessed. A question of vital importance to Japan is her armament, and of her armament no part demands more urgent attention than the increase of the Navy. The increase of the Navy, as compared with the equipment of the Army, is attended with greater difficulties, owing to the very nature of the task, as well as to economical reasons. The condition of the country, however, is such that not a day should be lost in carrying out the work. Hence the Government, in the Budget for the coming year, has asked for large appropriations on account of the construction of war-vessels, it being thus hoped to accomplish the task in the course of the next few years. The Government cannot but hope that, in consideration of the general welfare of the country, you, gentlemen, will give your consent to these appropriations. As to foreign affairs, friendship and goodwill more than ever characterize Japan's relations with the Foreign Powers. It is scarcely necessary to state that, while endeavouring to carry out various reforms in internal administration, we are at the same time bound to prosecute one of our most cherished desires—the great work of Treaty Revision. But much caution is required in this matter, and in order to achieve the great object entertained ever since the Restoration, it is absolutely necessary above everything, to secure unanimity of national view on the subject. Stated in a few words, the principal purpose of Treaty Revision is to regain powers which a nation ought to possess, and to assume obligations which every independent State is bound to discharge. The Government, in view of the progress of the country, perceives the necessity of introducing certain economic changes in the burdens borne by the people; and proposes to lower the assessed value of the land under cultivation in whatever instances such valuation is disproportionately high. Inequalities in the assessed value of the land have not only been a subject of discussion among the people, but have also engaged the serious attention of the Government. In the sequel of careful investigations we are now in a position to carry out the desired reform. Very little practical hope can be entertained of the possibility of securing absolute equality in the assessed value of land throughout the whole country, because climatic conditions, facilities of intercourse and transport, fertility of soil, market prices, cost of labour, and the nature of the yield vary in different localities. But it is important that a uniform principle be applied in the case of localities

where, in consequence of abnormal inequalities in the assessed value of land, the people are unable to bear the burthen of the tax. In carrying out this reform, it must be remembered that, since it is impossible to cut down the expenses necessary to the maintenance of the State, a decrease of revenue in one direction must be compensated by an increase in another. That is to say, in view of the general condition of the national finance, the deficiency caused by the reform in question must inevitably be made good by an increase in some other source of revenue. With regard to the improvement of river courses and embankments, the amounts of money at present defrayed from the Treasury is inadequate to meet actual requirements. Consequently, works of this nature have hitherto been undertaken only with a view to the needs of the moment, and no permanent plan of operations extending over a number of years has been mapped out. A frequent result of such a state of affairs has been that works had no sooner been completed than they were demolished. It has, therefore, been found necessary to provide for the appropriation of a sufficient sum to meet the urgent needs of the country in this respect. As to details, they will be explained to you in due time by the Minister of State in whose province the matter lies. There is another topic to which your attention must be invited. That the Japanese nation has been from the earliest times distinguished for loyalty to the Sovereign, love of country, and devotion to public good, is amply proved in the brilliant pages of the Empire's history. But it is a source of surprise as well as of satisfaction, that in the short space of twenty odd years since the Restoration, the country has made strides of progress so large and has accomplished achievements so solid as to excite the profound admiration of all the nations of the world. The work which the State demands of us does not, however, end here. We must endeavour more and more to develop the resources of the country, to raise its prestige abroad, and thereby to complete the great work of the Restoration. You will scarcely find upon the map any country that can be compared with Japan in respect of the fact that her forty millions of loyal, public spirited, and brave inhabitants, have, in little more than twenty years, restored her prestige sufficiently to place her side by side with the great Powers of the world. Nothing can add to the happiness of us, the present generation, whose lot has been cast in an age of such splendour and glory. We must, then, make it our duty to assist in the progress of the country and in the elevation of its prestige. That in order to achieve these ends we must rely upon the harmonious co-operation of Government and people, has already been stated, but solicitude for the good of the country dictates that, once again, this vital point should be pressed upon the attention of you, gentlemen, loyal and public spirited members of the Diet. Gentlemen, the Imperial Diet is an institution for His Majesty the Emperor to hold consultation with his subjects on legislative matters, and you as the trusted representatives of the people are in a position to deliberate upon the various questions that concern the interest and safety of the country. We venture to invite your attention to such obvious facts, because a Legislative Assembly being indispensable in every constitutional country, is an object of universal interest, and the degree of its efficiency is the standard by which the country's prestige and power are judged. We deem it a great honour, let us repeat once more, that, in obedience to the gracious command of our August Sovereign, we have been able in the present session of the Diet to lay before you a general outline of the policy to be pursued by His Majesty's Government."

The above, gentlemen, is a statement of the administrative policy which the Government, with your mature consent, proposes to follow in order to achieve the smooth and satisfactory working of constitutional institutions. The Minister President will have the honour of coming before you so soon as his health is sufficiently restored, which I trust will be before long.

Mr. Kori Hoso objected to a written declaration of policy. He declared that he could not understand it, and called upon the Acting Minister President to tell them in plain language what the Government intended to do.

Mr. Takasu Minezo rose to a point of order. It was laid down in the 112th article of the Standing Orders that reading of documents from the rostrum could not be allowed. He wished to know whether this interdiction applied to members only, or whether Ministers of State also must observe it. In his opinion a Minister of State, from the time of ascending the rostrum, was bound to obey the rules of the House.

Mr. Shimizu Bunjiro passionately protested against having a long document read out to the House. It was impossible to follow the meaning. Such procedure was only suited to children in a primary school. The House received Mr. Shimizu's vehement denunciations with much laughter.

Mr. Inouye Kakugoro had many questions to ask about the policy just declared by the Acting Minister President, but he reminded the members that they would have an opportunity of reading the Declaration in the Stenographic Records that evening, and of ventilating mature criticisms the next day. He exhorted them not to show a paltry spirit of cavilling *vis-à-vis* a Cabinet composed of the most eminent Statesmen of the Meiji era.

The President ruled that Standing Order No. 112 had reference only to members reading speeches prepared by themselves, and could not be applied to the case of a Minister of State who read aloud a declaration of the Minister President's policy, in the unavoidable absence of the latter.

Mr. Tanaka Shozo intended to run the risk of being censured for precipitancy by Mr. Inouye Kakugoro, and to make some comments on such parts of the Declaration as had struck him. He observed that no mention had been made of the Departmental Organization of 1885. Possibly the Minister President's illness had impaired his memory, but it was essential to come to some understanding on this point. Compared with the state of affairs in 1872 and 1873, the number of officials had increased six or seven fold. There were forty thousand officials in 1885. There had been but thirty thousand previously. In 1890, the number had reached sixty thousand. How did it happen that the scheme of Organization promulgated in 1885 had produced no good results? He wanted to know, too, what was to be done about the Department of Education, and the divulging of official secrets by Count Oki. The shortcomings of the Department of Agriculture and Commerce were also to be noticed. What was meant by leaving Hokkaido to its fate, and at the same time talking of increasing the Army and Navy, all through fear of foreign countries? Then there was the question of official interference in elections and all the bloodshed that had resulted. How was that to be dealt with? As for the problem of Land Tax Revision, he could tell them that in Yamaguchi Prefecture there were folks who concealed their ownership of land and paid no tax at all, but he did not observe that much notice of this had been taken in the Declaration of Policy. He should have more to say when he had read the Declaration carefully, but he called for an immediate explanation as to the organization of the Administration.

Mr. Watanabe, Minister of State for Finance, then said:—

GENTLEMEN,—I esteem it a great honour to be able to appear before you at the opening of the fourth session in the capacity of manager of the National Finances. It will not be thought unnecessary that I should make a brief statement of the Government's financial policy. I will speak, in the first place, of the existing economic conditions; and, in the second, of the programme which we propose to follow in the future. With regard to the former, although it cannot be said that our finances have made any very striking progress, yet I think it will be admitted that they are gradually progressing. Thus, owing to steps that have been adopted to convert Public Bonds bearing high interest into Bonds bearing low interest, the face value of Bonds carrying interest so high as 6 per cent. does not now exceed 2,700 yen. The result of these conversions is that the burden of the Treasury has been reduced by over 2½ million yen annually. Further, as you will see from the comparative tables given in the Budget, the revenue for this year exceeds the expenditure by more than 2½ million yen. Moreover, the foreign trade of the year shows an unprecedented condition of progress, the increase of exports amounting thus far to 14,910,000 yen. Passing, now, to the second part of my subject, the future financial programme, and having directed your attention to the fact that the Budget shows an increase of over two million yen on the revenue

side, I wish to divide my remarks into three principal lines. The first relates to the increase of military preparations for national defence; the second, to measures for improving the financial condition of the people; and the third, to the maintenance of the national prestige. With regard to the increase of military preparations for national defence, our project is to devote a sum of 16 million yen, spread over an interval of seven years, to building powerful men-of-war and cruisers. With regard to the second point, we propose to form a reserve of a million yen for the purpose of holding an industrial exhibition. Further, in respect of the problem of re-assessing the taxable value of land, which now occupies such a large place in public attention, the Government appreciates the necessity of taking some step, and after various investigations it is our intention to apply a scheme of special re-assessment which will reduce the burden of the tax by 3½ million yen. This measure, however, will cause a deficiency of 2,700,000 yen when we come to carry out the third branch of the programme, namely, the increase of military preparations for the national defence. To meet that deficiency, the Government considers that the most appropriate step will be to amend the Income Tax Regulations, and to increase the taxes on *saké* and Tobacco. Bills for these purposes will be introduced in your House. But in effecting the above improvement in the national finances, it is necessary to proceed deliberately. A full year will be required to conduct all requisite investigations into the actual facts of the value of land, and, consequently, the proposed reform cannot go into operation before the 27th year of Meiji (1894). A Supplementary Budget for the current fiscal year has also been submitted to you. The expenditures included in it are necessitated by the operation of law. Finally, in order to relieve distress resulting from the inundations in Tokushima and Okayama Prefectures, we are obliged to ask you for a supplementary grant of two million yen, which, however, can be met by funds now in the Treasury. I have thus briefly stated, gentlemen, the actual condition of the country's finances, and the policy which we propose to pursue in the future. The present Cabinet not having been long in power there has scarcely yet been time to deliberate minutely and thoroughly upon all the national affairs. I trust you will keep that fact in mind when you discuss financial questions in your House.

Mr. Kodama Chinji wished to have a Special Committee appointed to consider the question of Land Tax Reduction, but his proposal found no second.

The House then proceeded to the First Reading of the Barristers' Bill.

Mr. Kioura Keigo, Vice-Minister of State for Justice, explained that the system embodied in the Bill had been under consideration for twelve years, but owing to various difficulties had not become an accomplished fact. He dwelt upon the highly important part played by the Bar in relation to the security of life and property and the guardianship of men's rights, and pointed out that the interest of the nation was concerned in providing that Barristers should attain a high standard not only of erudition but also of morals. He entered into a general explanation of the provisions of the Bill, and declared himself ready to give detailed statements on any point referred to by the House.

The Bill was entrusted to a Special Committee of 9, nominated by the President.

The House then proceeded to the First Reading of the Bill for the Issue of Railway Bonds and the management of Funds for the Purchase of Railway Material. The Bill was read out as follows:—

Art. I.—The Revenue and Expenditure connected with the Railway Bonds issued under the provisions of Railway Construction, Law No. 4, of the 25th year Meiji, shall be distinguished from the Ordinary Revenue and Expenditure, and treated as special Finances.

Art. II.—When the cost of material required for officially constructed Railways built with funds derived from Railway Bonds, is defrayed out of Capital for the Purchase of Materials for Government Railways, such cost may be paid in advance.

Art. III.—The provisions of the Second Article of this Law shall become operative from the 27th year of Meiji.

Mr. Tajiri, Vice-Minister of State for Finance, explained that great and needless inconvenience and complications would be caused by not separating the railway accounts from the general accounts of Revenue and Expenditure.

The Bill was entrusted to a Special Committee of 9, chosen by the Sections.

The House then proceeded to the First Reading of the Government Bill relating to Funds for the purchase of Railway Material, which, after a brief explanation from Mr. Tajiri, was entrusted to a Special Committee of 9, chosen by the Sections.

The House took a recess at 2.35 p.m., and re-assembled at 3.15 p.m., when the President announced the names of the members chosen to form the Special Committees.

The House rose at 3.20 p.m.

THE BUDGET FOR 1893.

REVENUE.

ORDINARY REVENUE.

1. Taxes	66,676,136.476
2. Licences and Fees	2,173,088.567

THE CHRYSANTHEMUM.

In the first cold night of autumn
The dahlia's pride was lost:
The hollyhock's splendour vanished
At the coming of the frost.
Even the brave little pansy
Hides under the leaves that fall,
And not one flower of the summer
Answers the robin's call.
But! in the corner yonder
There's a gleam of white and gold—
The gold of summer's sunshine,
The white of winter's cold.
And laden with spicy odours
The autumn breezes come
From the nooks and corners brightened
By the brave chrysanthemum.
Hail to you! beautiful flower,
With royal and dauntless mien
Facing the frosts of winter—
I crown you autumn's queen.
With your gleam of late sweet sunshine
You brighten the closing year
And keep us thinking of summer
Till the winter we dread is here.

BY EBEN E. REXFORD.

CORRESPONDENCE.

Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

THE LAND TAX.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The present discussion has reached a point where, as you suggest, it might as well be discontinued. It is not with a wish to have the last word that I beg to insert the following.

A projectile fired upward at an angle from a gun describes a parabolic curve under ideal conditions. If a gunner were not to take into account the pressure of the atmosphere or the shape of the ball, what would be thought of his practical knowledge of gunnery? All that I have contended for is that in statistically estimating the burden of the land-tax, due allowances must be made in the nature of friction, and this is all that I meant by objecting to "wholesale methods." To illustrate, I take the following from a translation of a portion of a Report of the Department of Commerce and Agriculture:—

The average price of rice in the Tokyo Rice Exchange for the year 1886 was *yen* 5.56, and for the year 1887 was *yen* 5.10. In the town of Akita the average price for 1887 was *yen* 4.02; in Omagari, situated inland, only 55 *kil.*, the average price was only *yen* 3.32. In the year 1886 the difference was even greater; *yen* 4.63 and 3.40. In 1887 at the port of Miyako (Iwate-Ken) the average price was *yen* 4.79, and in the chief town of Morioka, distant 108 *kil.*, by the prefectural road, the average price was only *yen* 4.12. In Toyama, the chief town of the rice-growing province of Echū, the average price for 1887 was *yen* 3.94. In the town of Miyakonojo (Miyazaki-Ken) the average price in 1887 was *yen* 3.39 and at the not distant port of Kagoshima *yen* 4.82. In Hitoyoshi (Kumamoto-Ken) the average price in 1887 was only 3 *yen*. Even these prices were not those received by the farmers in many cases. The following are the average prices for 1886 in the rice exchanges of—

	<i>Yen.</i>
Tokyo	5.56
Osaka	5.26
Shimonoseki	5.00
Matsuyama	4.91
Kanagawa	4.33
Niigata	4.55

These figures seem to me to prove a real difficulty in finding out what the farmer actually gets for his rice, and consequently what the taxes on rice land are. Your reply may be that you took my own figures and average prices. But to this I must object, as I gave no final statistics.

What I said about statistics and lies was quoted from Robert Giffen, one of the best English statisticians. It was jestingly uttered by him and so intended by me, but it seems to have been strangely transmuted at the end. He adds this remark, seriously, that "statistics are easily mishandled, for the simple reason, amongst others, that people like short cuts."

As for the land-tax reform of 1889, I am quite familiar with it and have a special report about it.

Yours respectfully,

GARRETT DROPPERS.

[The discussion has tended to throw light on a very interesting problem. Probably opinions now conflicting cannot be reconciled thoroughly until more minute information is collected.—Ed. J.M.]

MR. JAMES STEVENSON.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Since you were good enough this morning (29th) to devote about half a column of your paper to the reviling of "a voracious and polished person by name James Stevenson," I would ask you to be good enough to allow me to write a few lines on the subject.

Not content with holding up to ridicule the report of an interview which was most certainly garbled, you go on to say "Stevenson appears to have resided at one time in Yokohama: he calls himself an architect, but it he ever occupied any such position here, it was without the knowledge of the public." Mr. Stevenson certainly never resided in Yokohama, and most assuredly never stated that he did. It was in Kobe that he was established as an architect, and it was there that he gained his experience of Japanese contractors and their business methods. I would also venture to affirm that Mr. Stevenson never made any such ridiculous assertion as "Mr. Rudyard Kipling refused to be 'personally conducted' when he was in Japan," and so forth.

Finally, I would add that I hold no brief for Mr. Stevenson; but I object, and object strongly when a gentleman (evidently personally unknown to you) is abused by you "a wild and evil-tongued

exaggerator," "an unprincipled romancer," and so on simply on the strength of an apocryphal account of a supposed interview published in one of the San Francisco papers.

I am, your obedient Servant,
Yokohama, November 29th, 1892.

"AZUMA."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your yesterday's issue, I notice that in reference to the reading given by Sir Edwin Arnold, of "Azuma," at New York, you say:—"One passage is quoted, the only one that Sir Edwin would allow to be made public property. The reason for his complaisance with regard to this particular part is said to have been that the passage in question had already been printed in a Japanese paper, but that is probably a misconception." The passage quoted did appear in No. 9 of the *Nihon Eigaku Shinshi*, or *New Magazine*, printed in this city. It was published over the poet's autograph signature.

Yours, etc., one of the Editors of the
"NEW MAGAZINE."
Tokyo, November 29th, 1892.

THE KEROSENE OIL CASE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your report of proceedings in the Appeal Court in the action brought by us against the Governor of Kanagawa Ken, attributes to one of the counsel for the respondent the following remarks:—

It is rumoured that the object of instituting the present suit was that owing to some unpleasant issue in another commercial concern, the appellants' creditors demanded immediate payment of a debt, and, for the purpose of exonerating themselves and gaining time, they alleged that they had incurred a very heavy loss through Chinese.

We desire, with your permission, to state that such rumours, if they existed, were absolutely without foundation, and we are confident that your readers and the public generally will form a just opinion, not only of the advocate who put forward such a suggestion for the purpose of damaging an opponent's case, but also of the Court which received, and the client who instigated or profited by, his baseless and malicious insinuations.

In reference to an article dealing with our case, which appeared in your issue of to-day, we would add for your information, that our appeal to the Supreme Court was duly lodged some three weeks ago.

We are, Sir, your obedient servants,
MOURILYAN, HEIMANN & Co.
November 26th, 1892.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—With reference to the communication from Messrs. Mourilyan, Heimann & Co. and your remarks on the above subject in your issue of yesterday, will you please do me the favour of enlightening me upon the following points:—

I quite agree with you that the statement in question of the Respondent's Counsel is at least unbecoming for an advocate in such an important case, while it would certainly have had the effect of injuring rather than profiting his cause; but was it not the duty—both moral and legal—of the appellants' counsel to move the Court to reprimand the offending Barrister—if he deemed the statement to be injurious to his clients—for the remarks must have been made at the same bar?

Was the Court, then, guilty of the 'sin of omission' because it did not take upon itself to reprimand the counsel, while no application or request therefor is made by the other side which was so ably represented?

You say—and I certainly think too—that no barrister has a shadow of right to prefer such a charge unless he is prepared to substantiate his words, and you hold that "it disgraces the Japanese Bar." But if I remember rightly no allusion to such rumours was made by the Respondent in the Court below when the case was conducted throughout by the Respondent's own officials. Is your correspondent then prepared to substantiate his words when he speaks of the client who instigated or profited by his baseless and malicious insinuations? The italics are mine.

If not, does this latter statement not "disgrace" the British merchants?

I am, Sir, your obedient Servant,
A JAPANESE STUDENT.
Tokyo, November 29th, 1892.

STATEMENTS BY COUNSEL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—You say very truly, of the principle which excuses in the eyes of the law the statement made by counsel in the Kerosene case, that "it finds defenders among jurists of note." You might have gone farther and said that no British or American Court would have stopped the counsel in the instance that has been criticized by the plaintiffs in that case. Here is the law of the question, as stated by perhaps the greatest American Chief Justice of the last generation (Shaw, of Massachusetts) in a passage quoted with approval by a leading Chief Justice of the present generation (Cooley, of Michigan), in a chapter on the privilege of counsel:—

The case of the party presenting his case to court or jury, or of counsel standing in his place to do the same, is also one of absolute privilege. Says Chief Justice Shaw:—

The question, therefore, in such cases is, not whether the words spoken are true, not whether they are actionable in themselves, but whether they were spoken in the course of judicial proceedings, and whether they are relevant or pertinent to the case or subject of the inquiry. . . . Much large allowance must be made for the ardent and excited feelings with which a party or counsel (who naturally and almost necessarily identifies himself with [his client]) may become animated, by constantly regarding one side only of a controversy.

Still, this privilege must be restrained by some limit, and we consider that limit to be this: that a party or counsel shall not avail himself of his situation to gratify private malice by uttering slanderous expressions, either against a party, witness, or third person, which have no relation to the case or subject matter of the inquiry. Subject to this restriction, it is, on the whole, for the public interest and best calculated to subserve the purposes of Justice to allow counsel full freedom of speech. . . . and this freedom of discussion ought not to be impaired by numerous and refined distinctions.

This is a clear statement of a wise and proper general rule, with its just limitations.

Judged by this rule, ought the Court to have stopped the Counsel in this case? His charge, in a nutshell, was that, according to rumour, the plaintiffs knew they had no case, and had brought the suit merely to satisfy the Bank's insistence. Such a matter was, in C. J. Shaw's words, very clearly pertinent to the inquiry. Suppose, for instance, the plaintiffs had been known to remark: "We know that we have no case, but we brought the suit to satisfy the Bank, on one chance in forty of winning it." Would any one say that such an admission was not highly material to the determination of the case? The fact asserted by the Counsel would, if it had been true, have been decidedly pertinent; and the Court, by the best canons of American law at least, would have had no right to stop the Counsel. So much for the Court. Whether the Counsel was morally justified in making such an assertion depends on whether he believed it to be true; but it is hard to see how an outsider has any right to prejudge him on this point.

The communication of the plaintiffs, in your columns, seems to me to be a good instance of the fragility of nine-tenths of the charges now and then made against Japanese administration of justice. These reputable and prominent gentlemen (whose feelings under the circumstances one can of course easily understand) have bitterly denounced a Japanese Court for not doing that which the highest possible American opinion would never allow them to do. The incident shows how thoroughly untrustworthy is any criticism of Japanese judicial methods made in ignorance of the professional rules and principles prevailing in the Western world. We permit ourselves in this country to criticize with the most refined captiousness that which we would not think of finding fault with in our own country. Better pluck out the beams in Western eyes before trumpeting about the discovery of moles in Japanese.

Yours, &c.,
November 29th, 1892.

THE CATTLE PLAGUE.

[TRANSLATION.]

KANAGAWA-KEN ORDINANCE, No. 68.

After the first Article of the Kanagawa Ken Ordinance, No. 64, of the year 1892, the words "but live cattle or sheep for food, for which the provisions of Art. 4 are observed, shall not come under this rule," and after Art. 3, the following Article, have been respectively inserted:—
28th, November 1892.

(Signed) UTSUMI TADAKATSU,
Governor of Kanagawa Ken.

Art. 4.—Persons desirous of importing live cattle or sheep for food shall observe the following rules:—
1. Before importing cattle or sheep, a previous permission shall be obtained from the Committee for the prevention of the cattle plague,

—stating the names of the localities from which the cattle or sheep have to arrive, the route, whether by railways or by vessels, their number, their destination, and the probable dates of their arrival.

2. As soon as they arrive, report thereof shall be made to the Committee for the prevention of the cattle plague, who will examine the cattle or sheep thus arrived, and, if found, or suspected to be, sick with the cattle plague, those cattle or sheep shall not be introduced, but if found in good health, they shall then be removed to a fixed place for the purpose of being re-examined there.
3. Cattle or sheep found to be in good health after the re-examination, shall be immediately taken to the butcheries and slaughtered—those showing symptoms of the disease shall be detained at the place and be dealt with in accordance with the directions of the Committee for the prevention of the cattle plague.

ST. ANDREWS BALL.

Once again has the swift passage of months brought us nigh unto the close of the year, and already the sands of November have run out amid the sounds of revelry and dance accompanying the loyal celebration of St. Andrew's Day. From "Caledonia stern and wild" unto the sunny land of Japan, in every place by North and South, by East and West wherever the sons of Scotia are gathered together, be it only in bands of twos or threes or be it by the hundred, their patron saint on the 30th of November is duly honoured. Dear are the recollections which cluster around that day to many a canny exile from the rugged Northern Kingdom which still holds stedfast to the memory of the charming but ill-fated Prince Charlie—their Bonnie Prince Charlie—and many an eye grows bright and many a heart beats high as Scotsmen foregather in the evening at dance or dinner to help each other break down the barriers which distance and years of absence have gradually flung around the once familiar sights and scenes of the old home. In Yokohama it has been the custom for several years past to celebrate the occasion with a ball, the St. Andrew's Society being the patrons. This year, the function was held as usual in the Public Hall, and in no respect was there any falling off in the hospitality accorded to one and all by the committee, or in the pleasures and gaieties afforded by the dance programme. The visitors, as usual, were a goodly number indeed, and many came down from Tokyo. The ladies, as in previous years, looking upon St. Andrew's ball as the event of the dancing season, wore their daintiest and most charming dresses and some confections, did space permit, deserve notice for the exquisite taste shown in the designing.

The hall was arranged somewhat as in previous years. The ante-chamber adjoining the main entrance was converted into an upper saloon, and was neatly decorated with bamboo and other foliage, several heraldic shields being used as mural ornaments. The vestibule received similar attention and was arranged with lounges. The dancing room itself was most lavishly beautified with flowers, foliage, and bunting. Upon the walls were the shields of the Buchanan, Douglas, Fraser, Campbell (McCullum More), Cameron, and Clan Stewart families, each surmounted by the red lion rampant of Scotland, and draped with various national flags. The shields arranged upon the wall facing the stage were three, the Cross of St. George and the Irish harp at the sides, with the Cross of St. Andrew, charged with the Japanese Emperor's crest—Chrysanthemum—in the centre, and draped with Japanese and Scottish flags. Over the front of the proscenium was draped the Lion of Scotland supported by St. Andrew's crosses, chrysanthemums filling in the corners, while underneath ran the words:—"Should auld acquaintance be forgot,"—a very happy conceit. The stage proper was turned into a cosy withdrawing room having the most seductive of lounges and settees, while behind in the Green-room, the ladies had an apartment all to themselves. The card room, as usual was upstairs, while the cloak rooms were fixed at the end of the vestibule. The general scheme of decorations was superintended by the Committee, headed by the Vice-President, Mr. C. E. Buchanan-Dunlop. They were Mr. R. W. Borthwick, Mr. D. McNeill, Mr. J. Johnstone, Mr. A. Patteson, and Mr. R. M. Stirling who found an indefatigable secretary in Mr. C. W. Ure. These gentlemen during the evening wore silver St. Andrew's crosses on Royal Stuart tartan rosettes. Other decorated personages were the stewards who wore Royal Stuart tartan badges, and the members of the St. Andrew's society who wore content with plain badges—St. Andrew's cross on a blue shield. The flowers and foliage were

supplied Messrs. Boelmer and Co., and arranged by Mr. Unger of the same firm, Mr. E. J. Moss supplying the furniture, screens, etc. The piano was lent by Mr. Doering. We must not forget to mention that Captain Castle, of H.M.S. *Leander*, kindly supplied the bunting and flags, and also sent a company of blue jackets to hang them. The Tokyo Marine Band was in attendance and gave a very good selection of dance music. Supper was supplied by the Club Hotel.

MOUNTAINEERING IN THE JAPANESE ALPS.

BY WALTER WESTON, M.A., F.R.G.S., ENGLISH CHAPLAIN, KOBE.

(CONTINUED.)

Owing to clouds, the distant view was very limited, though once we caught sight of the mighty, serrated ridge of Ontake, next to Fuji the most elevated of all the sacred mountains, on whose summit I was standing exactly a year ago.

This lies a little to the W. of South, and in the same direction, though only just at the base of the great ridge on whose topmost point we stood, lay the beautiful lake of Oike, whose waters form the source of the Adanogo-gawa, the name borne by the upper part of the Masuda-gawa, itself again known as the Hida-gawa when entering the province of Mino on its way to join the great Kisogawa, as I have mentioned, near Ota on the Nakasendō.

A rest of half an hour is enough, and then comes the descent. A stop for lunch at the lake we had passed on our way up; another halt while the preserver of lives spent much energy in frantic but futile efforts to take that of a ptarmigan which had a provoking way of stopping until nearly within reach, and then darting into the low level clumps of *haimatsu* that formed its shelter; ups and downs along our track of the morning, and we are once more at the head of the torrent bed which had given us a pleasant climb on the ascent. But going down was no more pleasant than that of the steepest moraine of an Alpine glacier, and it was here that the *waraji* (straw sandals) of the coolie had a great advantage over our hob nailed boots, the former giving a much better hold on the slippery smooth boulders down which we had to make our way. But even this was not so trying as the passage of the forest-covered spur of which we cherished anything but the pleasantest recollections. On emerging from this we found that it had been left at the wrong point and some time was lost in descending to one where the torrent could be crossed.

It was now raining steadily, and after scrambling hard up the shale slopes to the huts of Kozan, we lost no time in gathering together the things we had left there in the morning, and after a hearty farewell to our hospitable friends—whose first guests we had been—we applied ourselves with all speed to the descent. This took just 1½ hour, the path being now in very bad condition through the wet, and it was 6.45 as we, and the darkness with us, came down on Hirayu once more. Many congratulations were offered on our safe return, and great was the curiosity evinced towards us, during the quiet Sunday we spent in our modest quarters, by a constant throng of persons of all ages, who on any or no excuse were perpetually standing gazing in at our open *shoji* like the curious crowds before the cages in a wild-beast show.

There is something interesting, though sometimes rather inconvenient, in this ingenious curiosity so common amongst the Japanese. Those foreigners who have ever chanced to walk along the street, or enter a shop in any town where such a visitor is at all uncommon, are familiar with the inevitable crowd which gathers at one's heels, or congregates outside the shop-front, themselves far more interested in the foreigner than even he can be in his sightseeing or his purchases. Probably we feel it much more than they would because we are more given to mutual criticism and therefore become more self-conscious, whilst their politeness, whatever disadvantages or un-realities it may otherwise possess, tends to prevent such habits. It is for some such reason as this that the saying of a certain French writer finds so much less application amongst the Japanese than is the case with ourselves. "Il n'y a rien que rafraichisse le sang comme d'avoir su éviter de faire une sottise."

Having successfully carried out our designs upon Norikura, we next turned our attention to the question of the ascent of a splendid rocky peak whose grey cliffs and shining snow-slopes form such a striking picture as we look down the narrow valley to the N.W. of the village.

Its name, Kasa-dake, is known to few but those who live within its neighbourhood, for even tra-

vellers whose journeyings have taken them off the usual beaten tracks, would rarely catch sight of it except when in the remotest parts of the secluded province. On making enquiries we were told that the ascent could possibly be made from a lateral valley which runs to the N.E. from that in which Hirayu lies, and also that from the same locality we should be able to cross over the main chain of Hida from west to east and so reach Matsumoto by a short cut, though, doubtless, a very rough one. It is true, that no one had ever been known to do either the one expedition or the other, but still we should be able, they told us, to accomplish both if only we proceeded to a certain place called Gamada in the valley above mentioned. There we should get information, guides, and all that we wanted, including hot mineral baths free of charge. But we were doomed to disappointment.

At 11.30 we left Hirayu and made our way down the close stuffy defile which forms the only natural way out of the basin in which that village lies, and after a descent of some 1,200 feet as far as the hamlet of Hitoegans, we turned to the right and crossed an extremely steep ridge into the valley up which the path to Gamada leads. After descending on the other side of the ridge, the broad stony bed of a stream which flows into the Takahara-gawa is crossed by a curious long log bridge which is anchored fore and aft in the oddest manner to a great heap of rocks on the one side and the bank on the other. Safely over this, we turned to the right and, after a walk of a ¾ miles from Hirayu, Gamada is reached at 2.30. On making known our object to the old gentleman to whose care we had been recommended, one Jimbei something or other, he at once cast a wet blanket on our hopes by pronouncing the expedition impossible. However, he said he would make inquiries, and let us know later on. In the meantime, we went to solace ourselves in the mineral baths, of which we had heard at Hirayu, and this over we took a stroll up the village path to a point where, from a hole in the bank of the torrent and close to its surface, a column of steam was seen escaping. The phenomenon was a very curious one, but we were unable to get across to investigate it. In the evening our host had a consultation with the headman of the village on our behalf, the result of which was that our expedition had to be abandoned, at least for the present. The rivers had burst their banks, bridges washed away, and worst of all, nobody was willing, or at any rate able, to accompany us.

So the next morning by 10 o'clock we were back in Hirayu, and on the following day, shortly after 6 a.m., we were leaving there for the passage of the Abō tōge, the highest and least frequented, though shortest, of the passes leading over the mountains from Hida into Shinano.

Probably no walk of 25 miles is to be found in the whole of Japan to surpass, if even to equal, this one from Hirayu to Shimajima (also called Hashiba) by way of Onogawa.

For some distance the narrow path leads up a steep ascent, whilst now and then care is needed where one has to cross the remains of a landslip in whose downward course great firs have been uprooted and snapped in twain like mere match-wood.

But no difficulties are met with at a single point, and the grateful shade of the glorious forest, all solemn and still except for an occasional song-bird—perhaps a sort of nightingale—or for the voice of a distant torrent, gives one a sense of quiet and restfulness beyond description.

Long will that day's walk live in our memories as one of the most repaying, in every sense, that we ever had.

For some time no view but that of the dark slopes on the opposite side of the valley we were ascending was gained, but after crossing the head of the pass (5,400 feet) and winding round the hill-side to the right, a glorious view of the snow-streaked flanks and precipitous ridges of Kasa-ga-dake burst upon us and irresistibly compelled us to halt and gaze in silent adoration.

Very striking was the contrast between its grey ruggedness with the soft outlines of the other densely wooded hills whose flanks as yet are untroubled by the woodman and whose timber has not yet begun to fall before his destroying axe.

But one cannot linger long, for there is still so much ground to be covered before our journey's end is reached. At the top of the pass we have crossed from Hida into Shinshu, and by and by the surroundings for a time are less striking.

At length, far down on the right, we see the steam rising up from the valley in which the hot springs of Shirahone lie, and then the strong broad current of the stream has to be crossed by means of a couple of long thin pine trees laid across. It isn't the nicest kind of bridge to those not possessed of the balancing powers of a Blondin, and great is the relief to be safely landed on the

other side. For to feel the slippery pole bending and swaying at every movement of the body, whilst all the while the flashing waters as they rush below in swirling eddies dazzle one's eyes in the most distracting manner—this is somewhat trying, though doubtless it does afford an opportunity of asserting the power of the will as opposed to that of the imagination and the fears thereby inspired.

An hour before Onogawa is reached, a stiff ascent for a short distance brings us to the top of another pass—the Hinoki-tōge—and as our porters are now far behind, and with them our food, we stop at a little wayside *chaya*, of the most modest kind, for refreshment.

Little, however, is to be had that is eatable, though we are certainly too hungry to stick at trifles. Dried peas, we have heard, are very sustaining, and perhaps the aged person in charge has learnt this fact for of these she has a bountiful supply and with them we proceed to appease the pangs of hunger. But Onogawa is now only some three miles away, and pushing on again, by two p.m. we are at the comfortable inn kept by Okuta Kiichi, picturesquely situated on the banks of the Mayegawa in whose cool clear stream we soon enjoy a most delicious and refreshing bath. A long wait was necessitated here by the late arrival of the baggage, and it was not until 3.30 that we got off again. But the interval was pleasantly enough filled up by welcome repast on fresh trout, cakes, and tea, served with the most charming attention on the part of our host and his wife, the former of whom to his occupation of innkeeper adds that of a subordinate official in the Agricultural Department, in witness whereof his bottle green uniform hung in a conspicuous place on the little verandah near our room. His courtesy received a reward in the shape of a diagnosis of a sickness he was troubled with and a prescription for the same, with which attention he in turn was highly delighted. Happily for his guests his gratitude, unlike that which may be too often described as a lively sense of favours to come, took a practical form, and, by the time our Hirayu coolies had arrived, there were, thanks to his kind offices, already waiting a fresh trio to take their place, and so well did they work that day that we were bound to admit we had not yet met with such a sturdy set of porters since we began our tour.

The first part of the way from Onogawa led over a new road on the left bank of the Mayegawa, but judging by the landslides which here and there had completely carried it away, it would seem to have been rather unwisely planned. In such spots as these the passage over the gaps in the precipitous hill sides were made over slender fir poles, supported, somewhat insecurely, by struts of timber from below.

But this only served to make the journey more interesting, and when the corner was turned where on the left the Adzusa-gawa receives the waters of the Mayegawa, the scene became inexpressibly beautiful. For the next 8 or 9 miles the walk takes one through a great ravine whose sides rise up so abruptly from the water's edge that it almost seems as if it is too difficult for the road to keep its hold, and out of sheer despair it has in more places than one tumbled bodily into the river a hundred feet below. These broken spots demanded a good deal of care, and one in particular will be long remembered as giving us as good a bit of climbing as we had on our travels. The road here had not been cut into the living rock, but built up round its smooth perpendicular face, and as no foothold was to be had, the pathway having vanished, it was necessary to scale the face of the cliff at an earlier point, and then, crossing over to another point above the road beyond the gap, to descend to the path once more. The passage was not a long one, and with the aid of an ice-axe and a strong line we had with us it was safely negotiated. But the experience was as exhilarating as it was unexpected, and sufficiently diverted our attention for the time being to enable us to resume our delighted contemplation of the glorious scenery about us with increased zest. High up on the left a curious 'water-slide,' so to speak, comes over the black rocks to join the emerald stream below. It is neither a cataract nor a torrent, for the water seems to *glide* rather than rush or fall, over the face of the nearly perpendicular cliff, whilst the effect produced is similar to that noticed in the case of the great stone basin in the precincts of the temple of Iemitsu at Nikko. For there the edges of the basin are so finely chiselled that the water flows out on all sides with the most wonderful evenness.

It is between Onogawa and Mekiki that the perfection of the marvellous loveliness of this grand route is to be found, and so high and steep do the sides of the valley rise that it was already getting dusk when the latter village was reached at six o'clock, and by the time we had finished the slight repast we stopped for a little while to take,

Original from

the shades of evening had closed in and the 2½ miles on to Shimashima were accomplished by lantern-light. How stony the path always seems that has thus to be traversed by the traveller belated! What boulders and holes are then discovered, which pass almost unnoticed in the broad light of day, when once the yellow rays of the swinging *chōchin* begin to cast the shadow which sunbeams never make. And as we trudge doggedly on we long for something to break the monotony of the tramp, each step of which, but for an occasional stumble, is exactly like the last and will be like the next, seeming to bring us no nearer home. On this occasion, however, our monotony was broken at one point in a manner nearly as disagreeable as unlooked for.

Readers of Mark Twain's "Tramp Abroad" will remember the dilemma in which that writer was once placed owing to suddenly meeting with a pig when on his way across the well known Mauvais Pas near Chamoni. When the encounter took place neither party at first was willing to give way, and it was impossible for either to pass the other.

As the writer remarks, the idea of a pig on a pleasure excursion in Switzerland was extraordinary. But it was no use reasoning with the pig for he was not open to argument, his motto being *Vestigia nulla retrorsum*, and the difficulty only found its solution in an ignominious retreat on the part of the humourist until the obstreperous porker could be driven by without the risk of dashing him to fragments on the rocks below. The diversion we met with was in the sudden appearance of a vicious horse who, on the sight of our lanterns, as we turned a corner in the road, became exceedingly restive and began to charge in our direction so violently that escape was sought in instant and ungraceful flight up the steep bank on our right hand, the only other alternative being a headlong downfall over that on the left, a result involving not merely breaking the monotony of our walk, but a good deal more besides.

But Shimajima at length is near; already the lights are seen shining like glow worms in the darkness of the still valley on the opposite side of the river; the path takes a turn sharp to the right, and a sudden plunge down to the massive wooden bridge; then a few steps up the steep and stony ascent to the entrance of the village and here is the Shimidzuya once more, whose hospitable walls last year gave us shelter when bent on the same expedition as that which has brought us here to-day.

Then comes the ever welcome bath—a substantial meal, and we are ready for a council of war with one of the three bear-hunters who twelve months ago piloted me to Yari-ga-take. One of them, he tells me, is dead, but he himself and his two brothers will be glad to come and help us to complete this time what then so narrowly failed of success.

AN ASCENT OF YARIGATAKE—THE MATTERHORN OF JAPAN.

A glorious morning—exquisite scenery—the best trio of guides, indeed almost the only men really deserving of the name I have had in Japan, as our companions, and once more here is the twice-trodden track up the beautiful valley on whose right rises the lower ridge of the great mass of mountains which culminate in the sky piercing shaft of the second loftiest peak of this land of mountains. All these things combine to give us promise of one of the best expeditions we have known. The fresh pure air of the cool valley, the dew-drops trembling like diamonds on the foliage, the blue vault of heaven above, and the rushing emerald stream below, why, existence itself is a pleasure. It is a joy to live in such scenes as this. Here, indeed, we are in Nature's Academy, nay in God's own picture-gallery itself, hung with some of the Creator's masterpieces. And as we step out with lighter tread our hearts bound again with exultation at the glorious prospect before us. But we are not in the mood for conversation. For it is rather a time for silent contemplation, and we should be dull and thankful indeed if our hearts were not lifted the higher by the ennobling influences of the hour. So for a while each leaves his neighbour to himself, until at length our attention is diverted by our arrival at a little wayside hut which has been put up since I was here last year, and which goes by the name of *Burō-tairo*, for here a chalybeate spring has been recently discovered and its waters, artificially heated, are said to be efficacious as a remedy for many of the ills to which the human flesh is heir. An extraordinary institution is this in a valley whose only frequenters are an occasional bear-hunter or the coolies engaged in pushing on the path that is to lead over the ridge at its head down to the upper waters of the Adzugasawa. The courteous old custodian, interested at our arrival in these wilds, insists on our stopping to drink the tea he at once proceeds

to prepare, and there is no saying "nay" to his kindly importunity, through a refusal has to be given to his further pressing invitation to test the healing virtues of his novel *furō*. For we have a long day's march before us, and we want to advance as near the base of the mountain as possible to-night, mindful of the distance still between its summit and ourselves.

At an altitude of 3,700 feet stands the Dashinosawa, only some 7½ miles out from Shimajima. But it is on the opposite side of the stream, and has to be reached by a curious slanting bridge, made of pine poles fixed, one above the other, on tiers at an angle of above 30°. At this hut I last year spent two nights, but now it was closed and we could not get in. It accommodates 8 persons besides fleas beyond computation. Since last I passed through this valley a good deal of progress has been made with the path which the Nōshōmushō (the Department of Agriculture and Commerce) is constructing. It has now been carried right up to the summit of the Tokugo-tōge, a pass which crosses the range running parallel to the great *grät* or ridge of which Yari-ga-take is the highest point. Ultimately it will head down to the Azusa-gawa, and then probably, crossing that river, come out on the Hirayu side of the chain. Should this be the case it would afford a grand "High level Route" from Shinano into Hida, and greatly facilitate travel through the grandest and wildest district in Japan.

The climb up to the top of the pass, which stands about 7,100 feet above sea-level, and 4,400 above Shimajima, between Nabekamariyama on the N. and Kasumi-ga-take on the S. is very steep, and interminable seem to be the zig-zags of the path whose sinuous windings slowly crawl through the bamboo grass and up the tree-clad slopes. The afternoon grew very hot, and even the little half wild dog our guides had brought with them seemed to feel that the pull up the *tōge* made it a thirsty journey. But perseverance gained the day, and at length the summit is reached, whereupon, our coolies being far behind, the shadiest spot is sought for and with it well-earned *hiru-ne*.

The descent to the river on the west side of the pass was a different matter from the ascent we had just accomplished. For a short time the path winds through dense bamboo grass and then hopelessly loses itself in the broken rocks of a torrent feeder of the Adzugasawa. These are very loose, and care is needed to avoid slips and sprains.

It is a welcome relief to be able to leave this when the more level ground of the forest by the river bed is reached.

Striking through this to the left, we at length came to the Tokugo hut at which also I spent a night on my former expedition.

It is grandly situated, for straight in front, rising abruptly from the flat ground on the opposite side of the stream, the magnificent peak of Miōjindake raises its head like a mighty sentinel guarding the approaches to that shrine of nature whose lonely grandeur we were invading.

A splendid mountain is this great granite giant, in form and position reminding one forcibly of the Aiguille du Dru near Chamoni. It sides are mostly too steep to hold the snow, but here and there on the gentler slopes lie gleaming sheets, and in clefts and gullies on the higher ridges white threads throw out the surrounding rocks in darker relief.

At times we were almost tempted to transfer our affections from Yari-ga-take itself, and devote ourselves to this, but the thought had to be put aside, with the hope that at some future time we might be able to return and pay our addresses here also.

A short rest at the hut, and we pass through the forest to the edge of the broad strong current of the Adzugasawa whose waters the day before had been our companion on the never to be forgotten walk from Onogawa to Shimajima.

The coolies first transport the baggage across the stream and then we ourselves, pick-a-back, make the same journey. At first it was our intention to march on as far as a cave about five miles from the Tokugo hut, near the junction of the valleys which enclose a spur running down from the main mass of Yari-ga-take, but the day was already far advanced, and after going about 2½ miles we decided to encamp in the forest near to a spot at which last year we started an eagle in the act of devouring its quarry in the shape of a *ten* (Anglice *marten*). Wood of course there was in abundance, of water a no less bountiful supply, and it was not long before one of our men brought in some delicious trout he had taken with his bamboo rod and a line of the simplest kind. Having selected a suitable spot, we proceeded to sling the hammocks we had brought with us on trees conveniently situated. Over these we made a roof of mosquito netting and Japanese oil-paper, for though the night was fine and rain unlikely to fall, we had still to guard against heavy dews which are sometimes quite as effective as a heavy

shower. In the meantime the men were busy gathering fuel and putting up a rude shelter for themselves, and soon we had a grand fire blazing, and all was cheery and bright. Did ever trout taste so dainty? Was ever curried fowl so appetizing, or Cocoa—not Epps' of that ilk, but, best of all, de Jongh's, ever prove so "grateful and comforting?" And then the stars begin to light the sky, and clear and cold the moon rises from behind the dark pine clad ridge behind the camp and the lonely form of Miōjindake with its pale slopes and lines of snow looms up in solemn grandeur before us.

The calm stillness is unbroken save for the low distant murmur of the broad stream over its stony bed, and over all comes a quiet hush which one is loth to break. But an early start has to be made on the morrow, and we take to our hammocks while the guides are still smoking their pipes by the fire and talking on, though more stolidly than is usual with this volatile impressionable people.

"Early to bed and early to rise" having been our motto last night, we were up with the sun this morning, for we were obliged to wait for the appearance of that luminary before we could make a start, to do so by lantern light even being almost impossible. The oil-paper roof of our "tent" is as wet with dew as if it had been out all night in the rain, and such parts of the mosquito net as have been exposed are soaking. A substantial breakfast follows the morning "tub," and at 5.50 we strike the camp, and taking with us as much as we need for the day, are on our way in real earnest, with eager anticipations of a grand expedition. First comes a long stretch of smooth stones and boulders white and round, by the river's edge. Then we cross a corner of the forest for a while, at length coming out near the junction of the valleys already referred to just after an hour's steady walking. This spot is called Yokōdani, and about half a mile up the wild torrent valley to the left lies the cave I spoke of. It was this valley that last year I ascended, being a shorter, though more difficult, route up the mountain than that up which the two former ascents of Yari-ga-take had been made. That it was more difficult I was fully able to endorse, but I also believe the distance to be greater, though the scenery is more interesting, and the torrent has not so often to be crossed. It is this crossing from side to side, either by wading, or leaping, where possible, from rock to rock, that takes up much time on expeditions of this kind, these torrent-valleys being often the only means of approach to the bases of the great peaks in the heart of this and similar of the higher ranges in this country. The Yokōdani route is one of savage grandeur exceeding in wildness anything of the kind, probably, to be met with in Japan.

On the left rises the bold form of Miōjindake, next to it, northwards, comes the serrated ridge of Hodakayama which is connected by a broken *arête* with Yari-ga-take itself. The ascent follows the valley up to its head, where the torrent rises in the broad snow slopes which sweep down from the grand amphitheatre of heights to the south of Yari-ga-take. Leaving the torrent behind, a climb over the snow, followed by a stiff scramble up broken ground to the right, brings one to the lowest point in a narrow ridge overlooking the eastern sides of the two peaks last mentioned. It is on the snow slopes which have now to be crossed, as one traverses the base of the cliffs of Hodakayama, that the ordinary route falls in, the way to the summit of the peak now being the same for either.

On the present occasion we decided to take the route up the valley to the right, and after 1½ hours steady work now crossing the torrent, now scrambling along the boulders at the side, and again clambering through the dense bamboo grass and thickets high above it,—at length we halt at the foot of Chōgazake and a lateral valley on the left opens out to us our first view of Yari-ga-take's aiguille like-summit.

As a rule we have kept nearly all the way along the course of the torrent, but now and then a slight detour takes us through a side stream, and in one of these I had an impressive reminder of the fact that for this kind of work *waraji* are preferable to hob-nailed boots. For my own nails were getting kicked out, and when crossing from one rock to another, I failed to get a proper hold on the slippery surface of the water-worn boulder and the next moment I was cooling my heated frame in the snow-fed stream, having sat down with great emphasis in the torrent after the manner of the commencing skater in his earliest efforts.

About 3 hours walk from Yokōdani brought us to a point where we were able to leave the water and take to the wood on the right hand side of the valley, and after a hard struggle with the dense undergrowth we emerged on to a steep slope of rotten red rocks, fragments of which, very loose and very

sharp, made the going none of the pleasantest. Crossing this we again plunged into the forest, a moment before having caught sight of the snow slope high up on the rocks to the left, which lies nearly opposite to the cave known to the hunters as the *akasaka no-iwa-goya* "the red cliff cave."

A steep scramble here brings us close to the bank of the stream once more, and before us lies the huge wedge of rock which serves as a shelter to hunters when here on the track of the bears and sheep-faced antelopes in which this wild valley abounds. It was this spot at which I had an interesting experience last year when, being unexpectedly belated on the descent from the 'spear-peak,' I had to bivouac under the lee of the rock, in pouring rain, almost without food—nor having fed for a good many hours. But we were not the worse for it then, and it was with the keenest interest and pleasure that one again gazed on the scene of past enjoyments. It was now 11 a.m. and as it seemed unlikely that we should be able to complete the ascent of our peak and get down to our last night's encampment to-day, we decided to send back one of the three hunters to that spot to bring up some extra clothing and food against our return to the *Akasaka* cave.

Meanwhile, after a long halt, we again set off, and at 12-15 descending to the stream, we once more followed its course until in about 45 minutes we were able to leave it for the loose rocks and steep slopes to the left. *Yarigatake* now comes in full view, and the sight of the great obelisk before us spurs us on to further efforts. These at last place us clear of the debris-covered steeps, and several long slopes of snow give a pleasant variety to the climb and bring back happy recollections of happy days spent in Alps of wider fame than those of Japan are ever likely to know. For there is no danger of these becoming 'fashionable' mountains in the way it has been suggested—though not altogether seriously, let us hope—that some of those in the land of Tell may one day be. The late President of the Alpine Club (Mr. C. T. Dent) in the course of a witty and interesting address to its members, stated that Switzerland might now almost be advertised as a scholastic pension. "A large staff of first-class professors always in attendance. Lifts provided to many of the minor summits. Home comforts. Terms moderate. Wine also moderate." Above the snow slopes a wilderness of broken rocks stretches up to the base of the final peak, recalling vividly a passage of Ruskin's in the 4th volume of his 'Modern Painters.' "I can hardly conceive of any one standing face to face with one of these towers of central rock, and yet not asking himself, Is this indeed the actual first work of the master, on which I gaze? Was the great precipice shaped by His finger, as Adam was shaped out of the dust? Were its clefts and ledges carved upon it by its Creator, as the letters were on the tables of the law, and was it thus left to bear its eternal testimony to His beneficence among these clouds of Heaven? Or is it the descendant of a long race of mountains, existing under appointed laws of birth and endurance, death and decrepitude? There can be no doubt as to the answer. The rock itself answers audibly by the murmur of some falling stone or rending pinnacle. It is not as it was once. Those waste leagues around its feet are loaded with the wrecks of what it was. On these perhaps, of all mountains, the characters of decay are written most clearly; around these are spread most gloomily the memorials of their pride, and the signs of their humiliation. What then were they once? The only answer is yet again—"Behold the cloud?"

This "aspect of destruction" in the cliffs of the *Chamonix Aiguilles* is very noticeable too in these of *Yarigatake*, their Japanese representative. Some of the larger fragments of rock that have been rent from its ridges have fallen into such position as to form caves, one of which, in particular, would afford a very fair shelter for any traveller disposed to spend a night in such a situation. Having no desire, however, to do so on this occasion, we pushed on, and by three o'clock were on the saddle from which the arrow like summit rises. A grand climb up the smooth rocks of the south-east arête for about 400 feet, a sharp turn to the west and then we overlook all else. *Yarigatake* is ours and, save for "Fuji the peerless" itself, we are on the highest point of the surface of the "land of the Rising Sun."

This consists of a short narrow ridge of bare rock nearly perpendicular on all sides but the south-east, and the view, as one looks straight down into the wild and desolate valleys that stretch away from the base of the mountain, is most impressive. To the north lie the almost unknown peaks of the range between the provinces of *Shinshu* and *Eichu* which stretches far towards the Sea of Japan.

On the west stands the rugged form of *Kasagadake* which we think would afford a grand climb from the valley which separates it from us.

Southwards, the eye rests on the nearer giants of this group, *Hodaka-yama*, *Miojin-dake* and the massive double topped *Norikura*, and beyond these *Ontake* with the *Komagatake* of *Shinshu* on its eastern side. To the south-east, but farther off, stands the great mass of mountains on the borders of *Shinshu* and *Koshu*, the most prominent peaks being *Shirane-san*, *Akahi-san*, and *Kamagatake*. But most striking of all is the stately cone of *Fuji* rising with its majestic sweep supreme above all else, at a distance, as the crow flies, of over 85 miles. To enumerate all the summits to be seen from the point on which we stand would be to give a list of all the grandest mountains in Japan. Only the haze and clouds to the north-west prevent our view from embracing the sea in the bay of *To-yama*, so that nearly the whole width of the central portion of the empire is included in this magnificent prospect.

The altitude, from a comparison of observations taken last summer and on the present occasion, appears to be 10,000 feet.

(TO BE CONTINUED.)

LETTERS FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, October 25th.

As I closed my last letter in great haste on the morning of the opening day of the dedicatory ceremonies of the World's Fair, I could give only a few sentences concerning that event; but now I can take up the story from the beginning, and give a more detailed account of what was going on. The guests and visitors were literally innumerable, and thus gave a foretaste of the immense crowds which must be handled during the period of the Exposition.

Wednesday, the 19th, was devoted to meetings of the various official bodies of the Exposition, and to Columbian celebrations in all the public schools of the city. The latter, in the main, followed this official programme:—

Reading the President's proclamation.
Raising the flag.
Salute to the flag, by the pupils.
Music—America, "My Country 'Tis of Thee."
Acknowledgment of God, in song or selected reading.
Song, "Columbus Day."
Historical essays, readings, declamations, and patriotic songs, as arranged by the teachers.
Song, "Columbus," by Joaquin Miller; arranged by O. Blackman.
Address by a pupil, "The Meaning of the Four Centuries."
Ode, "Columbia's Banner," by Edna Dean Proctor.
Song, "Flag of the Free."

The great event of Thursday, the 20th, was the grand civil parade which, with the immense concourse of spectators, fairly choked the main streets down town. In the business portion bounded by the lake, the river and Van Buren Street, no vehicles were allowed after 9 o'clock, except express companies' waggons and supply waggons, and those only by special card from the Mayor. The crowds began to gather early in order to get good positions, in windows, on balconies, on roofs, on wooden platforms manufactured specially for the occasion, on cornices and corners, on posts, or on the side of the street. The reviewing stand was erected in front of the post-office, and was reserved, of course, for special individuals, such as the guests from abroad, the press representatives, the officials of the Expositions, and school children, who, at each end, were arranged, according to the colour of their costumes, in such a way as to form the national flag. My press badge and ticket procured me admittance on the stand, from which I was enabled with comfort to view the parade. There I had the pleasure of presenting the compliments of the *Japan Mail* to the Japanese Minister, Mr. Tatenos, his Secretary, Mr. Miyakawa, and Mr. Tejima, World's Fair Commissioner. The list of organizations and prominent individuals participating in the parade occupies a full page of a daily paper, so that I can only summarize briefly. The van of the procession came in front of the post-office at 12.25 o'clock, and the rear passed by at 3.15 o'clock. There were so many hands, that there was no cessation of music. The mounted police, the Chicago Hussars, the city officials, G. A. R. veterans, with part of the Italian organizations, were in the van. Next came the governors of States with their staffs and, perhaps, troops of militia. The Connecticut National Guards with their brilliant uniforms of the Eighteenth century; and the Cleveland (Ohio) Greys attracted the chief attention. Among the governors, Patterson, of Pennsylvania; Russell, "the boy-governor" of Massachusetts; Flower, of New York; McKinley, of Ohio; Rifer, of Illinois; and Boies, of Iowa, were greeted with tremendous applause. The most striking appearance of the

entire parade was that of the boys of the Carlisle Indian School. They followed a band of their own to excellent music, and marched in perfect ranks. One file, under a banner inscribed "education," carried books and slates under their arms; then came farmers, printers, bakers, carpenters, blacksmiths, shoemakers, tinkers and tailors, each boy carrying an emblem of his occupation. Then there were Orangemen, Scotch, Polish, Swedish, Norwegian, Hibernian, Italian, German, and Grecian Societies, the County Democracy, U.S. troops and State militia, Knights Templar, Foresters, Ancient Order of United Workmen, Catholic organizations, etc., etc. There were only two or three floats, of which one, of course, represented Columbus discovering America. It has been estimated, that there were about 75,000 men in line, and probably 1,000,000 spectators. The parade was reviewed by Director-General Geo. R. Davis, of the Exposition, and Vice-President Morton. The school children sang patriotic songs.

Thursday evening, a grand feast was given at Kinsley's by the Fellowship Club in honour of Vice-President Morton. The foreign diplomats, the Cabinet, the Governors, the Supreme Court Justices, members of Congress, Exposition officials, and other distinguished gentlemen, in all about 150, were present. Speeches were made by the Presiding officer, John W. Scott, of the *Chicago Herald*; Vice-President Morton; Lyman J. Gage; John W. Foster, Secretary of State; Baron de Fava, Italian Minister; Chief Justice Fuller; Major Washburne; Chauncey M. Depew; Whitelaw Reid; and Richard M. Hunt; and various songs were sung.

Friday, October 21st, was the greatest day of the week. Although the dedicatory ceremonies were not to begin till 12.30 o'clock, as early as 9 o'clock the cable cars and the Illinois Central trains were packed with people hurrying out to get a good chance at the seats. I went in about 10.30, and found a pretty good place in the press section. The waiting crowd were entertained by the practising of the chorus of 2,500 persons. About 9 o'clock the procession started from the Auditorium on its route of nine miles to Jackson Park. The procession included General Miles and staff, the Chicago Hussars, several troops of U.S. cavalry, the Toledo (O.) Cadets (on bicycles), the governors, Exposition officials, foreign diplomats, the Cabinet and other prominent individuals. On the way, a stop was made at Mr. H. N. Higginbotham's residence, corner of Michigan Avenue and Twenty-ninth Street, to take in Vice-President Morton. Down Michigan Avenue and Grand Boulevard the magnificent line moved to Washington Park, where, together with the U.S. infantry, it passed in review before Vice-President Morton: then it moved on over the Midway Plaisance to Jackson Park, where it arrived, the van about 12.30 and the rear about two o'clock. Inasmuch as luncheon had to be served to all, it was after 2 o'clock before the exercises began.

The immense Manufactures Building, 1,687 by 787 feet, was filled with a concourse of 150,000 people, who, though not absolutely quiet, kept in good order and in good humour. The programme was as follows:—

- 1.—"Columbian March and Hymn."
- 2.—Prayer by Bishop Charles H. Fowler.
- 3.—Introductory address by the Director-General.
- 4.—Address of welcome and tender of the freedom of Chicago, by Mayor Washburne.
- 5.—Selected recitation from the Dedicatory Ode, written by Miss Harriet Moore, by Miss Sarah C. Le Moyne; World's Columbian Chorus; World's Fair Children's Chorus.
- 6.—Presentation by the Director of Works of the Master Artists of the Exposition, and award of special commemorative medals.
- 7.—Chorus—"The Heavens are Telling"—Haydn.
- 8.—Address—"Work of the Board of Lady Managers"—Mrs. Potter Palmer.
- 9.—Tender of the buildings from the President of the World's Columbian Exposition to the President of the World's Columbian Commission.
- 10.—Presentation of buildings by the latter to the Vice-President of the United States.
- 11.—Dedication of the buildings by Vice-President Levi P. Morton.
- 12.—"Hallelujah Chorus" from the "Messiah"—Handel.
- 13.—Dedicatory Oration—Henry Watterson.
- 14.—"Star Spangled Banner" and "Hail Columbia" with full choral and orchestral accompaniment.
- 15.—Columbian Oration—Chauncey M. Depew.
- 16.—Prayer by Cardinal Gibbons.
- 17.—Chorus "In Praise of God"—Reethoven.
- 18.—Benediction by Rev. H. C. McCook, D.D.
- 19.—National Salute.

At first I was not able to hear much; but, having an opportunity to move into a better seat, I was enabled to hear most of Henry Watterson's, and about all of Chauncey M. Depew's, orations. The former, though labouring under a disadvantage from a recent sickness, acquitted himself well; and the latter, who is *facile princeps* among our orators, delivered a very eloquent address. Hearty applause greeted all the speakers, even those who offered prayer; nor did the music pass unappreciated. It was 5.15 o'clock when the exercises ended after a duration of about three hours, and the immense audience dispersed.

As we were passing out through the grounds, a number were attracted to the Transportation Building where U.S. troops and State militia were camping. Some of "the boys" stood in the doorway, and invited the passers-by to "step in and see the wild horse;" "free exhibition;" "last chance." Having entered, we were passed along by "boys" to about the middle of the building, where very calmly and deliberately there was uncovered a wooden saw-horse.

That evening at Lincoln Park on the north side, Garfield Park on the west side, and Washington Park on the south side, there were magnificent displays of fireworks. At the same time the inaugural ceremonies of the World's Fair Congress Auxiliary were held in the Auditorium before an audience of 3,000 persons. The oration by Archbishop Ireland, of Minnesota, on "The World's Congress of '93," was a masterly effort, which indicated the broad scope and the high aims of that branch of the work, of that department of the World's Columbian Exposition.

Saturday, the 22nd, was given up to the dedicatory ceremonies of various State buildings. In the morning Kansas led off at 10 o'clock, and was followed at 11 o'clock by Iowa and Massachusetts; Judge Albert H. Horton, of Topeka, delivered the address for Kansas; Iowa had a fine display of her State Militia with the Iowa State Band, and addresses by Gov. Boies and Hon. C. P. Suda; Massachusetts had a very informal affair at which Gov. Russell, however, was present and spoke. At noon, the New York building was dedicated with imposing ceremonies, comprising fine music and addresses by Hon. Chauncey M. Depew, Gov. Flower, and Archbishop Corrigan. At 2 o'clock in front of the Ohio building appropriate speeches were made by Gov. McKinley, Senator Sherman, Senator Brice, and Hon. Benjamin Butterworth. At 2.30 o'clock Rhode Island had informal ceremonies in which Gov. Brown was a participant.

Most of the guests and visitors departed, of course, on Saturday; but not a few remained over Sunday. That day, in many churches, appropriately closed up the dedicatory ceremonies with lessons from the occasion.

Chicago, October 31st, 1892.

The death of Mrs. Harrison at 1.30 o'clock on Tuesday morning, October 25th, was not, of course, unexpected, but none the less lamented. And yet, to the patient sufferer, death must have been almost a welcome relief. And even to the afflicted husband, careworn from his ceaseless vigil at the bedside of his beloved wife, rest now comes in his bereavement. President and Mrs. Harrison, even in the White House, have lived the simple and true life of a happy marriage, and have made that public mansion a genuine "home," graced by conjugal and parental affection and Christian ideas. With dignity they have performed their public social duties without being inflated with their high and honourable position: for no former associate, however humble, has ever been an unwelcome guest at the White House. Mrs. Harrison was pre-eminently domestic in her tastes, and disliked notoriety; but she had culture, dignity, and grace equal to any and every occasion.

Mrs. Harrison was 57 years of age at the time of her death. She was daughter of the Rev. John D. Scott, President of Oxford (Ohio) Female College, from which she was graduated. It was while Benjamin Harrison was a student at Miami University in the same place, that he met, wooed, and won Miss Carrie Scott. They were married October 20th, 1833, and have thus lived together 39 years. The next year, the young couple went to Indianapolis, when they began life in a very humble way, but gradually obtained honour and prosperity. They have had only two children; Russell Harrison, now of Helena, Montana, and Mary Scott Harrison, wife of J. R. McKee.

In appearance, Mrs. Harrison was a type of matronly beauty with regular features, dark, expressive eyes, a well-shaped head with silvery hair in curly waves; she had also a soft voice, and moved about gently and gracefully.

She passed away quietly, just after arousing from an unconscious state and giving one look of recognition to her beloved husband. He, though deeply and visibly affected, has borne himself with a noble and dignified fortitude.

Tuesday and Wednesday the remains of Mrs. Harrison lay in State at Washington "on a bed of flowers;" while heartfelt expressions of condolence were pouring in by mail and telegram, and the Press of this and other lands were vying with each other in honest tributes to the character of the deceased. Thursday morning, preliminary services of a very simple character were held in the White House. The floral tributes were numerous and very beautiful; but those present were very few. Music, scripture reading, and prayer

made up the services; after which the funeral party started on its way to Indianapolis. Besides the family, relatives, and intimate friends, the Cabinet officials with their wives, many members of the diplomatic corps (including the Japan, China, and Korean representatives), and a few other prominent persons composed the party.

The funeral ceremonies in Indianapolis on Friday, October 28th, were beautiful and impressive. They were held in the First Presbyterian Church in the morning as soon as the funeral train reached its destination. Around the depot about 3,000 people were crowded, and watched silently the funeral procession, which, on its way to the church, passed through lines of the Grand Army veterans. In the church, the Harrison pew was draped with black but beautified with lilies of the valley. After the church quartet had sung Mrs. Harrison's favorite hymn, "Lead, kindly Light," the pastor, Dr. Haines, gave sonnet scriptural readings and then paid an eloquent and touching tribute to the memory of the deceased. After prayer by Dr. Hyde, and the hymn, "One swiftly solemn thought," the cortege took its way to Crown Hill Cemetery, where at about 1 o'clock the interment took place.

That afternoon President Harrison sent to the Press the following public note, which clearly reveals the man:—

My dear old friends and neighbours:—I cannot leave you without saying that the tender and gracious sympathy which you have to-day shown for me and my children, and much more the touching evidence you have given of your love for the dear wife and mother, have deeply moved our hearts. We yearn to tarry with you and to rest near the hallowed spot where your loving hands have laid our dead; but the little grandchildren wait in wondering silence for our return and need our care, and some public business will not longer wait upon my sorrow. May a gracious God keep and bless you all.

BENJAMIN HARRISON.

At 5.30 p.m. the Presidential train left for Washington, and reached there Saturday evening; where, in his loneliness, our chief executive officer has resumed his public duties.

By common consent of all parties, political activity was intermitted on the day of Mrs. Harrison's funeral. In case arrangements for meetings had advanced too far to be stopped, parades and noisy demonstrations were omitted; and in many cases previous appointments were entirely cancelled. Some of the most appreciative and sympathetic paragraphs concerning the President's sorrow and loss were penned by Democratic editors and in Southern sanctuaries. Political partnership may yet be strong, but such prejudice is too weak to withstand true sympathy.

I feel inclined, from among the many tributes, prose and poetical, to include here these lines by "The Hoosier poet":—

CAROLINE SCOTT HARRISON.

BY JAMES WHITCOMB RILEY.

Now utter calm and rest,
Hands folded o'er the breast
In peace the placidest,
All trials past,
All fever soothed—all pain
Annulled in heart and brain—
Never to vex again—
She sleeps at last.
She sleeps; but, Oh, most dear
And best beloved of her,
Ye sleep not—nay, nor stir,
Save but to bow
The closer each to each,
With sobs and broken speech,
That all in vain beseech
Her answer now.
And, lo, we weep with you—
One grief the wide world through!
Yet, with the faith she knew,
We see her still—
Even as here she stood
All that was pure and good
And sweet in womanhood—
God's will, her will!

At the recent meeting of the House of Deputies of the Protestant Episcopal Church in Baltimore, seven new bishops were named, among whom are Rev. Thomas Allen Tibbald, D.D., for "Yeddo," and Rev. Samuel Roosevelt Johnson Hoyt, D.D., for Shanghai.

Rev. Dr. John Hall and Rev. Dr. Russell Booth have resigned from the Board of Directors of the Union Theological Seminary in consequence of that institution's abrogation of the compact with the Presbyterian General Assembly.

Mrs. Baldwin, "for twenty years a missionary in China," the other day stirred up a Methodist congregation in New York City by her strong praise of the Chinese and bitter denunciations of our anti-Chinese policy.

Lieutenant Fletcher S. Bassett, formerly an officer on the *Colorado* and the *Monocacy*, is now a resident of this city. He took an active part in the John Rodgers' expedition, in which seven Korean forts were stormed; and in 1871 spent some time in Japan. He was the moving spirit in organizing the Chicago Folk-Lore Society, is its Secretary, and is the editor of its journal, *The Folk-Lorist*.

Twelve families, comprising all together fifty-seven individuals, of Esquimaux have arrived, and are located in the World's Fair grounds. They will build their own huts according to their style of

architecture, and will be here for a year. They are already fenced in, and can not be seen except upon payment of 25 cents. Occasionally one comes outside, and paddles around in the lake, evidently for advertising purposes.

I am here reminded, that the great mass of Americans, even fairly intelligent persons, are unable to distinguish the Japanese, the Chinese, the Koreans, the Siamese, the Burmese, the Persians, etc., at sight. For instance, I had been informed by several friends, that a certain physician in this vicinity had married a Japanese lady; and, thinking we might, perhaps, be able to help her socially, I called at his office to make his acquaintance, and thus learned that his wife was a Siamese lady. Perhaps, however, such a mistake is not strange, for those Asiatics are not seen here often enough to be readily distinguishable.

During the week after the dedicatory ceremonies of the World's Fair, the National Commission and the Board of Lady Managers held several sessions, and discussed various matters of routine business. The National Commission downed a resolution, that the Western Hemisphere ought to be known, not as "America," but as "Columbia;" and voted to close the gates of the Exposition on Sunday, to allow the sale of liquor on the grounds "under appropriate restrictions," and to give special rates to the working classes on special days. An appropriation of \$10,000 has been made for the expense of the "opening" exercises to be held on May 1st, 1893. These exercises will not be long or elaborate, but will include music, a poem by an American, and an oration "by a man of international fame," perhaps, Señor Emilio Castelar, Prime Minister of Spain.

The Norwegian citizens of Chicago on October 26th reminded us, that, while Columbus undoubtedly deserves great credit and honour, he was, perhaps, not the first white man to land on American soil. A festival of grapes, with addresses, commemorated the name of Lief Erikson.

Milwaukee was visited on October 28th by a very disastrous conflagration, which ravaged 23 blocks, laid 15 blocks in ruins, rendered 3,000 people homeless and destitute, deprived 5,000 men of work, brought death to four persons at least, and caused a loss of \$5,000,000 in property. It began near the river on the east side, and was carried along by a high wind until it was stopped by the lake. The devastated part contained large wholesale houses, the freight sheds of the Chicago and North-western Railway, and houses of the labouring classes. Aid had to be summoned, even from Chicago, in fighting the conflagration, which raged fiercely for six hours or more; and assistance, pecuniary and otherwise, is now pouring in from all parts of the country to the sufferers.

In Philadelphia also there was a large conflagration whose cost amounts to about \$150,000. It was started by an explosion of gas and oil at the pumping station of the gas works on the river front, and wrought much damage among the shipping.

As the result of the Presidential election is already known to you, it is unnecessary for me to make any predictions. In fact, at this stage of the campaign prognostication is no easier than before. The political equation is extremely difficult to solve, because there are so many unknown quantities whose value it is impossible to ascertain. The most uncertain factor is the People's Party, with which the Democrats have "fused" in many states, most recently in Colorado and Oregon. It really looks now as if the "Populists," as they are called, will obtain enough electors and representatives to hold the balance of power in both the Electoral College and the new Congress. All things considered, Cleveland's chances are the best, *heredemo!* Betting runs pretty even.

THE EUROPEAN SITUATION.

(FROM OUR OWN CORRESPONDENT.)

Berlin, October 7th.

The cholera epidemic, which has not only affected the intercourse between the infected and healthy portions of the Empire, but also reduced the flourishing trade of Hamburg almost to a standstill, has further placed a damper on politics, and for a moment suppressed the everlasting struggle of nationalities parties and individuals. But no sooner did the records of death show a slight improvement than everlasting restlessness and agitation again assumed the upper hand.

The close of the 19th century is particularly remarkable for the nervousness and haste which characterizes all action: If one notices the hurry with which political questions of the highest order are brought forward, discussed and decided upon, one feels inclined to think that the political actors are working against time and are labouring under

the impression that the close of the century will bring the finish of their political race. Germany seems in a political sense to present the focus in which all the predominant political forces meet. The reactionary ultramontane tendencies are here developed side by side with the revolutionary social democratic organisation. Each in turn giving their own colouring to the State policy, which in course of a few years has hesitatingly passed from persecution to tolerance, and is now on the point of forming an alliance with the first of these irresistible powers. By the system of universal suffrage which is carried in Germany to the extreme in the elections for the Imperial Parliament, the great influence remains with the centre or ultramontane party, which is, however, little disposed to grant support to the government for nothing, and continues to exact concession after concession in the sense of a retrograde policy. Again, at this juncture, the Government is on the point of making a bargain with them in order to pass the new Army Bill, which reduces the three years service to two years with the object of drilling a greater number of recruits every year in order to be able to mass up such a reserve of drilled men in a few years, that the military power of Germany will exceed that of France and Russia together. Unfortunately, this reform will cost between 70,000,000 and 100,000,000 marks, in addition to present burdens, and as the Imperial finances are already so strained that the present expenditure is not even easily provided for, the necessity for new taxes and new sacrifices will be brought home to Parliament at the next session. This new demand can only be carried by a majority formed by the centre, or ultramontane party, and the conservatives, for the other parties will scarcely be convinced of the necessity. What the price will be which the government will have to pay to the centre is at present difficult to conjecture, particularly as the government has nothing worth while to offer, or at least cannot give away anything of value, for instance the schools, without raising a storm of indignation all over the country. Perhaps the return to Jesuits may be demanded, i.e. the repeal of the order of banishment, which was passed by the Reichstag immediately after the creation of the Empire, a measure which was more of an impetuous character than the result of sound considerations, for in the stormy debate that brought about the law in question, no evidence at all was produced which could prove that the order of Jesuits had in Germany been guilty of acts justifying such severe measures. But to consent to their return, which was named by the congress of Catholics at Mayence lately as the next object for which the centre would be labouring will be more than Count Caprivi will dare to grant, even if he was not bound by a speech he made not long ago in the Prussian Landtag. The second demand of the centre, an interference in favour of the restoration of the Papal sovereignty in Rome is entirely out of the question, not only for Germany, but even for Austria, for it would at once drive Italy out of the Triple Alliance, though not perhaps directly into the arms of the French Republic. Thus the basis for an understanding between Caprivi and the centre in order to carry his army Reform Bill, is yet to be discovered, whilst with the remarkable ability of this party it is scarcely to be believed that they will be satisfied with anything but concrete concession and will scarcely accept promissory notes on the future.

The desire of the Imperial Government for an unparalleled increase of the military strength, is that Germany may be prepared for all eventualities in Europe. However, there is no reason whatever to fear immediately an outbreak of a European war. Russia has stoically refused the conclusion of an alliance with France, which is continually and insistently demanded by the French Chauvinists. It is easy to see why Russia will not bind itself. The object of France can only be the restoration of Alsace-Lorraine, which in reality does not interest Russia in the least degree. The object of Russia, looking at the future from the point of view of its own interests, is the settlement of the Eastern question, in other words the possession of Constantinople. To Germany, the extension of the Russian influence on the other side of the Balkan is perfectly indifferent, or to use Bismarck's famous words: "not worth the bones of one Pommernian grenadier;" but France would have to alter altogether its pretensions for predominance in the Mediterranean Sea, and forget all its Crimean sacrifices, if it assisted the Russian Empire to establish itself on the Bosphorus. For Russia and France there is therefore no sensible basis for an understanding, whilst for Germany and Russia there is no difficulty at all to come to terms, except for the presence of Austria-Hungary in the Triple Alliance. The Austro-Hungarian statesman are dead against allowing Russia the slightest incroachment on Bulgaria, Serbia, or Roumania, for they maintain

that there is no stopping of Russia's progress if the barriers, feeble as they may be, which the Congress of Berlin has erected, were allowed to be broken down. The celebrated Treaty of Alliance which Bismarck concluded with Austria, and which, according to the last utterances of Count Kalnoky remains in force in its main features as the regulator of the German-Austrian defensive union, clearly distinguishes between the case where Russia should attack either Germany or Austria, or where the latter should attack Russia (say in order to protect its Eastern interests). In this case Germany is not bound to assist Austria which will have to shift for itself. Therefore, Bismarck when put into a corner had no hesitation in publishing the Treaty of Alliance, which for the time created in Russia an anything but unfavourable impression; for it proved that it was directed only against France and not meant to stop Russia's legitimate interests. The new Treaty of Alliance with Italy is according to the statement of Count Kalnoky, not to be published, i.e. to be kept secret, and offers, therefore, room for speculation which it would be a work of supererogation to indulge in at present. But whatever it may be, it cannot affect the conviction that the Russian Emperor is to-day really the arbitrator of the European Peace, and judging from the eminently high-minded pacific character of Emperor Alexander II. who has hitherto resisted all temptations to the contrary, we may hope that the cause of European peace is for the present at least pretty well secured. Whether the energy of Russia will not in the meantime, seek an outlet on its Asiatic frontiers, is another question; but these efforts, natural enough on the part of a colossal land Power shut out almost entirely from a sea frontage, will not to any considerable extent alarm Europe—Great Britain alone excepted. We can therefore, in Germany, not attach any exaggerated importance to the question of the Russian advances on Asia proper, under whatever form it takes place. We equally trust the news, which has lately come from Constantinople, of a diplomatic altercation between Russia and the Sublime Porte on the subject of the distinguished reception accorded by the to the Bulgarian Premier Sultan, as nothing extraordinary. Even the apparent support given by France to Russian protests in this case, cannot for a moment mislead those who look behind the cards. The two Powers are far from any sort of alliance at present. The recovery of Alsace-Lorraine, with the assistance of Russia, can only be obtained on the part of the French by their sacrifice of all dreams of supremacy in the Mediterranean and the abandonment of Turkey to its fate. It is possible that at this price, Russia might be bought over, but even this is not by any means certain—and what is on the other hand certain is that a French Cabinet which would sign a Treaty of Alliance with Russia on these conditions, would not remain a week longer in office. Another question, not by any means an idle one, may be, whether if Bismarck ever returned to power he would not attempt to establish a new basis for the Eastern question for the sake of a re-approachment with Russia? According to the utterances of his Press organs he pretends that Russia has been unduly neglected by his successors in office, and that this is the cause of the unsatisfactory State of Germany's foreign relations. It may or may not be the case, but we are certainly very far from a "re-appraisal" of Bismarck, and probably nothing short of a national calamity from which heaven may preserve us, will bring him again to the foreground.

LETTER FROM GERMANY.

(FROM OUR OWN CORRESPONDENT.)

Berlin, October 15th.

We are on the eve of a great political event. The Military Reform Bill of General Caprivi will prove the touchstone of our internal party life and perhaps clear out many cobwebs which are not exactly an ornament to the German union. For the present, the details are not yet published, but the principles are already fully discussed by the government organs, which are assailed from all sides. In view of the immense increase of the army which is under contemplation, it might be interesting to examine what the present military strength of Germany is.

During the war of 1870-71, the German Army reached, according to official reports, its highest strength with 1,350,787 men. In this are included not only the army in the field but all "Etappen" reserve and garrison troops in and out of the Fatherland. During the summer of 1890, the military authorities stated in the Reichstag that the number of drilled men which could be disposed of

was (including the line, reserve, "Landwehr" and "Landsturm") 2,900,000 men. This was already more than double the strength of 1870-71. But since 1890 a further increase of military power has taken place. The peace effective of three years, namely (1890, 1891, 1892) is transferred to the reserve, while only one year's Landsturm has retired. Besides, three years effective of drilled First Class "Ersatz Reserve," which only began to be organized since 1880, have been added to the "Landwehr" of the Second Class. Thus, the war effective of the German army has already passed the total of 3,000,000. This increase will, without any change in the present system, continue. In the first instance until 1902, because only by that time the drilling of the "Ersatz Reserve" which commenced in 1880, will have produced its results for all the annual contingents in favour of the Landwehr and Landsturm; and in the second instance until 1914, because the number of newly entering recruits is greater in proportion to the number of men retiring to the Landsturm. For instance, the last annual effectives are by 40,000 men stronger than the effectives called in before 1879, and by 30,000 men stronger than the effectives of the years 1887-1889. Since 1890 annually, about 212,000 men are taken in to be drilled and instructed, and taking the effective of 24 years and deducting 25 per cent for deaths, emigration, and invalids we obtain a total of drilled men of 3,815,000 men. Adding to this the number of officers and non-commissioned officers, we arrive at 3,900,000 men, a total of more than three times the strength in 1870-1871. If now the three years' service be given up and in its place the effective be increased annually by 35,000 men (which is possible without increasing the present legal peace effective) there is an increase of 24 times 25,000, or 450,000 men, which would in course of time cause the army on its war footing to become 4,350,000 strong. What the consequences would be in case the legal peace effective should be increased, is for the moment beyond the reach of speculation, as exact statements are not yet forthcoming, but the papers are right if they exclaim that since the creation of the German Empire so enormous an augmentation has never been heard of.

The French army has, according to the Parliamentary Report, made also considerable progress in its development and strength.

In 1869 the active army contained 24,000 officers, 385,372 men; in 1892 it had 28,000 officers, and 484,015 men. The effective is, however, not the whole military strength, but is nearly doubled in case of mobilization by the reserves, and besides there exist reserve regiments composed of the former mixed regiments. To these troops must be added the territorial army, which corresponds to the German "Landwehr." The total strength of the army would be therefore 1,650 Battalions of Infantry, 600 squadrons of Cavalry, and 750 Batteries of Artillery.

According to the estimates of la "France militaire" the French military forces are estimated as follows:—Standing army 577,319, to which must be added volunteers and re-engaged men 98,583, 26,934 officers, and 25,795 gendarmes. Further, the reserve composed of the effectives of seven years at 178,246 each year, make 1,247,722 which, deducting 3 per cent. for deaths, etc., leaves net 985,702. Total in case of mobilization, without officers and gendarmes, 1,510,292. The territorial army to which annually 105,769 men are transferred, contains in its six years effective, with a deduction of 7 per cent., 994,614 men. This, added to the above 1,510,292, makes a total of 2,504,906. Besides, there is the reserve of the territorial army composed of nine years' effective. Deducting 9 per cent. for casualties, this is calculated at 1,266,192 men, and we thus arrive at a grand total, including officers and gendarmes, of 3,823,827 men. We thus find that the total of the German army already exceeds considerably that of the French army, besides the fact that the men of the latter's territorial army are not by any means all or sufficiently drilled, nor are their cadres completely organized. The new military reform in Germany is now calculated upon the necessity of fighting on two fronts, with or without allies; but as public opinion stands to-day, it is doubtful whether the change will be accepted by the Reichstag.

The Blue Ribbon Army is badly needed at Central Pennsylvania, where an infant a year and a half old has come to a sad end in consequence of drinking whisky. According to a despatch to a New York paper, John Pastula's child had just been christened and while the guests were celebrating the occasion in the accepted fashion some indiscreet individual handed the baby a whisky and soda to taste. After trying it "the little toddler became very happy," and going into an adjacent room fell into the tub of water from which it had been christened and was drowned.

Original from

LETTER FROM DENVER.

(FROM OUR OWN CORRESPONDENT).

Denver, Oct. 24th.

Many things have happened to make Denver famous since last I wrote. Among them, and chief of all, the 25th Triennial Conclave of Knights Templars in August, over which our city went mad with festivity and dollar making. But the world's papers had some mention of that gathering and made it unnecessary that your correspondent should speak of the display.

The most prominent feature of this part of the world is now the political hotch-potch cooked by local schemers. The campaign is being fought out with the usual amount of 'gall,' not only in the inkpots but on the stumps also. Such delicate insinuations are boldly made as that So and So—an aspirant for office—is worth three hundred thousand dollars, but not a cent. of it stands in his own name; that he is sought for by creditors who cannot collect their debts, and that he cannot disprove the charge. It is a remarkable fact that the assailed candidate is of sound financial standing and well known and trusted by the best business men of the city, so that the slander is utterly useless. Some politicians find great pleasure in calling their opponents by opprobrious names, and the party sheets bristle with epithets like "wild-eyed blatherskite," "boodler," "fraud," and "bunco." The Weavers denounce all others as Gold-bugs, Wall Street sharks, and traitors to the interests of Colorado. The others are pleased to denounce the Weavers as Crazy Loons and Calamity Howlers. Many of the most loyal Republicans and Democrats have forsaken their accustomed standards, attracted to the 'Populist' platform by the Silver-plank. Bold is he who would prophesy the results of this conflict whether in the mining States, or in the agricultural States. Local Democrats are in two camps. Those who accept the Cleveland straight ticket are called the "White-wings," a name likely to survive the present election. Their delegates to the convention at Pueblo wore white ribbons as favours; hence their nickname. These are constrained to indorse many nominees of the 'disgruntled' Democrats. A leading congregational pastor of this city was nominated by both sections for Congress, but declined the honour. The stronger section seems to be that which has 'bolted' under the lead of C. S. Thomas and T. M. Patterson, accepting the People's Party platform. It would hardly be surprising if "General" Weaver were to carry this State, simply because the creed of most Colorado people is, in brief—Silver ought to be made worth more than its market price, and whoever will promise to raise its price is the politician for us. No one needs to learn that mines which now cannot be worked at a profit would pay handsomely if free coinage ever became a *fait accompli*. But no one dreams that Weaver will be President, or that the silver question would be settled by his election. The present crisis will only end by proving the real strength of out-and-out silver men. Meantime, the Prohibitionists are hard at work, though silently for the most part, with their million vote pledges. Are all these men patry souled office-hunters? Is there none among them who honestly desires to serve his country? In the universal scramble and the war of epithet does altruism have no place? A multiplying army of cynics say, no, to all these questions. It is absolutely certain that in no other sphere of human activity on this continent is there so much trickery, so much chicanery, so much complex machinery of private greed, as in these same politics. Everybody suspects every other body who touches the ark of public weal. If one is weary, however, the rival papers make cheerful literature nowadays in their descriptions of their opponents' political meetings. "Two or three hungry office hunters, an old woman in spectacles, a policeman, and a yellow dog assembled in what was called a Republican rally last night. They shivered in the cooling air while the office-hunters took turns at yelling, but soon got tired of it and went home to bed." "The Pop-gun celebration at — came off in the usual style yesterday. Four persons doled for the average howl, and six persons listened sardonically for half an hour and then left them to complete their speeches to the impatient janitor. Colorado people have no use for calamity-mongers." No small amount of ingenuity is expended on political cartoons issued by the daily papers. True patriotism and honest politics can probably afford to leave these personalities and this purposeful lying alone.

Lady Henry Somerset is here with Miss Willard, to attend the National W.C.V.U. convention. Denver is coming to be known, the *Cosmopolitan* says, as the City of Conventions. Certainly no city in the land is more beautifully situated, and

none is more willing to be hospitable when hospitality is an advertisement.

News has recently reached here of the wreck of the P. and O. steamer *Bokhara* in the China Sea. Among the passengers were Mr. and Mrs. J. A. Chain, well-known citizens of Denver and foremost in Christian labours. Many people here were conscious of personal loss. Among the missionaries in Japan are some who well know the esteem in which Denver has long held both husband and wife. They were on their way through the Far East to Palestine. Mrs. Chain was an artist of ability. Kindly, helpful, energetic, they were both representatives of that cheery Christian devotedness which is the salt of American life.

The *Kansas City Star* publishes a full account of a conspiracy to kill the famous "Sockless" statesman, Jerry Simpson. Two thousand dollars, it is averred, were offered to a blackguard named Snivell, if he would slay the unoffending Populist orator. Why one should think his influence worth destroying at such a cost passes the average man's comprehension. Possibly the whole story is a Populist "joke," developed for the sake of winning such sympathy as martyrs are sure of.

A most interesting experiment is being made at the State University. Hitherto, there has been no theological department there, but a Divinity School has now been formed under the cooperative efforts of various Christian denominations. A Baptist has been elected Dean of the Faculty, Rev. Kerr B. Tupper, of Denver. He is supported by one lecturer from each of the more extensive churches, except the Methodists, who have their own university close to Denver. It is curious to see what will happen with so cosmopolite a faculty in charge of theological instruction. Comprehensive views are to be expected in sight of these vast plains and stretching mountain ranges, but so far as I can learn this is the first time that America has found Congregationalists, Presbyterians, Episcopalians, Lutherans, Baptists, Universalists, and Unitarians ready to unite in producing a preacher of the gospel. Next Sunday all preachers are asked to discuss the question of Christian Unity and to publish their remarks in the local press! This is in honour of the Columbian celebrations and the Parliament of Religions.

If there are any budding philanthropists still in the Isles of the Dawn, commend the following to them for its lucidity of expression—good for Japanese to study—its excessive modesty, and chiefly for the opportunity it offers to serve their fellows. Vistas of scientific attainment open when "electrolysis" is mentioned, and possibly some occult means of wreaking vengeance on one's foes, useful for jealous women to know. I take it from the *Denver Republican* of Oct. 25th, 1892:—

"For \$75 I will learn you manicuring, electrolysis and facial blemishes; you can make a fortune. Address—this office."

P.S.—October 29th. It is clear that the vaunted Populist party is nothing but a scheme for robbing the Republicans of the Western States. The cloven foot has appeared in the instructions given by the National Democratic Committee to the Straight Ticket Democrats of Colorado to withdraw the Cleveland electors and to unite forces with the Weaver people. Their hope is of course to make so close a vote on the Presidential election that the House of Representatives will be made umpire. The House is Democratic and would elect Cleveland. The election of Weaver is impossible, and was impossible from the first. If, therefore, this was not a plot hatched by the fertile brain of some political swindler whose teachery was expected to help the Democratic cause, appearances are grossly deceptive. Many respectable and solid men have withdrawn from the new "combine."

The members of the London Alpine Club do not suffer from giddiness, but there are occasionally mountaineers who do. For these the cure, according to a writer in the *Quarterly*, is not brandy or alcohol in any form. Stimulants are practically valueless in such circumstances. The victim will have to give up climbing. But there is surely one cure which has the reputation of having been effectual when tried. On one of these occasions four mountaineers, roped together, were just entering on a narrow ledge where the foothold was most precarious, when vertigo seized hold of one of them. He told his companions that he dared not move. The leader was one of the two most famous guides of the Oberland about 1860, and when he heard the news merely gave the command "Push him over." He was obeyed immediately and the traveller was suspended off the edge of the rock for a few seconds and then pulled up. Then he was able to go on all right. But a "pull" at the brandy flask is still the favourite remedy among mountaineers.

IN THE TOKYO COURT OF APPEAL.

W. DENING V. TANAKA HEIZABURO.

We publish below the finding of the Tokyo Court of Appeal in the suit instituted by Mr. W. Dening against Tanaka Heizaburo to recover certain monies lent. It will be remembered that when the case was first brought in the Yokohama Local Court, judgment was given against the plaintiff, who at once appealed to the Tokyo Court of Appeal. That tribunal reversed the judgment of the Lower Court and the defendant appealed to the Supreme Court. The judges of the Supreme Court returned the suit to the Court of Appeal for re-consideration, and the case has been again decided in favour of Mr. Dening.

JUDGMENT.

W. DENING, Appellant, 40, Imaicho, Azabu, Tokyo.

ASAKURA TOMOTETSU, Counsel for Appellant, 21, Kami Makicho, Tokyo.

TANAKA HEIZABURO, Respondent, 1218, Ota Village, Kanagawa Prefecture.

OTSUKA SEIKICHI, Counsel for Respondent, 1, Sanjikkhen-bori Nichome, Tokyo.

This case was returned from the Supreme Court for reconsideration of the judgment previously given in an appeal from a judgment of the Lower Court relating to a demand for the recovery of a debt. The Court once more delivers its decision and reverses the judgment of the Lower Court.

The appellant possesses the right to recover from respondent the full amount of the debt, with interest at the rate of 10 per cent. per annum; which amount was determined in a suit instituted by Matsumoto Seishu against Tanaka Heizaburo in the Tokyo Local Court on the 28th day of December, 1888.

FACTS AND POINTS IN DISPUTE.

The gist of the statement of counsel for appellant is that, though the name of Matsumoto Seishu appears as the creditor on the document concerning a loan of 10,500 yen to the respondent, as shown by Exhibit No. 1A, the real creditor is W. Dening, appellant in the present suit; and this fact was known to Tanaka Heizaburo, respondent in the suit. Therefore, the appellant instituted a suit against the respondent for the purpose of compelling acknowledgment of the fact, and demanding repayment of the debt with interest. The Lower Court dismissed the suit, and plaintiff appealed to the Tokyo Court of Appeal to reverse the original judgment. The principal points urged by counsel for respondent are that the respondent never borrowed any money from the appellant; while Exhibit No. 1A was given to Matsumoto Seishu so that he might appear in the suit. He acknowledged contracting a loan from Matsumoto Seishu; and for its recovery Matsumoto instituted legal proceedings, with the result that respondent was made a bankrupt, as shown by the Exhibit No. 1B. By a private negotiation with Matsumoto, however, the agreement between them was altered as shown by Exhibit No. 2B. Therefore, the respondent is under no obligation to repay the sum demanded by appellant. Again, respondent declared that he failed to understand the obligation he was under to a person who had no interest in the case. The original judgment was therefore legal, and he requested the Court to dismiss the appeal.

REASONS.

As the document relating to the loan of 10,500 yen was addressed to Matsumoto Seishu, externally, it appeared, for all intents and purposes, as if the said Matsumoto was the real lender of the money; but a document presented by the said Matsumoto to appellant, as shown in Exhibit No. 2A, contains the following words:—"Though it (the document) is addressed in my own name, you are the real creditor, therefore you can do what you like with it, and I have no right to gain-say a word," etc. During the proceedings of the Lower Court a representative of the said Matsumoto affirmed that the money was advanced by the appellant; therefore, he is the real creditor, without the slightest doubt. Such being the case it is not necessary to call that witness to repeat the same affirmation. Moreover, Akiyama Shuzo, formerly Gizayemon, who attached his name to the bond as security for respondent, also declared that he knew that the real lender of the money was appellant. This evidence was considered trustworthy. The Court therefore considers that the real creditor is the appellant in the present suit, and not Matsumoto, as alleged by respondent. Again, to ascertain whether the respondent knew whether the real creditor was the appellant or not, the Judge cross-examined the representative of Matsumoto Seishu in the Lower Court as follows:—"The Judge—Did you communicate to Tanaka

the fact that the loan contracted was advanced with appellant's money?

The Representative of Tanaka.—Yes. As Matsumoto was acting as *banto* to Denning, and as Tanaka knew that Matsumoto did not possess a sum of over 10,000 yen, he (Tanaka) requested Matsumoto to borrow that sum from Denning. —Now, Matsumoto was *banto* to appellant, and as the respondent knew that he possessed no money, he was asked to apply to Denning to advance him the amount of the proposed loan. Akiyama Shuzo, a witness, also stated that Tanaka, the respondent, knew from the very beginning that the money belonged to and was advanced by appellant. This evidence was considered trustworthy. Again, in exhibit No. 34, a letter from Akiyama to Amakura, and in exhibit No. 44, another letter from Akiyama to Amakura and Matsumoto, Akiyama asking Amakura and Matsumoto to postpone the payment of Tanaka's debt, used the words "Your Master." Akiyama, the writer of those letters, declared that the words referred to the appellant. Akiyama was the person who countersigned the document of loan as security, and Amakura and Matsumoto were employees of Denning. Thus, judging from the above letters only, it is plain that the respondent knew that his real creditor was the appellant, and that, as Matsumoto was in the employ of the appellant, for convenience sake his name was written upon the document as the assumed creditor. Though the respondent does not accept exhibits No. 3 and 4, it is clear, judging from the statements of Akiyama and Amakura and the condition of the letters, that they are not fabrications. The Court considers their evidence as genuine. In letters from the respondent to Amakura, which were shown in Exhibits 8 and 10, the former asked the latter to postpone payment. Again, Exhibit No. 5, an agreement between the respondent and Amakura, states the method by which the debt in question was to be repaid. This document is accepted by respondent. Again, Exhibits Nos. 6, 7, 8, and 9, letters from Imamura Bunsuke to Amakura, are records of the former endeavouring to raise the money for the payment of the debt in question; and they contain sentences which interpreted mean that the respondent knew that his creditor was Denning. Those letters were dated at the house of Tanaka; and there is no evidence to show that they were fabricated afterwards. Taking these letters into consideration, along with other evidence furnished by Amakura, Akiyama, and Imamura,—the latter though not authorized by Tanaka as an agent, was acting for Tanaka in obtaining postponement of the debt—it is plain that the respondent knew from the very beginning that the real creditor was appellant. Respondent argued that he altered the terms of agreement with Matsumoto; but the above evidence plainly proves that he was aware of his real creditor, therefore no contract made with Matsumoto can be held valid, unless it obtained the consent of the real creditor. Exhibit No. 2B is not only a private document, but its date is uncertain; and since Matsumoto declared that the appellant was the real creditor in the Lower Court, and accepted Exhibit No. 2A, he had no right whatever to conclude any such contract with Tanaka. In the suit brought against Tanaka by Matsumoto, Matsumoto declared in the Lower Court that he was a *feudal* of the appellant, and sued the respondent under the latter's instructions. Thus, the fact of Matsumoto's only acting as agent for appellant is plain; while it is equally clear that respondent also had knowledge of the fact. All the evidence goes to prove that appellant is the real creditor in the transaction. Since it is proved that in a judgment previously given, as shown by the exhibit No. 1B Matsumoto was declared to be acting for appellant, it is not necessary for the appellant to ask for another judgment, as shown by Exhibit No. 1A. The Court determines that the real creditor is the appellant, and he may sue for recovery of the amount due from the respondent.

The above judgment was delivered in the Third Section for Civil cases in the Tokyo Court of Appeal.

(Signed.) { KITAMURA TAICHI, Chief Judge.
KOBAYASHI YOSHIO, Judge.
HIRANO NAGANORI, Judge.
ONO YEMONDA, Judge.
TOMIYA SENTARO, Judge.

He (rising).—Then, Miss Grace, I must leave you. She.—Thank you. I endeavoured to make it plain that you couldn't take me.

On careful calculation it is now settled that two rabbits in ten years will multiply 70,000,000.

The lands in Germany devoted to grain used in beer production would support 50,000,000 people.

Over 50,000 tons of cotton-seed oil are consumed annually. Not many years ago cotton-seed was thrown away.

YOKOHAMA LITERARY SOCIETY.

A large number of members and friends attended the fortnightly meeting of the Yokohama Literary Society held in the Van Schaick Hall on Friday evening. The programme was well balanced with music and literature, and came to a close shortly before half-past ten o'clock. The opening overture—Dar Kalif von Bagdad—was given by Mr. and Miss Griffin with their usual grace of execution. Mrs. Van Petten read an original paper, a résumé of which is given below. Mrs. Brouer contributed a song, "Rinaldo Von Hindel," and Miss Wilson recited "Logan at Peach Tree Creek." Miss de Motte opened the second part with Chopin's Polonaise, Op. 71, No. 2. Mr. J. L. Dearing's reading "Grandma's Attic Treasures," though very interesting, proved a trifle wearisome towards the end by reason of its length. Mrs. James Walter's song, "The Magic Song," Meyer-Helmund, was very beautifully given. A recitation by Mrs. Hubbard, "His Mother's Songs," and a "Das Grab auf der Haide," by Mr. Studdelmann, were the concluding items.

Mrs. Van Petten in introducing her paper—Farm Life in Illinois—said that she had come to a diametrically opposite conclusion to that arrived at by Mr. Wilkin who had, last session, read a paper on farm life in Canada. That paper, indeed, had been a source of great discomfort to her. The farms which she knew had been under cultivation since the early thirties, therefore she claimed an experience sixty years longer than Mr. Wilkin. The early settlers in Illinois, knowing nothing of the rich coal beds beneath the surface, chose the wooded districts along the river, so that the felled wood might be used as fuel. The railroad had not penetrated to those regions then, and a visit to friends in New York or Massachusetts entailed a hard journey of six weeks. Chicago in those early days was called Fort Dearborn, and was a swampy, undesirable spot. Fort Clark, the modern Peoria, was a favourite camping ground of Indians who, though not exactly hostile, were not particularly pleasant neighbours. The settlers were obliged to go 100 miles to St. Louis for their flour, and were often pursued by packs of hungry wolves, from whose jaws there were many thrilling escapes. For the women of those times, as well as for the men, said Mrs. Van Petten, I have profound respect. How one ever managed to be wife, mother, cook, nurse, house-keeper, laundress, and dress-maker, and still find time for church and charitable work, is a mystery to her daughters. Yet, in most of these relations and departments of work they are the best models we have. No wonder that among their sons were found an Abraham Lincoln and a U. S. Grant. In course of time, however, railroads brought the old homes within twenty-four hours easy travel, and after that the country was settled as if by magic. The coal-beds were unearthed and the fertile prairies made accessible to the skilled and eager sons of the early farmers; Fort Clark had become Peoria and Fort Dearborn Chicago, while the Indian had vanished. The lecturer then gave a concise and graphic description of the change that had taken place in the methods of agriculture, the improvements in the farmer's house, and his increasing comforts as the years went by. She also drew attention to the gradual improvement in the scholastic opportunities of the young. The early school was generally staffed by young men and women who were working their way through college by teaching. At the present day trained teachers of the State Normal have charge of the schools. Referring to the old-fashioned diversions,—the planting and harvesting, the quilting and apple bees were all occasions of jollity—the speaker said that it seemed almost a pity that we have lost them. The farmer's wife as things are now, is not so well off as her husband, because of the difficulty in getting servants,—indeed, a mistress of a house has often to be her own servant. Having painted a glowing picture of the pleasures of farm life in a genial climate, both in winter and summer, and given a sketch of some of the amusements indulged in by everybody sound of wind and limb, the Vice-President concluded: One can but admire the strength and energy of the young men, the self-helpfulness of the young women, engendered by this very lack of servants. Take it altogether the life of a well-to-do farmer in Illinois, or almost anywhere in the Mississippi Valley, seems to me to have great possibilities for health, happiness, and comparative wealth. Cities are all very well for society and various kinds of work, but for real living one needs to go to the country. There one's comfort is not lessened by the thought of even a dog that is cold and hungry, but everybody and everything has enough to eat and a warm place to sleep in. Statesmen and Philanthropists have still much to do before this will be true of all people, even the richest city of the world.—(Loud cheers.)

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets on Monday and Thursday evenings at the Club Rooms, No. 86, Main Street.

SOLUTION OF PROBLEM No. 45.

- WHITE.
1—Q to R 8
2—Q x P
3—B mates at Kt 2, or Q at Q 4, accy.
2—Q checks at Q 8, and
3—Mates at Q 4.
2—Q to Q 8 (ch.)
3—R mates at K 7, or Q at Q 4, accy.
- BLACK.
1—K to Q 4
2—K x R or to B 4
1—K to Q 3
2—K to Kt (or R) 2 or B 4

Correct solutions received from Scacchi, W.H.S., J.D., Omega, Ed. B., and J.W.E.

PROBLEM No. 47.

By G. HEATHCOTE.

White to play and mate in two moves.

The young and brilliant master, Emanuel Lasker, has added to his laurels by a complete victory over the veteran English player Bird. The match was played at Newcastle on Tyne under the auspices of the Newcastle Chess Club and resulted in a rather hollow victory for the younger man, he scoring five straight wins without a loss or draw. We copy from the *British Chess Magazine* the fourth and best game of the match.

TWO KNIGHTS DEFENCE.

- | White (Bird) | Black (Lasker) |
|-----------------|----------------|
| 1—P to K 4 | 1—P to K 4 |
| 2—Kt to K B 3 | 2—Kt to Q B 3 |
| 3—B to B 4 | 3—Kt to B 3 |
| 4—Kt to Kt 5 | 4—P to Q 4 |
| 5—P takes P | 5—Kt to R 4 |
| 6—B to Kt 5 ch. | 6—P to B 3 |
| 7—P takes P | 7—P takes P |
| 8—B to Q 3 | |

—Seldom played and inferior to the usual B B to K 5. Black's best reply is 8..... B to Q B 4

- | White | Black |
|-----------------|---------------|
| 9—Kt to K B 3 | 8—Kt to Kt 5? |
| 10—P to K R 3 | 9—P to K B 4 |
| 11—P takes Kt | 10—P to K 5 |
| 12—P takes Q P | 11—P takes B |
| 13—Q to K 2 ch. | 12—P takes P |
| 14—Kt to Kt 5! | 13—B to K 2 |
| 15—Kt to K 6 | 14—Castles |

If 15, Kt takes P, the Rook would go to K sq, with speedy trouble for White

- | White | Black |
|------------------|----------------|
| 16—Q takes B ch. | 15—B takes Kt |
| 17—Kt to B 3 | 16—Kt to R sq. |
| | 17—Kt to Kt 2 |
| | 18—P to K R 3 |

18—Q to K 4
19—P to Kt 4
Designing to get the Bishop into action as much as to keep the Knight from Q 4

- | White | Black |
|------------------|-----------------|
| 20—Kt to K 2 | 19—P to Q R 4 |
| 21—Q R to Kt sq. | 20—B to B 3 |
| 22—P to Q 4 | 21—P takes P |
| 23—P to Q 3 | 22—Q to Q 3 |
| 24—Q takes Kt P | 23—Q R to K sq. |
| | 24—B takes P |

Here it is said that Black overlooked the fact that his opponent could castle 24..... Q takes P was the correct move.

- | White | Black |
|---------------|-----------------|
| 25—Castles | 15—B takes Kt |
| 26—Kt to B 4! | 16—Kt to R sq. |
| 27—P takes P | 17—Kt to Kt 2 |
| | 18—P to K R 3 |
| | 19—P to Q R 4 |
| | 20—B to B 3 |
| | 21—P takes P |
| | 22—Q to Q 3 |
| | 23—Q R to K sq. |
| | 24—B takes P |

Throwing Black on the defensive. The difference between taking the Pawn with the Queen and taking it with the Bishop at move 21 is easily seen

- | White | Black |
|---------------|--------------|
| 26—Kt to B 4! | 25—B to B 3 |
| 27—P takes P | 26—B to Kt 4 |

All the play hereabouts is extremely ingenious.

28—R to Q 4!
29—R takes R
30—B takes B
..... If 30..... Q takes P, then probably 31 Q to R 5, regaining the Pawn at the very least. Neither can he take it on the next move for the same reason.

31—P to Q 4!
32—B to R 5
33—Q to K 6
34—P to B 4

White maintains his attack in the finest style, and Black's defence is a model one. With an eye to the end, it was necessary for the latter to get rid of the Rook's Pawn, as he does on the 36th move, though the risk was great.

35—Q takes R P ch. 34—P takes P
36—Q to K 6 35—K to Kt sq.
37—R to B 8 ch. 36—R takes P
38—R to B 8 ch. 37—R to R 2
39—Q to K 8 38—Kt to B sq.
40—R to Q 8 39—R to K B 2
41—Q to K 6? 40—Q to K 5

FA terrible blunder. Anxious to stop the threatened perpetual check, Mr. Bird here simply throws away the game. The position was not to be won for White.

42—K to R 2 41—Q to K 8 ch.
43—K to Kt sq. 42—Q to R 5 ch.
44—Resigns. 43—Q takes R

REPORTS.

The Japanese steamer *Mika Maru*, Captain W. Thompson, reports:—Left Otaru the 21st November at noon; had moderate N.W. winds with sharp sea and weather clear; at 10.25 passed Okushiri light, fresh N.W. winds and clear weather. Arrived at Hakodate the 22nd at 7 a.m., moderate to gentle N.W. winds and fine weather. Left Hakodate the 23rd at noon; had gentle S.W. winds, smooth sea, and cloudy weather; at 4.10 p.m. passed Shiriya-saki; on the 24th at 4.30 a.m. passed Koubesaki, fresh to strong N.E. winds with high sea; at 10.30 passed Kinkasan, and arrived at Oginohama at noon. Left the 26th at 4 a.m.; had moderate to fresh N.N.W. breezes, with high sea and cloudy weather; at 7 p.m. passed Inuboye, fresh N.N.W. breeze, high sea, cloudy threatening weather with rain; on the 26th at 3.17 a.m. passed Noshima, moderate northerly breeze and high southerly swell; thence to port had light to moderate northerly winds, fine and clear weather; passed Kanon-saki at 6 a.m., and arrived at Yokohama at 7.30 a.m.

The American steamer *Peru*, Captain Ward, reports:—Left Hongkong the 19th November at 3.05 p.m.; had strong N.E. monsoon with heavy sea and rainy weather till the 22nd, at noon wind veered to S.E. increasing in force from a strong breeze to a heavy gale with heavy rain and heavy sea from S.E.; barometer 29.93; on the 23rd at noon gale continued wind backing to the east, less sea and very heavy rain; at 5.50 p.m. passed Yokoshima, wind increasing and blowing a hard gale with heavy rain squalls and high south easterly sea; barometer 29.49 and falling; wind veered from S.E. to south; at 10 p.m. barometer 29.16, wind veered to S.W. and increased to typhoon force with very heavy rain and high confused sea; hove the ship to on starboard tack; at midnight wind died out, rain ceased, sky clear, barometer 28.82 lowest reading; on the 24th at 0.50 a.m. wind increasing rapidly and veering W.S.W. to west, weather cloudy and squalls, with heavy rain and low flying scud, at times very high confused sea, barometer 28.99; at 1.30 a.m. steered in an easterly direction; at 3.30 wind veered to N.W. and increased to a strong typhoon with very heavy squalls of rain and a mountainous confused sea; hove ship to, barometer 29.16; at 8 a.m. wind moderated to a strong gale, barometer 29.64; put ship on her course and proceeded to port; rough sea and high N.W. and S.W. swell and weather clearing at noon, strong gale, clear weather, and very high sea to noon on the 25th; thence to port fresh N.W. winds and fine, clear weather. Arrived at Yokohama the 26th November at 10.42 a.m.

The Japanese steamer *Hogo Maru*, Captain M. Matsumoto, reports:—Left Hakodate the 26th November at noon; had gentle to moderate westerly breeze and fine weather. Arrived at Oginohama the 28th at 11 a.m. and left the same day at 3.15 p.m.; had light westerly breeze and clear weather throughout the passage; after passing Noshima Lighthouse, moderate west-south-westerly breeze and fine weather. Arrived at Yokohama the 28th November at 5.45 p.m.

The Japanese steamer *Nagato Maru*, Captain Ekstrand, reports:—Left Kobe the 28th November at 7 a.m.; had light to moderate W.S.W. winds and fine, clear weather; experienced fine weather and light westerly winds to Vries Island; thence wind N.E., light and fine, clear weather. Arrived at Yokohama the 29th November at 11.30 a.m.

The Japanese steamer *Sendai Maru*, Captain Tittle, reports:—Left Kobe the 29th November at 10 a.m.; arrived at Shiotsu at 2.30 p.m., and left same day for Yokohama. Moderate north-westerly breeze with heavy sea up to Oshima,

thence to port variable wind. Arrived at Yokohama the 30th November at 6 p.m.

The Japanese steamer *Mika Maru*, Captain Thompson, reports:—Left Kobe the 30th November at 4 p.m.; had moderate N.W. winds and cloudy weather; at 9.33 p.m. passed Hino-misaki; at 11.40 passed steamer *Moray*; on December 1st at 2 a.m. passed Oshima; from Oshima to Rock Island, had strong to moderate N. to N.W. winds and high sea, weather fine and clear; passing Omai-saki at 1.35 p.m. and Rock Island at 4.32 p.m.; from Rock Island to port had light to gentle winds; at 9.40 p.m. passed Kanon-saki, weather hazy. Arrived at Yokohama at 11 p.m.

The German steamer *Nuernberg*, Captain B. Blanke, reports:—Left Hongkong the 26th November at 12.30 a.m.; had fine weather throughout the voyage; up to Linshoten Islands, strong N.E. to N.N.E. winds and rough to high sea, cloudy weather; thence to port N.N.W. winds and rough sea, cloudy weather. Arrived at Yokohama the 2nd December at 10 a.m.

The Japanese steamer *Sagami Maru*, Captain Pender, reports:—Left Otaru the 28th November at 10 a.m.; had gentle to moderate and fresh westerly winds to Okushiri, which was passed at 8.30 p.m., and fine but cloudy weather; similar winds and fine, clear weather to port. Arrived at Hakodate the 29th at 5.30 a.m. and left the 30th at 8 a.m.; had from moderate to fresh and strong westerly breezes with heavy snow squalls and very thick weather to Shiriya-saki, which was passed at 11.30 a.m.; at 3 p.m. weather cleared up with fresh breezes from N.W. to W. and S.W. and fine, clear weather; similar weather to port. Arrived at Oginohama the 1st December at 7.30 a.m. and left the same day at 3.45 p.m.; had from gentle to moderate N.W. and S.W. winds and fine, clear weather to Inuboye-saki, which was passed at 7.40 a.m. on the 2nd; similar weather to Noshima Lighthouse, which was passed at 2.45 p.m.; thence to port gentle to moderate and fresh N.E. and northerly winds and fine, clear weather. Arrived at Yokohama the 2nd December at 7.15 p.m.

LATEST COMMERCIAL.

IMPORTS.

We raise quotations to-day on Grey Shirtings, the strong enquiry for both 8½ and 9lbs. still continuing. In Turkey Reds, while buying has been moderate, holders have been able to obtain little more for stocks on hand. Woollens are very quiet, but holders are not willing to give way in prices, looking for a better market in sympathy with the advance on Cottons. Better feeling in Yarns, 28/32's and Bombays being quotably higher. Buyers, however, will not pay the higher prices if they can avoid it, hence the sales have been restricted somewhat, as holders are firm in their position.

COTTON PIECE GOODS.

KEROSENE.

The *Glenshiel* brought some 20,000 cases of Chester, but it has had no effect on the market. Prices remaining firm and sales good.

QUOTATIONS.

Chester	\$1.75 to 1.77½
Comet	1.72½ to 1.75
Devon	1.67½ to 1.70
Russian Anchor	1.74½ to 1.75
Russian Moon	1.70 to 1.72½

SUGAR.

About the end of last week buyers rushed into the market taking nearly 30,000 piculs Browns, and quotations on Manila and Daitong were pushed up 10 cents in consequence. Since then there have been some new arrivals and the market has quieted down.

Brown Takao	PER PICUL.
Brown Manila	\$4.35 to 4.60
Brown Daitong	3.75 to 3.80
Brown Canton	3.80 to 3.90
White Java and Penang	5.90 to 6.00
White Refined	5.65 to 5.90

EXPORTS.

RAW SILK.

Our last was dated the 25th ultimo. Since then settlements on this market amount to 796 piculs, divided thus:—*Hanks*, 19 piculs; *Filatures*, 527 piculs; *Re-reels*, 352 piculs, while *Kaheda* shows a surplus of rejections over settlements amounting to 72 piculs. Direct shipments have been 164 bales, so that the total export trade of the week amounts to 970 piculs.

There has been considerably more business than in the previous week, one or two days being fairly active. Business has been done for both continents, some American buyers entering the market rather freely, taking such *Shinshu Filatures* as are now to be had, at prices ranging from \$820 to \$845. In European kinds, several parcels have been taken up, *Filatures*, *Re-reels* and *Kaheda* all meeting with some enquiry. At closing, the market is quiet, shippers having apparently filled their immediate orders, although there are enquiries for good silks from time to time, such as now no longer exist.

Arrivals come in to a fair extent, being all cold weather silks, and our winter seems to have set in, the weather being unusually cold for the time of year. From the statistics given below, it will be observed that visible supply to date is 1,800 piculs less than it was last year.

Exchange has hardened yet further, but not to the extent of the rise in price of silver, sterling exchange being now more on a parity with the price of bullion in London.

There have been two shipping opportunities since we last wrote. The English mail steamer *Ravenna*, on the 26th instant (since damaged by collision in the Inland Sea), carried 144 bales for Europe, and the *Peru*, which left port for San Francisco on the 29th, had 1,106 bales for the New York trade. These departures bring the present export figures up to 29,353 piculs, against 23,333 piculs last year, and 10,253 piculs at the same date in 1890.

Hanks.—A small business consisting of good medium *Chichibu* at \$580. Good *Hanks* are very scarce this year and anything of special quality is very firmly held in strong hands.

Filatures.—More than one half the trade has been done in this class, the present offerings of *Shinshu*, full size, being freely taken at prices ranging from \$820 to \$845. Present quality is unsatisfactory when compared with summer reliings. Some few parcels of *Koshu* have also been done; *Yafima*, \$820; other chops \$800. In fine sizes, medium grades have been most in demand, silks running from \$710 to \$750 being most in request.

Re-reels.—Here there has also been considerable business, and among the purchases made are *Five Girl* at \$775; *Tortoise*, \$765; *Tengensha*, \$765 and others in proportion. Very common *Bushu* have been done at \$580.

Kaheda.—About 35 piculs medium grades at \$685 and \$700, with something rather better at

\$735. These purchases have been offset by large rejections of previous purchases.
In other sorts no business.

Available supplies to date	41,100	42,900	27,100

WASTE SILK.

In this branch there has again been a large trade, although not quite so much as in the previous week. Settlements amount to 1,275 piculs, divided thus:—*Noshi*, 688 piculs; *Kibiso*, 481 piculs; *Neri*, 106 piculs. There is not much change to note in prices. Buyers are evidently on the lookout for good *Waste*, especially *Noshi* sorts, and quotations are fairly well maintained.

Arrivals have not been on the same scale and the stock is still further reduced, being not more than 16,300 piculs. Visible supplies to date are about 5,500 piculs in excess of last year. Some of the Native merchants assert that *Cocoons* of this year's crop are not so good as last season's, and give more waste at the *bassine*; hence the increased supplies of *Waste* this year.

There has only been one shipping opportunity since we last wrote, the English mail steamer *Ravenna* taking 351 bales *Cocoons* and *Waste* for Europe. The present export figures are 15,098 piculs, against 12,610 piculs last year, and 12,943 at the same date in 1890.

Pierced Cocoons.—No business in these, the remaining stock being chiefly of inferior grades.

Noshi.—The trade in *Yegara* has continued, \$130 being paid for best, of which grade several hundred piculs have been taken. A fairly good line of *Oshu Noshi* at \$135, with *Foshu* assorted at prices ranging from \$70 to \$75.

Kibiso.—Filatures have again been in request, \$105 being paid for good quality, while many parcels of seconds have been done at about \$90. No transactions of any note in *Hira* sorts, one or two small lots of *Oshu* being entered at \$41.

Neri.—Considerable purchases in this at \$13 for common and \$17 for good, both quotations being for the uncleaned stock.

17.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BARNES, in his work entitled "The Nile Tribes in Abyssinia," says:—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. CURRIE, in his account of his extraordinary travels in China, published in 1891, says:—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout Word. May 1st, 1890.

AWARDED GOLD MEDAL, L'POOL, INTERN'L EXHIBITION, 1880.

YOKOHAMA: SATURDAY, DEC. 10TH, 1892.

BIRTH.

On December 5th, at 18, Nagata-cho, Tokyo, the wife of G. J. H. SCHURR, of a daughter.

SUMMARY OF NEWS.

H.I.H. PRINCE KOMATSU YOSHIHITO returned to the capital on the 6th inst. from Dzushi.

MR. KAJIYAMA, Japanese Minister Resident in Korea, is reported to have left Jinsen for home.

MR. SHIMAMURA, Japanese Consul-General in New York, left Yokohama on the 9th instant for his post.

A FIRE broke out on the 28th ult. at 3 p.m. at Saitsu-mura, Amakusa, Kumamoto Prefecture, and destroyed 43 houses.

MR. HIRANO TOMIJI, founder of the Ishikawa Shipbuilding Yard, Tokyo, died in the capital on the night of the 2nd inst.

THE survey of various proposed routes of Government Railways throughout the Ou, Sanyo, Saoin, and Kansai Provinces has been completed.

WE learn that Their Majesties the Emperor and Empress are slightly indisposed through colds. H.I.H. the Crown Prince is also suffering from a similar cause.

A TELEGRAPHIC message from Matsuyama, dated the 5th inst., announces that the *Chishima Kan* has been found sunk between Mutsuki and Goko Islands, in 38° 56' 20" N. 133° 40' E.

ON the morning of the 21st ult. at half-past four o'clock, while a strong wind was sweeping over the town of Shimonoseki, a fire broke out in a house at the port, and before the firemen

could successfully grapple with it, thirty-three houses had been burnt down, and two considerably damaged.

COUNT OKI, ex-President of the Privy Council, accompanied by his family, will leave the capital about the 14th inst. for their native place in Saga, Kyushu.

MR. KUBOTA, Governor of Saitama, was placed on the Retired List on the 3rd inst., and Mr. Gimbayashi, Secretary of the Tokyo City Government, was promoted to succeed him.

IT is stated that the Cabinet has decided to appoint Baron Senke, of the House of Peers, Chief Commissioner of the Bureau of General School Affairs in the Educational Department.

COLONELS S. OKAMURA, Y. Hasegawa, T. Takai, of Infantry; H. Kawakami, of Artillery; and Captains T. Tanaka and Soyeyima have received decorations of the Third Class Order of the Mirror.

EARLY on the morning of the 3rd instant a fire occurred in the factory of the Osaka Muslim Manufacturing Company, and four premises and four sets of weaving machines were destroyed.

A PRIVATE meeting attended by Counts Yamagata, Goto, Kuroda, and Oyama, Viscount Niire and Messrs. Mutsu, Kono, and Watanabe was held on the 5th instant at the official residence of Count Inouye, Acting Minister President.

ON the night of the 5th inst. a fire broke out in the buildings of the Hospital attached to the Medical Department of the Imperial University at Hongo, and before the flames could be got under, two buildings were burnt down. No injuries were sustained by the patients.

DURING a severe gale on the morning of the 24th ult. a junk sailing off the shore of Ujima, Kamigata-mura, Fukuoka Prefecture, gave signs of foundering. Some fifteen residents of Ujima went to the rescue of the crew, but their boat colliding violently with the junk, they were upset. Four lives were lost.

SEVERAL leading *sake* brewers, now staying in the capital, met at the Yanagiya on Friday last, and agreed to hold in the capital a general meeting of *sake* brewers throughout the country to consider their future policy in regard to the Bill for increasing the *sake* tax. They appear to be much alarmed by the introduction of the Bill.

THE members of the Japan Seamen's Aid Society, with the support of several leading shipping companies and newspaper offices, are collecting subscriptions towards the relief of survivors and families of persons lost by the wreck of the *Chishima Kan*.

A LARGE sum of money, amounting to over yen 8,000, is reported to have been stolen from a person at the Nippon Ginko, Tokyo, about 11 o'clock on the forenoon of the 5th inst. The money belonged to an employee of the Fourth National Bank, named Kawabata Seigo, who had just drawn the sum from the former Bank.

THE presentation of diplomas to over twenty graduates of the Military Academy took place on the 2nd instant at 9 a.m. H.I.M. Emperor, who was expected to be present at the ceremony, was unable to attend on account of indisposition, but he despatched Baron Yoneda, Chamberlain, as his representative. Among those present were Count Oyama, Minister of State,

and Lieutenant-General Kodama, Vice-Minister for War; Chief Army Inspector Miyoshi, and many others.

DURING last month gold, silver, and nickel coins were struck in the Osaka Mint to the following amounts:—Gold 5 yen pieces, yen 98,830.00; silver 1-yen pieces, 1,036,780.06; and nickel 5-sen pieces, yen 149,253.40.

THE Tokyo City Assembly resolved at its general meeting, held on Monday last, to present a letter of thanks to Mr. Gimbayashi, Secretary of the Tokyo City Government, who was lately appointed Governor of Saitama, for the eminent services rendered by him during his long occupancy of office.

AN action brought by a Chinese gentleman against Mr. Hamano, a wealthy Japanese rice merchant of Tokyo, which demanded compensation for injuries received through a carriage accident in which the former gentleman broke his arm, was decided in the Tokyo Court of Appeal on the 5th inst. in favour of the plaintiff. Mr. Hamano was ordered to pay yen 4,800 as damages. The defendant intends to appeal.

IT is stated that the members of the Kanagawa Prefectural assembly, now in session, have determined to pass a vote of no confidence in the Governor, the resolution having connection with alleged official interference in the past general elections. The dissolution of the Assembly will be the natural result of such action, and the electors are consequently preparing to return their present representatives should such an election take place. The vote has yet to be passed, however.

LIEUT.-GENERAL BARON NOZAKI, Commandant of the Sixth Army Division, and Major-General Omura, Commandant of the First Brigade of Infantry in the Imperial Body Guards, were retired on the 8th inst. Their position have been taken by Major-General H.I.H. Prince Kitashirakawa Yoshihisa, who was raised to the rank of Lieutenant-General, and Major-General Ogawa, Commandant of the Fourth Brigade of Infantry, who was succeeded by Colonel H.I.H. Fushimi Sadanaru, promoted to the rank of Major-General. Major-General Nogi was made Commander of the First Brigade of Infantry.

THE Import trade is not much altered, the condition of exchange seemingly acting as a deterrent to business, rendering holders firmer in their demands and crippling the action of buyers, who are working down their stocks and waiting for a little stability in silver. Yarns and Grey goods are held for more money, but Woollens are unaltered in value. There is nothing to report from the Metal market. There is not much moving in Kerosene, and a considerable addition to the stock has been made by recent arrivals, but holders are strong, and buyers, not having much stock in hand to go on with, will probably be shortly forced into the market. There has not been a great deal done in Sugar, the several sorts having fluctuated in value, Daitong and Canton having gone up from 5 to 25 cents per picul, which Manila Brown and Java and Penang Whites have declined from 5 to 15 cents. A fair amount of business continues to be done in Silk, the demand for quality being greater than the supply, consequently prices are fully maintained. There has been a large business in Waste Silk, close upon 2,000 piculs having passed the scales, and as arrivals do not keep pace with sales the stock is decreasing. The Tea trade is on a very small scale, and for what is doing prices are unchanged. Exchange continues to fluctuate, the changes being mainly downward.

EDITORIAL NOTES.

LOSS OF THE "CHISHIMA KAN."

THE loss of the *Chishima Kan* is an event sufficiently novel in the history of the Japanese Navy to excite much interest. One is disposed to think that its very novelty ought to have suggested itself as the first topic of comment, but, strange to say, none of the vernacular journals congratulate the country on the rarity of such accidents. Some critics, notably the *Choya Shimbun*, discuss the possibility that the event may have an injurious effect on the attitude of the Opposition towards the Naval Appropriations. This view is founded on the fact that the *Chishima's* fate completes a rather formidable list of mishaps to vessels ordered from abroad in recent years. The catalogue begins with the *Unebi Kan*, which disappeared suddenly just before her arrival in Japanese waters, not the smallest trace of her having been subsequently discovered. Then followed the *Itsukushima Kan* which met with such injuries en route that her voyage was most inconveniently prolonged. And now we have the case of the *Chishima*. It was stated originally that the *Chishima* had been ordered in 1887, but that appears to be a misapprehension. At all events, her keel was not laid down until November 1889, and she was ready for sea exactly a year later. In the Mediterranean Sea she met with trouble, and it was found necessary to send materials and artisans from France to effect repairs. No statement has been published as to the exact incidents of her subsequent voyage, but she seems to have been nearly two years en route, and the sequel is her total loss by collision. The remarkable immunity from serious accident enjoyed by the ships actually forming part of the Navy gives all the more prominence to these unfortunate experiences of vessels on their way to join the Navy. It is feared that the record may furnish fresh ground for doubt to politicians who charge the Naval Department with mismanagement, and that a prejudice may thus be created against entrusting public money to the present Admiralty for ship-building purposes. The contract price of the *Chishima*, with her armament, was 726,442 yen, and if the cost of repairs en route and of the long voyage out be added, it is calculated that she represented something like a million yen when she left Nagasaki on her fateful voyage. People ask why she was not insured, but of course the simple answer is that it pays the Government better to be their own insurers. The *Unebi* happened to be insured, but that was owing to some special feature of the arrangements connected with her transfer. The question of insuring or not insuring is purely one of dollars and cents. The *Choya Shimbun* doubtless understands the mood of its own nationals, but truly we shall be astonished to find that accidents like those which befel the *Unebi*, the *Itsukushima*, and the *Chishima* are perverted into arguments against ordering ships from Europe, or entrusting the business of procuring them to the present Admiralty. After all, the politicians of the Opposition may declaim as they please, but the personnel of Japan's Navy is the best and most highly experienced at her command, and on the whole she has reason to be proud of it.

The most extraordinary article published on this subject, indeed one of the most extraordinary articles, we are disposed to think, ever published under similar circumstances appears, in the *Kokkai*. That journal does not pretend to know anything about the details of the collision. The sum of its information is that the *Chishima* was cut down and that the *Ravenna* suffered considerably. Yet it unhesitatingly declares that the fault lies with the inferior seamanship and antiquated methods of the *Chishima's* navigators. By what supernatural process of reasoning this conclusion is reached we are totally unable to discover. The *Kokkai* writes in a very learned manner, and has much to say about *Kiushiki* and *Shinshiki* (old and new style). It even undertakes to sit in judgment on British and French seamanship when last the two fleets worked together, the verdict being that the

former had to take a back seat on account of its adherence to *Kiushiki*. We should not venture to query the breadth and depth of such nautical discernment were it not accompanied by a rider that the collision of the *Chishima* with the *Ravenna* is like an encounter between a warrior and a merchant, and that the blame must of necessity devolve upon the warrior. Possibly events may justify the *Kokkai's* idea, but nothing can ever justify its singular precipitancy in passing judgment without a jot of evidence, and nothing can mitigate the absurdity of its warrior-merchant comparison.

Full details of this terrible disaster says the *Kobe Chronicle* of the 3rd inst., are still wanting. It was thought that a full account of the unfortunate affair would be brought by the *Ancona*, but it appears that when the *Ravenna* was passed, the latter vessel signalled that no assistance was required and the *Ancona* did not stop. The *Kosan Maru*, belonging to the Osaka Shosen Kaisha, came in yesterday afternoon and reported that on passing the *Ravenna* repairs were observed to be going on at the bow, and the steamer appeared to be getting ready to proceed. The *Chishima Kan* has sunk in deep water and none of her masts is to be seen. Fishermen were engaged at the time Japanese steamer passed in trying to locate her position by means of fuzes. The full report of the *Kosan Maru* given by the *Osaka Asahi Shimbun* is as follows:—On arrival at Mitsugahama saw the *Katsuragi Kan* and four other Japanese men-of-war in harbour. Proceeding to Horiye Bay found the *Ravenna* anchored about one mile from shore. Observed that she had sustained serious injuries to her bow. Her stem was twisted to the right, and the plates were broken and bent. Endeavours were being made to prevent the inrush of water by making temporary repairs. The exact position of the *Chishima-kan* had not been discovered, but she is believed to lie at a spot between five and six miles from Horiye Bay. The captain of the *Kosan Maru* believes it probable that when the collision was seen to be inevitable the cruiser in attempting to avoid the blow was struck on the port side. Both steamers, he further states, were in full speed at the time, and this is the reason why it is now so difficult to find the exact position of the *Chishima Kan*, both vessels drifting apart immediately after the collision. We have been favoured with the following report by Mr. F. Bischof, the pilot of the *Empress of Japan*, who writes from Bakan:—On 29th November, at 8.30 a.m., when passing Horiye Bay, in *Empress of Japan*, saw a vessel at anchor, sending up rockets; stopped engines, and after careful watching, found this vessel to be the P. & O. steamer *Ravenna*, at anchor, with signals of distress flying; steamed within one mile of *Ravenna* and let go anchor. Captain Lee, of *Empress of Japan*, got gig lowered and proceeded to steamer *Ravenna* at once. After about an hour and a half a small Japanese steamer came alongside of *Empress of Japan* with the *Ravenna's* passengers, mails, and luggage; embarked same on board of *Empress*; a lady passenger informed me that the *Ravenna* had been in collision with a Japanese cruiser that morning at 3.30 a.m., the latter having been cut into two halves by the former. The Japanese cruiser sank within a couple of minutes, and the collision was so sudden that of the whole complement of one hundred, eighty-four had been drowned. The *Ravenna* sustained heavy damages about her bows; by looking at her from the *Empress* I saw a big hole on port bow above water; the stem and bow-plates of *Ravenna* having been forced to starboard, which appeared to be bulged out considerably. At 11.30 a.m., after the arrival of Captain Lee on board the *Empress*, all passengers and mails being on board, proceeded on our voyage; in passing Nobotsuna-Sima saw a lot of oil floating on the surface of the water, probably from the Japanese cruiser which had been forced upwards, but not a particle of wreckage to be seen. The exact position of the collision I cannot

give, as I did not see the pilot of *Ravenna*, and the passengers' description of the place being naturally very inexact. The *Ravenna* was in charge of Mr. Kichi, a Japanese, who was the Company's pilot. Passed Shimono-seki at 5 p.m. 30th, and left *Empress of Japan* of Rokuren Light at 5.30 p.m., making the distance of 106 miles in six hours.

THE HOUSE OF REPRESENTATIVES ON THE 1ST INSTANT.

It is stated that Mr. Shimizu Bunjiro, who distinguished himself by his extraordinarily vehement protests of inability to comprehend the Declaration of Policy read by the acting Minister President of State in the House of Representatives on the 1st instant, has long been under instructions from his constituents to preserve silence in the House. This injunction was laid upon him because of his well demonstrated liability to effervescence. But on the 1st instant he broke away from all bonds, and fumed freely during the space of about 50 seconds, when he resumed his seat amid a chorus of laughter. Mr. Kori Hoso, the other member who complained of the Declaration's want of perspicuity, may have been on his feet in the House before, but we have never read his name in any debate. In truth, one of the most remarkable features of the whole affair was that no member having any claim whatever to prominence, attempted to criticise the declaration. Mr. Tanaka Shozo spoke, but then Mr. Tanaka Shozo is rather notorious than prominent. The House listened to the Declaration in absolute silence and refrained from all immediate comment on it. The fact is interesting—and we record it from personal observation—because it illustrates what very false impressions may be gathered and conveyed by cursory readers and over-graphic describers of debates. Thus, in the columns of a local contemporary, we find this statement:—

The reading of the Minister President's imposing and conciliatory speech so far from impressing the House, gave rise to a childish quibble as to the propriety of a Minister of State reading a document aloud in the House, or documents being read aloud at all. It was declared by some that they could not understand it; by others that it was against the rules. But all objections were overruled by the President.

It would certainly have been difficult to misrepresent the attitude and conduct of the House more completely than the above sentences—written, doubtless, in all good faith—misrepresent them. The incident reminds us of an assertion made some time ago by a writer who had never been inside the walls of the House of Representatives when he wrote, namely, that the Japanese Diet is a "rowdy place." Rowdy it most assuredly is not.

"THE IMPERIAL ENGLISH AND CHINESE DIARY."

THE annual issue of Messrs. Kelly and Walsh's "Imperial English and Chinese Diary" must assuredly cause many qualms of conscience to several folks. For it is a cogent and forcible reproach to every one lacking that most essential of business qualities, a practical sense of order. We cannot conceive any compilation better calculated to teach a man what he might be were he endowed with that sense, or to furnish him with the means of cultivating it if he has not already done so. The volume, which costs only one dollar, commences with tables of Customs duties and other matters essential to merchants, and then passes to post-office regulations and rates, telegram charges, calendars, and so forth. All this matter is prefatory to the body of the book, which consists first of a diary, each leaf—measuring 13 inches by 8—having only two days, so that ample space is furnished for the fullest entries. A hundred and seven pages are devoted to this, the most important part of the work, and then comes a page of invaluable character, namely, "Memoranda of Things Lent." If the columns of this sheet were only kept filled, from how many losses would one's library be saved, and how many of one's friends might be guarded against their own negligence. But we observe that no page is added for "Things Borrowed," probably on the principle that any man precise enough to keep notes of what he lends, will be

Original from

sure to remember what he borrows also. Each month in the year then receives a page for its "Cash Account"; another page is devoted to an "Annual Cash Summary" seven pages are headed "Register of Correspondence," with appropriate division into columns; two to "Names and Addresses"; and "Memo" and "Reminders" have one each. Happy would be the man who kept such a book on his desk and made the filling of its pages an every-day rule. His business would never fall into arrear, and order reigning supreme in all his affairs, the effective value of his industry would be doubled.

H.M.S. 'PALLAS' ON SHORE.

THE Douglas steamer *Thales* (Captain Bathurst), which arrived from the north this morning, says the *China Mail* of the 26th ult., reports H.M.S. *Pallas* having been on shore at the Pescadores. The *Thales* left Taiwanfoo on Monday last, 21st inst. There was a fresh breeze blowing, and the barometer fell to 29.74. At midnight the barometer was still falling, while the wind had increased considerably. Captain Bathurst deemed it advisable, in these circumstances, to anchor in Battery Bay (Pescadore Islands). On Tuesday a heavy gale was experienced and the barometer fell to 29.54, so he shifted his anchorage to Watering Bay, where he found H.M.S. *Pallas* and the steam-tug *Samson* (which are looking after the burying of the bodies of the victims of the *Bokhara* disaster and salvage operations), had already sought shelter. On the morning of Wednesday, Captain Bathurst received a letter from the *Pallas*, stating that she and the tug were on shore on a sand spit off Ta Tsang Island. The *Thales* stood by until high water at 2 p.m. on Wednesday, when both vessels succeeded in getting off apparently without sustaining any damage. The weather became fine, the barometer was rising, and the *Thales* was able to proceed on her voyage to Amoy.

MR. KATO'S ANECDOTE.

In the course of a recently published interview with a correspondent of the *Manchester Guardian*, Mr. Sateri Kato, a Japanese clergyman, related an anecdote by way of response to a suggestion that a new religious sect might be established in his country. "One of the Emperors," he said "was informed by the Prime Minister at the time that another sect was in course of formation. The Emperor treated the matter lightly, and asked how many sects were already in existence in Japan. 'Sixty-nine,' was the reply. 'Then there is not much difference between sixty-nine and seventy,' said His Majesty, and the subject dropped." This story, though entitled to the welcome due an old and familiar friend, is too nearly allied to the fruit of the *castanea vesca* to justify radical deviations from its original form. As told by Vivero y Velasco, it was not a genuine emperor who made the alleged remark, nor was it a Prime Minister to whom he spoke; and the figures, instead of being sixty-nine and seventy, were thirty-five and thirty-six. It is true that the incident loses little by Mr. Kato's variations, but on the other hand it gains nothing, and people who have been attached to it for ages prefer to see it in the shape to which they are accustomed. It is unwise to trifle with cherished traditions. From the moment when George Washington's cherry-tree began to be confounded with somebody else's apple-tree, public confidence in the legend of the hatchet sensibly abated, and scarcely anybody now regards it as historically authentic. If liberties are wantonly taken with the medieval Spaniard's Japanese tale, a similar fate will assuredly befall it.

ORDER IN THE HOUSE OF REPRESENTATIVES. MR. HOSHI TORU, whose ability as President of the Lower House, is admirably and conspicuously displayed, seems to be, perhaps, unconsciously, on the eve of a reform which would remove the one objectionable element in the present mode of procedure. The custom in the British Parliament known as "catching the Speaker's eye," becomes, in the Japanese House of Representatives, stunning the President's ear. A member desiring to speak—we do not allude, of course, to set debates when

the occupants of the rostrum succeed each other in pre-determined order—springs to his feet and cries "*Gicho*" (President). The quality of the cry varies with the interest of the occasion, and sometimes when the recognition of the Chair is not secured at once, these vociferations of "*Gicho*" become a veritable din, and convey to outsiders the idea of much disorder. Evidently the fact struck Mr. Hoshi on a recent occasion, for he suggested to the members that if, instead of crying "*Gicho*," they would call out their numbers, it would be much easier for him to distinguish between them. So it would, and what is more, the effect would be far less undignified. Were each member restricted to indicating himself by number only when seeking recognition, things would move more smoothly. There might, however, be occasional confusion. Three or four numbers called out nearly simultaneously could scarcely fail to perplex Mr. Hoshi Toru. In the end, the House is pretty sure to come to the English method, namely, that of rising silently and remaining on foot until the Speaker indicates somebody. Mr. Hoshi appears to be developing a consciousness that the present plan occasionally produces consequences not at all consistent with the good order which habitually reigns under his sway, and if he begins by insisting on numerical calls only, he will conclude by forbidding calls altogether. Then he would have something very near a model House.

THE LATE PRESIDENTIAL ELECTION.

In politics, as in most human affairs, a great deal depends upon the point of view. Actions that are lauded by one party as full of graciousness, dignity, and rectitude, become base and contemptible when criticized by the other side. In October last, Mr. Cleveland, like many American citizens of exceptional distinction, was invited to be present at the dedication ceremonies of the Chicago Exposition. His response was to the effect that while he would gladly attend if he could do so solely in the character of an ex-President of the United States, he was unwilling to expose himself to the suspicion of seeking to gain a political advantage from the event. As a President of the past, he would be delighted to participate. As a possible President of the future he could have no share in the proceedings. His objections were, moreover, "overwhelmingly increased" by the circumstance that his rival, who had also been invited was prevented from accepting by the grave—and, as it subsequently proved, fatal—illness of his wife. Mr. Cleveland was probably influenced, in announcing this decision, by the harsh comments of Republican journals upon his appearance at the Columbian festivities in New York, a few days before the observances in Chicago. He had, in company with ex-President Hayes, reviewed the military parade from a platform in Madison Square, and had been more or less emphatically rebuked by his opponents for making himself conspicuous at a time when Mr. Harrison was compelled to remain in seclusion. It was doubtless inevitable that his motives in absenting himself should be diversely estimated, and that while receiving compliments for what his adherents termed "a manifestation of sensitive delicacy," he should be accused by antagonists of having "carefully calculated his course with an eye to popular effect;" but the extremities of eulogy and censure with which the incident was discussed were curiously at variance with the moderation generally shown in this unusually well-ordered campaign. As an example of Democratic fervour, we find in a leading Western newspaper the statement that "the true grandeur of Grover Cleveland's noble nature was never more convincingly demonstrated;" and in the opposite vein, a Republican organ insisted that "a distressing calamity was utilized by one candidate as a means of personal self-glorification at the expense of the other." The *Louisville Post* admirably declared that in this and all the actions of his life, Mr. Cleveland "stands by the truest and noblest purposes;" and the *Detroit Tribune* came in judgment with a shower of unpleasant adjectives, denouncing the letter of declination

as "discreditable, disgusting, and dishonorable, offensively presumptuous, and in excessively bad taste." The *Toledo Bee* was satisfied that the democratic chieftain had once more exalted himself as "an honour to his country, his party, and himself;" and the *Buffalo News* held that such a "display of pretentious affectation was offensive to every man's sense of the fitness of things." To a distant observer this vehement eloquence has altogether a perfunctory air. So far as we may be permitted to give an opinion, Mr. Cleveland's action was neither particularly magnanimous, nor yet the reverse. He probably disliked the interpretation put upon his public appearance at the New York celebration, and determined to avoid a repetition of the annoyance; and by staying quietly at home, saved himself a deal of trouble, and escaped a fresh deluge of equally unpalatable praise and blame.

MALE AND FEMALE EDUCATION.

In the sequel of long and patient investigations, Sir James Crichton Browne has arrived at the conclusion that there is a marked structural difference between the male and female brain. Some of the points of difference are not easily comprehended by every-day folks; others are capable of quick understanding. The female brain weighs about an ounce less than the male. It is more symmetrical, owing to its comparative poverty in secondary gyri. Its grey matter is a less highly nourished and developed tissue. Again, "the region of the brain which in men is most richly flushed with blood is that supposed to be concerned in volition, cognitions, and ideomotor processes; while the region which in woman is the most vascular is that which is mainly concerned in sensory functions." Sir James thinks that these structural differences make themselves felt all through life. From first to last the male brain differs from the female in capacities, aptitudes, and powers. Hence he deduces an important conclusion as to education. We quote his own words from the *Educational Review*:—"These differences of brain structure and function which at every stage of existence separate the sexes, have a special pathological significance at the period when sexual divergence is taking place most rapidly, and when education is being pushed forward with most vigour. Education, from first to last, can only be understood in the light of cerebral physiology. The high-school education of girls which is now so popular is full of peril for them. Children have no business with headaches, nor with weak eyes, nor with neuralgia, nor with any form of nervous exhaustion, and I am satisfied, from careful inquiry, that a large proportion of the girls in our high schools suffer from all these complaints, and as a result of overpressure. The attempt to educate young men and women on the same lines and in the same coaches cannot but be injurious to both. 'What has been decided among the prehistoric protozoa cannot,' it has been well said, 'be annulled by act of Parliament,' and the essential difference between male and female cannot be obliterated by a stroke of the pen by a *Senatus Academicus*. To essay such work is to fly in the face of evolution. The sexes diverge from each other as we ascend in the animal kingdom, and are most marked in the human species. And with this divergent differentiation of the sexes has come reciprocal dependence and higher harmony. It is no question of superiority of the one sex to the other. Each sex is higher, each is lower; together make up the perfect whole. It is in the sympathetic accord of the differentiated sexes that human progress can alone be hoped for."

ECHIZEN.

A CORRESPONDENT, writing from Fukui on the 3rd inst. says:—This morning, a little before three o'clock, Fukui was visited by an earthquake shock of considerable severity, the heaviest that has occurred for several months. No damage, however, has been reported. Snow began falling here on the night of the 25th ult., and has continued at irregular intervals ever since. Rain, however, has fallen in considerable quantities during the same period, so that the depth of snow on the level is only a few

inches. Miss West reached Fukui on Tuesday afternoon, November 22nd, and the same evening gave a parlour talk to a gathering of about a hundred persons. This proved to be her last address. Next morning, when she started for Kanazawa, she was not feeling well, and when she had gone some four or five *ri*, travelling by *jinrikisha*, she became quite sick. She kept on, however, and reached Kanazawa the same evening, having ridden twenty-two *ri* since the morning. Her engagements for meetings in Kanazawa had all to be cancelled, as she was by the time she reached that place quite ill, and, as you doubtless already know, that illness terminated fatally.

BIG FIRE ON YATO-ZAKA.

YOKOHAMA has been visited by another calamitous fire. About forty minutes past two o'clock on Wednesday morning the house of Kato Denzaemon, No. 1, Motomachi, Ichome—one of the block of Japanese houses which are clustered in the gully alongside the Yato-zaka, more familiarly known as Camp Hill—caught fire. A very strong breeze was blowing at the time right up the Bluff, and in a few minutes the fire had been carried to the adjoining houses. House after house was caught by the flames, and soon a roaring sea of fire was sweeping up the hill. The fire bells had by this time drawn large crowds to the spot, and the fire brigades were soon at work. It was quickly seen, however, that nothing could be done to stay the flames in the densely packed village, while the European houses on the other side of the road were in great danger. Attention was therefore directed to prevent their catching fire. The task was no light one, and the residence of Mr. E. J. Moss was twice alight, but through the exertions of Dr. Rogers of the U.S. N. Hospital, and the men under his command, the place was saved. Lower down the hill, the large tenement occupied by Mrs. Kilgour and Mr. Pass required constant drenching to prevent the flames from getting hold. The woodwork was charred, and the large windows of the verandah cracked by the intensity of the heat. All the grass on the opposite slopes was burnt to tinder. The trees by daylight exhibited a sad array of blackened branches and scorched foliage. Altogether, one hundred and thirty houses were totally destroyed. This morning, the spectacle presented by the smouldering mass was very desolate. Here and there under the brow of the French hill a fire-proof house remains, but in a damaged condition. The electric light poles which were not entirely burnt down stand out amid the fallen ruins, charred from top to bottom. So swift was the spread of the devouring element that very little salvage was effected, and in the majority of cases nothing was saved. At one time a rumour prevailed that some children had been burned to death, but we have not been able to obtain confirmation of the report. Both the Bluff and Settlement brigades were engaged, the Foreign Brigade attending under command of Superintendent Kipling with two steamers, hose reels, and engine, and 14 men. Much praise is due to the hospital authorities for their prompt aid.

WORLD'S FAIR SOUVENIRS.

ONE of the devices resorted to in connection with the Chicago World's Fair is the coining of a million silver half dollars, which are to be sold at a uniform price of one dollar, excepting five of them, namely, the 1st, the 400th, the 1492nd, the 1892nd, and the last. For these five the romantic section of the public is at liberty to offer as much as it pleases, and inasmuch as ten thousand dollars have already been bid for the first coin, it is plain that the projectors of the scheme did not make a false estimate of peoples' fancies. It is possible that among our readers there may be some who desire to obtain possession of a silver souvenir, and we therefore reproduce, for their information, a note which has been issued by the chief of the Department of Publicity and Promotion:—

The World's Fair souvenir coins are "going like hot cakes," and those who want to get one or more of them

will have to bestir themselves or they will be too late. The desire for one of these mementos of the Exposition seems to be almost as universal as is the interest in the Exposition itself, and orders for them have been sent in from all parts of the United States and also from foreign countries.

This souvenir half dollar, it is reported from Washington, will be the most artistic coin ever issued from the mint. On the obverse side will appear the head of Columbus, designed from the Lotto portrait, and so rounding it the words, "World's Columbian Exposition, Chicago, 1892." On the reverse side will appear a caravel, representing Columbus' flag-ship, and beneath it two hemispheres. Above the caravel will be United States of America, and beneath the hemispheres, "Columbian Half Dollar." There is no doubt that this coin will be regarded as the most distinctive and highest priced cheap souvenir of the World's Fair.

All of these souvenir coins, except five, are being sold at a uniform price of one dollar each. For the first coin struck off \$10,000 has already been offered, and various prices have been bid for the 400th, 1492nd, 1892nd and the last coin. Desiring that these souvenirs be distributed as widely as possible among the people, and that all, irrespective of locality, have an equal chance to obtain them, the Exposition authorities have sought to prevent syndicates and others from purchasing large quantities and thus "cornering" the sale. On the contrary, they have arranged to supply banks, business houses and individuals in all parts of the country with as many as they may desire to distribute among their patrons, customers, or friends. They require only that the orders must be for fifty coins, or some multiple of fifty, and that the order be accompanied by the cash, at the rate of one dollar for each coin. A great many banks and business firms have gladly complied with these conditions and ordered each from 50 to 20,000 of the coins.

Notwithstanding that these conditions have been widely published, still a vast number of inquiries by letter has been received at Exposition headquarters asking how the coins may be obtained. The best way is to get them through local banks, all of which are no doubt willing to accommodate in that way their patrons and the residents of the city or town in which they are doing business. If, however, for any reason it is desired to obtain them otherwise, the proper method is to form a club of subscribers for fifty coins, or some multiple of fifty, and select some one member of the club to send on the order and money and to distribute the coins when received. Orders should be addressed to A. F. Seeberger, Treasurer, World's Columbian Exposition, Chicago.

It is probable that the coins will not be ready for distribution until some time in December. But the orders are being sent in rapidly, and will be filled in the order of being received. Therefore it is important that all who desire coins should put in their orders as soon as possible.

FIRE IN TSUKIJI, TOKYO.

FIRE broke out at 3 o'clock on Tuesday morning in the block of buildings, on lot No. 20, Tsukiji. The main roof, covering two dwelling houses, was soon one mass of flames, and the building is completely destroyed barring a few of the massive uprights which still stand in charred nakedness. The fire was virtually out, and all danger over before four o'clock. At one time the Hotel Metropole was threatened, but fortunately there was not much wind, and the Hotel just at this point presents very little but brick to the side the fire was on. The two dwelling houses were at the time unoccupied by regular tenants, but were used now and then for holding auction sales in by Mr. Hall. It is said the fire was caused by a hibachi used by the caretaker. One of the wooden outhouses caught fire in a small way two or three times, and Mr. Tyng did good work in putting out these incipient flames. The nearest fire station to Tsukiji, with steam fire engines, is Kaji Bash, a good mile off, and this and the one from Shimbashi were some little time before they arrived, but when these two, shortly supplemented by others, did come, the fire had but little chance, and was soon beaten out by the powerful streams of water thrown upon it. Just before the steamers arrived a small hand-engine put in appearance, and drew its supply from the fresh water tanks of the Hotel, and a few men did some bucket work. Mr. Dewett, the manager of the Hotel, must have lost by the naturally rough usage his furniture and effects suffered in their hasty bundling into the street, as his house was dangerously near the fire.

JAPANESE CARDS.

"THE Game of Japanese Cards" is a prettily bound and attractive little volume by Mr. Uchiyama Rossetsu, explaining, as its name indicates, the manner of playing Japanese Whist, or "Hana-awase." The first foreigner whose researches extended to this particular field of Japanese civilization was, we believe, Mr. J. Conder; but before his investigations took published form, Major-General Palmer, R.E., contributed a paper on the subject to the Asiatic Society of Japan. It is scarcely necessary to say that Major-General Palmer went into the

subject with his usual thoroughness. We are, therefore, somewhat surprised to find that no acknowledgment of his work is made in the volume now before us. Mr. Rossetsu has mapped out his explanations in a most lucid manner. It seems to us that any student of his book might sit down confidently to play the difficult and intricate game discussed. Nor must it be supposed that such an achievement would be in any sense a trifling matter. Our own whist resembles chess and mathematics in this that the men destined to attain real proficiency in it are born not made.

The same seems to be true in an equal degree of Japanese *Hana-awase*. Its pretty name, "flower-matching," was apparently chosen by some lover of paradox, for the path to successful performance is strewn with thorns rather than with blossoms. We shall not attempt to justify this assertion by any explanation of the perplexing processes of the pastime. Mr. Rossetsu devotes sixty-four pages of pretty closely printed letter-press to the effort, and are do not see that he could have greatly abridged his exegesis without loss of lucidity. People desiring to be initiated must therefore be referred to his volume. To us it appears that *Hana-awase* is a combination of whist, picquet and poker. The preliminary composing of a hand, before the play of tricks actually commences, demands considerably more judgment and calculation than have to be exercised in the two last games combined, and the subsequent conduct of the game brings it into close relationship with whist. Some of its affinities to poker are quite remarkable; as for example, the right of electing to play or pass out; the holding and transfer of the "age"—which term, by the way, finds almost an exact counterpart in the Japanese "oya," or "parent"—the values of pairs, triplets, fours, and so forth. Such resemblances seem to pass the limits of mere accident, and it there were any possibility of tracing their origin, the task might be worthy of attention at the hands of some leisured ethnologist. We believe that efforts are being made to introduce *Hana-awase* into Western circles, and certainly the game would be an immense addition to our repertoire of after-dinner amusements. The Japanese play it with the most insignificant little cards conceivable. This is referred by Mr. Rossetsu to the fact that gambling having always been very strictly interdicted in Japan, card-players found it necessary to reduce to a minimum the dimensions of their tools of trade so as to facilitate concealment at critical times. In Western hands the pack of forty-eight will soon attain becoming and self-confident proportions, and since the floral designs from which the various cards derive their names are really artistic, their enlargement and luxurious reproduction would be a distinct gain. The little volume before us contains coloured facsimiles of all the cards and all their important combinations, an immense aid to the better understanding of the text. It is well printed, the illustrations are excellent, and the cover is at once gay and attractive, the whole doing credit alike to its industrious compiler, and to its enterprising publishers, the Seishi Bunsha.

THE BUDGET COMMITTEE.

THE Budget Committee has sounded its first note. Our readers are doubtless aware that the Committee consists of 45 members, but we ought perhaps to explain its method of procedure. In the first place, the whole body is divided into a number of sub-committees to each of which a section of the Budget is entrusted for examination and report. Before these sub-committees go to work, however, it is necessary to determine the general lines upon which they shall proceed, and for that purpose a Policy Sub-Committee is chosen. The Policy Sub-Committee on the present occasion consists of four Radicals and one Progressionist. They did not take long in preparing a draft. Appointed on the 29th ultimo and organized for work on the 30th, they had compiled a programme of policy by the evening of the 2nd instant, and on the 3rd this programme was discussed by the whole Committee in session. Briefly speaking,

it recommends sweeping reductions in official salaries all round, as well as in the number of officials. When the draft came up for discussion by the Committee, Mr. Tajiri, Vice-Minister of State for Finance, in his capacity of Government Delegate, assured the Committee that the Government could not consent to such drastic measures. But no attention was paid to his protest. Mr. Ishida Kannosuke, President of the Policy Sub-Committee, did indeed explain that there was no idea of interfering directly with the Law of Official Salaries, and that if the reforms mapped out in the statement of policy were accepted by the Committee, they would go before the House merely as suggestions. But that, of course, was nothing more than a device to escape the constitutional difficulty, for of course the House of Representatives has no right to interfere in matters relating either to official salaries or to the establishment of the Administration. The Committee accepted the programme with one or two insignificant alterations, and in a few days we may look to see a report submitted to the House on lines as drastic as those followed by the Budget Committee in the first session.

The Section of the Budget Committee charged with the duty of determining the general policy to be pursued by the Committee in compiling its report on the Budget, consists of Messrs. Ishida Kannosuke, Kudo Kokan, Inugai Ki, Ozaki Yukio and Kawashima Jun. These gentlemen assembled on Friday last, and agreed upon the following scheme by which the various sections of the Committee are to be guided:—

PROGRAMME FOR REPORT OF BUDGET COMMITTEE.

Art. I.—The salaries of officials shall be reduced.

(a.) The salaries of *Shinnin*, High Class and *Hannin* officials shall be subjected to suitable reductions, according to the accompanying table.

(b.) The establishment of the Administration being at present fixed at its maximum limit, a due number of officials, according to the amount of business to be discharged, shall be determined, and taken as a basis in compiling the estimates.

(c.) The appropriation demanded for the Retired List shall be granted in its entirety.

(d.) The pay of officers of staff rank in the Army and Navy shall be reduced in the various Sections in due proportion to the reductions made in the salaries of Civil Officials.

(e.) The salaries of officials enumerated in the appended table shall be treated, in each Section, according to a different standard.

Art. II.—The expenses for repairs in each Department shall be adequately reduced after due examination into the circumstances of the Department.

Art. III.—The same principle shall be applied to the Travelling Allowances in each Department.

Art. IV.—The Miscellaneous Expenses of the various Departments shall be appropriately reduced according to the following scale:—

(a.) Entertainment Allowances shall be granted only to the Minister of Foreign Affairs, the Governors and Customs Superintendents of the Three Cities and the Open Ports, and the Headman of Hakodate.

(b.) One carriage shall be allowed for the Foreign Office, and all the rest shall be abolished, together with all horsed vehicles, grooms, and so forth. This rule shall not apply, however, to vehicles required by the Printing Bureau for purposes of transport.

(c.) The number of *jinrikisha* drawers shall be reduced to two-thirds or less of the number demanded.

(d.) The number of employés, as waiters, servants, and so forth, shall be reduced at least ten per cent.

(e.) Allowances connected with salaries shall be reduced or eliminated according to the circumstances of each case. This refers, for example, to money given to foreigners in the Naval Department, to allowances to committees for examining into medical matters in the Departments of Education and Home Affairs, &c.

Art. V.—The various items of Office Expenditures in the Departments, shall be calculated on the principle of a general average, the articles allowed, as books, paper, pens, ink, and so forth, being estimated *per capita* of the fixed establishment in accordance with the annexed scale. Allowances on account of communications, transport, clothes, food and so forth shall be determined according to

the circumstances of each Department, and the allowance for horses shall be abolished in every case except in the case of the Foreign Department.

SCALES.

Cabinet, Privy Council; Departments of State, Administrative Court; and *Official Gazette* Bureau per official of the fixed establishment:—

Office Furniture	from 4 to 15 yen
Cost of Printing	from 10 to 30 yen
Stationery	from 5 to 12 yen
Allowance for Waste	from 6 to 8 yen
Sundries	from 10 to 15 yen
Official Residences	Expunged

Audit Bureau; Railway Bureau; City, Prefectural and other Offices, and Schools, per official of the fixed establishment:—

Office Furniture	from 1.10 to 4 yen
Cost of Printing Books	from 0.50 to 9 yen
Stationery	from 2.00 to 8 yen
Allowance for Waste	from 0.50 to 5 yen
Sundries	from 2.00 to 10 yen

Art. VI.—As to Secret Service Funds, the allowance for the Cabinet shall be eliminated; the allowances for the Police Bureau and the Cities and Prefectures shall be reduced by one half; and the rest shall be suitably reduced after due investigation into each case.

Art. VII.—No new works shall be sanctioned except those considered to be of a thoroughly sound character.

TABLE OF SALARIES.

Present Salary. Proposed Salary.

Minister President of State 9,600... 6,000

Chief Secretary of the Cabinet 3,500... 2,500

Director of the Decorations Bureau 4,000... 2,500

Vice-director 3,000... 2,000

Secretary 2,400... 1,600 to 1,400

Chief of the Law Bureau 4,000... 2,500

Councillor of the Law Bureau 800 to 2,500... 800 to 16,000

Vice-director of Law Bureau 3,000... 2,000

Examiner of Pension Bureau 1,200 to 1,400... 800 to 1,000

Ministers of State 6,000... 5,000

Vice-Ministers of State 4,000... 3,500

Directors of Bureaux 2,500 to 3,000... 2,000 to 2,500

Councillors, Secretaries and Private Secretaries 800 to 2,500... 800 to 1,800

FOREIGN DEPARTMENT.

Translators 800 to 1,800... 700 to 1,200

Diplomatic Officials and Consuls 800 to 1,800... 700 to 1,200

Allowances for travelling expenses of Wives to be eliminated except in the case of Consul-General.

HOME DEPARTMENT.

Manager of Police Bureau 1,600 to 1,800... 1,400

Surveyors of Engineering Bureau 1,500 to 2,000... 1,200 to 1,600

Superintendents of Prisons 800 to 1,800... 700 to 1,200

POLICE BUREAU.

Chief of Police 4,000... 3,000

Inspectors of Police 700 to 2,200... 700 to 1,500

Chief of Fire Brigade 1,400... 1,000

Medical Officer 1,000... 1,000

Directors of Prisons 800 to 900... 800

HOKKAIDO ADMINISTRATION.

Chief of Administration 4,000... 3,500

Secretaries 2,000 to 2,500... 1,600 to 1,800

Chief of Gendarmes 1,800... 1,200

Paymaster 1,800... 1,200

Councillor 1,000... 800

Headmen 600... 600

TOKYO MUNICIPALITY.

Governor 3,500 to 4,000... 3,500

Secretary 2,000... 1,800

Chief of Tax-Collectors 1,500... 1,000

LOCALITIES.

Governors of the Two Cities and Eight Prefectures 3,500 to 4,000... 3,000

Secretaries 1,500... 1,600

Chiefs of Gendarmes and of Tax-Collectors 1,100... 900

Governors of other Prefectures 3,000... 2,500

Secretaries 1,500... 1,200

Chiefs of Gendarmes and of Tax-collectors 1,100... 800

Chief of Gendarmes in Osaka 1,400... 1,000

Governors of Islands 1,200... 700 to 800

Councillor One at 1,000 and one at 700 One only at 800

Headmen of Districts 600 yen; 500 yen to 600 two hundred yen, and all specially appointed officers pointed re- abolished.

Superintendents of Prisons 600 to 800... 500 to 700

FINANCE DEPARTMENT.

Accountants and Tax Officials 800 to 2,500... 800 to 1,800

PRIVY COUNCIL.

President of Privy Council 5,000... 2,500

Vice-President 4,500... 2,000

Privy Councillors 4,000... 1,500

Chief Secretary 3,500... 2,000

Secretaries 800 to 2,500... 800 to 1,800

IMPERIAL DIET.

Chief Secretaries 3,000... 2,000

Secretaries 800 to 2,000... 800 to 1,800

AUDIT BUREAU.

Chief of Bureau 4,000... 3,500

Vice-Chief 3,000... 2,500

Examiner 1,000 to 2,500... 1,000 to 2,000

Assistant-Examiner 600 to 900... 600 to 900

Secretaries 1,500 to 2,000... 1,200 to 1,600

ADMINISTRATIVE COURT.

President of the Court 4,000... 2,500

Judge 1,200 to 3,000... 1,000 to 2,000

CUSTOMS.

Superintendent 1,200 to 3,000... 1,000 to 2,000

Appraiser 1,200 to 1,400... 800 to 1,200

Assistant-Appraiser 900 or less... 400 to 600

DEPARTMENT OF JUSTICE.

President of Supreme Court 5,000... 4,000

Chief Public Prosecutor of Supreme Court 4,000... 3,500

Vice-President of Supreme Court 3,500... 3,000

Judges and Procurators of do. 1,600 to 3,000... 1,200 to 2,500

Chief Secretary of do. 1,200... 1,000

Presidents of Tokyo and Osaka Appeal Court 4,000... 3,000

Chief Procurators of do. 3,500... 3,000

President of Osaka Local Court 2,500... 2,000

Procurators of do. 1,200 to 2,000... 1,600

Presidents of other Appeal Courts 3,500... 3,000

Other Chief Procurators 3,000... 2,500

Vice-Presidents of other Appeal Courts 1,400 to 2,200... 1,400 to 2,000

Procurators 900 to 2,000... 800 to 1,600

Judges 900 to 1,200... 800 to 1,300

Chief Secretary 900 to 1,000... 800 to 900

Presidents of other Local Courts 1,400 to 2,200... 1,300 to 2,000

Chief Procurators of do. 1,200 to 2,000... 1,000 to 1,400

Vice-Presidents of do. 900 to 1,200... 800 to 900

Procurators and Judges of do. Judges of District Courts, Procurators of do. 600 to 800... 500 to 700

DEPARTMENT OF EDUCATION.

Inspectors of Schools 700 to 1,600... 700 to 1,200

President of Imperial University 4,000... 3,000

Judges 1,200... 900

Examiners 600 to 900... 600 to 900

Overseers, Forestry Officials 800 to 1,500... 700 to 1,200

Engineers 500 to 700... 500 to 700

DEPARTMENT OF COMMUNICATIONS.

General Business Officials 700 to 1,200... 600 to 1,000

Overseers 1,000... 800

RAILWAY BUREAU.

Chief of Bureau 4,000... 3,000

Vice-Chief 3,000... 2,000

Councillors 800 to 1,200... 1,000

General Business Officials 800 to 1,200... 800 to 1,800

Probationers 900 or less... 400 to 600

TABLE OF RATES FOR HANNIN OFFICIALS.

Foreign Department, Zoku Officials.....	Average 300 Yen.
Home Department, Secretaries and Clerks.....	Average 300 Yen.
Engineering Superintendence Bureau, Secretaries, and Clerks.....	Average 264 Yen.
Prison Bureau, Secretaries, Wardens, Doctor.....	Average 264 Yen.

THE HOUSE OF PEERS AND GOVERNMENT BILLS. ALTHOUGH the opinions of the members of the House of Peers, says the *Hochi Shimbun*, on the reassessment of the taxable value of land, as well as on the proposed increase of the *saké*, tobacco, and income taxes, have not yet been declared or definitely settled, an estimate may be formed from the following:—

THE "KONWA-KAI."

Hitherto the majority of the members of the House of Peers have taken very little interest in the land tax question. Several members of the *Konwa-kai* always expressed their readiness to support a Bill for reassessment, and during the present session their number has increased, so that, and especially since the Government has introduced the Bill, though they may not approve it entirely, they will amend some portions and pass it. On the other hand, they are not at all in favour of the Bills for increasing other taxes. They met at the Nobles' Club on Thursday last, and discussed the question, finally deciding to elect a committee of three members to investigate the subject. Messrs. Fujimura Shiro, Hara Chujo, and Hayashi Soyemon were chosen. The last named is one of the biggest brewers of Miye Prefecture.

THE "SANYO-KAI."

The members of the *Sanyo-kai* have always been entirely opposed to reassessment of the taxable value of land, but before the opening of the present session, considering it necessary to investigate the question, they determined to present a representation relating to the establishment of a Bureau for examining the land-tax problem. The principal matters which the Bureau would have to ascertain are:—(1) the advantage or disadvantage of reassessment; (2) the amount of reduction; and (3) the method of reassessment. The Bureau would also investigate the reduction of the land-tax. The *Sanyo-kai* have further expressed a desire that the members of the Bureau be appointed from both Houses of the Diet as well as from officialdom. This proposition having been made before the Government declared its intention of reducing the taxable value of land, the *Sanyo-kai* are not likely to abandon the project now. As for increasing the taxes on *saké*, tobacco, etc., the *Sanyo-kai* are absolutely opposed, and will devote their full energy to rejecting this proposal.

THE "YAMATO CLUB."

The members of the Yamato Club, as well as the Independents who follow Viscount Yamanoichi, are opposed to reassessment whether the scheme emanates from the Government or otherwise. They are also strongly opposed to any increase of the taxes on *saké*, etc. Not one among them has expressed a favourable opinion on the proposition of the Government.

THE "KENKIU-KAI."

Though the members of the *Kenkiu-kai* have always been opposed to reassessment of the taxable value of land, their chief aim is to support the Clan statesmen, and consequently, so soon as the Government proposed to undertake reassessment, they forgot their former attitude and now declare in favour of the reform. They will undoubtedly approve the increase of taxes on *saké* and other luxuries; but it is reported that two or three of them endorse the proposition of the *Sanyo-kai*, for establishing a new Bureau to investigate land-tax questions.

THE CHAWA-KAI.

The members of the Chawa-kai originally separated from the *Kenkiu-kai*, but not with the intention of arranging themselves against

the latter on any question which concerned the interests of the Government. Up to the present they have merely expressed their willingness to support the Government; and have not yet held any meeting.

THE INDEPENDENTS.

Each independent member holds his own opinion on the question, and as they do not meet to determine their policy, it is somewhat difficult to ascertain their real attitude. But rumour says that about 70 per cent. of them approve of reassessment; and 90 per cent. oppose the projected increase of taxes on *saké*, tobacco, and incomes.

RECEPTION DAYS.

OUR readers will doubtless find it convenient to be in possession of the following information as to the days and places of fixed receptions by some of the Japanese ladies of the Capital:—

TUESDAY.

COUNTRESS ITO.—At the Official Residence of the Minister President of State. (The Countess does not receive, of course, during the illness of the Minister President.)

MARCHIONESS HACHISUKA.—From the Second Tuesday of January, at the Official Residence of the President of the House of Peers.

MADAME HAYASHI.—At the Official Residence of the Vice-Minister of State for Foreign Affairs.

MARCHIONESS NABESHIMA.—At No. 1, Nagatacho, Ichome.

WEDNESDAY.

COUNTRESS KURODA.—At the Official Residence of the Minister of State for Communications, in Kobikicho (near Shimabashi).

MADAME SANNOIYA.—At No. 27, Kitamachi, Takahara.

COUNTRESS GOTO.—At the Official Residence of the Minister of State for Agriculture and Commerce (near the British Legation).

VISCOUNTESS HIJIKATA.—At the Official Residence of the Minister of the Imperial Household (near the British Legation.) The Viscountess is not receiving at present on account of indisposition.

THURSDAY.

THE LADIES OF THE IMPERIAL COURT.

FRIDAY.

MADAME MUTSU.—At the Official Residence of the Minister of State for Foreign Affairs.

VISCOUNTESS NIREI.—At the Official Residence of the Minister of State for the Navy, opposite the Foreign Office. (The Viscountess has not yet moved into this new residence.)

SATURDAY.

MARCHIONESS TOKUGAWA.—At Mukojima.

This list is, of course, incomplete, but even the partial information it contains will doubtless be of service.

BLOODSHED AT YOKOSUKA.

IN old times there existed a certain class of rowdies whom the Japanese termed *Nagawakizashi* (long-swords), from the fact of their carrying very long swords for use in their swash-buckling exploits. The class gradually died out after the Restoration, but some of its members still exist in the ranks of gamblers, preserving a semblance of organization and having a ring-leader. As, however, police supervision is so strict now-a-days, these gentry can seldom create any disturbance. The district most notorious for gamblers is Joshu and in the second rank stands Yokosuka. In the latter place are two ring-leaders, one nicknamed Mekane (Kosugi Kanekichi) and the other Konauta (Hamada Utagoro). Bitter enemies, these men show much energy in collecting and organizing followers, and collisions not infrequently occur between their adherents. Lately the Konauta gang has been increasing very rapidly, and its members have often behaved shamefully to the followers of Mekane, so that the latter are said to have been biding their time to get even with the former. These men are employed chiefly at the arsenal. On the 28th ultimo they all received their monthly wages. It is the custom to have a grand gambling bout on pay-day. This presented to the followers of Mekane their desired opportunity. They secretly agreed to surprise the Konauta gang while the latter were engaged in gambling. With that object they marched to the house of Konauta the same evening, and

provoked a quarrel. But the followers of Konauta had obtained information of their enemies' design, and were thoroughly prepared to meet them. Consequently the Mekane party was totally defeated, and had to fly from the house crestfallen. This unsuccessful attempt was at once reported to their leader, who forthwith ordered preparations for a fresh attack the following day. About forty of his followers accordingly assembled on the 27th, armed with swords or spears, and suddenly invading Konauta's house, wounded several of the inmates. The family escaped out of doors, and the aggressors marched into the inner room, which is reserved for the master of the house and ring-leader of the other party. After a struggle Konauta was severely wounded in the head. Meanwhile, these doings having been reported to the police station, Miyamoto, a detective rushed to the scene of disturbance. At the gate of Kashiwada he met one Ishiwatari Asajiro, who was covered with blood. The detective stopped the wounded man and was enquiring into the cause of disturbance, when one Kurabashi Kichigoro, a follower of Mekane, rushed up with a spear nearly three feet in length, and wounded Miyamoto very severely. But the detective, nothing daunted, grappled with Kichigoro, and at last bound him with ropes. After wounding Konauta, the followers of Mekane escaped into the mountain above Iriyamasu village. Meanwhile, the followers of Konauta having received intelligence that their master was wounded, some 30 of them followed the Mekane party into the mountain, and a combat ensued lasting several hours. Over 15 men on each side are reported to have received severe wounds. At last, by the energy of the police, the combatants were separated and peace was restored. It is said that no fight of such dimensions had occurred for many years.

DISMISSAL OF THE GOVERNOR OF SAITAMA KEN.

FOR months the people of Saitama Prefecture had been urging Mr. Kubota Kwanichi, Governor of the Prefecture, to resign. But he took no notice of their appeal. They then despatched commissioners to Tokyo, to petition Count Inouye, Minister for Home Affairs, to remove the objectionable official. But even this step seemed to have no effect. Finally, the members of the Saitama Prefectural Assembly became so indignant that they refused to discuss any question, of whatever importance, relating to Prefectural management. Thereupon Count Inouye despatched a telegraphic message ordering the dissolution of the Assembly; and of course local dissatisfaction blazed out more fiercely than ever against the Governor. Suddenly the *Official Gazette* announced the dismissal of Mr. Kubota Kwanichi. In his stead Mr. Ginbayashi, Secretary of Tokyo *Fu*, has been appointed. The Saitama people ought to feel contented now, for not only has the unpopular Governor been removed, but also they obtain in his place one of the most able and conciliatory local officials in the empire.

This dismissal is another of the drastic measures adopted by Count Inouye since he assumed the position of Minister of State for Home Affairs—measures which clearly indicate a resolve not to tolerate anything like a disposition to exercise undue official interference on the part of local officials, but which have nevertheless failed to receive any recognition from such implacables as Messrs. Tatekawa Umpei, Ozaki Yukio, Haseba Toshitaka, and others. These men, having ridden to the death their hobby of official interference, are now engaged in the artistic occupation of flogging the defunct animal. Last session we had the pleasure of hearing Mr. Tatekawa deliver his two hours' indictment of the Government, and we must confess that while fully appreciating the spirit which prompted the Opposition to fight for the principle of untrammelled individual liberty in elections, the chief sentiment awakened by Mr. Tatekawa's speech was one of surprise that any responsible politician could commit the egregious blunder of supplementing grave and seemingly well supported charges by accusa-

tions so obviously wild and so evidently based on pure hypothesis as to discredit the whole complaint. The defective judgment which betrayed Mr. Tatekawa into that mistake has now urged him to perpetrate the still greater error of attempting an anti-climax. The public are pretty well tired of this official interference question. They know well that the present Cabinet is above all suspicion of anything of the kind, and that it has taken every step which can reasonably be expected of it to evince its sense of the absolutely neutral position which officials ought to occupy in the field of politics. Yet here we have Mr. Tatekawa Umpei and thirty-five other members of the House declaring that the Ito Cabinet has paid no attention to the Representations made by the two Houses last session, and actually putting up one of the number, Mr. Haseba, to charge the Cabinet with actively pursuing the very practices condemned, rightly or wrongly, in its predecessor, and pursuing them, too, for the pettiest and least profitable purposes. When such accusations as these are resorted to against Count Ito and his colleagues, the whole business assumes the character of vindictive persecution, and we shall be much surprised if the result is not to disgust the nation with politicians so careless of their own dignity and of the dictates of justice.

THE VOTE OF WANT OF CONFIDENCE.

At the close of a three hour's debate in the House of Representatives yesterday, only three members stood up to support a vote of want of confidence in the Ministry. They were the three representatives of the Oriental Radicals, Messrs. Inagaki Shimesu, Arai Shogo, and Mori Riusuke. The Oriental Radicals are the followers of Mr. Oi Kentaro. They are pledged to oppose Mixed Residence, and they stand now in the very van of a radicalism visibly approximating to socialism. Mr. Inagaki used to call himself an "Independent," and used to be regarded as a supporter of the Cabinet. But he is now an associate of the *Toyō Jiyū-to*. He is the member who made the sensation in the House last session by declaring that bribes had been offered to him to support the Naval Appropriations Bill, and of course he was the hero of the hour. In all that he may have been quite honest, but when any follower of Mr. Oi Kentaro complains about the non-accomplishment of Treaty Revision, knowing well that his Party is pledged to oppose any reasonable programme of revision, we must be permitted to doubt his sincerity.

TENDERS FOR THE TOKYO WATER WORKS.

The tenders for supplying iron pipes for the Tokyo Water Works have been opened and the figures are now known. They excite more than usual interest because the competition takes something of an international character, and because there has been so much talk of the pipes being manufactured in Japan. Some of the figures sent in by the competing firms are as follow:—Messrs. Harrison and Co., Bessemer Works, Alabama, \$19 (gold), per ton of 2,000 lbs., for straight pipes, and from \$45 to \$60 for specials (i.e. pipes with bends, &c.), delivered at the works. Messrs. Cochrane and Co., Middlesbrough from £4.10s. to £3.19s. 6d. per ton of 2,240 lbs. for straights from 4 inches to 42 inches; and £11 for specials, delivered at the works. Messrs. Macfarlane, Strang and Co., Glasgow (represented by Messrs. Okura and Co. in Japan), from £4.5 to £4. per ton of 2,240 lbs. for straights, and £9 for specials delivered in Glasgow, or £6.0.10 to £5.15.7½ for straights delivered at Tsukudajima, Tokyo, and £11 for specials. Another British firm, represented by Messrs. Jardine, Matheson and Co., from £6.6 to £6 per ton of 2,240 lbs. for straights, and £11.15 for specials, delivered in Tokyo. The same firm, through the Yeisho-kai, £6.3.3 to £5.17.9 for straights, and £11.11.3 for specials, delivered in Tokyo; the corresponding prices for delivery in Glasgow being £4.3.3, £3.18.6, and £9.3.6 respectively. A French firm, through Messrs. Schoene and Mottu, 95 fr. per ton of 1,000 kilo., delivered at the works. A Belgian firm, through Messrs. Favre-Brandt, 164.92 frs. to

99.50 frs. per ton of 1,000 kilo., and 60 frs. extra for specials, delivered at the works. Messrs. Stewart and Co., Glasgow, £6.18.3 to £6.6.9, and specials £4.10 extra, per ton of 2,240 lbs., delivered in Tokyo. Mr. Totaki, for pipes manufactured in Japan, 4 inch, straights, 12 kilo. each, 4.15 yen; 6 inch, 137 kilo. each, 6.50 yen; 8 inch, 192 kilo. each, 10.80 yen, and so on up to 37 and 44 inch pipes weighing 2,099 kilo. and 2,616 kilo. each, and costing 99.77 yen and 123.26 yen respectively; and 63.80 yen to 61.49 yen for specials per ton of 1,000 kilos. Messrs. Laidlaw & Co., Glasgow, per Messrs. Illies & Co. £7 to £6.9 per ton of 2,240 lbs. for straights, and £13.1 for specials, delivered in Tokyo. Messrs. Hirano & Co. (Ishikawajima), 57.36 yen per ton of 2,240 lbs. for 4 inch straights; 51.68 yen for 6 inch; 51.68 yen for 8 inch; 50.91 yen for 10 inch, 12 inch, and 16 inch; 52.62 yen for 20, 24, and 26 inch; and 56.36 yen for 36 and 42 inch. The Staunton Iron Works, Nottingham, per Messrs. Raspe & Co., £5.2.6 to £4.15.6 per ton of 2,240 lb., and £9 for specials, delivered at Liverpool. A German firm, through Messrs. Raspe & Co., 157½ marks for straights and 254 marks for specials, per ton of 1,000 kilo. delivered at Tsukudajima.

Among the above it will be observed that, so far as concerns prices for delivery at the works, America, France, and Belgium are remarkably cheap, but if prices for delivery in Tokyo be considered, Messrs. Macfarlane, Strang & Co. (per Messrs. Okura & Co.) are the most reasonable. Mr. Totaki's prices are low, but inasmuch as he has no facilities for the work and is estimating on incredibly cheap bases of manufacture, it is difficult to be sure of the results. We take leave to doubt altogether whether the pipes can be made at any reasonable price in this country.

A DRIFTING STEAMER.

The Customs cruiser *Feiho* (Captain Nielsen) arrived here yesterday, says the *N.-C. Daily News* of the 28th ultimo, with Mr. Forrester, second officer, and four native sailors belonging to the *El Dorado*, who were picked up from a boat on Saturday morning at about eleven o'clock, off the Saddles. It appears that on Saturday the *El Dorado*, whilst on the voyage from Tientsin to this, broke her shaft, and having no sail to speak of was practically helpless, and began to drift out of the ordinary track of steamers. On Friday morning, Mr. Forrester and the four sailors put off in one of her boats, with the intention of reaching Gutzlaff, and telegraphing to Shanghai. They sailed in the boat about thirty miles in a S. by W. direction, and made the North Saddles. They landed in South Bay, and were accommodated by the lighthouse-keeper. Hearing that the *Feiho* was in the Side Saddles they decided to seek her. On the way they encountered the *Feiho*, and were taken on board. The *El Dorado* is drifting out to sea, with anchors down and some 120 fathoms of chain; her position approximately being N. by E. 30 miles from the North Saddles. The *Esang* has been despatched to her assistance.

MR. THEODORE CHILD'S DEATH.

The announcement of the death of Mr. Theodore Child, several times repeated and as often contradicted, is finally confirmed by a dispatch from Paris, dated November 10th. Two days before, Messrs. Harper and Brothers of New York, in whose service the accomplished writer had been for several years, publicly discredited the report, and the London house of Osgood, McIlvaine & Co. stated that a letter from him had been received within a week, giving information that, though he had suffered from an attack of cholera at Tabriz, he had on the 6th of September, entirely recovered. Further testimony was offered by Mr. George A. Lucas, of Paris, in the form of a telegram from Mr. Child, dated Teheran, October 5th, declaring that he was about to start, in excellent health, upon a horseback journey over the mountains, and that owing to the irregularity of communications, six months might pass before he could again be heard from. His friends were therefore

under no anxiety, and the positive assurance of his death must have been a painful surprise. He undoubtedly fell a victim to a second seizure of cholera, which was prevalent throughout Persia at the time of his visit. Mr. Child's loss will be lamented by the literary world, and especially by the readers of *Harper's Magazine*, to the pages of which he was accustomed to contribute critical and descriptive articles of great value. He was a recognized authority on modern art, and his reputation rested chiefly upon his mastery of this subject. Of late years he had been more especially engaged in visiting remote and unfrequented parts of the world, in which he found material excellently suited to his animated and picturesque style of narrative. It was about four months ago that he set out upon the last of these excursions, accompanied by Edwin L. Weeks, the artist, who was to supply illustrations to his text. Mr. Child was generally supposed to be an American, but we believe he was born in Liverpool, about forty years ago. He graduated from Oxford in 1877, and, immediately after, devoted himself to literary work, in which he at once secured distinction. He fixed his residence in Paris, and for some years sent letters to *Yate's World* and the *Daily Telegraph*. Latterly he had confined himself almost exclusively to *Harper's Magazine*, and his last published paper, entitled "Along the Parisian Boulevard," appeared in the November number of that periodical.

THE KANAZAWA LOCAL ASSEMBLY.

The Local Assembly of Kanazawa, in Kaga, appears to be determined to cross lances with the Governor. A telegram received yesterday announces that the Assembly passed a measure for the punishment of officials who had interfered in the elections, whereupon the Governor ordered that the measure be withdrawn, inasmuch as it exceeded the legitimate powers of the Assembly. The latter, however, is standing to its guns, so that the situation is somewhat strained. Japan is not an easy country to govern at present. The Tanakas, the Arais, the Inagakis, and their confrères have sowed seeds productive of a troublesome crop of tares.

COLLISION IN THE BAY.

The steamship *Zambesi* left the anchorage on Thursday night bound to Hongkong direct, and had got as far as the Saratoga Spit when she came into collision with the *Hokumon Maru*, and sustained such injuries that she had to be run on shore to save her from sinking in deep water, the *Hokumon* having cut into the *Zambesi's* plates fully four feet below the water line. The *Hokumon* arrived at the anchorage next morning, and exhibits signs of the collision, her bows being completely stove in and her stern very much out of the perpendicular. She is a vessel of 678 tons, and belongs to the Hakodate Steamship Company. Assistance has been sent to the *Zambesi*.

The *Zambesi* now lies in the same position where she was beached after the accident, and every effort is being made to so lighten and patch her up before the advent of bad weather, as to raise and shift her to a place where she can be repaired. Her injuries are not of so severe a nature as to make it absolutely necessary that she should go into dock, and it may possibly happen that a more expeditious and less expensive method of replacing her broken plates will be found in repairing her at anchor with stern depressed and bow raised sufficiently for that purpose. The *Zambesi* does not appear at present to be injured in any way beyond the broken plates on the port bow where contact with the *Hokumon* took place. This occurred immediately abaft the collision bulkhead, that is, in the fore-hold, which has a run of 48 feet. Of this hold 18 feet of plating are stove in above the water line, measured fore and aft, the entire fracture taking the form of an irregular and inverted triangle which extends several feet below the water line. The fore hold contained flour, matches, seaweed, &c., and the top tiers of cargo were got out dry, while the lower portion

Original from

is of course submerged, as this hold is full of water. The bulkhead separating the fore from No. 2 hold is leaking steadily, and there were six feet of water in the latter yesterday at midday upon which the pumps could make no impression, in fact the water was gaining slightly at that time. The cargo in other parts of the ship was intact yesterday forenoon, and if the weather continues fine there is little doubt that in about three days the vessel will be patched, pumped, and raised, and taken to a place of safety. In the meantime, the *Zambesi's* cargo and passengers will be transferred and forwarded, as whether the vessel be docked or not the necessary renewal of plates will occupy a considerable time, though no damage whatever has been sustained to hawse-pipes, stem, or any part forward of the collision bulkhead. One of the crew is missing, and three were injured when the collision took place.

THE ENTERPRISE OF "THE TIMES."

The Times is not in the habit of loudly proclaiming its enterprise and expenditure, but when it has a large object in view, it does not stop at trifles. The *North American Review*, before publishing the article which that periodical recently secured from Mr. Gladstone, offered to place it at *The Times'* disposal for quotation and review. *The Times* inquired as to the amount of matter that could be used, and was informed that twenty-five hundred words might be extracted—a little more than one half of the entire contribution. Whereupon an order was issued that the essay be telegraphed in full, at the cost of the London journal. This being done, about two thousand words appeared in the next morning's edition. A larger proportion was transmitted and paid for, and left unused, than the fragment which was reproduced. If *The Times* had been willing to leave the selection to its American representative it might have saved a large sum of money; but the extra outlay was not considered too lavish for the privilege of making the choice in Printing House Square. These particulars were disclosed by way of reply to a London evening paper which had the temerity to assert that the citations were "pirated." Otherwise the details of the transaction would never have been known to the public.

A NEW STYLE OF WEAPON.

YESTERDAY a visitor to the House of Representatives could not fail to be struck by the exceptional vigilance which the guards displayed. Everyone approaching the Strangers' Gallery was subjected to scrutiny of marked closeness. The explanation was that a visitor had been discovered on the previous day carrying in his girdle a pipe-case which contained a decidedly mischievous-looking dagger. His name was Yamada Keiji, and there was no question as to the authenticity of his introduction to the precincts of the House. Neither did it appear, indeed, that his intentions were open to suspicion. He explained that his constant habit was to carry a weapon for purposes of protection, and that he had forgotten to give it up at the vestibule. The guards contented themselves with taking charge of it for the moment, but the very close resemblance its sheath bore to a pipe-case, and the information that the carrying of such things had begun to come into fashion, prompted the vigilance shown yesterday.

STRIKE IN HONGKONG.

THE coolies in the employ of the Hongkong and Whampoa Dock Company at their Hung-ham establishment, to the number of 2,000, went on strike on the 1st inst. It appears that the men have been in the receipt of double pay for night-work—all night—for some time past, and the company desired to reduce this to pay and a half, which not being acceptable to the employes the men declined to start work on the 1st of December, the date upon which the new scale of pay was supposed to commence. The company had a lot of work in hand at the Hung-ham works, but as it is only at this place that the men are on strike, the steamers under repair and other work wanted quickly have been taken

to Aberdeen and other of the Company's establishments. Everything is perfectly quiet, and the Dock officials and the leaders of the men are conferring with a view to the settlement of the dispute.

BARRISTERS-AT-LAW.

EVER since the first session of the Diet the Barristers Bill has evoked much unfavourable criticism; and though it was amended and presented to the Diet during the second session, it did not pass both Houses. The Bill has now been once more submitted to the Diet, but it will again have to undergo a troublesome ordeal. Rumour says that the students of the six principal law colleges are entirely opposed to the Bill. They assembled in the lecture hall of the Meiji Law College on the 2nd instant, and after a prolonged discussion determined to organize a campaign of opposition to the Bill. Some of them agreed to undertake the task of arguing with the officials of the Judicial Department, and others promised to visit the members of both Houses of the Diet, and point out the objections to the Bill. In pursuance of this programme, three students of the Meiji Law College went to the Judicial Department, and saw Mr. Kiyoura, Vice-Minister for Justice, Mr. Kumano, Councillor, and Mr. Yokoda, Director of the Bureau for the trial of Civil and Criminal Cases. The visitors enquired the object of the Government in enforcing the Bill, and stated their arguments against it, receiving, apparently, a polite hearing, but producing, probably, no very deep impression.

REGULATIONS FOR EXCHANGE.

New Regulations for Exchanges have been compiled by the Government, and handed to a special committee for consideration. The Regulations consist of 32 Articles. The Committee began to examine them last Friday. It is said that the Government intends to present the Bill to the Diet as soon as it obtains the approval of the committee, which consists of many of the best known men of business in the empire. They have not yet completed their investigations, but immediately on the draft's passing the committee it will be presented to the Diet, and we shall then publish a full translation of the text.

RESIGNATION OF MR. OTANI.

SINCE Mr. Otani Kayemon was appointed President of the Yokohama Traders' Union not more than three months have elapsed, but disagreements and disputes have been more frequent and troublesome than ever. Mr. Otani presented his resignation twice, but each time he was advised to remain. It is now reported that he has presented his resignation once more, and that he will not withdraw it on any account.

RE-ARREST OF MILLER.

MR. CHARLES EDWARD MILLER, whose name has recently been prominently before the public in connection with embezzlements alleged to have been committed by him at Hyogo, Japan; his arrest at Singapore on board the French mail steamer *Melbourne*; his appearance at the Police Court; his remand to the Supreme Court, and his final release on a writ of Habeas Corpus granted by the Honourable the Chief Justice, is reported to have been re-arrested at Sourabaya on his arrival from Singapore.

RAILWAYS IN SIAM.

THE first locomotive ever seen in Bangkok was started on the 7th ult. on the temporary siding adjacent to the Korat Railway terminus. The native population took immense interest in the trial run over the half mile of railway now laid. It is noted as a singular coincidence that the line between Kuala Lumpur and Kawang, constructed by the same contractor (Mr. Murray Campbell) was inaugurated on the same day.

THE TRIAL OF MR. BOX.

THE trial of Mr. T. H. Box on a charge of embezzlement and fraudulent false accounting will open in the British Court before his Honour the Judge and a Special Jury, at 9.30 on Wednesday, December 14th. The Jury were drawn

yesterday. Mr. H. C. Litchfield will prosecute on behalf of the Crown, Mr. Tison being retained by Mr. Simon on the same side. Mr. J. F. Lowder defends.

THE KOMURA-ROAD MURDER CASE.

THE hearing of the Carsten's murder case was resumed in the Japanese Law Courts at Yokohama, on the 8th inst., at 1.30 p.m. After some discussion between the Public Prosecutor and advocates, Chief Judge Maruyama declared that Carstens had lost the privileges of a subject of the German Empire, and was therefore amenable to the jurisdiction of the Japanese Courts. The Public Prosecutor at once appealed against this judgment.

MR. CLARKE-THORNHILL.

THE many friends of Mr. T. B. Clarke-Thornhill in Japan will learn with pleasure that the illness said to have reduced him to a dangerous condition at Oporto, turns out to be, not typhus fever, as reported, but ague, and that at the date of latest advices from Europe, he was progressing steadily towards recovery.

RAW SILK IN THE UNITED STATES.

THE Imports of Raw Silk at the Ports of New York and the Pacific Coast for the month of October, 1892, amounted to 10,050 bales—1,550,340 lbs.—\$5,354,268; and the imports of Waste Silk and Pierced Cocoons in the same period were 166 bales—50,100 lbs.—\$24,173.

THE *Bellona*, Captain Jagaer, which arrived here this week, picked up a Korean drifting down the China Sea in an open boat, and brought him on to this port, but how he got out to sea is not known as he could only speak his own language which no one on board the steamer understood. There was another Korean in the boat, but he was dead.

ACCORDING to a telegram received in Shanghai from Anping, the diving operations at the wreck of the *Bokhara* had been so successful that up to the night of 18th ult. treasure to the value of Tls. 65,000 had been recovered and sent away in H.M.S. *Pallas*. Salvage operations were proceeding satisfactorily.

FIFTEEN vessels, says the *N.-C. Daily News* of the 2nd inst., are in the vicinity of Woosuung, two, the *Saikio Maru* and *Glenfalloch*, unable to get out, and the rest unable to get in.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The political situation seems to perplex many observers of current events. An idea apparently prevails in certain quarters that the House of Representatives is decidedly unfavourable to the Cabinet, and that the rumoured alliance between the Government and the Radicals has been made impossible by the turn of events. It is true that the National Unionists, though supposed to be on the whole friendly to the Ministry, have plainly indicated their willingness sometimes to assume an attitude of opposition as marked as that of the Progressionists, and that they talk of the importance of introducing reductions of 4 or 5 million yen in the Budget. It is also true that the leader of the Radical party in the House of Representatives has been endeavouring to deliver a speech on the Government's Declaration of policy in the presence of the Ministers of State. The Radicals too are reported to be in favour of sweeping reductions in the ordinary expenditures of the Government. But despite these plain facts, it is, in our opinion, premature to draw any inference as to the ultimate attitude of the Diet towards the Cabinet. Neither is it warrantable to assume that the Radicals are about to oppose the Government persistently. We have never been able to perceive any solid justification for the report that an alliance was meditated between the *Fuyu-to* and the statesmen now in power. But it is an indisputable fact that the *Fuyu-to* leaders showed

strong sympathy with the Ito Cabinet when it was first organized, and it is also equally true that the same attitude is still maintained by them, though their ardour may have cooled more or less. In the House of Representatives, the Radicals sometimes express opinions at variance with those of the Cabinet; but this ought to create no surprise, for, being pledged to certain fixed views on many questions now before the Diet, they are under the necessity of endeavouring to preserve a show of consistency. It is noticeable by every careful observer, that the Radicals are at heart ready to make as large sacrifices as possible to come to an honourable compromise with the Government. That is illustrated by their conduct on the question of the reassessment of the taxable value of land. At first it was reported that they would oppose all Government's Bills connected with the matter. But by and by they agreed to meet the Government's proposals at least half way. It is now reported that even on the question of an increase of the *saké* and tobacco taxes some of them may consent to the Cabinet's proposition with modifications. So far, therefore, there is no indication of any serious collision between the Government and the Diet, still less of deadly antagonism between the Radical politicians and these in power. Our opinion is shared for the most part by the *Choya Shimbun*, which maintains that of late there has been a strong tendency among the Popular Party to follow a conciliatory policy towards the Government, and that this tendency is not likely to abate, being inspired by experience of the fruitlessness of wanton opposition as exemplified during the past three years.

The *Nippon* thinks that it has discovered in the Government's Declaration of Policy certain passages which point to the existence of an understanding between the Cabinet and the Radical Party. These passages relate to the foreign policy of the Government. The Declaration emphasizes the importance of bringing about unanimity of opinion on the question of Treaty Revision. This declaration, according to our contemporary, was made by the Cabinet on the understanding that the Radicals would elicit the views entertained on the subject by the majority in the Lower House, and embody them in an Address to the Throne.

That our view as to the attitude of the Diet towards the Cabinet is correct, has been signally proved by the ridiculous fate of a motion for a vote of want of confidence in the Ministry, which was introduced in the House of Representatives on the 8th instant by Mr. Inagaki Shimesu, a member of the Oriental Radical party, who gained unenviable notoriety towards the close of the last session of the Diet in connection with a scandal about alleged bribery of members by the Naval Authorities. The character of the introducer and of the supporters of the motion may have had something to do with its signal defeat. But it is a circumstance well worth remarking that not one of the Progressionists, those deadly antagonists of the Ministry, voted for the motion. All things considered, it is certainly significant that the motion did not find more than three supporters, including its introducer.

The Opposition papers do not like to acknowledge that the effect of the signal defeat encountered by the motion for a vote of want of confidence in the Cabinet on the 8th instant is calculated to strengthen the position of the Government. They explain that the Opposition members of the House of Representatives would have given a "hearty reception to the motion if it had been introduced at the right moment and by the right person." If this remark of the *Fiji* and others expresses the views held by their respective parties, the latter are open, as is noticed by the *Nippon* and other independent papers, to the charge of entrusting important measures to a Cabinet which they are prepared "at the right moment" to pronounce unworthy of confidence. The truth is that the Opposition

members of the Diet, especially the Radicals, are quite ready to entrust the Cabinet with measures of great moment, but have not the courage to make an open acknowledgment of the plain fact. Hence the ambiguous language which they used in opposing Mr. Inagaki's motion last Wednesday.

Certain papers publish mysterious rumours as to the bribery of Mr. Inagaki by a Minister of State to induce him to bring in his motion, in the hope that by rejecting it, the House would virtually record its confidence in the Cabinet. Other papers report that the Radicals, aware of an intention on the part of the Oriental Radicals to introduce such a motion opposed it principally to gratify a burning passion of hatred against their quondam comrades. The circulation of such rumours shows the straits in which certain folks have been placed by the force of circumstances.

The resolution passed by a large majority in the Lower House on the 8th instant, touching the conduct of the Cabinet in connection with the House's requests to the Ministers of State to attend its meeting to hear a speech by one of its members, is heartily applauded by the Opposition papers. These journals take it for granted that the Ministers of State having announced their policy to the Diet, are morally bound to listen to a counter declaration by the acknowledged leader of the Opposition. Since they have shunned coming into direct contact with the Opposition on the broad question of general policy, their conduct, according to party organs, is directly at variance with their avowed solicitude about the maintenance of harmony between the Government and the people. The Ministers of State in the opinion of these papers, have placed themselves in a very unfortunate position, for their conduct virtually amounts to a refusal to come to a clear, mutual understanding with opponents, a condition absolutely essential to the establishment of harmony between the two. The *Nichi Nichi Shimbun* exposes the fallacy of these contentions on the part of Opposition journals. It refuses to make any distinction between Mr. Kono and the rest of the members of the Diet. They all occupy the same position, and if one of them is entitled either to ask for the special attendance of Ministers of State or to demand a change of the Order of the Day, for the purpose of delivering a speech, all the rest may justly claim the same privilege. What necessity is there, continues the *Nichi Nichi*, for the adoption of such an extraordinary and absurd course, when there are plenty of constitutional means by which the Opposition can make its opinions known to the Cabinet or seek the latter's explanations on any question. The Opposition leaders have been betrayed into this singular step by the perverted notions which they entertain as to the proper functions of the Diet, no less than by the circumstance that they attach more importance to individual encounters with the so-called "Clan Statesmen" than to the conduct of the proper business of constitutional government.

The proposed re-assessment of the taxable value of land, and increase of taxes on *saké*, tobacco, and incomes, are much discussed. The first of these measures, the reassessment of the taxable value of land, has been practically settled for the present, the Government Bill on the subject having been passed in the Lower House by a large majority. But the fate of the three taxes is still in suspense. The *Kaishin* organs unhesitatingly oppose the taxes. In their opinion, the funds required for reassessment as well as for the reduction of the land tax, may be very easily obtained by making reductions in the ordinary and extraordinary expenditures of the Government. In the field of ordinary expenditures, 44 million *yen* in round numbers are to be reduced, while in that of extraordinary expenditures, 3,320,000 *yen* may be obtained by throwing out the Government's proposal for the construction of war-vessels. In addition to these, more than 2 million *yen* are available in

the shape of surplus, so that the funds procurable for the purposes under consideration amount in all to over 10 million *yen*. The Progressionist organs declare that their party will consent to reassessment of land only on the basis indicated above should the Cabinet refuse to approve the Re-assessment Bill on the ground of the Diet's rejection of the Bills for the increase of the *Saké*, Tobacco, and Income taxes, the Progressionist organs fear that the present Government will meet with the same ignominious fate as its predecessor.

The Radical organs refrain to speak out on these topics. From the tone of their writings as well as from trustworthy information, their Party appear disposed to make a compromise with the Cabinet; they will approve the proposed increase of income tax, but supply the rest of the required funds by retrenchments from the ordinary expenditures of the Administration. It is even supposed that a few of them may consent to the increase of the taxes on *Saké* and Tobacco within certain limits. The National Unionists will oppose the increase of the *Saké*, Tobacco, and Income taxes. So we may predict that the fate of the *Saké* and Tobacco Bills is sealed, while the Income-tax Bill has a fair chance of success.

The *Nichi Nichi Shimbun* devotes several articles to impressing upon the members of the Diet the importance of considering these taxation Bills in the light of their mutual connection and their relationship to the Bill for the increase of the Navy. The re-assessment of the taxable value of land is, in our contemporary opinion, a means for securing Naval augmentation. It observes that there being thus an evident inclination on the Government's side to make reasonable concessions, the Opposition is bound to approach the question in a similarly conciliatory spirit.

The *Fiji Shimpō* fears that the Government's conduct about re-assessment may have the effect of alienating the independent section of the people who have hitherto been comparatively well affected toward those in power. Men of this class, says our contemporary, are opposed to the re-assessment of the taxable value of land. They do not make themselves conspicuous in political spheres, yet they wield immense influence in their respective localities, and the good will of such persons is of vital importance to the Ministry. The *Fiji* fears also that the Cabinet's compliance with the clamours of interested party politicians, in disregard of the policy its predecessors pursued, may cause a split within its own ranks. In short, our contemporary fails to perceive the wisdom of the course adopted by the Ministry.

The loss of the *Chishima Kan* continues to excite the public. Several papers have been quick to hold up this incident as a proof of the inefficiency and mismanagement of the Navy. General Aoyama was weak enough to make himself spokesman for the indiscriminate grumblers of this class by delivering in the Lower House yesterday a strong diatribe against the unfortunate officer in command of the lost war vessel in particular, and the Naval authorities in general. The *Choya Shimbun* and the *Nichi Nichi Shimbun* advise their countrymen to conduct themselves in a dignified and thoughtful manner, and to suspend judgment until the close of the enquiries which will be held in due time. It is not unnatural that the vernacular press should be inclined to complain about Naval mismanagement, as accidents have of late rapidly followed each other. But this circumstance is no reason why the Naval authorities should be charged with mismanagement and incompetency. The *Nichi Nichi* also warns its readers against indulging in precipitate condemnation of the officers in command of the British ship *Ravenna*, although our contemporary itself does not think British seamen the most cautious or courteous

THE GOVERNMENT'S DECLARATION.

THE foreign public has now had an opportunity of reading the Government's Declaration of Policy made in the House of Representatives on the 1st instant. Further, in our present issue, will be found an epitome of the comments which the Declaration has elicited from the vernacular press. These comments possess, in our opinion, an interest scarcely inferior to that of the Declaration itself. We watched for their appearance with keen curiosity, and we are bound to confess that they profoundly disappoint us. As to the tone of hostility which some of them display, that, of course, was to be expected. Indeed, we hesitated for a moment before translating the criticisms of the *Kaishin-to* organs—the *Mainichi Shimbun*, the *Hochi Shimbun*, the *Yomiuri Shimbun*, and the *Kokumin Shimbun*. The Progressionist Party are at present the slaves of a mood of blind and uncompromising enmity to the Government. It is impossible that a Cabinet Minister can do right in their sight. Whatever programme Count ITO enunciated, short of abdicating in their favour, was inevitably destined to be condemned by their organs. Hence, it seemed for an instant that time and space could only be wasted in transcribing utterances so disfigured by prejudice. Yet it is well to hear all sides, if only for the sake of learning how little there is to hear. We many laugh at the peevish exigency of a party organ which, while professing to be keenly solicitous for the reduction of a particular tax, declares that it will never consent to such reduction unless it be made by means of funds taken from official pockets. We may laugh all the more at this display of wanton implacability when we remember that the very Party which the *Hochi Shimbun* represents, has been endeavouring, during three sessions of the Diet, to effect the reduction in question by means of funds a large portion of which did not come from the source indicated. But the serious fact underlying such retorts is the implacability they indicate. The *Kaishin-to* have developed one trait at least which qualifies them to be regarded as a political party in the full occidental sense of the term, namely, incapacity to feel content out of office. This display of hostility neither surprises nor disappoints us. What we find most disheartening is the marked superficiality of the vernacular journals' comments. Count ITO speaks in two characters; as a statesman and as a politician. The political aspects of his Declaration have been appreciated by all more or less clearly, and discussed more or less astutely. But the statesman's utterances appear to have escaped general notice. Policy is to statecraft what tactics are to strategy. No intelligent critic of a campaign thinks of confining his attention

to the modes employed to bring the troops into action or deploy them for attack or defence. He scrutinizes the plan of the Commanders rather than the manner of its execution. But the Tokyo journals seem to regard Count ITO solely as a tactician. They devote themselves entirely to the methods of his programme, and find nothing to note in its motives. The methods are plain enough. Count ITO offers a compromise. He undertakes to carry out an important part of the Opposition's most cherished scheme, provided that they, on their side, agree to appropriations for increasing the Navy. A golden bridge is thus built for the Radicals to retreat from their stronghold of implacability. They recently made the strengthening of the Navy a leading plank in their new constructive policy. They have always agitated for re-assessment of the taxable value of land. The latter is now promised on condition that they accept the former. They are to have what they want in return for approving what they advocate. Easier terms could scarcely be propounded. Surely there must be some large project in the vista of such a proposal. It is this project and the manner of defining it that constitute the statemanship of Count ITO's Declaration. He aims uniquely at restoring harmony in the councils of the nation. A powerful party has sprung up crying aloud for reforms and changes, and arraigning the Government as though it blocked the path of progress. "What is your standard of reform," asks the Minister President in effect; "What your limit of change? You cannot find in the whole world a country that has made so many reforms and undergone so many changes in twenty years as Japan. You and we have ample reason to be proud of her achievements. It is our mutual glory to live in such an age and to have contributed to the making of its history. But the country's advance has been checked. The institutions whose inauguration ought to help her progress, have been perverted into instruments of obstruction. The Administration cannot do any useful work because nothing that it proposes is tolerated by you. You yourselves can effect nothing because your methods are too drastic and polemical to command general support. Yet, look back. See what was accomplished during the years antecedent to this squabbling. Are you content to have put a period to such advance, and could you not be content to resume it at the same speed? Ask yourselves, also, whether the Diet is serving its purpose; whether the legislative functions deputed to it by the SOVEREIGN are bearing any sound fruit. Let us then restore the harmony essential to successful progress. The world is watching you. It will accept the results of your parliamentary experiment as the true standard of your civilization and moral capacities. We, on our side, promise to labour

honestly for the removal of every obstacle in the path; and, after all, the story of the past offers some pledges of our sincerity. Let us raise the flag of the nation above this cloud of factional ensigus." Count ITO says all this and says it eloquently. It is the real goal of his Declaration: the rest is only an indication of routes. But the vision of the vernacular press seems to be defective. It sees the tactician, but overlooks the statesman. Is Count ITO before his time in Japan, or has the time been thrown back by political animosities?

THE ATTITUDE OF THE OPPOSITION.

IT is probably justifiable to deduce from the action of the House of Representatives on the 3rd instant some inference as to the general attitude of the Opposition towards the Government this session. Once again the Radicals introduced their *pièce de résistance*, amendment of the Land Tax. Not a single dissentient voice was raised. One member ventured to enquire how the deficiency of revenue caused by the proposed change was to be compensated. But the introducer of the Bill did not give himself the trouble to offer any genuine explanation. "There was money enough," he said in effect, and the House rested content. Thus the Bill passed virtually *nem. con.* Probably a hundred or more members were opposed to it at heart, but they understood the futility of open resistance. Now the mere fact that a majority of the people's representatives vote for reduction of the Land Tax, is not remarkable. They are pledged to do so, and they have done so every session. But we must assume some degree of practicality on the part of the Radicals. By changing the rate of the tax from twenty-five to twenty-two thousandths of the assessed value of the land, the revenue of the State will undergo a diminution of about five million *yen*. How is this deficiency to be met? Already a Bill has been submitted by the Government providing for re-assessment of the taxable value of land with the view of equalizing the incidence of the tax. To carry out this measure involves a loss of revenue amounting to 3½ millions, and the Government announce that a considerable increase in various other branches of taxation, will be necessary. It may therefore be assumed that, with the Budget constructed as at present, no margin whatever offers for giving effect to the change just voted by the Radicals. Whence, then, will funds be procured? It is inconceivable that the Radicals should pass a measure with their eyes open to the impossibility of carrying it out. The only inference we can draw is that they intend once more to manipulate the Budget according to the fashion adopted by them in the first session. They will seek to cut down the Ordinary expenditure of the Administration until a permanent surplus of in-

comings over outgoings is obtained. But such an attempt must once more precipitate a collision between themselves and the Government. The latter cannot consent to any distinctly unconstitutional interference with the SOVEREIGN'S Prerogative of fixing the establishment and salaries of the Civil Service. Reforms in that sphere must be initiated by the Government itself under the authority of the EMPEROR. Hence we find the political horizon clouded again. For a moment the public entertained a hope that some ground of compromise had been found: that the Government's consent to re-assess the taxable value of land would be accepted by the Opposition as a settlement of the land-tax question, temporarily at all events. It looks now as though the hope were vain. The Opposition has pledged itself to a step the inevitable sequel of which, so far as we can judge, will be another fight over the Budget, and a revival of all the bitter feelings that seemed to be subsiding. The Peers, of course, will throw out the Bill. Under no circumstances can it become law at present. But that can scarcely avert the fate of the Estimates. The Budget Committee is already at work, and doubtless there has been mapped out for it by the Party to which two-thirds of its members belong, a drastic programme of retrenchment. If it were possible to have the Land Tax Bill rejected by the Peers before the Budget Committee's Report is presented, the situation might be a little eased. No such exit from the dilemma is reasonably probable, however, and we can only look forward to a fresh *impasse*.

POLITICAL PARTIES AND THE GOVERNMENT.

THE Government having announced its programme, the next question of vital interest is to determine the attitude which the various political parties will assume towards the details of the scheme. Foremost among the measures contemplated by the Administration is reassessment of the taxable value of land, and in connection with this the Cabinet has presented Bills providing for an increase of the taxes on *Saké*, Tobacco, and Income. Will these Bills pass the House of Representatives? Information contained in the columns of the vernacular press seems to furnish sufficient materials for a reply. Let us take the various parties in succession.

The National Unionists, who supported the Government staunchly last session, appear disposed at present to go into opposition. They held a general meeting on Saturday, the 3rd instant, and after considerable discussion, came to the conclusion that they could not vote for any increase of the taxes on *Saké*, Tobacco, and Income. What precise form their objection takes with regard to the Income Tax, we do not discover. But in the cases of *Saké* and Tobacco they claim that to

augment the imposts on these articles of domestic production without any corresponding alteration in the Customs tariff, would encourage the import of alcoholic beverages and tobacco from abroad, and thus impoverish the country. The principal purpose of the Union is to foster the national resources and promote their development. Hence the members declare themselves unable to endorse a measure which they regard as calculated to impede that purpose. They are not opposed to reassessment of the taxable value of land, but they think that funds may be obtained from sources other than those selected by the Government.

The *Fiyu-to* had a meeting on the 2nd instant, when their President, Count ITAGAKI, addressed them as follows:—

Our Party has always hoped to accomplish amendment of the taxable value of land, simultaneously with a reduction of the Land Tax. In pursuance of our object we have conducted various investigations, but owing to certain circumstances we did not include measures in that sense among our Party's proposals during the present session. The fact that the Government has introduced a Bill for reassessment must undoubtedly be regarded as official adoption of the popular desire and as the attainment of our long cherished aim. We have to congratulate ourselves most heartily. I trust, therefore, that the members of our Party in the Diet will cooperate harmoniously with those who are seeking to make reassessment an accomplished fact. The Government has also introduced Bills providing for an increase in the taxes on *Saké*, Tobacco, and Income. We are not altogether opposed to such increases, since, on the one hand, the articles taxed are luxurious, and, on the other, the classes affected are the wealthy. But it is possible that since the Customs tariff remains still unaltered, the proposed taxation of domestic products might give an undue impulse to imports. I invite careful attention to this subject. As for the income tax, however, our investigations go to show that it may, perhaps, be increased sufficiently to furnish the desired funds without touching the taxes on *Saké* and Tobacco. The whole question calls for profound consideration.

These remarks of the President did not provoke any expression of dissent. It seems probable, therefore, that the *Fiyu-to* members, urged by their anxiety to assist the reassessment scheme, will vote for the Government Bills as presented.

The *Kaishin-to*, we need scarcely say, are utterly hostile. They themselves had intended to introduce a Bill for reassessing the taxable value of land. But the Government having stolen their thunder, nothing remains but to attack the proposed methods. They have resolved, therefore, not only to vote against all increase of taxation, but even to bring forward a proposal for reducing the very imposts which the Government contemplates augmenting.

Sixty independent members of the House have formed an association called the *Giin* Club. These, also, held a meeting on the 2nd instant, and came to the conclusion that while supporting the Bill for reassessment, they must oppose the idea of increasing the taxes on *Saké*, Tobacco, and Income. They are said to have adopted the following resolution:—"We cannot approve the Bills for increasing the taxes on *Saké*, Tobacco, and Income, which the Government has introduced for the purpose of obtaining a majority in the House."

The *Domei* Club is the only important

political association remaining to be considered. Its members, also, have determined to support the Bill for reassessment, but to oppose the Bills for increased taxation in other directions. Their programme is to obtain the necessary funds by cutting down administrative expenditure.

It will be sure from the above analysis that, with the exception of the *Fiyu-to*, the whole of the Lower House seems to stand arrayed against the Government's Bills for increasing the taxes on *saké*, Tobacco and Incomes. A strange turn of events, surely, which brings the Government and the *Fiyu-to* into the same camp.

THE TWO LEADERS OF THE OPPOSITION.

THE singular action taken by the two leaders of the Opposition in the House of Representatives has provoked much comment and created a situation which adds not a little to the tension already existing between the "Ins" and the "Outs." On Thursday the 1st instant the Cabinet's Declaration of Policy was made in the House of Representatives by the Acting Minister President of State. It elicited no comment at the time from any prominent member of the House, but, on the following Monday, Mr. KONO HIRONAKA, leader of the Radical Party, rose at the conclusion of the day's proceedings, and announced a desire to make a statement by way of reply to the Declaration. He added that he wished to speak in the presence of the Ministers of State, and that he trusted they would give him an opportunity of doing so. This was civil enough in its way, and did not pledge anybody to anything, though it could not fail to be interpreted as implying an assumption that the Ministers of the CROWN might, at any time, be summoned to attend in the House of Representatives by a member desiring to address his remarks to them. When the stenographic report of the proceedings appeared the following morning, people rubbed their eyes and wondered whether the leader of the *Fiyu-to* had really meant what he said, or whether he had thoughtlessly blundered into a position indefensible from any point of view. These doubts were soon resolved. For, in the next meeting of the House, the leader of the *Kaishin-to*, which, as everybody knows, forms the other wing of the Opposition, deliberately moved that the President be instructed to ask the Ministers of State to fix a day for attending in the House to listen to speeches on the subject of the Cabinet's policy. The *Kaishin-to* are the recognised implacables of the era. They oppose for the sake of opposition, and without any concern for the nature of the measure under debate. Their *môt d'ordre* is to stand always in the van of the assault upon the Government. They aspire to play the rôle of lightning in the political

firmament, leaving the business of cloud-forming to their allies the *Yiyu-to*. True to this principle, Mr. SHIMADA SABURO, the *Kaishin-to* leader, made it his business to give practical shape to the rudimentary extravagance of Mr. KONO HIRONAKA's suggestion. He moved, as we have said, that the President invite the Ministers of State to fix a day for attending in the House. The proposal was greeted with many marks of approval, and the President, in the absence of any objection, promised to take the course indicated. Presently another member endeavoured to make himself conspicuous by outdoing the leaders of the Opposition. He moved that the Ministers be invited to attend immediately, and that the debate be suspended until a reply could be received from them. This proposition, being obviously in conflict with the motion of Mr. SHIMADA SABURO, which had already received the tacit consent of the House, was ruled out of order by the President. But no objection whatever was raised to it on its merits. Like the extraordinary proposal of the *Kaishin-to* leader, it seemed to excite no sense of astonishment or ridicule. Thus the situation was that the Ministers of State stood summoned to fix a day for presenting themselves in the House in order to listen to speeches made by members of the Opposition. This is certainly the most singular incident that has yet occurred in the history of Japanese parliamentary institutions. The constitution provides a clear route of communication between the Diet and the Government. The majority in either House may address a Representation to the Government, or any group of not less than thirty members may formulate a Question with a statement of the reasons dictating it. These are the only constitutional methods of conveying the views of either House, or a part of either House to the Government, exclusive, of course, of motions regularly moved and passed. Nowhere in the Constitution is it provided, and nowhere in the parliamentary practice of Western States has the principle ever been outlined, that a member can move to have a summons served on the Ministers of the CROWN, requiring them to attend in the House in order to listen to a speech made by himself or by another member. It will be observed, too, that not even the occasion for delivering such a speech was fixed. There did not stand upon the Orders of the Day, nor yet on the list of propositions awaiting debate, any subject in connection with which either Mr. KONO SHIRONAKA or Mr. SHIMADA SABURO was entitled to deliver a statement of views bearing upon the general policy of the Cabinet. The law of the Houses provides that "Ministers of State and Delegates of the Government shall be allowed at any time to speak" in either House, but there is no rule which entitles a member to

deliver an address unless it be in connection with some subject standing upon the Order of the Day or otherwise coming before the House according to due methods of procedure. But Messrs. KONO HIRONAKA and SHIMADA SABURO seem to have committed the mistake of forgetting altogether that there are such things as rules. They stand in the position of having simply announced their intention to speak on a subject of their own choosing, the leave of the House to introduce such subject not having been sought, and none of the authorized methods of introducing it having been adopted. Moreover, against this most singular performance not a single member of the House of Representatives raised his voice. The President did not even appear to anticipate the possibility of protest, for no sooner had the proposal of Mr. SHIMADA been formulated, than he announced that, in the absence of objection, he should take the step indicated. All this forces us to arrive at two unwilling conclusions: the first is that the Opposition has been carried off its feet by the pride of strength; the second that, in the face of a tyrannical majority, the members have for the moment lost their individual faculty of distinguishing between right and wrong; or, at any rate, are wanting in courage to assert their views. No one, giving to this matter a moment's serious thought, can entertain the notion that either House of the Diet is entitled to summon the attendance of the Ministers of State for the purpose of hearing a member's speech. Neither may any member declare his intention of delivering a speech until he has complied with the regular procedure entitling him to be heard. Messrs. KONO HIRONAKA and SHIMADA SABURO have been betrayed into a course which not only indicates an almost delirious estimate of a party leader's parliamentary importance, but also betrays marked indifference to the rule of constitutional procedure. These gentlemen, however anxious they may be to embarrass and humiliate the Government, should at least remember that they may themselves be some day required to occupy the bed which they seek to make so uncomfortable for the present holders of office. Precedents now established will be valid hereafter; a consideration which, in other countries, generally exercises a salutary restraint, though in Japan, for the moment, it seems to possess little force. Count ITO'S Cabinet has shown itself genuinely anxious to restore harmony and to conciliate the Opposition. But assuredly it cannot so far forget its dignity and ignore the rules of parliamentary procedure as to yield to the giddy and irregular proposals of Messrs. KONO HIRONAKA and SHIMADA SABURO.

MR. CLEVELAND'S INTENTIONS AND OPPORTUNITIES.

WHAT will Mr. CLEVELAND do? To this question, now eagerly asked in all commercial quarters, no authoritative answer on any point can be reasonably expected before the coming March. It is far from probable, even, that the inaugural address will satisfy the impatience of those who look for a definite announcement of policy upon the vital subjects which occupy public attention in the United States. In the interval, speculation and surmise will be as various as are the conflicting interests which largely depend upon his action. With most of the calculations and predictions of the next few months, the wish will be the father to the thought, since nothing is less likely than that the new PRESIDENT will allow his official declarations to be anticipated through private channels. The situation is graver than any he has hitherto been required to encounter, and his natural prudence will be doubled under the necessity of keeping his counsels secret until the moment when they may be disclosed with safety. He doubtless feels that a single unwary step in the present condition of affairs may not only injure his prestige with the public at large, but weaken his grasp upon the confidence of his political supporters. So many uncertainties surround him that he may probably wait till the last possible hour before fixing the lines upon which his administration is to be conducted. For, in deciding what he will do, he must first of all consider what he can do, rather than what he would wish to do. It is a foregone conclusion that his performances will fall short of his personal desires. That will be the inevitable result of the anomalous conditions of his election. Having avowed his rooted faith in certain principles of national economy, he finds himself chosen PRESIDENT as the representative of a party by no means unanimous in the acceptance of those principles; and for a long time his efforts to execute what he conceives to be his duty will be thwarted by the opposition of powerful agencies in his own circle. If he neglects to move cautiously at the outset, he may fail to command thorough coöperation in the most important of the projects to which he considers himself morally bound.

Notwithstanding Mr. CLEVELAND'S endeavours to make the tariff a party issue, the fact remains that an influential proportion of the northern Democracy adheres as firmly as ever to protective doctrines. Any attempt, under his leadership, to introduce rapid and sweeping revenue reforms would be resisted by some of his most powerful supporters. To what extent can he run the risk of alienating these supporters and breeding dissension in the organization which has made him what he is? There are those who believe him

capable of pursuing his convictions, even in defiance of practical political considerations, but in this instance there is no reason to suppose that his convictions would ever lead him to extremities. He knows that the entire commercial structure of the country might be shaken by an abrupt assault upon the system now in operation, and he would be the last man to think of pulling down before the material is ready for building anew. Without striving to forecast events, we may fairly assume that Mr. CLEVELAND will confine himself, at least during the first year of his term, to making a safe and sure beginning in what he regards as the true direction. To do more would be to excite alarm throughout the business community, and to produce a needless uneasiness, if not more dangerous feeling, among his immediate partisans.

In dealing with the silver problem, the new PRESIDENT will again be hampered by the lack of unity in his surroundings. The course he would prefer to take is as different as can be imagined from the course into which many active Democrats would gladly force him, if they could. But in this matter, the consciousness that he has with him the best financial intelligence of his retinue may encourage him to take a more aggressive stand than he would venture with the tariff. There are, of course, other grades of intelligence which he may not value highly, but which he cannot afford to contemn. Signs have been given—signs hardly to be mistaken—that he would affirm his well known views with emphatic directness, if he were sure that the discontent he might provoke would be confined to the more belligerent and less responsible sections of his constituency. As to this, he has not sufficient evidence, and until the uncertainty is cleared away, he will not be left free to follow his inclination. He is under deep obligations to his intimate advisers, and is not likely to disregard their admonitions hereafter, as he has sometimes done in the past. They can point too readily to the unlucky results of his independent action on occasions of moment;—results to which he may or may not have been individually indifferent, but which are held up to his reproach as a political leader. Unless he is prepared to offend them irretrievably, he will take no decisive step without consulting them and securing their approval. But his views concerning silver are understood to be so pronounced that attempts will be made to bring the party into comparative harmony on the question, and to call forth such expressions of popular opinion as will warrant the administration in moving with speed and energy. We may therefore look for animated silver discussions in the American press and on the platform, from the tone of which the incoming Executive can ascertain how far it will be wise to proceed in this branch of its policy. In

accordance with the amount of favour or disfavour shown, the policy of Mr. CLEVELAND will presumably be shaped.

In fulfilling the duties of his office, a PRESIDENT of the United States is often influenced by personal as well as by party considerations. During his first term, it is natural that his mind should turn to the prospect of securing the succession for himself, and that his measures should, so far as propriety will allow, be calculated toward that end. Mr. CLEVELAND is subject to no temptation of this sort. He is about to enter upon his second tenure, and is forbidden to hope for a further extension of power. He will have no occasion to inquire as to the effect of his actions upon his own future interests. So far, he may work with a free hand. There remain, however, the bonds of party fealty, from which it will not be easy to extricate himself, even supposing he should wish to do so. He is, we believe, under fewer direct pledges than most of his recent predecessors, and except by usage and precedent he is virtually unfettered. The exception unfortunately covers a very broad and comprehensive range of limitation. Every PRESIDENT knows that he has it in his power to inaugurate reforms the postponement of which is a national discredit; yet not one, in the last fifty years, has shown the courage to set about them. It would be vain for Americans to hope that Mr. CLEVELAND will seriously exert himself to eradicate the evils of the Civil Service. His party would denounce and forsake him if he failed to turn out the mass of Republican office-holders and replace them with men of his own side. Republicans cannot consistently censure him for continuing the methods by which they have always profited. To do this would be to utterly ignore their record for a quarter of a century. His countrymen in general appear content that no blow shall be struck against the practice of rotation in office, the difficulties of arresting which are by common consent acknowledged to be beyond the might of any Chief Magistrate to overcome. Are they indeed insuperable? Or could a man of Mr. CLEVELAND'S force and resolution sweep them out of existence, if he were not held in check by the subjugating spell of party domination? He is, his friends assure us, about to address himself to labours which in the estimation of outside spectators are not less arduous, and the obstacles to success in which are scarcely less formidable. Yet we are told, with what sounds like simple and unquestioning sincerity, that throughout his second Presidency, as throughout all time, so long as there are spoils to gather in the great Republic, the victors alone must claim and enjoy them.

THE HOUSE OF REPRESENTATIVES.

THE leader of the *Kaishin-to* in the House of Representatives carried yesterday to a climax the curious performance inaugurated by Mr. KONO HIRONAKA on the 3rd instant. Mr. KONO, a man of comparatively moderate views and well balanced mind, probably opened the drama without serious reflection. He wanted to have a debate on the Ministry's Declaration of Policy. He wanted to have the Ministers present. He wanted, if possible, to draw them into discussion. And probably, as one of the leaders of the Opposition, he wanted to involve them in some dilemma which would serve his Party's ends. All that was fair and proper enough. But his method of achieving his purpose was utterly irregular. For he simply rose in his place, announced his intention of delivering a speech on a subject not before the House, and expressed a wish to have the Ministers of State attend in order that they might listen to him. The thing happened at the close of a somewhat tedious sitting. It is conceivable that Mr. KONO'S announcement attracted little attention or scrutiny. But no such excuse can be alleged for the action of the members on the 5th instant, when Mr. SHIMADA SABURO asked the President to invite the Ministers of State to fix a day for attending in order to hear Mr. KONO'S speech. Mr. SHIMADA must have deliberately considered the course he was pursuing. Several of the members had evidently considered it. Yet, once more, the flagrantly irregular and unconstitutional character of the whole proceeding evoked no protest. The President, properly regarding absence of objection as tantamount to endorsement, conveyed Mr. SHIMADA'S proposal to the Government, and on the 7th the latter briefly returned answer that the Ministers of the Crown being entitled to attend in the House whenever they please, no occasion exists for the latter to go to the trouble of inviting them. It is plain that the Ministry could not have returned any other answer. They might couch their reply in polite language, but they could not possibly accept the principle that the House has any right to summon their attendance for the purpose of hearing member speak. There are too recognised methods of coming into communication with the Government; by Representation or by Question. The latter is much the simpler of the two. It involves no reference to the House, and has never failed to secure an answer from a Minister of State in person when a verbal explanation seemed conducive to a better understanding. Nowhere, however, either in the Constitution or in the Law of the Houses, can a provision be found implying that the House of Representatives is empowered to require the attendance of Cabinet Ministers. On the contrary, the whole spirit of the

9th Chapter of the Law of the Houses is opposed to anything of the kind. For it is there provided that Ministers of State may speak at any time in the Diet; that they may attend the meetings of a Committee and there express their opinions; that the fact of an impending meeting of a Committee must always be reported to the Ministers of State; and that the Orders of the Day and the notices relating to debates must also be transmitted to them simultaneously with the distribution of such announcements among the members. All this plainly contemplates that the Ministers direct connection with the Diet is purely discretionary, and that their attendance or non-attendance depends entirely on their own estimate of the occasion. Mr. KONO HIRONAKA must be supposed to know the Law of the Houses and the Standing Orders. He must know that he had no right to stand up in the House and declare his intention to speak upon any subject unless he has previously complied with the regular procedure of conveying notice to the President, and getting the subject entered upon the Order of the Day. He must also know that whenever due notice is thus given, the fact is conveyed in the regular routine to the Ministers of State. Hence, when, at the end of the day's session, he rose and declared that he should speak on a matter not yet even included among the announcements placed daily in the President's hands to be read to the House before entry in the Order of a future day, he ought to have known that he was violating all the rules of procedure. And when he added the hope that the Ministers of the Crown would come to listen to his intended oration, and asked the President to convey a message in that sense to the Cabinet, he ought to have known that he was asking the House to betray itself into a palpable excess of competence. We are inclined to think that Mr. KONO acted without mature reflection. But the opportunity offered by his want of care was not to be lost. The *Kaishin-to* are always on the watch to create friction between the House and the Government. Their leader saw his chance and utilized it with mischievous adroitness. On the day following the above incident, he moved that the Ministers of State be invited to fix a day for attending to hear Mr. KONO's speech. That sounded simple enough, and since the motion was made in Mr. SHIMADA'S most polished and smiling style, it was suffered to pass without protest. "Invite the Ministers. To be sure. Why not? It would be pleasant to have a field day with them." Then came the polite snub from the Cabinet. The situation was shaping itself excellently to Mr. SHIMADA'S purpose. Mr. KONO, indeed, would fain have found an exit from the perplexity by taking advantage of the fortuitous presence of a Minister and getting off his speech at once. But though the House consented to the

quaint proposal that the Order of the Day be changed for the purpose, as Mr. INOUE KAKUGORO neatly put it, of hearing Mr. KONO deliver a lecture, the Government, having a clear perception of what is meant by Parliamentary procedure, declined to give its consent, and thus stood between the House and the establishment of a preposterous precedent. If it were possible for a member at any time to ask, as a point of urgency, that the Order of the Day be changed so as to give him an opportunity of delivering his after thoughts about some statement made on a previous Day by a Minister of State or Government Delegate, the proceedings of the Japanese House of Representatives would be exposed to quainter interruptions than have ever been conceived in a similar assembly any where else. But all this lent itself admirably to Mr. SHIMADA SABURO'S purpose. The House had made an egregious blunder and was anxiously looking for some one to suggest a means of retreat or vindication. Mr. SHIMADA seems to have thought solely of making mischief. He rose on the 8th instant, and in subtle language, the full import of which was not understood until Mr. INOUE KAKUGORO translated it into the phraseology of his robust intelligence, asked the House to commit itself to the proposition that it has the right to require the attendance of the Ministers of the CROWN, and that they acted wrongly in denying that right. Much courage is needed to openly abandon a false position. Apparently the House lacked that courage. It accepted Mr. SHIMADA'S motion, and thus fell an easy victim to the wily stratagem of the *Kaishin-to* leader. It would be difficult to conceive anything more undignified than the situation in which the members now find themselves. They must be well aware that the principle embodied in their vote is quite extravagant, and that the Government cannot possibly accept it. They must also be aware that the country would laugh at them if they took the only remaining means of enforcing their doctrine, namely, a vote of want of confidence in the Cabinet because it declines to admit liability to be summoned to the House at any moment to listen to a debate. The plain truth is that the House of Representatives has allowed itself to be pushed into a humiliating and unconstitutional *impasse* by the leader of a party whose unique object is to prevent any approach to harmony between the Administration and the Legislature. We do not think that this kind of thing will be perpetually tolerated by the country. Reasonable opposition is one thing. But systematic opposition inspired simply by the hope of rendering government impossible, is another and a wholly different matter.

NEW CODES AND OLD CUSTOMS.

IX.

WE shall conclude our survey of the Civil Code with references to a few of the minor chapters which offer opportunity for comparison. Deposit is treated in Chapter X. of Book III., in the Civil Code, and further in Chapter X. of the Commercial Code. One of the first and most important matters regulated is that of the degree of care and responsibility to which the depositary is subjected. The degree required is ordinarily that care which he gives to his own; but the higher standard of "a careful manager" is applied, where he has offered his services, or where the deposit is solely for his benefit, that he may use the article when desired. Commercial deposit is regulated by Arts. 607-608 of the Commercial Code; and the higher degree of care is there required from depositaries receiving a reward, or making a business of taking on deposit, or undertaking to manage as well as to keep on deposit, or expressly undertaking greater than ordinary responsibility.

Stating these rules in briefer and looser fashion, (1) the depositary is never liable for loss happening through *vis major*, and (2) it is always enough for him to treat the property as he treats his own, unless he receives money for his services, or makes a business of storage or has the privilege of using the article. The first of these rules was almost universally acknowledged in Japan. The record for Sagami *kuni*, that "when an object received on deposit, for which a storage-fee is paid, is lost through a calamity of Heaven, the depositary does not make it good," expresses the general rule. Only two passages assert the contrary rule; but they are of course open to explanation on the ground that the depositary might in those places have been accustomed to undertake stricter responsibility, and it is obvious that even under the Code the depositary in those places would be held to his old obligation if it could be proved that he was understood to undertake the service as an insurer against "calamities of Heaven." This vernacular phrase (*ten-sai*, corresponding to our "act of God," familiar to shippers and carriers) has now been replaced in the Code by the more accurate "unavoidable force" (*fuka-ko-ryoku*); for there was not complete harmony in its interpretation in different regions. In some places (e.g. Kaga *kuni*) it appears to have included everything not due to the depositary's fault. In others (e.g. the adjacent *kuni* of Echigo) it excluded loss by fire, rats, theft, or robbery; and in these cases presumably the storehouse-keeper was regarded as undertaking to provide against such causes of loss. For this lack of a uniform standard is substituted the general test of "unavoidable force," which gives accurate form to the notion underlying *ten-sai*, just as our "act of God" has been improved

upon and displaced. It must be remembered, however, that this change affects the judges, dealing with law as a science, rather than the people in their mutual relations; for any depositary can specially increase his liability, by agreement with the depositor, so as to harmonize with the customs of the locality.

To this exemption from absolute responsibility there are in the Commercial Code two exceptions familiar to all,—the absolute responsibility of *e.g.* the banker receiving money on deposit (Arts. 617, 619), and that of *e.g.* the innkeeper (Art. 609) receiving the property of guests. The first is fully in accord with existing Japanese ideas, and the coincidence of development between Roman and Japanese law is worth noticing. In the former a *depositum irregulare* might be made by depositing money and giving the depositary the right of using it, and in this case (the depositary being usually a banker) his situation resembled that of the receiver of a *mutuum* or loan of money, and his responsibility was absolute. In the same way in Japan the deposit (*azukeru*), at first merely the handing over of a bag or box of money, to be specifically returned, became finally (in one form) equivalent to a loan, and the responsibility of return was absolute. In some districts, we are even told, "there has been no such expression as 'the loan of money for use,' the only term used for all such transactions being 'receiving money on deposit'" (Settsu and Ise *kuni*). This practice was fostered also by the desire to evade certain restrictions to which ordinary loans but not deposits were subject, and a large proportion of money loans were made as "deposits" (*azukari-kin*). We thus find indigenous in Japan the principle that is of such constant application and paramount importance in modern commerce, that "when fungibles are deposited in such a manner that according to contract or the usages of trade the depositary is entitled to the use or disposal thereof, the right of property therein and the entire risk of loss thereof or damage thereto is transferred to the depositary" (Art. 617), and that "in the absence of any express agreement to the contrary, deposits of money or precious metals made without being sealed up or otherwise secured, are to be regarded as the property of the depositary" (Art. 619). So far as the term "fungibles," in Art. 617 (that is, things made up of a number of like units, and replaceable by an equal amount of the same units) includes rice and other staples in addition to coined money, the principle in its full bearing was well known in Tokugawa times; for we learn from the "Introduction" to the volumes now before us that, in various trades, the warehousemen issued deposit receipts, which passed from hand to hand and were good for three years; and the quantity specified in the receipt was demandable by the holder

absolutely, neither fire nor any other excuse being allowable. Here we have the principle of Art. 617 in its fullest extent. The importance of the principle in to-day's commerce is our excuse for insisting upon its recognition in the Tokugawa days.

We have mentioned also the absolute responsibility of the innkeeper and similar persons. This, to be sure, can be expressly contracted away, except so far as the innkeeper's fault causes the loss. Such a provision is wise, it would seem, for this absolute responsibility does not appear to have been recognized in Old Japan; at least this inference is suggested by Nos. 46 and 47 in the volume of Legal Precedents.

Turning from this topic to that of the degree of care required, we find hopeless uncertainty and confusion among the customs. Naturally enough the expressions employed by the people to designate this idea are without fixity or clearness; *hosen suru*, *yoku hosen suru*, *moppara hosen suru*, *tori-shimari*, *mamori-oku*, *chu-i*, *kwan-shu*—these are popular expressions which it is impossible to render exactly. *Ayamachi* is a term which corresponds only loosely to our "negligence." The Civil Code adopts the uniform tests, sanctioned by the traditions of Roman and French law, of the two degrees, "care equal to that bestowed on one's own property," and "care of a careful manager." The Commercial Code adopts the two degree principle, but for the second substitutes "utmost care" (Art. 608). There will be no actual conflict; but we may note that this difference in form of expression is liable to cause confusion and ought to be amended. In our own opinion the Anglo-American test of "reasonable care under the circumstances" is in practice the most satisfactory; but Japan has chosen continental models.

The title of Prescription forms Part II., of Book V., in the Civil Code. The notion was well known in Old Japan; but we have records as yet of the prescriptive limitation of money claims only. It is not likely, in fact, that the principle acquired such definite force for land claims. According to the customary records, the term generally accepted as outlawing money claims was 10 years, though in some regions it reached 20 years. The difference between this rule and that of the new Code, as might be expected, is that the prescriptive period has been much shortened. The chief sorts of claims are classified; the longest period is 5 years; the shortest (for lodging, day-labour, etc.) 6 months. For claims not specially noted the time is 30 years. These periods are supposed to be varied according to mercantile convenience. The same idea was known to Old Japan; in Shimosa *kuni*, for instance, the claims of petty tradesmen were outlawed in 6 months.

The period is constantly liable to be lengthened by what are termed in the

Code "interruption" and "suspension." The chief examples of the former are the bringing of a suit by the creditor, which interrupts the prescriptive period, and the voluntary acknowledgment of the claim by the creditor. We do not find, in the precedents before us, any example of the first sort; but the second was a very common expedient for the purpose of keeping a debt alive. The creditor invariably got the heir to renew on the ancestor's death, and the debtor frequently renewed the instrument several times before finally paying. Moreover, the rule was once especially laid down that actions upon claims ruled out by a certain prescriptive order "shall be taken up and adjudicated, if the defendant admits the fact of the borrowing, no matter how many years have elapsed between the conclusion of the contract and the bringing of suit." The old judges were also familiar with the principle that where there is a running account the prescriptive period begins with the date of the last transaction in the account. Of the suspension of the period by reason of the minority, insanity, or other legal incapacity of the creditor they do not seem to have known; though nothing appears to prove this, and the subsequently published precedents may show the contrary. We are here concerned with criticising the Codes as formal bodies of law; but we cannot help noting, in passing, that the Commercial Code establishes in two points a rule different from that of the Civil Code: (1) the uniform period of prescription is 6 years (instead of 5 or less), and (2) the acknowledgment of the debtor which interrupts the prescription may, in the Civil Code, be either written or oral, express or implied; in the Commercial Code it must be in the form of a written promise, except only the case of a partial payment. Here there is, strictly speaking, no conflict; but this variance in the rules will not tend to make the law plain for plain people.

A few final words must be said as to the system of bankruptcy in Old Japan. The detailed regulations and elaborate safeguards of modern statutes are not to be found. The social conditions were not such as to call for them. But the fundamental ideas of bankruptcy were universally familiar in TOKUGAWA days. The sequestration of property, selling at auction, and distribution among creditors,—these three essential steps were found almost everywhere.

The modern principle of bankruptcy requires that the proceedings shall be supereded by the local or judicial authorities. This principle was universally acknowledged in Japan where the unpaid claims included money due to the feudal lord or, perhaps, the local community; but in ordinary cases we find it acknowledged in only a minority of instances. In all cases, however, the debtor's five-men company

seems to have taken an official part. The sequestration of the property probably took place under their direction. We read of seals being affixed to guard against secret removal; and exempt property was known as "unsealable" property. The laws as to exemption are meagrely mentioned in these records. The homestead exemption appears several times and was possibly a general one; but the principle was also applied to other property. Where a fraudulent sale or removal took place, the bankruptcy would not be permitted. In almost every case, the assets of the debtor were realized by having his effects sold at auction, either by sealed bids or in the ordinary mode. In the distribution of proceeds the priority of certain claims was recognized, unpaid taxes always coming first, and properly authenticated mortgages coming next. One of the most important questions is of course whether, as in modern bankruptcy, the settlement on this occasion was a final discharge of the claim, even though only a percentage of the full liabilities was realized. On this point we find two-thirds of the passages agreeing with the modern theory. In the others it appears that a creditor could come upon the debtor again whenever the latter obtained means; though sometimes, and probably usually, this was only where the instrument of debt so provided. Whether, in the cases where the settlement in bankruptcy was a final discharge, the creditors were obliged to accept the dividend and lost their whole claim if they did not (as is usual in modern involuntary bankruptcy), does not appear. In some instances the statements point in that direction. On the whole, then, the essential and even many incidental ideas of a modern bankruptcy system were familiar in Old Japanese practice.

x.

We shall not attempt to make any detailed examination of the Code of Civil Procedure, because there is as yet no authorized translation of it and because the complete ground is not covered in the volumes thus far published in the "Materials for the Study of Private Law." But the first volume of the Third Part, just issued, contains enough material on the subject of Civil Procedure to make it very clear that all the essential features of our ordinary modern procedure were present. We are not here defending the Tokugawa legal system and policy; and we need not, therefore, discuss the features of procedure peculiar to a feudal policy now passed away. What we wish to determine is solely whether the Courts and the people were in those days familiar with principles of procedure in any way similar to those of the new Code.

It is clear beyond doubt that they were, and that, as we have said, all the essential features of our ordinary modern procedure

were present in the practice of the supreme tribunal, the so-called Chamber of Decisions. In the first place there was a clear division of jurisdiction among different Courts. These Courts were classified on a principle which was peculiar to the times, but the notion was none the less distinct, and dismissal for want of jurisdiction is one of the topics under which the precedents are arranged. The jurisdiction fixed, the plaintiff applied to the *nisi prius* Magistrate for a summons; for even Supreme Court cases were first heard by a single Judge. This summons (*sashi-gami*) seems to have been of two sorts, according as it was employed in a Supreme Court or a Lower Court case. In the former instance all the Magistrates added their indorsing-seals before issuance. The summons contained a statement of the complaint, and the names of the parties; and in one case there was as much of a discussion raised over the misnaming of the defendant (who had changed his name) as ever took place in an English court on a plea in abatement.

The order in the summons was for the defendant to appear on the 7th day, if he was a townsman of Yedo, or some later day, if he was a countryman, the interval depending on the distance of his home. On this day both parties appeared and made their pleas. The plea might be to the jurisdiction, or some other dilatory plea; usually the defendant set forth his answer to the merits of the plaintiff's claim. It is impossible yet to know just when or in what order the parties' pleadings were handed in, or by whom they were written. But what is certain is that there were written pleadings, at least one by the plaintiff and one by the defendant. For the complaint (*meiyasu*) the form is not given. The defendant, it is said, in a money-action "should concisely make in writing the following statements as his written pleading: The circumstances under which the debt was incurred; the amount already paid; the wording of the instrument of debt; and the undertaking to submit to whatever order of payment may be made." Here the plaintiff had probably declared by merely handing in the instrument of debt, as in some of our modern actions; and after the defendant's reply he joined issue.

When the nature of the parties' dispute had thus become clear, the Magistrate examined them, summoning other witnesses where necessary. A number of precedents are to be found in which several witnesses on each side were summoned and questioned. The evidence was reduced to writing, presumably by a clerk, and a *précis* made of the proceeding. It is in this form that we have most of the cases of which a full account remains. This *précis* contained the comments of the Magistrate on the evidence, and ended with his provisional decision. The decision, with the whole proceeding, was laid

before the Supreme Court, and the case came up in its turn on the regular court day for the class of actions to which it belonged. The Supreme Court might question the parties again and call for documents; and might then or (better) at a later day pronounce judgment, rejecting or modifying but usually affirming the provisional decision.

There were numerous other points on which we find the Court proceeding in a manner quite analogous to that of the West—repeated deliberation in case of difficult points or the over-ruling of previous practices, respect paid to precedent, consultation of merchants and other experts as to the prevalence of local customs, strict construction of the words of documents and conventional interpretation of particular clauses, allowance of priority to certain classes of actions (such as suits on commercial paper, or for eviction), fixing a minimum sum for claims cognizable in the highest Court, and many others. These we have no space to consider; but some note must be taken of the proceedings to enforce payment by the debtor. Until 1843, great leniency was shown, and the claim was apportioned into instalments to be paid in several months or years. In 1843 this was abolished. The debtor, when judgment was rendered against him, signed a certificate reciting the facts and the judgment and engaging to pay as ordered. This was given to the creditor, and served as his muniment of title. If payment was not made after a specified period, the creditor applied to the Court and obtained an order for execution in bankruptcy. This order was directed to the defendant and the local officials of his ward or village, and contained the following statement:—

That the Court has ordered the defendant to discharge the claim within a certain term, but the defendant declares his inability to do so; that this is against law, and therefore the Court orders execution in bankruptcy; and, that the defendant, under the supervision of his local officials, is to sell his rice-field and upland, residence—land, house, storehouse, family belongings, etc., and deliver the proceeds to the plaintiff.

Another document was given to the plaintiff, attesting the issue of the above order; and the parties both signed a memorandum of the proceedings, which also contained a detailed statement of the course to be pursued in case the proceeds of the sale exceeded or fell short of the plaintiff's claim. Preferred claims, including those of a mortgagee, of course had priority over the plaintiff's, and if a mortgagee found his priority disputed, he might bring an interlocutory action to have the issue settled. If the debtor's estate was subject to a claim for taxes which covered most of the assets, the creditor might pay the amount in arrears and take possession of the estate.

In all this we see a system thoroughly feudal and clearly insufficient for the needs of to-day. But no one can fail to see also that every essential feature of a modern lawsuit was present. We are as far as possible from claiming that the practices

described in the volume before us would be adequate for any but the social conditions amid which they grew up and by which their development was limited. But it is revealed on every page that there was a definite systematic procedure, and that the judiciary and the people who followed this procedure were in possession of all the essential ideas underlying the modern system. When special pleading was abolished in England forty years ago, when Code pleading came into operation in New York at a later date, the lawyers and the judges had to begin the study of these changes and to master the new principles. No one will pretend that the new Japanese Code of Procedure does not call for more or less study by the judges and the lawyers, and more or less effort on the part of the people to become familiar with some of its notions. What we protest against is the assertion that it has been imposed upon a nation who either know nothing of the principles it rests on or have been in the habit of conducting their litigation by radically different methods. The precedents now lying before us demonstrate amply the fallacy of such a belief.

XI.

THE material for a complete comparison of the commercial rules is not yet available; but in the Introduction to the "Materials for the study of Private Law," is contained certain information which enables us to form an opinion on some of the essential points to be compared.

Among the various agencies of modern commerce (other than those resting on mechanical invention) perhaps the institutions of prime and elemental consequence may be said to be the bank, the exchange, the insurance system, the brokerage contract, and the joint-stock corporation. Of the documentary expedients for facilitating commerce and utilizing credit, the leading and indispensable types are the bill of exchange, the cheque, and the bill of lading. On these things the commerce of to-day is built up, and from them flow the majority of the relations which modern commercial law busies itself in adjusting. Now the pages of the volume before us demonstrate clearly that for over 200 years Japan has possessed every one of these types of documents, and has thus been familiar during all that period with the typical and ordinary transactions which form the material for modern commercial law. We shall not attempt to argue that Japan anticipated the Western nations in the development of these ideas; though this is easily demonstrable, for many of the above instrumentalities, as to all others than the great commercial communities of early modern times. It is enough to call to mind that these ideas are with us of a comparatively recent origin, and to point out that for more than two centuries Japan has made use of institutions and expedients

which have been known for the same length of time in but few districts of Europe.

The guild of the bankers was organized in Osaka about 1660, the only European districts having at that time a real banking system being the commercial towns of Italy. These banks in Japan lacked none of the essential features of our own. They received on deposit, honoured cheques, issued notes, negotiated bills of exchange, discounted bills drawn against merchandise, and acted in general as the intermediaries for commercial transactions. The smaller banks were connected financially with the larger ones, just as the country banks are with those of American metropolises and the provincial banks with those of London. They supported each other in times of financial embarrassment, performing substantially the functions of banks of to-day. They had some sort of a clearing-house system, the details of which are not yet clear. In short, there is little in the Western idea of a bank which the Japanese institution did not have or could not easily have assimilated.

Exchanges were the successors, alike in Japan and in Europe, of markets and fairs. The Osaka Rice Exchange at Dojima dated back to half a century after the Royal Exchange of London. There were money exchanges also, at which quotations were obtainable for gold, silver, and small money. At the Rice Exchange were brought and sold the rice certificates issued by the storehouse-keepers of the great *Daimyo*, as well as the rice-products shipped to Osaka and Yedo by the farmers themselves. Dealing in futures was one of the elementary notions on 'Change in Japan, and the Government seems to have made efforts, equally strenuous and only a little less futile than those in the West, to stop gambling in staple agricultural products. The sales in the Exchange were conducted very much as they are now; and when the bidding was opened, there was, according to the chronicles, the same madness of behaviour and vociferous competition among the brokers of 200 years ago which characterise this scene in every Exchange to-day. Of options and the like varieties of Exchange transactions, nothing specific is reported in these volumes. But enough is given to show that the methods of the Exchanges were highly developed, and that closer investigation would probably reveal all of the varieties of transactions which we know to-day, or varieties equally complex and technical.

Of insurance no details are as yet furnished us,—only enough to indicate that for the bulk of the sea traffic between Osaka and Yedo a system of mutual insurance was in operation (under the management of the guilds) for 200 years. Of the mercantile joint-stock corporation it is not possible certainly to say that it existed. Further investigation may show that commercial houses like the ECHIGO House—

where the name was borne by a family of five or six branches having a common stock and a single profit-and-loss account—were managed on the principle of the joint-stock company. Whether this was so or not is here less to our purpose; for the present popularity of the joint-stock company in Japan and the vast area of business now managed by this form of organization puts beyond any question the applicability of the new Codes to Japanese conditions. It is, however, worth pointing out that Japan is in some respects better fitted to comprehend and to apply with facility the modern corporate idea than the countries owning the sway of English law. It has taken nearly a century for the English and American bar and bench to work out the true theory of a business partnership,—the notion of the business as an entity, a legal person, quite distinct in its standing from the individuals who make it up. The true result has come, partly through Germany, but chiefly by self-discovery. Now in Japan, the notion of a business as an entity requires no effort to appreciate and apply. In the idea of a family and of a family business as an entity it has long been familiar to them. The unity, the unbroken continuity, of a family-business corresponds closely to the modern notion of a partnership, and offers a congenial field for its application in law.

When we come to the cheque, the bill of exchange, and the bill of lading, we find Japan threatening to dispute even with Italy for priority of invention. The cheque cannot be proved to have existed in the commercial transactions of Europe, outside of Italy, until the late 17th or early 18th century,—in England, indeed, not until about 1760. In Japan we find the bankers employing cheques (*furi-dashi-tegata*) as early as, say, 1650. The volume before us describes some of the practices with reference to them. One would perhaps not expect to hear of "certified cheques" in Japan in these banks of the old régime; but there they were. The indorsement was as necessary in this cheque as in our own. The dishonoured cheque was equally worthless as a payment of a debt. Perhaps the most startling parallel of all is the rule that a bank which receives from another bank a cheque drawn against no funds or otherwise faulty must return it to the latter bank before 12 o'clock in order to recover payment.

For the bill of exchange there are even older traditions. In Europe, if we forget the commerce of the classic ages, and go back only along the lines of modern commerce, we find the bill of exchange introduced nobody knows exactly where or exactly by whom, but certainly used and developed by the Lombards of the 13th century and later. In the Japan there is a law of the same century, in which such documents (*kaye-sen*) are regulated; and in later times there are plentiful references to them. The later name (*kawase-tegata*)

covered a number of varieties, brought into existence by the complexities of commerce. We need not here cite proofs in detail. It is sufficient to say that the principle was perfectly understood, and that it was applied in essentially the same transactions as at present. Most worthy of note is the fact that it served effectively to adjust the equilibrium of trade between Osaka and Yedo. The great *Daimyo* of the West in Yedo sold their rice in Osaka; but they and the people of Yedo relied on Osaka for most of the staple manufactures. Thus Osaka owed Yedo *Daimyo* for rice; Yedo wholesalers owed Osaka exporters for manufactures; and by bills of exchange an immense volume of exchange was settled at the least expense. This is only one indication, but a most important one, of the comprehension shown in Old Japanese commerce of the functions of the bill of exchange.

The bill of lading was not quite the same in form as ours; it purported to be an order by the shipper to the captain to deliver, or a notice to the consignee of the shipment, not a receipt by the company or captain, and the list of the goods was written into it, not contained in a separate invoice. A copy of the bill of lading, it seems, was, where feasible, dispatched by land route to the consignee; but usually the bill was packed in with the goods. It was sometimes made out in blank, or, at least, in the alternative; whether it circulated as representing the goods does not appear. The art of slicing down the vessel's responsibility to the smallest possible contingency was apparently unknown; but it has not taken long for Japanese shipping companies to learn the value of these limiting clauses. The rules of the guild, however, provided for the ordinary contingencies, and questions of average and freight were settled by the guild rules.

Such were the facts of Japanese commerce. It is idle to contend that Japanese mercantile life of the last generation was equal in richness of development, complexity of operation, fertility of resource, or importance of undertakings to the Western mercantile life of to-day, or even of the last generation. But we do not have to go very far back to reach a point where the comparison is not so unequal a one, and what we do find throughout is that Japanese commerce possessed, with scarcely an exception, the fundamental mercantile institutions and expedients with which Western commercial law deals. Europe and America have for nearly two hundred years had advantages which have been denied to Japan; notably they have had the opportunity for a free exchange of the new ideas which each day brings forth, an opportunity through the lack of which Japan has suffered in almost every department of commerce, whatever it may have gained in art. But meanwhile Japan has been in the possession of these fundamental commercial notions, and, like the

steward who turned his one talent into five, this country has preserved and developed these ideas to as high a degree as was possible under the circumstances. Greater opportunities for assimilation and enlargement now lie before it; and it is idle to suppose that they will not be amply utilized. What is now clear is that our attitude towards Japan is without support, when we assume that the new Code brings in notions and rules novel to the people or opposed to their traditions of commerce. Foreign art (to employ comparison) indeed has offered to the Japanese new tools, new standards, new canons. Western education is in principle thoroughly different from the received Chinese system. The railway and the steamship were never before known here. In these cases we may assert with truth that the Western importation either is an entire novelty or is radically different from what existed before. But just as Japanese paper is turned out no less skilfully merely because the processes may now be carried on by steam-power instead of by hand, so we have no cause to anticipate friction from putting into force a modern commercial Code in a nation which has for two centuries possessed nearly every leading institution and expedient therein regulated. It is simply giving to Japan the advantage of the more developed form of these ideas to which the West, by the favour of circumstances, has been enabled to bring them.

SHANGHAI HORSE, DOG AND POULTRY SHOW.

The sixth annual Show of the Society was successfully held on Saturday (26th ult.) on the Race Course. The weather was bright, but cold, and there was a fairly large attendance of visitors, who apparently took a very keen interest in the exhibits, and particularly in the pony-leaping competition. Some 87 entries had been received in the pony classes, being considerably in excess of last year. The leaping contest attracted the customary amount of attention, but somehow or other it did not appear particularly good. *En Avant* and *Puritan* were markedly superior to the other competitors, and it was early apparent that they were the two animals likely to demand the judges' greatest attention. *Puritan* was particularly good at the fences, and *En Avant* at the water jump, the latter eventually securing the first prize for the best general performance. The tandem driving was a very pretty display, and the victories of Mr. R. W. Shaw, in Class 5, and Mr. "Frank" in Class 6, evidently gave satisfaction to the on-lookers. The latter gentleman gave an exceedingly clever exhibition of driving, his handling of *Cheeky* and *Chunky*, the pretty black pair, being a pleasure to see. In the dog classes, the judges on the whole had a comparatively easy task. The fox terriers were a fair lot, the English pointers poor, and the retrievers very good. In the non-sporting dogs division, Mr. Harry Maitland secured a well deserved first with a fine bull-dog, *Bully Boy*. The poultry classes were of high average excellence. The Langshans shown by Mr. George Cameron were really magnificent birds, and it is pretty safe to say that they would have secured prizes at any show at home. Had the show been held some six weeks later they would have been in still better form, but of course that arrangement was impossible. There would have been many more exhibits but for the cold, which the small dogs particularly seemed to feel very keenly.—*N. C. Daily News*.

IMPERIAL PARLIAMENT.

FRIDAY, DECEMBER 2ND.

HOUSE OF PEERS.

The House met at 10.30 a.m., the Order of the Day being.

- 1.—Applications for leave of absence from various members.
- 2.—First Reading of a Government Bill for the amendment and enforcement of certain portions of the Commercial Code.
- 3.—Appointment of a Special Committee to report upon the above.
- 4.—First Reading of a Government Bill for creating a Court of Jurisdictional Limitations (*Angen Sogi Saiban*).
- 5.—Appointment of a Special Committee to report upon the above.

The House agreed to all the applications for leave preferred by members, and then proceeded to the Order of the Day.

On the First Reading of the Commercial Code Bill, Count Yamagata, Minister of State for Justice, spoke as follows:—

GENTLEMEN,—The Bill passed by the Imperial Diet in its third session for postponing the operation of the Civil and Commercial Codes, has received His Majesty's Sanction and been duly promulgated. The Government has not neglected to appoint a Committee for revising these Codes. But there are three parts of the Commercial Code, namely, the Law of Companies, the Law of Promissory Notes and Bills of Exchange, and the Law of Bankruptcy, for the immediate operation of which urgent occasion exists. These laws are absolutely essential to the safe conduct of the peoples' financial operations in the existing state of commercial progress. The lack of proper order and method in the commercial associations of our country is not a mere temporary trouble. The frequent panics and failures of companies that occur are to be attributed mainly to the fact that speculators, taking advantage of the too loose meshes of the present law, are able to devise dishonest schemes calculated to benefit themselves only. To correct this abuse the only course to is to enact suitable and sufficient laws, under the provisions of which the operations of commercial companies may be duly controlled. Hence the pressing need of the Law of Companies. As for the Bankruptcy Law, it is especially calculated to give useful effect to this Law of Companies. Unless the two laws go into operation together, the object of subjecting commercial associations to control cannot be attained. The speedy operation of the Law of Promissory Notes and cheques is also important. For in these times, when the transactions of trade are conducted with the utmost celerity, commercial and industrial development depends, to a great extent, on a system of credit, and the present law relating to promissory notes and cheques is inadequate to the full existence of such a system. The three laws being, therefore, urgently needed, and not admitting of so much as a day's neglect, the Government has caused certain revisions to be effected, and now submits to your House a Bill providing for their independent operation from the 1st day of the 1st month of next year. We trust that the measure will be so fortunate as to obtain your approval and pass your House. It is, in fact, an outcome of the separation of the Judiciary and the Executive, and the reasons I have now stated induce us to regard the question as one of pressing importance. I do not doubt that you, gentlemen, also will agree as to the urgency of the measure. Detailed information with regard to the various articles will be furnished by the Government Delegate.

The Bill was entrusted to a Special Committee of 15 nominated by the President.

The Government Bill for the creation of a Court of Jurisdictional Limitations was then read. Count Inouye, Minister of State for Home Affairs, said:—

It seems scarcely necessary, gentlemen, that I should enter into any explanation of this Bill. The fact is that on one side you have the Law Courts, on another the Executive, and on the third, the Administrative Court, all more or less connected and at the same time independent. Between these three bodies disputes frequently arise as to limits of jurisdiction, and in such cases it is necessary that some tribunal should exist to adjudicate their difference. Hence you will find that in the law of the Administrative Court reference already exists to a Court of Jurisdictional Limitations, so that, in submitting the present Bill to you, the Government is merely treading a previously anticipated course. Speaking broadly, the Bill may be said to have its origin in the fact that the Executive and the Judiciary have been completely separated. The measure it embodies is essential under the circumstances of the time. These, gentlemen, are the general reasons for submitting the Bill. I have no doubt that it will meet with your approval.

Any information that may be desired as to particulars will be furnished by the Government Delegate.

Mr. Suyematsu Kencho, Government Delegate, said that the best plan to pursue, in his opinion, would be, not to offer any explanation of the whole Bill, but to reply to any questions that might be put by members.

Some discussion arose as to the manner of appointing a Special Committee to report upon the Bill, but it was finally decided to entrust that duty to the President, the House taking a recess from 11.20 to 12.25.

On re-assembling, the President announced the receipt of a Question relating to the Game Regulations, from Mr. Miura Yasu, and others; also the names of the Special Committee nominated to report upon the above two Bills. The House rose at 12.35 p.m.

SATURDAY, DECEMBER 3RD. HOUSE OF PEERS.

The House did not meet, the Special Committees alone being in session.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m., the Order of the Day being:—

- 1.—First Reading of a Bill for amending the Public Meeting and Political Association Regulations; presented by Mr. Ito and others.
- 2.—First Reading of a Bill for amending the Press Regulations; presented by Mr. Minoura Katuto and others.
- 3.—First Reading of a Bill to amend the Land Tax Regulations; presented by Mr. Sugita Teichi and others.
- 4.—First Reading of a Bill to amend the Publication Regulations; presented by Mr. Kagami Kaihei and others.

Mr. Ito Daihachi, introducing the Bill for amending the Public Meeting and Political Association Regulations, said that the Regulations now in force were enacted under a bureaucratic regimen, and could not possibly be suited to these times of constitutional government. It did not seem necessary for him to enter into any detailed argument as to the necessity of reform. The House had already declared its verdict on the subject by passing, last session, the very Bill which was now again submitted. Unfortunately, the Bill had failed to come up for discussion in the House of Peers, but he trusted that if it were sent to the Peers at this early stage of the Session, it could not fail to secure favourable attention. Its provisions remained exactly in the form approved last session, with one trifling exception in the 18th Article.

Mr. Suyematsu Kencho, Government Delegate, said that the Bill now before the House was one of three measures which might be called recurrent, for they made their appearance every session. The Government had no desire that such should be the case. It would be much better that the fate of the Bill should be definitely settled in one session. The group of three sets of Regulations to which it belonged occupied a place of much importance in the view of the Administration. The Executive had its duties and responsibilities. These Regulations were not framed simply for the purpose of administrative facility. They had an intimate connection, also, with the preservation of public peace and good order. It was impossible for the Government to endorse the Bill in its present form. The House doubtless desired to pass some measure on the subject. If so, it behoved the supporters of the Bill to calculate the contingencies that had to be encountered. They might send forward a measure, but, on the one hand, the reception given to it by the Peers had to be taken into account in framing it, unless failure were deliberately invited; and, on the other, they had to remember the Government, on whose behalf he assured them that unless the Bill were greatly amended, sanction could not be sought for it.

Mr. Node Shozaburo asked the House to pass the Bill at once. Mr. Suyematsu himself, in his capacity of member, had introduced a Bill for the reform of these same Regulations. He obviously considered reform necessary. Let the measure be adopted without further discussion.

Mr. Uwazumi Itsuji wished to ask a question. Mr. Suyematsu had introduced a Bill on the same subject in a former session. It was true that his Bill had been different in some respects from the one now before the House. But if

the present Bill were amended on the lines of his own, would he still oppose it?

Mr. Suyematsu replied that, in his present office, he had nothing to do with Bills introduced by Suyematsu, the member. He appeared before them as Government Delegate and his duty was to tell them the views of the Government. He might add, however, that the Bill now associated with his name, had not been of his framing, nor did it embody his views. His connection with it had simply been that, as President of a Special Committee, he had announced to the House the views of the majority of that Committee concerning a Bill entrusted to it for examination and report.

After a brief discussion, the Bill was entrusted to a Special Committee of 9, nominated by the President, a Bill on the same subject submitted by Mr. Motoda Hajime, being handed to the same Committee.

Mr. Minoura Katuto, introducing the Bill for the amendment of the Press Regulations, said that it came before the House for the fourth time, and that its failure to find a place among the laws of the land must be counted a legislative shortcoming. He believed the Bill to be entirely satisfactory as it stood. When sent up to the Peers last session, the latter had expended thirty days over its examination, without bringing it forward for final discussion. He saw nothing to examine. The Bill ought to be sent up to the Peers without a moment's delay, and not thirty days but three should suffice for its passage through the Upper House.

The Bill was entrusted to the Special Committee elected for the purposes of the preceding Bill.

The Bill for amending the Land Tax Regulations was then read, as follows:—

The First Article of the Land Tax Regulations, issued as Imperial Ordinance No. 7 in the 3rd month of the 17th year of Meiji (1884) shall be altered to read as follows, the alteration to go into force from the 26th year of Meiji (1893):—

Art. I.—Land Tax shall be divided into two classes. The tax on Wet and Dry Fields shall be two and one-fifth per cent. of the assessed value of the land. The tax on Urban and Rural Building Lands, on Salt Fields, on Mineral Spring Lands, on Marsh Lands, on Forest Lands, on Pasture Lands, and on Various Lands, shall be two and a half per cent. of the assessed value of the land.

Provided that the term "assessed value" employed in this Article shall be interpreted to mean the value recorded in the Land Register.

Mr. Tajiri, Vice-Minister of State for Finance, said that, as the views of the Government with regard to reducing the rate of the Land Tax had often been laid before the House, there was no occasion to repeat them now. The members understood very well that in order to meet the necessities of the State, the public finances were already strained to their utmost. A large diminution in one of the principal sources of revenue was out of the question.

Mr. Sugita Teichi, the proposer of the Bill, felt persuaded that the House would pass it without difficulty. Its object was to relieve the burdens of the overtaxed farmers, and thus promote the nation's prosperity. The House had already, by large votes, pledged itself to the principle of the measure. He did not contemplate arresting the reform here. His hope was to see the Land Tax ultimately reduced to 1 per cent. But on the basis of a reduction of three-thousandths, in order that the change might be practicable side by side with re-assessment of the taxable value of land. The Government, in deference to the voice of the House and the wish of the people, had accepted the latter reform. He was persuaded that they would ultimately accept the former also. There was no occasion to hand the Bill to a Committee. The question was simple. It ought to be decided at once. Last session, a similar Bill had been passed and sent up to the Peers. But want of time had been alleged by the Upper House as a reason for not debating it. Let no such pretext be afforded on the present occasion. Let the Bill be accepted forthwith, and sent on to the Peers without delay.

Mr. Hirabayashi Kuhei asked what means were projected for making up the deficiency of revenue that would be caused by reducing the Land Tax.

Mr. Sugita replied that as he believed the surplus revenue to be sufficient to permit not only reduction of the Land Tax, but also the Reassessment of the Taxable Value of Land, he saw no reason to think of providing any compensatory resources.

Mr. Yamaguchi Chiosaku wanted to know why the Government admitted the expediency of Re-assessing the taxable value of land, but denied the possibility of reducing the Land Tax. Had their hands been forced by the desperate agitators supporting the former measure, whose opposition to all public enterprises could not be softened by any other sop? If so, he and his friends would immediately set about organizing a party of desperate agitators in the interests of a reduction of the Land Tax.

Mr. Tajiri said that it was simply a question of financial inability. They had the Budget before them and could judge for themselves.

Mr. Hasegawa Tai asked whether the Government consented to stand convicted of falsehood. In the sixth year of Meiji (1873) it had been announced by Imperial Rescript that the Land Tax should be gradually reduced. Four years later a reduction had been effected, in accordance with the spirit of the Imperial dictum. Since then, over thirty millions had been added to the revenue by miscellaneous taxes. But the Land Tax remained unchanged. How was the blame to be avoided of having uttered a falsehood and deceived the nation?

Mr. Tajiri said that there was no question of falsehood. The Government was actually taking measures to reduce the burden of the Land Tax. He invited the House to consider facts before forming conclusions.

Mr. Hasegawa retorted that the country was in possession of two promises made in Imperial Rescripts. Moreover, when the Constitution was promulgated, Count Ito, as President of the Privy Council, had distinctly told the Governors of Prefectures that, treading in the footsteps of Okubo, Iwakura, and Kido, he intended to reduce the Land Tax. The guilt of falsehood was inevitable.

Mr. Tajiri repeated his assertion that the acts of the Government were in accord with its promises.

Mr. Kudo Kokan observed that the Government Delegate had very emphatically announced the Administration's dissent from the Bill. Doubtless the dissent of the Administration was a serious matter. But he begged to remind the House that such difficulties were not necessarily permanent. The dissent of to-day might become consent to-morrow. They had an instance before their eyes. Last session, Mr. Watanabe, then Vice-Minister of Finance, had assured them that re-assessment of the Taxable Value of Land was out of the question. This session the same Mr. Watanabe, as Minister of Finance, had himself announced the introduction of a Bill for re-assessment. So, again, of the Codes problem. Ministers of State who, a short time ago, had been emphatically against the postponement of the operation of the Codes, were now in favour of it. All declaration must be regarded as relative. The Government evidently understood that if they rejected the measures of the Popular Party, their own measures would fare ill at the latter's hands. The Land Tax was the most important of all the public burdens. Not alone did its rate indicate the amount paid to the Treasury: it also measured the sums which the people had to disburse for local purposes. No tax had such bearings, and therefore no tax merited such prompt treatment. The transfer of Prison Expenditures to the charges of the Treasury would afford some relief to the people. But that relief being small compared with the consequences of reducing the Land Tax, the former measure had been deferred for the sake of the latter. The Government kept up a brave appearance, building splendid mansions, and so forth, but the backbone of the country, the agricultural popu-

lation, was growing weaker. He could conceive nothing more important as a measure of public relief than to reduce the Land Tax, and he called upon the House to pass the Bill without delay.

Mr. Inouye Kakugoro moved that the Bill be entrusted to a special Committee. Other Bills in the same sense but differing in details had been submitted. The whole should be considered together.

The House rejected the motion.

Mr. Node Shozaburo moved that the Bill be at once carried to a Second Reading, and the motion was carried.

Mr. Ta Keikichi moved that, for the sake of perspicuity, the language of the Bill be altered to read "twenty-two thousandths and twenty-five thousandths," instead of "two and one-fifth," and "two and one-half" respectively.

Mr. Hasegawa Tai moved that the Bill be altered to read "two per cent." instead of "two and one-fifth per cent." He supported this proposal in a long speech, the gist of which was that the Government, years ago, had solemnly promised to reduce the Land Tax; that Count Ito himself had repeated the promise two years ago; and that the 6½ million yen saved in the Budget of 1890-91 had been destined to carry out this very reform. He claimed that if the eighty thousand Administrative officials were boldly cut down, three or four million yen could easily be returned from the public expenditure.

Mr. Kokura Yoshimori spoke at length in support of the Bill, but adduced no new arguments. He declared that whereas in China, Holland, Italy, and Russia the proportion of revenue derived from land-tax was only twenty, ten, five, and six per cent. respectively, in Japan it was forty per cent. The land-tax in Japan amounted to 1 yen per head of the whole population. It was not fair or just that such an unequal distribution of public burdens should continue.

Mr. Hasegawa Tai's amendment was put and lost, as was also Mr. Ta Keikichi's. The Second Reading was then carried, and the Third Reading was voted by a large majority.

The House then proceeded to the First Reading of the Bill for amending the Publication Regulations, which was entrusted, without discussion, to the Special Committee appointed to report upon the two Bills standing first on the Order of the Day.

Mr. Kono Hironaka said that he desired to submit the views of his Party for the consideration of the Cabinet, by way of reply to the Declaration of Policy made by the Acting Minister of State. He did not doubt that the Cabinet would give attention, and he asked whether it would be permissible to solicit the attendance of the Cabinet Minister for the purpose.

No objection was raised to this proposal.

The House rose at 3.20 p.m.

MONDAY, DECEMBER 5TH.

HOUSE OF PEERS.

The Special and Standing Committees alone met.

HOUSE OF REPRESENTATIVES.

The House met at 1.10 p.m., the Order of the Day being:—

- 1.—Government Bill (First Reading) for Special Reassessment of the Taxable Value of Land.
- 2.—Appointment of a Special Committee to report upon the same.
- 3.—Government Bill (First Reading) for amending the Salt Brewing Tax Regulations.
- 4.—Appointment of a Special Committee to report upon the same.
- 5.—Government Bill (First Reading) for amending the Supplementary Salt Brewing Tax Regulations.
- 6.—Appointment of a Special Committee to report upon the same.
- 7.—Government Bill (First Reading) for amending Law No. 14 of the 22nd year of Meiji.
- 8.—Appointment of a Special Committee to report upon the same.
- 9.—Government Bill (First Reading) for amending the Tobacco Tax Regulations.
- 10.—Appointment of a Special Committee to report upon the same.
- 11.—Government Bill (First Reading) for amending the Income Tax Regulations.
- 12.—Appointment of a Special Committee to report upon the same.
- 13.—Government Bill (First Reading) for dealing with the Capital of the Central Finance Relief Fund.
- 14.—Appointment of a Special Committee to report upon the same.
- 15.—Private Bill (First Reading) for amending the District Local Government System.
- 16.—Private Bill (First Reading) for amending the Registration Law.
- 17.—Private Bill (First Reading) for amending Law No. 84 of the 25th year of Meiji.

18.—Private Bill (First Reading) for supplementing the Weights and Measures Law.

19.—Representation relating to Funds for developing Hokkaido.

The President announced the receipt of the following:—

Question relating to the Import of Alcohol; by Mr. Kanai Mitsugi.

Question relating to Official Interference in Elections; by Messrs. Tatekawa Umpei, Ozaki Yukio and others.

Question relating to the Amalgamation of Local Districts; by Mr. Ono Kinsuke and others.

Bill for abolishing the Peace Preservation Regulations; by Mr. Uwazumi Itsuji and others.

Bill for amending the Registration Law; by Mr. Motoda Hajime and others.

Bill for amending the Mining Regulations; by Mr. Nakamura Yaro and others.

Bill for abolishing the Import Duty on Raw Cotton; by Mr. Okada Koroku and others.

Bill for the same purpose as the last; by Mr. Kato Masano-ake and others.

Bill relating to Customs Duties; Mr. Suzuki Shoji and others.

Bill for amending the Law of Medical Diplomas; by Mr. Yamada Taizo.

Mr. Tatekawa Umpei declared that the question of official interference in elections remained still unsolved. The House, by a large majority, had adopted a Representation on the subject last session, but as yet no sufficient notice had been taken of it by the Government. The Acting Minister President, when announcing the policy of the Cabinet, had asserted that the Government aimed at bringing the working of the Administrative machine into practical harmony with the Constitution and at securing the rights of the people. But such announcements, though very attractive in appearance, seemed to have no real results. The whole nation had been excited by the question of official interference and wide-spread mischief had been caused, yet the present Cabinet, despite its professions, had taken no efficient steps to show their condemnation of such practices. A few Governors had been shifted, a few police officials removed, but the transfer of a Governor often meant an increase of rank or salary, and was in no sense an adequate evidence of Government disapproval. As things stood, the country could only conclude that official interference in elections had the endorsement of those in power. He need not dwell upon the mischievous consequence of such a belief. There was no desire to continue attacking the last Cabinet. Count Matsukata, however, had disclaimed all responsibility for what had occurred last February, and before the echo of his words had ceased, Viscount Shinagawa, in a speech delivered in Kinshu, had publicly acknowledged that he had interfered in the elections. Whether he spoke as the ex-Minister of State for Home Affairs, or as Viscount Shinagawa, the individual, it did not greatly matter. His confession proved that official interference had been resorted to, and what they had now to consider was whether the present Cabinet had adopted any reasonably sufficient measures to mark its sense of the impropriety of such proceedings, as well as its appreciation of the opinion placed on solemn record by the two Houses of the Diet.

Mr. Haseba spoke in a similar sense. He claimed that the present Cabinet not only had failed to inflict adequate punishment on the offenders of February last, but was also itself actually engaged in a similar breach of the Constitution. In support of the latter assertion he referred the House to the cases of Kagoshima and Kumamoto, where, as the newspaper reports showed, local officials had interfered in the election of members of the Local Assemblies. Further, in Kagoshima the police had engaged in a campaign to promote the interests of the pro-official party, and had so grossly maltreated a man who declined to obey them, that he had instituted proceedings in the Law Courts, and a constable had been sentenced to imprisonment with hard labour and a fine. At the trial an attempt had been made to establish the constable's innocence by suborning witnesses, but four of these false witnesses had been convicted of forgery and severely punished. The Government must be perfectly well aware of these things, yet they took no steps to correct them. Moreover, when an account of the affair was published in the newspapers, the Police Department had inserted a correction to the effect that the facts were misrepresented. In the same Prefecture a member of the Popular Party having been stabbed by a political opponent on the 17th of last month, had complained to the Police Office, and had been told to come the next day. He had gone home, obtained medical assistance,

and had his wound stitched. The next day a surgeon had come from the Police Station, had cut the stitches to examine the wound, and had gone away without re-placing the stitches, the police, meanwhile, advising the man to say nothing about the injury he had received. This affair was still under examination. At another place, the police had ordered the dispersal of a political meeting. A portion of the audience had thereupon retired to another place, and the police, breaking into the latter, had behaved with such violence that several persons had been wounded. This happened on the 17th of last month, and a telegram just received said that the Preliminary Court had remanded five of the policemen for trial. Instances could also be adduced of teachers in schools who had been dismissed, their only offence being that they did not support the pro-official candidates. It was not too much to say that the Central Government's authority could not be vindicated in Kagoshima Prefecture. He could not reconcile such a state of affairs with the declaration of the Minister President that the Cabinet aimed at bringing the working of the Administration into practical harmony with the Constitution.

Mr. Ishizaka Shoko suggested that it would be better to defer speeches like the above until the Cabinet Ministers were present. They had been asked to attend to-day in order to hear Mr. Kono Hironaka's reply to the Government's Declaration of Policy, but not one was in his place.

Mr. Haseba said that he had greatly abbreviated his remarks in consequence of the absence of the Cabinet Ministers. But since the question had been submitted, he, as one of its supporters, felt bound to say a few words. He hoped to have an opportunity of going into the subject more fully when the Ministers of State were in their places. He then continued his denunciation of the Government and concluded by declaring that the House owed it to itself not to let the matter rest in its present unsatisfactory state.

Mr. Shimada Saburo moved that the President be asked to inquire when the Cabinet Ministers could attend in their places. They had been invited by Mr. Kono Hironaka, on the 3rd instant, to appear to-day, but they were not present. Many of the Bills now before the House had a close bearing upon the policy of the Cabinet, and it would greatly facilitate the House's deliberations if Ministers were in their places to answer questions.

The House approved this motion and then proceeded to the Order of the Day. The Bill for reassessing the Taxable Value of Land was read as follows:—

PROJECT OF LAW FOR THE SPECIAL RE-ASSESSMENT OF THE TAXABLE VALUE OF LAND UNDER CULTIVATION.

Art. I.—In cases where the present valuation of land devoted to cultivation is considered unduly high, it shall be specially amended and reduced, the superior and inferior limits of the total reduction to be 150,000,000 and 140,000,000 yen.

Art. II.—The standards observed in amending the above unduly high valuation shall be as follow:—

- (a) The assumed yield shall be reduced in proportion to the grade of the land and to the average yield in each district.
- (b) The assumed price of rice per *koku* shall be lowered in the same ratio in the different localities, on the basis of the average market price during the five years from the 20th to the 24th year of Meiji, inclusive.
- (c) The assumed rate of interest shall be six per cent.

Art. III.—The general amount to be reduced from the existing valuation of land in each City, Town and District shall be determined by the Minister of State for Finance, in accordance with the system of territorial division adopted at the time of the Land Tax Revision. The amount to be reduced from the existing valuation of particular farms, in each City, Town or District, shall be fixed by decision of the Council of Landowners. Provided that, the organization and competence of such Council of Landowners shall be determined by Imperial Ordinance.

Art. IV.—The expenses incurred for purposes of reassessment in each City, Town, or District, shall

Original from

be defrayed by the owners of the lands the taxable value of which has been reduced.

Art. V.—Lands whose valuation has been amended in accordance with this Law, shall be taxed on the basis of the amended valuation from the 27th year of *Meiji*. Provided that, in the case of Cities, Towns, and Districts, where the work of reassessment has not been completed by the aforementioned year, the land tax shall continue to be levied on the basis of the present valuation until the work of reassessment is completed.

Art. VI.—With regard to the enforcement of this Law, Law No. 105 of the 23rd year of *Meiji*, namely, the Law of Complaint, shall not be applicable.

Mr. Tajiri, Government Delegate, said that the Bill needed no explanation, and he trusted the House would pass it at once.

A number of questions were asked and answered, and the Bill was entrusted to a Special Committee of 9, elected by the sections.

The Bill for amending the *Saké* Brewing Tax Regulations was read as follows:—

BILL FOR AMENDING THE "SAKÉ" BREWING TAX REGULATIONS ISSUED BY ORDINANCE NO. 40 OF THE 13TH YEAR OF "MEIJI."

The following amendment shall be made in the *Saké* Brewing Tax Regulations issued by Ordinance No. 40 of the 13th year of *Meiji*, and shall be enforced in respect of such Breweries as shall have been officially inspected, on and after the 1st day of the 11th month of the 26th year of *Meiji* (Nov. 1st 1893).

Art. III.—Brewers who apply for licenses shall pay License and Brewing Taxes as follow:—

License Tax for Brewing, yen 30 per Brewery. Brewing Tax as follows:—

1st kind per one *koku* Yen 5
2nd kind per one *koku* Yen 6
3rd kind per one *koku* Yen 7

Mr. Tajiri, Government Delegate, explained that the object of this Bill was to make up the deficiency of State Revenue which would result from reassessing the taxable value of land. The two Bills were closely connected.

Mr. Horibe Hikojiro said that the increase of revenue estimated by the Bill was 1,600,000 yen, the increase of tax being 1 yen per *koku*. But according to the last statistics, the total quantity of *saké* brewed annually was 3,840,000 *koku*. Hence, an increased tax of 1 yen per *koku* should bring in a revenue of over 3½ million yen.

Mr. Tajiri said that an increase of tax would probably involve a decrease of consumption. Hence the Government's estimate. In answer to other questions he said that the Government did not consider the proposed tax prohibitive, and did not anticipate that it would cause any increase of imports. The consumers of imported alcoholic beverages and those of Japanese *Saké* were, for the most part, different altogether. There might be some effect produced at the open ports, but it seemed most improbable that imported drinks would find any extended sale in the interior on account of the proposed additional tax.

The Bill was entrusted to a Special Committee of 9 elected by the Sections.

The next two Bills were read as follow:—

BILL FOR AMENDING THE SUPPLEMENTARY "SAKÉ" BREWING TAX REGULATIONS.

The following amendment shall be made in the *Saké* Brewing Tax Regulations, issued by Ordinance No. 40 of the 13th year of *Meiji*, and shall come into force on and after the 1st Day of the 11th month of the 26th year of *Meiji* (Nov. 1, 1893).

Art. I.—Persons who brew *saké* for household use (for private drinking, mixing with sauce and other purposes) shall apply for a license to the local authorities, and shall pay taxes according to the following distinctions:—

First kind yen 3.00
Second kind yen 1.50
Third kind yen 0.50

A license for brewing the Third kind shall not be granted to the following persons:—

(1). Government officials, and those who are privileged to be treated as such. (2). Persons who pay income tax. (3). Persons who pay land tax amounting to yen 5 and upwards. (4). Members of the families of the three preceding classes of persons, and those who live with them.

Art. V.—The total quantity of *saké* brewed for household uses shall not exceed the following limit in any one family and within any one period of time:—

First kind Two *koku*.
Second kind One *koku*.
Third kind Five *to*.

BILL FOR AMENDING LAW NO. 24 OF THE 22ND YEAR OF "MEIJI."

The rate of tax set forth in Law No. 24 of the 22nd year of *Meiji* shall be amended as follows, and the amendment shall come into force on and after the 1st Day of the 11th Month of the 26th year of *Meiji*.

The License Tax for Brewing shall be Yen 20 per one Brewery.

The Brewing Tax shall be as follows:—

1st kind per one *koku* Yen 4
2nd kind per one *koku* Yen 5
3rd kind per one *koku* Yen 6

After a few questions, the Government Delegate explaining that the estimated increases of income were 220,000 yen and 58,000 yen respectively, the Bills were handed to Special Committees.

The Bill for amending the Tobacco Tax was read as follows:—

BILL FOR AMENDING THE TOBACCO TAX REGULATIONS.

The following amendments shall be made in the Tobacco Tax Regulations, issued by Imperial Ordinance No. 20 of the 21st year of *Meiji*, and shall go into force on and after the 1st day of the 4th month of the 27th year of *Meiji* (April 1st 1894).

Art. VIII.—Manufacturers of Tobacco shall affix on their manufactures a Tobacco Stamp of the value of 3/10 (three-tenths) of the price of sale of the goods.

Art. XXX.—Manufacturers of Tobacco who, after the enforcement of the above amended Art. VIII., have their goods stamped according to the old rate, shall make proper additions of stamps within three months after the enforcement of these amendments. This shall also apply to goods in the hands of middlemen and retailers.

The Bill was handed to a Special Committee without question or discussion.

The Bill for amending the Income Tax Regulations was read as follows:—

BILL FOR AMENDING THE INCOME TAX REGULATIONS.

The following amendments shall be made in the Income Tax Regulations, issued by Imperial Ordinance No. 21 of the 21st year of *Meiji*, and shall be enforced from the 27th year of *Meiji* (1894) and subsequently.

Art. I.—Persons in receipt of an income the annual amount of which is yen 150 (one hundred and fifty yen) and upwards, shall pay Income Tax as herein set forth.

The amount of income of any member of a family shall be joined with that of the head of that family for the purpose of calculating the family income.

Art. IV.—The grades and rate of Income Tax shall be as follow:—

Grade.	Amount of Income.	Rate of Tax.
First	Yen 30,000 and upwards	3 per cent.
Second	25,000 and upwards	2.8 per cent.
Third	20,000 and upwards	2.4 per cent.
Fourth	15,000 and upwards	2.2 per cent.
Fifth	10,000 and upwards	2.0 per cent.
Sixth	6,000 and upwards	1.8 per cent.
Seventh	3,000 and upwards	1.6 per cent.
Eighth	1,000 and upwards	1.4 per cent.
Ninth	700 and upwards	1.2 per cent.
Tenth	500 and upwards	1.0 per cent.
Eleventh	300 and upwards	0.8 per cent.
Twelfth	200 and upwards	0.6 per cent.
Thirteenth	150 and upwards	0.5 per cent.

Provided that, in places where the Regulations relating to City and Prefectural Governments are in force, the electors of and persons eligible to serve on, Committee of Inspection of Income Tax, shall be men who have been registered as citizens according to City, Town, and Village Regulations, are residents of the City, Town, and Village, and are actually paying income tax. Government officials, City, Town, and Village officials shall not be eligible.

The Government Delegate said that an increase of income to the extent of 250,000 yen was anticipated.

The Bill was entrusted to a Special Committee, and a motion by Mr. Kudo Kokan, limiting the time for the various Committee's Reports on the above Bills, was rejected.

The Bill relating to the Central Famine Relief Fund was then read as follows:—

It shall be lawful for the Government to augment the capital of the Central Famine Relief Fund by transferring to it money from the ordinary revenue of the State. Provided that amounts so transferred shall be determined in the Budget.

The Government Delegate explained that this measure was necessitated by the heavy drains

made on the Fund during recent years in consequence of exceptional calamities. Thus the *Kwan-to* inundations in 1890 and the *At-Gi* earthquake in 1891, had reduced the Fund by 2,280,000 yen, and only 2,100,000 yen now remained. Unless some steps were taken promptly to restore the Fund to reasonable dimensions a national calamity might find the State unprepared to deal with it.

The Bill was entrusted to a Special Committee.

On taking the Bill for the amendment of the District Local Government System, Mr. Watanabe, Vice-Minister for Home Affairs, explained that the Government could not agree to the proposed changes. The present method of electing members of District Assemblies, namely, by re-election by and from the members of the Divisional Assemblies, had been adopted for the sake of saving the peoples' time and expense. To hold a fresh general election for members of District Assemblies would entail needless outlay of time and money. Again, the Bill proposed to make the office of District Headman elective, instead of having its holder nominated by the Central Government. Under existing circumstances such an alteration seemed unwise. In point of fact, the system of District Local Government which the Bill sought to amend had been promulgated only two years ago, and had not come into force in more than 10 out of the 46 prefectures. To change it already could not be regarded as anything but a hasty step.

Mr. Kudo Kokan combated these objections at some length. He contended that the fact of the District System having gone into operation in only ten Prefectures, was a proof of its imperfections, and that it should not be forced upon people evidently unwilling to accept it. Further, if the principle of election favoured by the Government were extended to all Assemblies, the members of the House of Representatives ought to be chosen by and from the members of the Local Assemblies, which would obviously be wrong. Mr. Tateiri Kiichi supported the Bill.

Mr. Asakura Chikatame recommended that the advocates of making the office of District Headman elective should consider how things fared in provincial elections now-a-days. He thought that the disturbances which marked these events did not encourage any extension of the system.

The Bill was entrusted to a Special Committee of 9 nominated by the President.

The House took a recess at 3.40 p.m. for the purpose of electing the Special Committees enumerated above. On re-assembling at 5.15 p.m. the names of the various Committee-men were read out, and the House rose at 5.25 p.m.

TUESDAY, DECEMBER 6TH.

HOUSE OF PEERS.

The House did not meet, the Standing and Special Committees alone coming together.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m. the Order of the Day being:—

- 1.—Private Bill (First Reading) for amending the Law of Registration.
- 2.—Private Bill (First Reading) for amending Law 84 of the 23rd year of *Meiji*.
- 3.—Representation relating to Funds for the Development of Hokkaido.
- 4.—Private Bill (First Reading) relating to Copyright.
- 5.—Private Bill (First Reading) for transferring Prison Expenditures to the charge of the Treasury.

The President announced the receipt of the following:—

- A Reply from the Minister of State for Agriculture and Commerce to a Question submitted by Mr. Kashiwada and others on the subject of materials for a Steel Foundry.
- A Question from Mr. Shimizu Banjirō on the subject of an instruction issued by the Minister of State for Education with regard to text books for Primary Schools.
- A Question from Mr. Inouye Kakugoro and others with reference to the Government's policy towards Korea.
- A Representation from Mr. Nishiyama Shichu and others, with reference to the extension of navigation.
- A Representation from Mr. Tange Naohi and others, with reference to opening a harbour at Mutsugasaki.
- A Bill for amending the Standing Orders of the House of Representatives, from Mr. Kawaguchi Susumu and others.
- A Bill for taxing the salaries of officials, from Mr. Ooka Ikuzō and others.

Mr. Inouye Kakugoro desired to explain the questions submitted by him to the Government with reference to Korea. In the first session of the Diet he had addressed a question to the Government on this subject, and had received from Viscount Aoki, then Minister of State for

Foreign Affairs, an assurance that though the policy pursued towards China and Korea might have wavered in the past, it should be firm and resolute in the future. How had that promise been kept? He invited the House to consider the country's relations with Korea, especially from the three points of view to which his questions were addressed; namely, telegraphs, Quelpart, and the prohibition of the export of cereals. He had resided for several years in Korea and he had some knowledge of that kingdom's affairs. He could assure them that the prohibition of the export of cereals had injured not the merchants directly concerned alone, but the whole people of Japan. With regard to telegrams, an agreement had been made between Japan and Korea nine years ago, according to the terms of which a line of telegraph was to be constructed from Fusan to Japan, on condition that Korea, during a space of 20 years, made no contract with any other country for the laying of a cable, and that under no circumstances should a cable be laid which would interfere with the profitability of the Fusan-Japan line. Two years later, however, Korea had concluded with China a convention for the laying of a line between Fusan and Peking, and had placed all her telegraphs under Chinese control, thus deliberately trampling on her covenant with Japan. It appeared that this empire had remonstrated, but its remonstrances had been treated with indifference. Nay more, the use of the telegraph from Korea to Peking had been interdicted to Japanese residing in Seoul. Japan had protested against this interdict, and had demanded of Korea that a line of telegraph be laid between Seoul and Fusan, which line had been completed in 1887. With these circumstances before it, the House could be in no doubt that Korea had broken her treaty engagements with Japan. As illustrating the present state of affairs, he referred to the outrage at the residence of the Tai-won-Kun last June. Intelligence of the event had been sent across the wires by the Japanese Representative in Seoul on the 18th of June, but had not reached Japan until the 23rd of that month. Telegraphic inquiries subsequently addressed to Korea by the Japanese Government had been delayed for days, the whole record showing that Chinese officials controlled the service at their own convenience. Was it possible to say that the prestige of the empire was maintained in the face of such events? The House knew that a convention had been concluded by Count Ito in Tientsin seven years ago. He believed that up to the present time the Convention had not been ratified. It was not his intention, however, to rake up events of the distant past, but he must remind them that the Convention contained clauses binding the High Contracting Parties to remove their troops from the peninsula, and providing that neither should send troops there in the future without previous notice to the other. Consider this last provision by the light of last June's experience. Had the Tai-won-Kun affair assumed large dimensions, could there be any doubt that Chinese troops would have garrisoned Seoul in force before Japan had even received telegraphic intelligence of what was really happening in the peninsula? He could not be content with Viscount Aoki's assurances, but must call on the present Government to give them practical effect. Again, in 1889, the Korean Authorities had suddenly issued a proclamation forbidding the export of rice, on the pretext of an impending famine. Japanese merchants had already purchased and paid for rice to the value of 170,000 yen when this proclamation was issued in direct contravention of Treaty. A claim for indemnity preferred by Japan had received such scant attention that not until 1892, the present year, had any prospect of a settlement become visible. There was then talk of 140,000 yen to be paid by Korea, but, at the latter's request, it had been reduced to 120,000 yen, and now, long after the whole thing should have been settled, Korea was understood to allege that she could not give more than 60,000 yen. He desired to know whether any excuse could be offered for

allowing the country's just demands to be so deliberately flouted. Finally, although a Convention had been concluded with Korea in 1883 giving to Japanese subjects the privilege of fishing on the Korean coasts, the exercise of this privilege had been unlawfully prevented by the Korean local authorities during the present year. He asked to be informed what steps the Government had taken to redress this wrong.

Mr. Shimizu Bunjiro, who had presented a Question relating to the Department of Education, entered into an explanation of his queries, the gist of his speech being that officials of the Educational Department were in collusion with a bookselling firm, the *Tosho Kaisha*, and that by playing into the hands of the firm, they had enabled it to reap exorbitant profits. With a capital of only 50,000 yen, the firm's last balance-sheet had showed a profit of 17,000 yen, figures with which no other mercantile record in the country could compare.

The House then proceeded to the Order of the Day.

Mr. Node Shozaburo, in presenting his Bill for the amendment of the Law of Registration, said that the Bill had been before the House last session, and had reached its second reading. Consequently, no explanations ought now to be necessary. But as the Government opposed the desired amendments so strenuously, he wished to remind them that practical experience was in favour of the chief change recommended; namely, the transfer of registration functions from Courts of Law to Divisional Headmen. The Government asserted that this would be a retrogressive step, and that better security was attained by the present system, but, in point of fact, there were more complaints now than there had been when the business was in the hands of Divisional Headmen. He failed to see why Divisional Headmen, superintended by District Courts of Law, should not be a perfectly trustworthy medium for the transaction of such business. The question of expense, too, had a vital bearing on the proposed amendments. At present the annual cost of registration operations throughout the empire was 570,000 yen, and if the changes embodied in the Bill were made, a great economy would be effected. He then briefly explained the points of difference between the present Bill and the Bill presented in the previous session.

Mr. Kinoura Keizo, Vice-Minister of State for Justice, strongly opposed the Bill. The transfer of registration functions from Divisional Headmen to Courts of Law had been made in order to correct flagrant abuses, and that the transfer had been to a great degree successful in attaining that object was clearly demonstrated by statistics. The proposer of the Bill himself admitted the necessity of legal supervision in such matters, since he had inserted a clause providing for supervision by District Courts. But in truth, the provision had only a nominal value, for no possibility existed of such supervision being efficiently exercised. The Law Courts offered the only really suitable and trustworthy machinery for the management of affairs already so important, and daily acquiring fresh importance as trade developed and as its transactions were placed on a more rigid footing. When the new Commercial Code went into force, registration by men of business would become more vital than ever, and it would be an unhappily retrogressive step were such affairs restored to the management of persons like Divisional Headmen, who, in the majority of cases, were wholly without legal training or other qualifications essential to the proper discharge of registration functions. The new system had not been long enough in force to warrant any conclusive deduction as to its satisfactoriness, but thus far it had unquestionably given better results than the old. As to expense, the truth was that the proposed changes would increase instead of diminishing the cost of registration, and assuredly there would be no improvement in respect of facilities. The Government recognised that additional facilities were needed, and if they looked at the Budget they would find that provision had been made for increasing by over 200 the number of places where

registration could be effected. So far from thinking that the bonds of strict official management and judicial supervision might be relaxed in the matter, the Government had recently ordered that Local Courts should assist to secure greater accuracy and fidelity. What the Bill invited them to do was, not to make a reform, but to deliberately return to a state of affairs discredited by actual experience.

Mr. Seki Shinnosuke put some questions the gist of which was that although Divisional Headmen might be less trustworthy than Court officials in some respects, they had the advantage of being able to personally identify most of the persons applying for registration.

Mr. Iso Arashi opposed the Bill for reasons similar to those advanced by the Vice-Minister of Justice. Divisional Headmen were not salaried officials, and served for only a fixed number of years. They were doubtless a better class of persons now-a-days than they had formerly been, but it nevertheless seemed wholly unreasonable to entrust to such persons the onerous and important functions of registration. It should not be forgotten that accuracy and order in the processes of registration had a most vital bearing on the security of property, and therefore ultimately on the rights of the subject. He failed to see how any confidence could be felt unless the duties of registration were entrusted to responsible and competent officials. He also insisted that the proposed changes would involve heavy expenditure—as much as eight hundred thousand yen—and he condemned them as not only unnecessary but also mischievous. Nevertheless, the Bill had over a hundred supporters, and would therefore be doubtless entrusted to a Committee. He trusted, in that event, that the Committee would pay special attention to the question of securing celerity in the operations of registration.

The Bill was entrusted to a Special Committee of 9 nominated by the President.

The Bill for amending Law No. 84 of the 23rd year of *Meiji* was then read as follows:—

AMENDMENT OF LAW NO. 84 OF THE 23RD YEAR OF "MEIJI"

The Government may impose a fine of not more than 50 yen or punish by minor confinement any person violating an Administrative Regulation.

Presented by NODE SHOZABURO, KAGAMI KABET, and FUKUDA HISAMATSU.
Supported by YAMADA TOJI.

(Original.—Any person violating an Administrative Regulation may be punished by the Government with a fine of not more than 200 yen or imprisonment for not more than a year.)

Mr. Node Shozaburo explained that the object of introducing the Bill was to give proper effect to the 23rd Article of the constitution. The Law in question—No. 84 of 1890—had been promulgated by Imperial Ordinance within three months of the meeting of the first Diet. It gave the Administration great punitive power to enforce the prohibitions of regulations. Without such power, it would have been impossible to carry into effect such laws as the Premonition Regulations. The 23rd Article of the Constitution provided that no Japanese subject should be arrested, detained, tried, or punished unless according to law. It was obviously opposed to the spirit of this Article that there should be vested in the Administration competence to inflict severe punishments of fines and imprisonment without recourse to the regular processes of law. The most radical method of preventing the issue of such Ordinances as the Game Regulations and the Premonition Regulations, without reference to the Diet, was to deprive the Administration of power to enforce the prohibitions of the Ordinances. He trusted that, as the Bill was short and simple, it would be passed without the intervention of a Special Committee.

Mr. Sayematsu Kencho, Government Delegate, said that the phraseology of the Bill was notably defective. It made minor confinement a punishment alternative to a fine of 50 yen, but it fixed no limit for the period of such confinement. The framers had probably intended to limit the punitive power of the Administration to penalties for misdemeanours, but they

had to remember that terms of minor confinement for misdemeanours varied with each class of misdemeanour, and that the periods were practically unlimited. It did not appear that the Bill had been framed in accordance with the real intention of its advocates. Further, they must remember how varied, and often how grave, were the offences that might be committed in contravention of Administrative regulations. For example, men might have to be punished for mixing poisons with drugs, for selling such a dangerous article as adulterated kerosene, for holding lotteries, and so forth. Evidently it would be futile to think of dealing with this wide range of offences by fines only, or yet by imprisonment only. In some cases a fine, especially when limited to 50 *yen*, would be wholly ineffectual; in others minor confinement alone would not be deterrent; and in others recourse must be had to both. It was impossible to reconcile the provisions of the Bill with the condition of the people and the circumstances of the time, and he trusted that the House would reject it.

Mr. Yamada Taizo asked whether the Administration Regulations were good for anything except to facilitate official interference in elections.

Mr. Suyematsu Kencho declined to answer such an irrelevant and vague question.

Mr. Hashimoto Kiutaro strongly supported the Bill, but his speech was limited to a violent attack on the Premonition Regulations, which he said, could never have been enforced without the aid of Law 84. He protested against entrusting such power to an Administration capable of abusing it grossly at any moment.

Mr. Miyagi Kozo spoke at considerable length in opposition to the Bill. He agreed that Law 84 was contrary to the spirit of the Constitution, but he contended that the law which they were asked to substitute for it would be equally unconstitutional. The only rational course was to repeal the Law altogether. He entered into a long legal argument to prove that no inconvenience would be caused to the Administration by such a step, and reminded the House that if they enacted an amended form of the Law, it would be very difficult to repeal it afterwards.

The Bill was entrusted to a Committee of 9 chosen by the Sections.

The Representation relating to Hokkaido was then read as follows:—

REPRESENTATION RELATING TO FUNDS FOR THE DEVELOPMENT OF HOKKAIDO.

The development of Hokkaido is one of the most urgent affairs of the country. It ought not to be neglected even for a day. After the Government had appointed a Colonial Governor in 1869, Hokkaido was divided into three Prefectures, and subsequently the Hokkaido Administrative Board was established. Thus, though the Authorities essayed various projects, the lapse of 24 years, and the expenditure of 50 million *yen*, have for their only results a cultivated area of 45,000 *cho* (112,500 acres) and a population of 400,000. How trifling is this outcome in comparison with its cost! The area of Hokkaido is 6,900 square *ri*, and its richness in forests and pasture lands renders it one of the wealthiest regions of the Empire. If enterprises of development be properly managed, it can support a population of 1,000,000 and a revenue of 100,000,000 *yen* can without difficulty be obtained from it. But if the Government follow the policy hitherto pursued, how many hundred of years must elapse before such results are attained? The fact inspires profound regret. We therefore hope that the Government will abandon the old system of favouritism (*fojitsu*), wash away the accumulated abuses, adopt a permanent policy and pursue it without delay. To attain this object it is necessary to examine the natural features of the island, and investigate matters connected with roads, railways, and telegraphs; the construction of harbours and lighthouses; the condition of the various mines, and the state of the fisheries, all of which have an intimate relation to the emigration scheme. It is also necessary to place the organization of administrative superintendence on a firm basis. When all this is achieved, the work of development can be begun. To accomplish the above undertakings there is need of funds for salaries, travelling expenses, and other miscellaneous outlays. The Government ought to prepare an estimate, under the name of

"Funds for the Development of Hokkaido," and present it to the Imperial Diet as a Supplementary Budget for the 28th year of *Meiji* (1893), so as to obtain the latter's concurrence.

We respectfully present this Representation.

Presented by MAKI BOKUSHIN, and others.

Mr. Maki Bokushin spoke at length in support of the Representation, but added no arguments to those adduced in the text. His main points were that the policy of the Government had been vacillating and ineffective; that great sums of money had been spent with insignificant results; that the island, being equal in area to Kiushu and Shikoku combined, and being possessed of great resources, might be made a home for many millions of people and a source of large revenue; that its capacities had as yet been only partially investigated, and that, unless some more vigorous procedure than that pursued by the Government were adopted, hundreds of years must elapse before any really good results were secured. He proposed to make the Committee of Investigation entirely independent.

Several questions were asked, pointing to the probable expense of the undertaking and the difficulty of organizing an independent committee, but Mr. Maki had no definite information of any kind to give.

Mr. Fukuda Hisamatsu opposed the Bill in a speech of considerable length, not because he objected to the principle that had dictated it, but because he thought that until the numerous abuses now existing in the administration of the Island were corrected, it was useless to talk of developing its resources. He dwelt much on the alleged fact that the Regulations for the sale of land were not obeyed, and that people desiring to obtain land were very often unable to do so. There was an area of 240,000 *cho* to be disposed of, but only 40,000 *cho* had as yet been allotted. He thought the Bill altogether premature.

Mr. Horibe Hikojiro opposed the Bill, not because he considered it premature. He, too, held that the unsatisfactory state of Hokkaido was due to the defective policy pursued by the Government, but he did not think that things could be mended by any process of mere investigation into the resources of the island. People spoke commonly of Hokkaido as "the thieves' corner." That was probably an exaggerated formula. But it did seem pretty certain that the root of the trouble was clan Government. A certain clan was said to have marked the place for appropriation to itself. What they had to do before everything was to get rid of such abuses.

Mr. Ooka Ikazo supported the Bill in a speech of considerable length.

The Representation was rejected by the House.

The House rose at 6 p.m.

WEDNESDAY, DECEMBER 7TH.

HOUSE OF PEERS.

The House met at 10.30 a.m., the Order of the Day being:—

- 1.—Applications for leave of absence.
- 2.—First Reading of a Bill sent up from the Lower House for amending the Land Tax Regulations.
- 3.—Appointment of a Special Committee to report upon the same.

The President announced the receipt of a Question relating to the establishment of a Steel Foundry, from Prince Niijo and others. The following documents were read to the House:—

QUESTION RELATING TO THE GAME REGULATIONS.

The Government promulgated Game Regulations by Imperial Ordinance No. 84 in October last, and abolished the Shooting Regulations issued by Notification No. 11 in January the 10th year of *Meiji*. But from the points of view of taxation and the rights of the people, the Shooting Regulations could not be changed except by Law. For what reason did the Government change them by an Imperial Ordinance.

In accordance with Art. 48 of the Law of the Houses we venture to ask the question.

Presented by SHINJO NAONOBU, Viscount.

Supported by MIURA YASU, NIJO MOTOHIRO, Prince and 41 others.

THE GOVERNMENT'S REPLY.

The Game Regulations were enacted for the purpose of preserving the public peace, and promoting the welfare of the people. Not only do they contain no provision which violates the rights of individuals as granted by the Constitution, but also they provide punishments for any one trespassing on rice-fields or cropped lands. Thus they protect the rights of land owners. Further, fees levied for shooting licences are simply administrative fees, and not taxes as contemplated by the Constitution. The fact that they were formerly included among taxes was because no necessity then existed to clearly distinguish fees from taxes. In short, as there is no provision in the Constitution which requires that Game Regulations shall be promulgated as law, they were changed by an Imperial Ordinance.

(Signed) GOTO SHOJIRO, Count,
Minister of State for Agriculture and Commerce.

(Dated) the 8th day of the 12th month of the 24th year of *Meiji*.

On proceeding to the Order of the Day, Mr. Watanabe, Minister of State for Finance, explained that the Bill for amending the Land Tax could not be approved by the Government, as the economical conditions of the time did not permit such a reduction of revenue.

Mr. Ohara Shigeyasu moved that as the question was of great importance, the Bill be entrusted to a Special Committee of 15 chosen by the Sections.

The House rejected the motion by 83 to 35, and agreed to entrust the Bill to a Committee of 9 nominated by the President.

The House rose at 12.37 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m., the Order of the Day being:—

- 1.—Report of the Special Committee on the Government Bill for Special re-assessment of the taxable value of land.
- 2.—Private Bill (First Reading) of a Copyright Bill.
- 3.—Private Bill (First Reading) for transferring Prison Expenditures to the charge of the Treasury.
- 4.—Private Bill (First Reading) for amending the Bailiffs Regulations.
- 5.—Private Bill (First Reading) for supplementing the City Government Regulations.

The Chief Secretary read the following communication from the Government with reference to the attendance of Cabinet Ministers in the House:—

The Ministers of State have power to attend at any time in either House of the Diet. Hence, in order to be present there, it is not necessary for them to put the members to the trouble of making any special request in that sense.

The following documents also were read to the House:—

QUESTION RELATING TO THE GAME REGULATIONS.

The fees for shooting licenses were formerly regarded as a tax both by the Government and the Diet. But the Government has changed them to administrative fees by its own decision. For what reason has this step been taken?

Presented by SHIMIZU BUNJIRO.

Supported by WATANABE YOSHIZO and 29 others.

THE GOVERNMENT'S ANSWER.

Fees for shooting licenses have the nature of compensation for administrative transactions undertaken for the benefit of individuals, and do not belong to the taxes mentioned in the Constitution. Before the promulgation of the Constitution no necessity existed to make any accurate distinction between taxes and fees. Therefore at that time there were included among taxes many items which, by their nature, were not taxes at all. The term "tax" in the Constitution signifies a tax in nature. Notification No. 11 of the 11th year of *Meiji*, and Ordinance No. 33 of the 22nd year, were issued before the operation of the Constitution. Thus, though some of the items of revenue derived from their operation were included among domestic taxes or national taxes, that circumstance does not affect the principle that taxes and fees must be determined according to their actual nature. The taxes and fees enumerated in former Budgets cannot be regarded as a standard. The fees paid for shooting licenses were included among taxes, but were not in truth taxes at all. Therefore, in accordance with the 2nd clause of the 62nd Article of the Constitution, a change in such fees could be made without recourse to the processes of law.

(Signed) GOTO SHOJIRO, Count,
Minister of State for Agriculture and Commerce.

(Dated) 6th December, 1892.

The President announced the receipt of the following:—

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

A Government Bill relating to the Tax upon the sale of Saké.
 A Supplementary Budget for the 25th year of Meiji.
 A Project of Game Laws; from Mr. Oshima Shin.
 A Representation relating to the reform of the Navy; from Mr. Sugita Teichi and others.
 A Representation relating to the Game Law; from Mr. Takata Sanaye and others.

Count Inouye, Minister of State for Home Affairs, spoke as follows:—

GENTLEMEN,—The Government has presented to the Imperial Diet, in the form of a Supplementary Budget for the 25th year of Meiji, certain expenditures on account of works in Hyogo, Okayama, Tokushima, Yamanashi, and Kochi Prefectures, which suffered from inundations. I therefore propose to offer some explanations. In July last these five Prefectures were the scene of an extraordinary calamity in the form of storm and inundation. Numerous banks of rivers, roads, and fields were entirely destroyed, and the people of the Prefectures were without resources to effect repairs. The Prefectural Assemblies passed resolutions, and petitioned the Government to undertake the necessary works by means of funds paid out of the Treasury. I therefore at once despatched to those Prefectures five engineers, belonging to the Bureau for Superintending Public Works, and commissioned them to investigate the amount of the damages. The report sent in by them showed a most serious state of affairs. The worst districts were Hyogo, Okayama, and Tokushima. The area of devastation extended over two towns (*shi*), and 791 divisions (*son*); the number of deaths was 990; the number of houses washed away, over 10,000; while more than 20,000 *cho* (50,000 acres) of cultivated lands were entirely laid waste. Rice had to be provided for over 130,000 persons, and the number of houses requiring relief out of the Famine Relief Fund, approximated 40,000. With regard to public works, the utmost economy has been exercised. Only the most urgent works are to be undertaken. For all these purposes a sum of over 5,000,000 *yen* is required in the five Prefectures; out of which total, 4,600,000 *yen* will be spent in Hyogo, Okayama, and Tokushima Prefectures. It is our intention to make the people of the devastated districts disburse as large a part of the five millions as their resources will permit, the remainder alone becoming a charge on the Treasury. According to this arrangement the total sum falling to the share of the Treasury is over 3,800,000 *yen*, the distribution of which is minutely recorded in the Supplementary Budget itself. Believing that the above expenditure cannot possibly be defrayed from the local taxes, we have included it in a Supplementary Budget, which is now submitted for your consideration. The Government hopes to obtain your consent as soon as possible, so that the necessary works may be commenced without any delay, and a measure of peace and comfort may be restored to the sufferers. If you require any detailed explanations the Government Delegate will furnish them.

Mr. Kono Hironaka asked permission to have the Order of the Day changed. The President had been instructed to request the attendance of the Ministers of State, with the result indicated by the document which they had heard the Chief Secretary read. Fortunately, however, some of the Ministers were now present, and he wished to avail himself of the opportunity to make a statement.

A discussion ensued, some members contending that Mr. Kono's speech might be heard without any change of the Order of the Day. But the President ruled that no speech unconnected with the subject immediately before the House could be delivered unless the regular preliminary forms had been complied with.

The House voted in favour of changing the Order.

Mr. Inouye Kakugoro asked to be informed by what title they were to call the business now before the House. Was it to stand on the records of the Diet that one item of the Order of the Day was "A Lecture by Mr. Kono Hironaka"?

Mr. Shimada Saburo supported the motion, and Mr. Arai Shogo declared his desire also to make a statement.

Mr. Inouye Kakugoro opposed the motion. The first item on the Order of the Day was a Government Bill, and he did not see why they should establish the precedent of deferring debate of such a Bill for the sake of one member's convenience. Even were the promised statement confined to Mr. Kono's, the course proposed would be objectionable, but already other members had signified their desire to

speak, and it was impossible to foresee to what lengths this interruption might lead them. Supposing the Order of the Day changed as desired, what form would the substituted item take? Would it be Mr. Kono Hironaka's Lecture?

Mr. Takata Sanaye said that the Order had not been changed on Mr. Kono's account only. Any one who had remarks to make might make them.

The President denied this. The Order had been altered on Mr. Kono's account and on his account only.

This led to fresh discussion. The President said that he could not tell what the members had in their minds when they voted, but the motion put by him referred to Mr. Kono Hironaka alone. Considerable altercation ensued. Some members claimed that the President was mistaken, and, when referred to the Stenographic Records asserted that it also erred. Others urged the President to yield, but he replied that he should never yield on a point that concerned the good order of the proceedings. Mr. Abe Bankon wanted to know whether the representative of one party alone was to be permitted to speak. The President replied that, sitting there as President, he knew no distinctions of parties, but simply took cognizance of the motions as presented. Mr. Misaki Kamenosuke recommended the House to give up its altercation and go on with its speeches, otherwise "the jewel that it sought to grasp would escape." While the altercation was in progress, the President, having applied for the Government's permission to change the Order of the Day, announced that permission had been refused. Some of the members asked why it had been refused, but the President said that he had not enquired the reason, and was not empowered to do so unless the House ordered him.

Mr. Abe Bankon moved that the Government be asked to give its reasons.

The President urged the fruitlessness of such a course. In order to debate Mr. Abe's motion or vote upon it, they must again ask permission to change the Order of the Day. It seemed more manly and more businesslike to proceed at once with the fixed Order. Doubtless the Government would feel itself morally bound to afford the opportunity desired.

The House proceeded to the Order of the Day.

Mr. Amakasu Fumiye, on behalf of the Special Committee, reported that the Committee was in favour of passing the Bill for Reassessing the Taxable value of Land. The details of the Bill differed in some respects from the details of similar projects presented by members, but on the whole the Committee approved the various articles of the Government's Bill. In answer to questions, he explained that the Government Delegate had stated that present financial conditions did not permit a larger reduction than 3½ million *yen*. Accurate investigations had not, however, been made as yet.

The Government Delegate, in answer to questions, said that the main object of the Bill being to relieve the burdens of the people, the proposed reform had been confined to wet and dry fields and not extended to building lands, because the latter played a comparatively insignificant part in the poorer classes' sources of sustenance. He had told the Committee that the time seemed to have come for this reform, first, because the construction of railroads tended to equalize prices of produce, and secondly because the finances could now bear the strain.

Mr. Kudo Takuji strongly opposed the Bill, his chief ground being that a measure of such great importance demanded the most careful and thorough procedure. Such a method as that contemplated was altogether superficial, and could only breed fresh discontent. Long and patient investigations and surveys were needed, instead of the hasty and empirical devices that must be resorted to if this Bill were sanctioned. He contended that the best plan was to leave the alleged inequalities to be corrected by the automatic operation of transfer. Overtaxed lands must decline in price when offered for

sale and undertaxed lands must proportionately appreciate, so that in the end perfectly equal incidence of taxation would be secured.

Mr. Kaku Risuke supported the Bill, and thought that the country should congratulate itself heartily on the fact that the Government had abandoned its former attitude of opposition and adopted this reform so much desired by the people.

The House voted for the Second Reading by a large majority, and agreed to proceed with it at once.

Mr. Kanmochi Tomotsune moved that the Sixth Article, by which the Law of Complaint was declared in operation in respect of reassessments made under this Bill, should be expunged. Such a measure as reassessment would be sure to give rise to many complaints, and he strongly deprecated any diminution of the people's lawful sources of redress merely for the sake of carrying out a measure which could be regarded as a concession to the "Implacables." When once such concessions were begun, there was no saying where they would stop, and it would be most unfortunate if the provisions of laws intended to secure personal rights were not preserved against the effects of these political agitations.

Mr. Naito Rihachi seconded the motion.

Mr. Fukuda Hisamatsu opposed it. He said that innumerable abuses, bequeathed from the days of bureaucratic government, had to be mended, and if they set about the work with all the nicety and precision implied by Mr. Kanmochi, it would be like "helping a man to rice with a hair-pin." Mr. Kanmochi's argument sounded very admirable, but they must be practical before everything, and it would never do to allow a reform such as the Bill projected to be marred by perpetual cavilling afterwards.

Mr. Ooka Ikuzo argued in support of Mr. Kanmochi Tomotsune. He taunted the so-called champions of the Constitution with setting the example of themselves trampling on its provisions. They were very vehement about official interference in elections, yet now a representative of the conspicuously vehement *Kaishin-to*, Mr. Fukuda, recommended suspending the operation of a cherished law merely to secure a pecuniary advantage for a section of the people and to facilitate the carrying out of a party measure.

Mr. Kudo Kokan spoke in the same sense.

The House adopted the first five articles and rejected the 6th by 143 to 105.

The Third Reading was taken at once.

Mr. Sakamoto Sokubi made a strong speech against the Bill, but confessed that he had no hope of interrupting its passage.

The Bill was finally passed.

Mr. Yamada Toji said that he believed that some of the Ministers of State were in the ante-room. He requested that a Secretary be instructed to see if they were, as in that case he desired to make an urgency motion.

Mr. Hayakawa Ryosuke, introducing the Copyright Law, explained that one of the chief reforms contemplated was the granting of copyright to newspapers and periodicals. Since, therefore, the Bill had a close relation with the Press Regulations, he trusted that the House would submit it to the Special Committee already engaged upon the Bill for amending the latter.

This course was adopted.

The House rose at 4.40 p.m.

THURSDAY, DECEMBER 8TH.

HOUSE OF PEERS.

The House did not meet, only the Special and Standing Committees coming together.

HOUSE OF REPRESENTATIVES.

The House met at 1.20 p.m., the Order of the Day being:—

- 1.—Private Bill (First Reading) for transferring Prison Expenditures to the charge of the Treasury.
- 2.—Private Bill (First Reading) for amending the Bailiffs Regulations.
- 3.—Private Bill (First Reading) for supplementing the Weights and Measures Bill.
- 4.—Private Bill (First Reading) for abolishing Law No. 2 of the 22nd year of Meiji.
- 5.—Private Bill (First Reading) for supplementing the City Government system.
- 6.—Private Bill (First Reading) for amending the Law of Organization of Law Courts.
- 7.—Private Bill (First Reading) for amending the City and Prefecture Government System.
- 8.—Representation relating to the management of Public Forests.

9.—Private Bill (First Reading) for abolishing the Peace Preservation Regulations.

The President announced the receipt of the following:—

An announcement that the Minister of State for Foreign Affairs would attend in the House the following day to answer the Questions put by Mr. Inouye Kakugoro with regard to Korean Affairs.

A Memorial to the Throne on the subject of Treaty Revision, from Mr. Suzuki Shoji and others.

A Representation for abolishing the Premonition Law.

Mr. Inagaki Shimesu asked permission to introduce an urgency motion declaring that the present Cabinet did not possess the confidence of the House.

Mr. Shimada Saburo asked permission to introduce an urgency motion in order to obtain the sense of the House with regard to the answer given by the Government the preceding day, when the Cabinet Ministers were invited to attend in the House for the purposes of hearing a statement from the members as to the Government's policy.

No objection was raised.

Mr. Shimada Saburo said that there were points which the House could not understand in the Declaration of Policy made by the Minister President of State. Without a full explanation of these points, it was impossible for the House to determine its own method of procedure. He had therefore moved that the Ministers of State be invited to attend in order that questions might be put to them, but they had answered that it was within their right to attend at any time. There was no question of interfering with that right. The only object in view was to secure the co-operation of the Government in discussing important affairs of State. Considering the position in which they now found themselves placed, it did not seem that the House had failed in its duties. The fault lay with the Government, and it appeared essential that a clear expression of the House's opinion on the subject should be elicited.

Mr. Inagaki Shimesu asked whether Mr. Shimada proposed that another application be made to the Cabinet.

Mr. Shimada replied in the negative. He merely wished to make it clear that the responsibility rested with the Cabinet. The Ministers of State would understand what that meant.

Mr. Inouye Kakugoro inquired whether the idea was to pass a motion that the Ministers of the Crown, irrespective of the reply given by them yesterday, ought to attend in the House to hear an expression of certain members' opinions.

Mr. Shimada replied in the affirmative. The Ministers of the Crown had the responsibility of attending in the House.

The House approved Mr. Shimada's motion by a large majority.

Mr. Inagaki Shimesu said that the reply given on the preceding day by the Ministers of State to Messrs. Kono and Shimada's request for their attendance showed that the present Cabinet did not discharge their responsibility towards the Emperor, did not discharge their responsibility towards the forty million subjects of the Emperor, and were, moreover, criminal towards the country. The duty of the Ministers of State under constitutional institutions was to secure harmony between the Administration and the Legislature and to promote the progress of national prosperity. But the action of the present Ministers was calculated to break that harmony, and their declaration of policy, so far from giving any indication of a genuine desire to lighten the people's burdens, was a collection of falsehoods. In the exercise of his rights as a member he moved that no confidence could be placed in such a Cabinet.

No objection was raised to changing the Order of the Day for the purpose of debating this motion as a matter of urgency.

Mr. Inouye Kakugoro desired to ask the House's opinion as to whether the Order of the Day should be changed twice consecutively for the purpose of debating motions which, judging from the language of their proposers, were based on the same grounds.

Other members having urged a similar objection, the President asked the House to vote as to whether the Order should be changed, and a majority was found in favour of the proposal.

Mr. Inagaki said that, as a member of the House, he stood there entrusted with the confidence of the people and commissioned as their representative. In this capacity, the procedure of the members had a vital bearing on the welfare of the State. The time had come beyond all doubt to declare that the present Ministers of State lacked the confidence of the nation and were traitors (*gyakusoku*) to their country. For many years he and his fellow thinkers had been busying themselves with political affairs, during which time they had suffered innumerable hardships, imprisonment, want, and other pains. At last they had attained their aim and seen a national assembly opened. But from the day of its convention unending disputes had arisen between the Administration and the Legislature, and to this moment not one important measure had been passed in the interests of the empire. The present Ministers of the Crown declared themselves opposed to any legislation giving real efficacy to the three great organs of freedom. They declined to allow any amendment of the narrow and exclusive Law of Election, and they suffered the empire's prestige to wane. So far from asserting the national dignity, they allowed the country to be trampled under foot by Foreign States. With such Ministers there was no hope of national progress or prestige. Nothing of real importance or public value was achieved. The methods of developing Hokkaido were wholly defective, and in every respect the policy pursued must be condemned. Bound as they were to take counsel with the House on all these subjects, the Ministers had nevertheless returned to the House's invitations a reply such as that received the day before. They had hoped for some change for the better from the Ito Cabinet, but practical experience showed that nothing was mended, and that, instead of appreciating the fact that the members of the House carried on their debates as representatives of the people, the Ministers, if they occasionally attended, went away again without saying a word. The time had certainly come when the duty of the House dictated a declaration of want of confidence in the Cabinet, and he had no doubt whatever that his motion would receive the approval of the majority. To cite the chief heads of his accusations against the Government: In the first place, came the question of Treaty Revision. Their failure to accomplish this was in itself sufficient to call for the Ministers' resignation. If they wanted an example of the way things were managed, they need not look far. For in the former Satake-yashiki at Mukojima a wealthy American citizen was permitted to live, proving that the system of Mixed Residence had already been inaugurated, the Treaties remaining all the while unrevived. Moreover, it was notorious that the Minister of State for War and Countess Oyama often visited the inmates of this residence at Mukojima, who, however wealthy they might be, were after all only merchants. How could the dignity of the country be maintained if a Minister of State humbled himself in this fashion? Count Ito, again, though appointed President of the Treaty Revision Committee, had never attended its sittings more than once. With such a man at the head of the Cabinet, need he point out the impossibility of accomplishing Revision. In the second place, the Ministers of the Crown threw every possible obstacle in the way of the reform of the Three Great Laws—Press, Public Meeting and Political Association—and declared themselves inimical to amendments ardently desired by the people in the system of local organization. Again, they showed no disposition whatever to abolish Clan Government or to correct its abuses. For twenty years they had nominally been engaged in the development of Hokkaido, but the results were virtually *nil*. On the contrary, the evils of favouritism made themselves so apparent that nothing was achieved except the growth of public distrust. How could confidence be reposed in such Ministers, let them talk ever so much of Constitutional methods. Were he to enumerate all the administrative blunders committed by the Government during the past twenty years, thirty or forty days would be needed for the purpose. Without attempting

the task, he might confidently assert that the time had now come for decisive measures of reform. He asked whether any hope could be entertained of the present Cabinet's inaugurating such measures. Unless this Clan Government were overthrown, the tranquillity and prosperity of the nation could never be secured. If the Cabinet declined to resign because of this vote of want of confidence, then the House must resolutely pursue the course leading to really representative government.

The President said that in the course of his speech Mr. Inagaki had apparently applied the term "traitors" (*gyakusoku*) to the Ministers of State. Had he really used such an expression?

Mr. Inagaki replied in the affirmative.

The President said that, according to the Law of the Houses, such an epithet was inadmissible and must be withdrawn.

Mr. Inagaki said that since the law compelled him, he should withdraw it.

Mr. Nakamura Yaroku opposed the motion, not because he professed to have confidence in the present Cabinet, but because he thought that the House was not yet in a position to say that the Ministers of the Crown had actually forfeited public confidence. As for the various arguments adduced by Mr. Inagaki, were they to be discussed in detail, the whole of session would be fruitlessly occupied. Their confidence in the Cabinet was limited to the present ten Ministers of State. It was necessary to see first whether these ten Ministers really intended to act according to the genuine canons of representative government. If not, there would still be plenty of time to pass a vote of want of confidence. The House exercised one of its gravest functions when it passed a vote of want of confidence in the Cabinet, and he could not think that the present occasion was sufficiently important to justify such action.

Mr. Mori Riusuke supported the motion. With many important national works inviting its attention, the Government pursued a policy of extravagance, maintaining a large number of superfluous and highly salaried officials. It had introduced a Bill for re-assessing the taxable value of land, but, on the other hand, it proposed to increase the duties on *sake* and tobacco. That could not be called lightening the burdens of the people. Asked to reduce the Land Tax, it said that no funds for the purpose were forthcoming. Yet all the while it made no attempt to introduce economy into the extravagant system of the Administration. It had interfered in the elections and caused wide-spread disorder, in defiance of the Constitutional rights of the people. How could confidence be reposed in such a Government? The Diet was now in its fourth session, but in no instance had it succeeded in getting its views adopted by the Government. A perpetual state of collision alone existed. How could the interests of the country or the prosperity of the nation be secured under such circumstances? They must overthrow this Clan Cabinet.

Mr. Ogaki Hyoji failed to comprehend the basis of Mr. Inagaki's motion. Doubtless there was some reason for it, but he confessed his inability to fathom that reason, and he condemned the notion of springing upon the House a question of such grave importance as a vote of want of confidence in the Government, involving as it did, the dissolution of the Diet. Mr. Inagaki had alleged various grounds for his motion, placing in the foreground the fact that Treaty Revision had not been achieved. But the House knew very well that opposition to Treaty Revision existed in the country itself, and that its satisfactory achievement was a matter of much difficulty. As for the charge about official interference, they must remember that the Cabinet had been in office only since August, and that it had found a number of troublesome matters to deal with within the short space of four months. To declare it unworthy of confidence at this early stage could not be called other than extremely precipitate.

Mr. Arai Shogo supported the motion. Its opponents did not pretend that they had confidence in the Cabinet, but merely alleged various pretences for not placing on record their want

of confidence; as that the step was too hasty, or that the occasion was ill chosen, and so forth. If they lacked confidence, let them say so boldly. The Acting Minister President had told them that the Government intended to clear away all obstacles to national progress. Had the Government done so? Was it doing so? Did it show any signs of doing so? If its purpose were honest, why did it not take steps to correct the abuse of official interference in elections? It talked, too, of harmony and coöperation between the governed and the governing, but in practice it paid no attention whatever to the wishes of the people as expressed through their representatives, following simply its own arbitrary ideas. Surely it was absurd to call such a government representative. Its methods had pushed the country to the edge of a perilous precipice. It had no fixed policy about the national defences, but merely drifted with the times, and in every respect showed itself unworthy of the confidence of the nation.

Mr. Yamada Toji was one of those who habitually opposed the Government, but he nevertheless thought that the occasion was ill-chosen for a vote of want of confidence. Such a vote, based on the arguments they had heard advanced, should have been passed at the opening of the Diet, if at all. What they had to do now was to carefully observe the procedure of the Government, and be guided in their attitude by the Administration's actual performances. If a vote of want of confidence were called for in consequence of acts contrary to the interests of the empire or the principles of representative institutions, there would be plenty of time to pass it.

Mr. Tanaka Shozo thought that much gratitude was due to Mr. Inagaki for introducing the motion. They had not looked for any act so discourteous to the Government from a member of the *Ri-to*. But the motion was evidently on the verge of defeat, and lest the small number of its supporters should create an impression that the Party to which he, Tanaka, belonged had confidence in the Cabinet, he felt it incumbent to protest against any such idea. He also recommended the men who to-day talked of want of confidence, namely, the members of the *Ri-to*, to consider in the first place whether they themselves deserved confidence.

Mr. Inouye Kakugoro said that one of the men whom they had been pleased to dub *Ri-to* since the opening of the Diet was he, Inouye Kakugoro. He did not propose to discuss that point. If his opinions differed from those of the persons giving him such a title, that was his own business. But he asked the House to consider whether this motion now before them was likely to add to the brilliancy of their record. It declared want of confidence in the present Cabinet. But since the Declaration of the Cabinet's policy, only one of the measures announced by the Ministers of the Crown had come up for consideration, and had been swiftly passed through all its readings by a large majority. Was that their method of showing want of confidence? Was the very morrow of such a demonstration the time to declare that the policy of the Cabinet did not command their confidence in any respect? He, too, they would observe, was opposed to the motion, but they would also observe that the grounds of his opposition differed from those alleged by other members. Mr. Inagaki Shimesu, as a member of the Eastern Radicals, had brought forward this motion. He and the section to which he belonged must accept the responsibility. It did not greatly matter that a vote of want of confidence, solemnly introduced as an urgency motion and solemnly discussed by prominent members, was about to receive the support of only three men in the whole House—for that seemed to be the fate hanging over the motion. But it did matter that the records of the House should be disfigured by such a motion under such circumstances, and he trusted that the public would extend to the incident nothing worse than ridicule.

Count Goto, Minister of State for Communications, said that the members had delivered speeches for the most part hostile to the Cabinet,

but he did not propose to combat what they had said. It seemed to him, however, that the discussion had not been exhaustive. The Cabinet wished to hear the fullest possible expression of opinion with regard to such a motion. At the same time he must remind them that the Ministers of State held office by the appointment of the Sovereign and not by that of the Diet.

The President called for a vote by show of hands, when only three members rose to support the motion.

The House proceeded to the Order of the Day.

The Bill for transferring Prison Expenditures to the charge of the Treasury was read as follows:—

BILL RELATING TO THE TRANSFER OF PRISON EXPENDITURES TO THE CHARGE OF THE TREASURY.

Art. 1.—Among the expenditures now disbursed from local taxes those for prisons in *Fu* and *Ken*, their new buildings and repairs, shall be transferred to the charge of the Treasury from the 26th year of *Meiji* (1893).

Art. 2.—The lands, buildings, furniture, tools, implements, and other properties of Prisons in *Fu* and *Ken* shall be transferred to the Treasury from the 26th year of *Meiji*.

Mr. Kataoka Chokuon, introducing the Bill, explained that the inclusion of prison expenditures among the local burdens had been a temporary measure, necessitated by financial circumstances but not in accord with administrative principles. Numerous petitions in favour of transferring these expenditures to the charge of the Treasury had been received, and in two sessions the Government had introduced a measure in that sense. But the House, bent upon reducing the taxes upon land, had refused its consent to any reform which seemed likely to encroach upon the funds required for that pet project. A Bill having now been passed, however, for reassessing the taxable value of land, that difficulty had been removed. In view of the importance attached to this measure by previous Cabinets, it was difficult to understand why the present Cabinet had failed to bring in a Bill for the transfer of Prison Expenditures. Presumably some reasons of temporary expediency were responsible. But there could be no manner of doubt as to the desirability of the reform, and if compared with the reassessment of land which the House so strongly favoured, the transfer of Prison Expenditures would be more widely beneficial. He spoke at considerable length, and concluded by expressing the hope that the Bill would be entrusted to a Special Committee in order that the latter might devise some expedient for obtaining the necessary revenue to carry out the reform.

Mr. Tanaka Shozo spoke against the Bill, not because he opposed the principle, but because of the grounds advanced by Mr. Kataoka. It was true that petitions had been sent from the localities, and that Local Assemblies had voted in favour of the proposed transfer, but the truth was that whereas the Government's alleged reason for making these and other expenditures a charge on the localities was because six million *yen* annually were needed for purposes of currency redemption, instead of applying the money to that purpose, it had been devoted to meet the ever-increasing outlay of an extravagant Administration.

Mr. Ooka Ikuzo supported the Bill in an eloquent speech, his main point being that whereas the Opposition talked perpetually of reducing the people's burdens, they chose a field of reform which did not tally with their declarations. What the people chiefly complained of was the weight not of national but of local taxation, but what the Opposition devoted its energies to reducing was a partially felt section of the national taxes, instead of a universally felt and important section of the local taxes.

Mr. Suzuki Manjiro did not object to the principle of the Bill, but thought that the opportunity for such a measure had not yet offered. There were no visible funds available for the purpose, and even though there were, he should be in favour of devoting the money to educa-

tional purposes, which was the best way to diminish crime.

Mr. Awaya Shinazo supported the Bill. He observed that amid many professions of a desire to lighten the people's burdens, the House voted hotly for reducing the Land Tax and reassessing the taxable value of land, but threw out every Bill for transferring Prison Expenditures to the charge of the Treasury. Yet these changes in the land tax could benefit only the middle and upper classes, whereas the transfer of Prison Expenditures would benefit the masses who really wanted relief. They had passed by acclaim Bills for reassessment of land and reduction of the Land Tax, and they had asked no questions about available funds. Ought they not to be equally sanguine about the Prison Expenditures Bill, instead of rejecting it for reasons which should have been just as effective in the other cases?

The House voted against entrusting the Bill to a Special Committee, and rejected the Second Reading by 153 to 84.

Mr. Ooka Ikuzo, in introducing the Bill for amending the Bailiff Regulations, explained that the present Bailiffs, though only nominally officials, perverted their official status to the purposes of their own trade, and had acquired an exceedingly bad reputation. His object was to make them genuine officials and remove them altogether from the field of commerce. He himself could bear witness to the abuses of the present system, and to the fact that, in many cases, Bailiffs were nothing better than the tools of usurers. The reform proposed by the Bill seemed the best way to correct the abuse. It would involve a corresponding change in the Code of Civil Procedure, but he understood that a Bill for the latter purpose was about to be presented to the House.

The Bill was entrusted to a Special Committee of 9 nominated by the President.

The House rose at 5.40 p.m.

THE FOREIGN BORN POPULATION OF THE UNITED STATES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The idea prevails among many intelligent people that the proportion of foreign-born population in the United States is much greater than it really is. For the benefit of such and others who may wish to know, I have copied off the following figures given by Hon. E. D. Wright, U.S. Commissioner of Labour in the last number of the *Popular Science Monthly*:—Out of a population of 62,622,250, according to the census of 1890, the total of the foreign born class was 9,249,547, or 14.77 per cent. This percentage seems to me quite small compared to the general notion. But the most important fact brought out by these figures, is found by comparing them with those given in the census of previous years. Taking the census years from 1850 to 1890, Mr. Wright finds the percentage of native and foreign born of the whole population to be as follows:—

	Per Cent.		Per Cent.
1850. Native	90.32	Foreign.....	9.68
1860. Native	86.84	Foreign.....	13.16
1870. Native	85.56	Foreign.....	14.44
1880. Native	86.68	Foreign.....	13.32
1890. Native	85.23	Foreign.....	14.77

From these figures you will see that the proportion has remained practically the same for the past forty years—not having varied a per cent.

Previous to 1820, the immigration to the United States was small, but commencing with that year and counting to the census of 1890, the whole number of immigrants coming to the United States was 14,820,690. When it is remembered that this number is scattered over a space of seventy years in time, the number of foreigners who have come to America is not so appalling as we have been sometimes led to think. Nevertheless, thoughtful Americans are becoming more and more anxious concerning the matter of immigration even if the ratio of foreign-born to native has changed so little. The two reasons that strike me as being the most efficient in bringing about this uneasiness are, first,

the deterioration in the quality of the immigrants. Until the last ten years I am safe in saying that 90 per cent. of them came from Great Britain, Scandinavia, and Germany, whereas the past ten years has seen an immense falling off in these, and their place has been taken by Hungarians, Poles, Italians, and Russian Jews—mostly from the very lowest classes. Indeed, it is commonly thought by Americans that the shipping of criminals and paupers to America has been assisted or encouraged by certain foreign Governments. Second, the settling together of great masses of these later immigrants, especially in the cities, and their consequent endeavour to preserve their original language and customs, even to the point of displaying strong hostility to American ideas, customs, institutions, and language, insulting the American flag, and denouncing American laws.

It is these two facts more than the number of foreigners in America that are fast bringing on a crisis. If these immigrants, even of inferior quality could be scattered evenly over the country, the problem, aided by the wonderful assimilating power of the American people, might solve itself.

Yours, &c.,
J. W. D.
December 5th, 1892.

THE CONDUCT OF THE POLICE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I wish to testify through your columns to the excellent conduct of the Japanese officials and people at the fire in Tsukiji this morning. The large empty house at No. 20 was consumed, imperiling the Club Hotel and the residences closely surrounding it. The fire was confined to the one building, however, even the servants' quarters, only a few feet away, being saved. While this fortunate outcome was due largely to the absence of wind, the firemen deserve commendation for the efforts they made to prevent the spread of the fire. From the top of the next house I had an excellent opportunity to watch the conduct of the whole affair, and it is difficult to see how it could have been managed better with such apparatus as they had. The conduct of the police is especially to be commended. They took charge at once of the surrounding premises, kept the large crowd in perfect order and at a distance, and so prevented confusion and theft.

I am, very truly yours,
WILLIAM J. LAWRENCE.
19, Tsukiji, Tokyo, Dec. 5th, 1892.

THE KEROSENE OIL CASE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Critics who seek to influence public opinion by arguments drawn from sources not open to general inspection owe, I believe, a certain measure of good faith to those whom they address and of fairness to those whom they criticize. Neither debt has been satisfactorily discharged by your correspondent "W." I venture to say that the spectacle of a learned person and a stranger to those whom he attacks employing the weapons at disposal in the manner of your correspondent is at once unseemly and by no means common. With your leave I will make my meaning plainer.

Since "W." is a trained lawyer—his acquaintance with the sayings of the eminent deceased Shaw and the eminent living Cooley for bids a contrary assumption—since "W." is a legal expert, how came he to lead your readers to understand (as they must have understood from his letter) that an advocate's "privilege" means the right to say what he pleases without interference from the court, when in truth it means no more than his immunity from actions in respect of words uttered by him in the performance of his duty? "W." must know that the Courts of Western countries can and do control the liberty of speech in counsel, and are prompt to suppress the scandalous and the irrelevant whenever it appears: yet modesty or some other cause forbids him to parade his knowledge. It has never been said that Mr. Takahashi laid himself open to an action, but it is suggested that the Court should have interrupted him or expressed its disapproval of his conduct, and this suggestion "W." has made no fair attempt to meet.

"W." proceeds to say: "His (counsel's) charge, in a nutshell, was that according to rumour the plaintiffs knew they had no case and had brought the suit merely to satisfy the Bank's insistence." What the charge is in a nutshell—compressed that is to say by the removal of the more offensive portions—I shall not trouble to consider. In its original form it affirmed the existence of rumours as to the object of the suit, which rumours were to the effect that some other business in which the plaintiffs were engaged had come to an unpleasant issue, that their creditors pressed for immediate

payment of a debt, and that the plaintiffs for the purpose of excusing themselves and gaining time alleged that they had incurred a very heavy loss through Chinese. The first two rumours directly affect the credit of the plaintiffs, while the third conveys a distinct imputation on their honesty—that they alleged a loss through Chinese, not because they had in fact suffered it but in order to stay the demands of their creditors. Compare this result with the contents of the nutshell and the difference between them is painfully apparent, while "W.'s" argument which assumes their identity seems to lose the main part of its force and all its title to respect. The moral responsibility of counsel for his statement, I shall leave to his conscience and to "W.," merely noting that it was open to him to ascertain the truth or falsity of the rumours from the creditors, that is to say, if "W.'s" synonym be correct, from "The Bank."

I trust that I have made it clear that "the bitter denunciation of the Japanese Court" by Messrs. Mourlyan, Heilmann & Co., or in less pointed but more accurate language the appeal of that firm to the judgment of the public, was based on a fuller recollection of the charges made by counsel and a more accurate acquaintance with the principles which prevail in the Western world than your correspondent "W." cares to display in your columns.

I am, Sir, your obedient servant,
December 6th 1892.

A STORY FOR MR. INOUE KAKUGORO.

TO THE EDITOR OF THE "JAPAN MAIL."

DEAR MR.,—I have read your writing about what Mr. Inoue Kakugoro said respecting my country and I want you to put what I think about it in Japanese.

I think this.

I think I should like to tell Mr. Inoue Kakugoro a story which we in Corea used to often tell to children: and which we now tell to grown men. Once in Corea there was a big yard. And the yard was full of bones. And in the yard there were the houses of two dogs. And one dog was a yellow dog and the other dog was a white dog. And they were both male dogs. Also there was a female dog. It was small and it was mangy and its dog-house was dirty: but it was a female dog and in the dog house were bones.

Now near by there lived another dog: and it was large and black and had teeth a finger long and its dog house had two doors. And the back side door led into the court yard. But the back side door was very often shut. And then the black dog went by the front side door and got bones in other courts, and then the white dog and the yellow dog had many bones. And the dog house of the black dog was near by the dog house of the female dog. Now it chanced that the white dog and yellow dog quarrelled and fought about the female dog. And this is the reason they made one against the other.

The yellow dog said: I will protect her against her enemies.

The white dog said: I will save her from false friends.

The yellow dog said: My grandfather was her grandfather's first cousin.

The white dog said: My grandfather eat hers up.

The yellow dog said: I taught her to bark.

The white dog said: I will teach you I can bite. This is what they said in the court. Also they growled much.

And the female dog sat in her dog house and he saw a chink in the wall and through the chink he saw the female dog and he spoke and said; Female dog do you like noise!

And the female dog said: No, for I like quiet and bones.

And the black dog said: But they will take your bones and your dog house.

Therefore I will protect you. But the doors is shut and I cannot come.

And the female dog said: Let us make the chink large and wide.

And so they did.

And outside the noise of barking and growling was great: and inside the black dog and the female dog bit and tore till the chink was large. And when the battle outside was over there was the black dog in the female dog's dog house.

And the yellow dog and the white dog were sick and sore; and they could fight no longer.

And so the female dog sat quiet and her dog house was made clean and there were always bones in it.

But now the black dog could always come into the court for when his door was shut the female dog's door was open: and before there were but

three dogs to eat the bones and now there were four. But the black dog grew strong and fat. And in the end there was only one dog that E. eat the bones.

[We print the above exactly as it has reached us. Our correspondent can scarcely expect us to translate his remarks into Japanese.—Ed. J.M.]

A DISCLAIMER.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the review of the religious press which appeared in the *Japan Weekly Mail* of the 3rd inst., reference is made to a letter to the editor of the *Rikugo Zasshi* which is described as "indorsing Mr. Asada's view" (see *Mail* of Nov. 5th, p. 557) regarding a revision of the Japanese version of the Bible. As the writer of that letter, may I be allowed to say that I did not intend to indorse Mr. Asada's views—certainly not in matters of detail. My object in writing was to point out that Mr. Asada was wrong in his statement that the Japanese Version was based upon the Authorized English Version and not upon the Greek Text, and that a considerable share of his criticisms were directed against features for which the translators were not responsible, as they grew out of the rules of the Bible Societies which bore the expense of the work. Possibly, a more liberal interpretation of those rules might have passed without censure; but the committees in charge did not feel at liberty to go farther in the direction desired by Mr. Asada. It is true, I expressed my hearty sympathy with his desire to see a translation of the Bible which should be the product of Japanese scholarship; but I suppose all friends of Japan may unite in that desire without any necessary disparagement of the present version, beyond what is involved in the acknowledgment that it was not prepared by Japanese. Macaulay has said that no one has ever written anything deserving a place of the first rank in literature in a language which he did not acquire so early as to have forgotten the trouble which it cost him to learn it. No Japanese version can have a place in Japan corresponding to that which King James' version has won in English literature, which is not the fruit of Japanese labour. In saying this, I am not unaware of the great amount of time bestowed upon the present version by Japanese gentlemen of high literary attainments; they were, however, more or less hampered by the fact that the full responsibility did not rest with them. It was my privilege to spend six of the best years of my life as a member of the Committee for the translation of the New Testament, and I have had something to do with the care of the text ever since. For this reason, I explicitly disclaimed in my letter any purpose to engage in a discussion of the merits of the present version, though I may perhaps be permitted to say here that a very considerable proportion of the criticisms submitted to a revising committee appointed about a year ago were based upon a very mistaken conception of the Japanese idiom.

There are already several Japanese of high attainments in Biblical scholarship, but such scholarship is not the only requisite. It is by no means certain that there will be, for several years to come, a sufficient number of Japanese of good Biblical scholarship, who enjoy also a recognized standing in the literary world, to render the formation of a new translating committee expedient. Such a committee would also involve large expense. Without foreign help this expense could not at present be met, and the aid of the Bible societies under their present rules could only be secured by such concessions regarding the text as a Japanese committee might justly hesitate to make. Taking all this into consideration, it does not appear that the day for a new version is so near at hand as to render new editions of the present version inexpedient. In preparing for the edition in the Roman letter, the revision already referred to was undertaken. This revision occupied much time and earnest thought, and the new edition was carried through the press by a special committee, who bestowed upon it the most painstaking care. It presents in the best form yet attained, a version which, though prepared by foreigners, has had the benefit of the suggestions of several widely respected Japanese scholars, and has won a place in the estimation of the Christians of Japan far beyond the best hopes of the translators.

I remain, yours, &c.,

THE "RIKUGO ZASSHI'S" CORRESPONDENT.

Tokyo, December 7th, 1892.

THE OPENING EXERCISES OF THE TOHOKU GAKUIN AT SENDAI.

The formal opening of this school took place on November 19th. The school began its existence some six years ago in a very small way under the joint labours of the missionaries of the Reformed Church and the Rev. M. Oshikawa. But from the first, in spite of severe disappointments, there has been an unwavering conviction on the part of the teachers that the school would succeed. It has steadily increased its force of teachers, foreign and native, until the faculty now has three Japanese who have studied abroad, three foreigners, and eight others. The students number about one hundred and seventy-five. The course of study has been gradually extended and raised, until now the regular course covers seven years, and the theological three more. The school is situated in the centre of the city on the broadest avenue, and its new brick recitation-hall is by far the finest piece of architecture in the city. The decorations that were put up by the students in honour of the opening were a fine advertisement of what was going on. The gateway, trees, and buildings were well covered with the usual signs of festivity, and what the students failed to express in the ordinary free use of red lanterns, evergreens, flags, &c., was left to take shape in a huge telescope made of U.S. flour-barrels set up on the tower of the building. The main hall was filled to overflowing, all departments of the city being well represented. Civil and military officials as well as the faculties of the various schools were present.

Being a school with distinctly Christian principles, the exercises were of a positively religious character. There were no evasion of this, and at the same time there was no offensive insistence on it. The spirit of patriotism was accorded a most generous place, especially in the address of Mr. Hoy, the Vice-Principal, who gave a very touching history of the school, and then spoke with deep feeling and eloquence of the purpose of the faculty to give the students a well rounded education, one that should neglect no side of a young man's well being, and one that should especially fit him for Japanese citizenship in this transition period of the nation. Next came the address of Principal Ishikawa. No one who knows this man's history—how bitterly he was persecuted as a Christian years ago in Niigata, so that even an attempt was made to assassinate him on the street one night, which attempt resulted in the murder of the wrong man—can wonder at the power he has over his audiences whenever his subject touches upon the religion to which he has absolutely given his life. All the intense earnestness of his nature came out in his explanation of the principles that have influenced his choice of Christian education as his life-work. The motto over his desk, *Kei Shin Ai Jin*, gave him his starting-point. *Reverence God, Love Man*, shows at once the trend of an eastern mind in selecting the more impressive word *Reverence* for God, while a western speaker would almost inevitably have taken the form that permeates literature—*Love God, Love Man*. *Reverence* is, in the East, the bond of all witness, as *Love* is in the West. The weight of his speech, so far as it was religious, was on the word *Kami*, one of the vaguest in the vocabulary of Japan. But in Mr. Oshikawa's mind, it became a most vivid and exalted conception, illustrated by science, æsthetics, philosophy, and illumined by the exceptional character of his own profound experiences, and so was made to stand out as a living reality before the minds of his hearers. Turning to Education as based on faith in such a God, he called attention, in the same lofty style of language, to the other two mottoes which adorned the walls on the right and left, *Humanity and Divinity*, and *Talent, Virtue, Wisdom, Knowledge*.

This was followed by Mayor Endo, who modestly expressed his inability to speak after an orator like Mr. Oshikawa. With a few appropriate remarks and congratulations the Mayor sat down.

The Governor, Mr. Funakoshi, very kindly sent a letter of regret that he was detained by official business from accepting the invitation which had been extended to him. He took pains also to send his congratulations to the teachers, both foreign and native on the prospects before them.

Three cheers for the Emperor in the usual formula, *Tennō Heika Banzai*, were given by the guests within, and these were followed by three more from the students without.

The addresses fitted into the occasion with rare appropriateness. Liberty was not sacrificed to formality, yet everything was done impressively. All concerned are to be congratulated. A school with a faculty of such men must succeed.

THE PHOTOGRAPHIC SOCIETY OF JAPAN.

A regular monthly meeting of the above mentioned Society was held on Friday, Dec. 2nd, at the rooms of the Geographical Society (Chigaku-Kiokai) Nishi-konyacho, Kiobashi, Tokyo, beginning at 5 p.m., Dr. E. Divers, F.R.S., &c., in the Chair.

Viscount C. Hori, G. Bigot, and K. T. Takahashi were unanimously elected members of the Society.

Mr. T. Tanaka was called on to report on the "Re-touching Solution" that was mentioned in the report of the last meeting. He reported very favourably, stating that he found it the best medium that he had, so far, used.

Mr. Kajima Sebi showed some very effective prints of sunset views, and an enormous camera for taking direct negatives on plates measuring 42 x 36 inches.

Pinhole photographs were shown by Mr. Favre-Brandt, Mr. Tanaka, and Messrs. W. K. Burton and K. Arito. These were of various sizes, varying from about 8 x 6 inches to 18 x 12. Some were remarkably good, showing, in the general opinion of these present, all the definition that was necessary for pictorial effect. Some members considered the effects better than these of photographs taken with lenses.

Mr. K. Arito showed a set of prints of Konodai on plane paper toned with platinum. The prints were made by the process described in the report of the annual meeting for 1891.

Mr. K. Ogura showed a set of excellent and most interesting photographs of the recent military manoeuvres.

Messrs. W. K. Burton and K. Arito showed the results of a set of experiments with plates stained with picric acid neutralized with ammonia (presumably really picrate of ammonium) to prevent halation. Mr. Burton had, some years ago, tried the effect of staining films with various dyes to prevent halation, but had not been very successful. As a rule, if halation were prevented, the plate was very much slowed, or there was great difficulty in getting density. With picric acid this was not so. The sensitiveness was somewhat reduced, but not much, whilst, so far as density was concerned, the difficulty had, up to the present, been that too great density had to be been got in every case. The picrate did not seem so much actually to slow the plate as to act as a retarder in development. This necessitated a developer strong in alkali and, even with very small proportions of pyro. or of eikonogen, the density came up too great. Doubtless farther experiments would lead to the discovery of a remedy. The next were to be made with plates coated with emulsion with which picric acid (or picrate of ammonium) had been mixed. Both halation and solarization were completely prevented.

Several hundred lantern slides were shown on the screen, and it was decided to hold a lantern evening in Yokohama at an early date.

The proceedings terminated with a vote of thanks to the chairman.

LETTER FROM CHICAGO.

Chicago, November 11th.

Rev. William Elliot Griffiths, D.D., has resigned the pastorate of the Shawmut Congregational Church, of Boston, after a faithful service of more than six years. He has been honoured with the appointment for this year to the Dudgeon Lecture-ship at Harvard College. This was founded in 1751 by Chief Justice Paul Dudley, of Massachusetts; and the books making the series of Dudgeon lectures form one of the standard productions of the University. Dr. Griffiths' lecture, to be delivered in the chapel of Harvard College, will be on the subject, "The Validity of Non-Episcopal Ordination."

Rev. J. Batchelor's book, "The Ainu of Japan," is published by Fleming H. Revell Co. of this city.

It is reported here that the Canadian Pacific Railway is arranging to place two more steamers on the route from Vancouver to Yokohama.

A newspaper item has had considerable circulation to the effect that the Emperor of Japan "will visit Europe next year, and may be induced to extend his journey to the United States." Is there any truth in the statement?

The Japanese in Chicago gave evidence that they have not lost the *Yamato-damashii*, when they duly celebrated the Emperor's birthday on the 3rd inst. The Japanese workmen, about 25 in number, in the World's Fair grounds, struck work about three o'clock, and, repairing to their lodging place, had an appropriate celebration. In the

evening World's Fair Commissioner Teijima, at his residence near the grounds, entertained a number of the Japanese residents of this city and vicinity. There are about twenty Japanese who may be called permanent residents; and there are about thirty more who are here in connection with the World's Columbian Exposition.

This city is also favoured just now with a chrysanthemum show, which, though it cannot compare with those of Dangozaka, is yet very beautiful. The *Inter-Ocean* says of it:—

Some one has declared that the best illustration of the doctrine of evolution to present to a delicate and sensitive mind is the chrysanthemum, the golden flower evolved from the modest bloom springing from the sacred mountain's base in fair Japan into the glorious perfection exhibited in the Second Regiment Armory yesterday.

Palms, orchids, roses, and other flowers and plants add to the beauty of the exhibition.

Rev. S. Vishner Karmarkar, of Bombay, has been addressing various audiences in this city on the phases of Christian work in India. He is "a high caste Brahmin," and "speaks the English language fluently."

Mr. W. E. Giles, a special agent of the World's Fair in the Western Pacific islands, lost his life Sept. 12th near Loma Loma. He and his wife and two children left Loma Loma in a small boat to reach a steamer, and in a squall all were drowned.

The separate building for the department of liberal arts will stand between the German and the French headquarters in the Northern part of the grounds. It will be irregular in shape, it will contain about 160,000 square feet of ground floor with about 40,000 square feet in a gallery. It will cost \$150,000.

While the Exposition is open, there will be on the grounds twenty-five restaurants, each to accommodate 1,000 persons. The service will be of three grades; the first-class, the ordinary, and the lunch counter.

The W.C.T.U. Convention was held this year in Denver, and will undoubtedly be fully reported by your correspondent at that place. It suffices here to say, that Lady Henry Somerset, of England, was present, and that Miss Frances E. Willard was once more elected President.

THE PRESIDENT'S GRATITUDE.

Washington, November and. The President to-day requested the publication of the following card:

The expressions of sympathy with me and our family in our great sorrow, from individuals, from societies, from church conventions, from public meetings, from political clubs and committees of all parties, have been so tender and so full of respect and love for Mrs. Harrison that I reluctantly abandon the purpose of making a personal acknowledgment of each. We are grateful, very grateful, for this great cup of good will and for your prayerful intercessions. May God give to each of you in every trial that grace and strength which you have asked for us.

BENJAMIN HARRISON.

The President has issued his annual proclamation of a day of thanksgiving on the last Thursday (24th) of this month.

Lieutenant Frederick Schiwaika, the Arctic explorer, died suddenly, November 2nd, at Portland, Oregon, from an overdose of laudanum.

Private Iams, the Pennsylvania National Guard, won great notoriety at the time of the Homestead troubles by cheering when the news was received of the attack on H. C. Frick. For that offence he was ordered to be strung up by the thumbs, stripped of his uniform, and drummed out of the militia. Afterwards he brought a suit before a Pittsburg justice of the peace against the officers of the militia for assault and battery. On the 5th inst., the jury brought in a verdict of not guilty.

The Briggs trial began in the New York Presbytery day before yesterday, but has not yet reached any important developments.

During the evening of the 7th inst. a cold wave, which in the north-west became a blizzard, struck the country, and made the election day sharp and cold; but it did not seem to be able to keep many from exercising the franchise.

The political campaign ended in a surprise to all parties. The sweeping Democratic victory was as unexpected to the victors as to the vanquished. Both parties had, of course, made big and boastful claims, but could not base their calculations on positive knowledge. The secret Australian ballot was an important factor in creating uncertainty and in making a pure and honest vote. It was a campaign of calm deliberation and careful weighing of the issues, and resulted in a glorious victory for the Democratic party and the cause of tariff reform. It showed that the thoughtful voters were not frightened by the bugaboo of wild-cat currency, or by the possibility of free coinage of silver, or by the "Solid South." The silver question was not an issue except with the People's Party, which, however, polled a large vote; the Prohibition Party did not play much part in the election, though it may have increased its popular vote. The tariff question was the dominant issue on which the campaign was fought.

It was known the morning after election, that Cleveland and Stevenson were surely elected; but it is not yet known exactly how the electoral vote

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

will stand. It is slow work counting the large and complex ballots, especially when so many persons declined to vote a straight ticket. In this ward, for instance, about 500 voters, like your correspondent, supported the Democratic candidates for State and county officers. Even the unofficial returns will, in some cases, be needed to settle disputed claims. There is still a little doubt about some of the electoral votes. North Dakota, for instance, is very close, with the chances in favour of the Fusion electors; and even McKinley's State of Ohio, if it goes Republican, will not give Harrison much more than 1,000 majority. The following table, giving North Dakota to Weaver and Ohio to Harrison, represents fairly the present condition of affairs:—

State.	Whole No. of votes.	Harrison.	Cleveland.	Weaver.
Alabama	11	11	11	11
Arkansas	11	11	11	11
California	9	9	9	9
Colorado	11	11	11	11
Connecticut	6	6	6	6
Delaware	5	5	5	5
Florida	4	4	4	4
Georgia	13	13	13	13
Idaho	5	5	5	5
Illinois	24	24	24	24
Indiana	15	15	15	15
Iowa	15	15	15	15
Kansas	10	10	10	10
Kentucky	13	13	13	13
Louisiana	8	8	8	8
Maine	6	6	6	6
Maryland	8	8	8	8
Massachusetts	15	15	15	15
Michigan	14	14	14	14
Minnesota	9	9	9	9
Mississippi	9	9	9	9
Missouri	17	17	17	17
Montana	5	5	5	5
Nebraska	8	8	8	8
Nevada	3	3	3	3
New Hampshire	4	4	4	4
New Jersey	10	10	10	10
New York	56	56	56	56
North Carolina	12	12	12	12

Virginia	12	12	12	12
Washington	4	4	4	4
West Virginia	6	6	6	6
Wisconsin	12	12	12	12
Wyoming	3	3	3	3
Total	444	444	444	444
Necessary to a choice, 212.				

The Republicans will lose a number of votes in the Senate, and thus pass into the position of a minority. In California, New York, Wisconsin, and New Jersey a Republican will be replaced by a Democrat; in Montana and Nevada, and perhaps in North Dakota by a Populist. In the Senate of the next Congress the Populists will have at least five, the Republicans probably forty, and the Democrats forty-three. This gives the Democrats a plurality, but not a majority, and puts the balance of power in the hands of the Peoples' Party.

In the new House of Representatives the Democrats will have a plurality of about 70, and a majority of about 80. Many districts are so close as to be yet in doubt; but the *Chicago Tribune*, a Republican newspaper, printed this morning a table of 217 Democrats, 127 Republicans and 11 Populists. In Arkansas, Hugh Downs, ex-Minister to Korea, was elected on a small margin; in California, the notorious anti-Chinese champion, was re-elected; in Georgia Speaker Crisp was re-elected; the "objector," W. S. Holman, is returned again from Indiana; "Socksless" Jessy Simpson, of Kansas, has another term; from New Hampshire comes ex-Senator Henry W. Blair; in New York, Bourke Cochran was re-elected; here and there valuable members, both Republican and Democratic, were re-elected. In the present Congress the Democratic majority has been too unwieldy; in the next Congress it will be somewhat less, but perhaps more easily controlled. It is to be hoped, therefore, that more will be accomplished in the line of necessary legislation.

With a few words about the State elections, this letter must close to catch the mail. In Illinois, Indiana, Massachusetts, New Jersey, and Wisconsin the Democrats elected Governors: in Massachusetts Governor Russell was the only successful candidate on the Democratic State ticket. In Nebraska, to the surprise of all, Crouse, Republican, beat Van Wyke, Populist, for Governor. In Colorado, North Dakota, Nevada, and, perhaps, Idaho and Montana, the Populists elected Governors. In the other States the election went about as was expected.

It is said that Mrs. Harrison, knowing that she had not long to live, expressed a wish that she might live till after the election, because she had confidence that the people would honour her husband with a re-election. In view of the result, it seems providential that she was spared the bitter disappointment of her cherished hopes.

MOUNTAINEERING IN THE JAPANESE ALPS.

By WALTER WESTON, M.A., F.R.G.S., ENGLISH CHAPLAIN, KOBE.

(CONCLUDED).

After half an hour's stay on the summit, we are reminded of the fact that we still have a long descent to make before reaching the cave at which we intend to pass the night, and at 4 p.m. the journey is begun. Coming down, the loose stones on the flank of the mountain are anything but pleasant, and need a good deal of deliberation to avoid tumbles and sprains, but once on the snow glorious glissades are possible, though in these the guides decline to share, their *wajiri* here being worse than useless, and the descent is made by them on the broken ridges above the slopes of snow.

Just before nightfall—at 6.30, for daylight dies young in these valleys overshadowed by the steep heights on either hand—the *Akasaka no iwagoya* is reached. The coolie has just returned with the supplies for which he had been sent to the lower camp, and we proceed to enjoy our well-earned food and rest. Soon a cheery fire is blazing and when our meal is over we turn in, our beds consisting of a few leaves and ferns underneath our shawls and sleeping bag sheets, whilst for pillow a rucksack and a camera suffice. Under the lee of the great wedge of rock we are well sheltered. The place has been a little improved since last year, and with an umbrella at our heads to keep off the night breeze that pierces a crevice at that end and a fire at our feet, we sleep the sleep of the satisfied.

The following day, leaving the cave at 6.15, we passed down the valley to Yokodani in three hours, picked up the rest of our baggage, and crossed the Tokugotoge to Shimajima, the little dog our guides had with them on the way, securing, after a sharp tussle, a yellow marten near the summit of the pass on the western side.

The distance from the cave to Shimajima is reckoned by the bear hunters at not quite 12 *ri* (30 miles), and it was only after a race against time from the top of the *toge* that we just managed to reach our inn by night fall (6.50 p.m.), our porters bringing in their baggage an hour or so later on.

From Shimajima—one of the most delightful of mountain retreats in which to spend a quiet "off-day" after a long expedition—a good road takes one into Matsumoto, one of the largest towns in the great and fertile province of Shinshu. This side of the range exhibits the greatest contrast to the solitudes of Hida on the West. The latter province, which covers an area of 268 square *ri* (about 1,606 square miles) has only a population of 113,485 people; comparatively little of the land is cultivated, the chief sources of livelihood being silk-worm breeding and timber cutting.

On the other hand, Shinshu, with an area of 5,088 square miles, supports a population of 1,095,998, and presents an aspect of prosperity and cultivation of the most general character.

To the north east of the town of Matsumoto, on the western outskirts of the hills over which the road to Karuizawa crosses, stands the little village of Asama, celebrated in all the country round for its hot springs, which make it the Miyanoshiita of the province of Shinshu.

After our ride from Shimajima, to which *jinrikisha* had been sent by a messenger despatched to Matsumoto for them, we found the latter place extremely close and hot, for we had lately been spending so much time at higher elevations that the change was very noticeable.

Accordingly, a visit was paid to the baths in question where, at Ume no Yu—a spacious bath-house inn of unusual size and comfort—we had a delightful experience. Private bath-rooms, some twice or thrice the size of the well known ones at the Fujiya Hotel at Miyanoshiita, supplied with every convenience, proved a genuine boon after our somewhat rough and tumble experiences of the past fortnight in the solitudes of Hida.

The water is said to be efficacious in no less than 28 specific diseases, the list I was presented with beginning with brain-disease and ending with paralysis.

At Matsumoto I had to part with my genial fellow traveller whose cheery companionship had helped to make our Hida trip so enjoyable, and whilst he went eastwards, I struck out due south, having as my object the first ascent of Akaishi-san, one of the highest peaks of the great range between the well known rivers Tenriugawa and Fujikawa. Owing to its position, the lofty ridge of which it forms the culminating point is scarcely seen from the ordinary beaten tracks, and in order to obtain a view of it one needs to stand on some

height overlooking the intervening ranges which shut it out.

A native carriage was chartered for my baggage, my own person, and that of the ever obliging young landlord of the Shinanoya inn, at which both last year and this I have found the greatest attention. On the occasion of my first visit he was indefatigable in his efforts at furthering our plans, and now he proved no less solicitous to do the same. Indeed, he volunteered to accompany me as far as I wished on my expedition, and his ever-ready help made the journey all the pleasanter. And so behold the *basha* rattling down the street leading out of Matsumoto at the southern end of the town, as we turn our backs on the great mountains which for a fortnight past have afforded so much enjoyment. A ride of 2½ hours along a good road over the Matsumoto plain brings us to Shiwojiri, and in 40 minutes more we are on the summit of the pass of that name, the well-made *shindo* (new road) taking a turn to the south-east from the village as it mounts the hills, and crosses them at an altitude of 2,800 feet.

A long but gradual descent soon takes us into the broad valley of the Tenriugawa whose swift current is approached shortly after passing through the village of Miyaki. An hour more and we reach Matsushima, here bidding a glad good-bye to the "jaunting car" a day's jolting in which—as a Scotch friend remarked of a *jinrikisha* ride over a very cobbly road—though it may be "a grand thing for the liver, is uncommonly bad for the trousers." From Matsushima Takato, our halting place for the night, a nearly level walk of 8½ miles took us across the valley, affording grand views of the summits of Komagatake of Koshiu in front, and the mountain of the same name in Shinshu on our right. On proceeding to the inn at Takato, to which we had been recommended, *de more Japonico*, we were refused admittance, and the same reception greeted us at a second. Finally, we sought the aid of the local policeman who succeeded in making our third attempt effectual. They had never had a foreigner here before, they said, and feared they could not hope to give satisfaction, but still they would try their best. Apparently they did, for the next morning when the bill was presented we were astonished to find that whilst supper, bed, and breakfast were charged at 25 *sen* each, we were called upon to pay 50 *sen* for a little carp and eel, which fish are by no means a rarity here. Takato, a busy, prosperous town of some 4,000 inhabitants, is picturesquely situated in the valley of the Mibukawa about 6 miles from the point of junction of that river with the Tenriugawa just below Ina on the Ina Kaido. This road is one of considerable importance, and from just below Shiwojiri runs for many miles nearly parallel with the Nakasendo which it has crosses at that village. It is, however, separated from it by the great mountain chain which also divides the Kiso-gawa from the Tenriugawa, and whose loftiest summit is the well-known Komagatake of Shinshu, highest of all the many mountains which bear that name. A grand expedition, taking one from the Nakasendo to the Inakaido, may be made over the summit of Komagatake (10,300 feet) from Agematsu to Ina, the views afforded being, from the central situation of the peak, of the most extensive and sublime description. The distance is estimated at a little over 12 *ri* (30 miles) and the climb involves an ascent of 7,500 feet on the west, and a descent of about 8,000 on the eastern side. The time taken, going steadily, is about 12 hours, though, as the expedition made by Mr. H. W. Belcher and myself last year was the first crossing by foreign travellers, we had no means of making any comparison in the matter of times.

Pleasant were the recollections that came crowding into one's memory as I left Takato on a gloriously clear morning, and looked back at the sharp peak for which, just at this time a year ago, my friend and I were starting. When on the top of the mountain then we were much attracted by the appearance of the great parallel range far beyond the broad valley of the Tenriugawa, and now the interest then aroused is stimulating one to make a closer acquaintance with these peaks of which but little is at present known.

Leaving Takato behind us, our route leads us high above the broad strong stream of the Mibukawa in whose company we keep for more than half the day. The most striking object in the landscape is the rugged form of the Koshiu Komagatake, which, though well seen from Takato itself, appears most to advantage at a point some 5 miles to the South, where the valley of the Kurokawa opens out on the left and discloses a magnificent prospect of the great precipices and ridges and the dark wooded lower slopes of the mountain. The ascent from this, the western side, should be an interesting expedition, but we were able to

gain very little information about it. Indeed, the ignorance of the people in this locality concerning its topography is surprising, and it was only by dint of the most minute and persistent enquiries that I was able by degrees to get any information of the mountain towards which our steps were bent. The character of the scenery in this neighbourhood is pretty without anything very striking to attract the attention when once Komagatake has fallen behind and is hidden from view by intervening lower ridges. At Ichinose (also called Entsuji) a halt was made for lunch, and a long wait was necessitated by the late arrival of the pack-horse we had chartered for our baggage, the load being, nevertheless, a very light one. Immediately on reaching the house which does duty for an inn—for few but the inhabitants of the valley use this road—we made arrangements with our host for a fresh horse to replace the one *en route* from Takao. The prospective transport, he said, would arrive *tadama*—a word which is popularly supposed to mean “immediately,” but as a matter of fact does mean, as has been pointed out already by a great authority on the language, any time between now and Christmas! In the present instance it had to be translated by 2½ hours, a disadvantage at a place where the swarms of flies were in excess of anything I ever beheld. The house at which we rested during this time was pleasingly deceptive in the matter of personal appearance. On entering, a dirty bare space with a large untidy room at the far end is all that is to be seen, but as a matter of fact there is a great deal more behind than appears at first sight, for, on turning to the right through a matless apartment, devoted, as most rooms in these parts are to the culture of silkworms, a lovely little guest room greets the traveller, and by its very neatness and coolness tempts him to rest an inordinate length of time. The mats are spotless, and the woodwork beautifully polished, in curious contrast to the front portion of the building. Nearly three hours had passed before we could move on, and when we did we found the walk lay up the close valley, narrowing at every few yards, into which the sun beats down fiercely with all the power of its early afternoon rays. Three miles out from Ichinose finds us at the head of the valley on the summit of the Ichinose-toge, 4,442 feet above sea-level; but not before I have had a narrow escape of making the quickest descent on record to the bed of the stream, down a nearly perpendicular bank thickly overgrown with thick bushes and young trees. For in this neighbourhood wild raspberries of great size grow in abundance, and their crimson fruit proves a constant temptation to stray from the pathway we are on.

From the summit of the pass the narrow road still goes due south, and as it has just left the source of the Mibugawa behind, so here it discovers the birthplace of the Kitairigawa (or Kashiogawa as it is sometimes called, from the name of the locality through which it flows) until, farther down, it joins the waters of the Koshibugawa on its way to swell the mighty torrent of the Tenriugawa itself. The path continues to descend through a shady forest of firs, maples, and *sawaya*, and as most of the few inhabitants of the valley gain their livelihood by working up the timber in various ways, saw mills form a large proportion of the erections one passes on the downward way. The character of the scenery now improves, and on the hill side about half down to Ichiba, a few scattered cottages under the name of Onnataka are worthy of notice by reason of a curious report about them. *On dit* that here *women* only are looked on as the heads of the households, whilst if any outside “Lord of creation” (what a misnomer here!) should have the temerity to aspire to the hand of one of these fair ladies, his life then is of but short duration. For though it is popularly supposed that the hen-pecked husband is in fair Japan a non-existent personage, or at any rate a *rara avis*, the reverse would seem to be the case here; since it is assuredly owing to the crushing weight of the burden of matrimonial life that these unfortunates come to such untimely ends.

Near Ichiba the scenery grows more picturesque as the valley opens out, and the pretty village with its cottages dotted about on either side of the broad river, here crossed by a long narrow bridge, at length greets our eyes. We had been recommended to the inn—doubtless the better of a poor pair—on the left bank of the stream, but owing to sickness in the house we could not be taken in, and had therefore to try the modest establishment just across the bridge, the Dai Manya by name. Here we were successful, and whilst waiting for the baggage to arrive I enjoyed the nightly luxury of a *furō*, than which nothing is more refreshing and soothing to the traveller when a good day's work has been done. As it was only six o'clock when we reached Ichiba I decided to wait for my own provisions rather than fall to on the native food with which my companion speedily

proceeded to regale himself. By about 8 p.m., however, no beast of burden had arrived, and the inner man began to assert its claims so persistently that I was obliged to called for *gosen* to satisfy its needs. Hour after hour still dragged on in weary expectation, until it at length appeared as if this Micawber-like state of waiting for “something to turn up” might go on indefinitely.

By midnight, therefore, as the baggage did not turn up, I turned in, *i.e.* turned over on the *futons*, on which I had for some five hours been already reclining, and went to sleep.

It is a fact of common experience that misery acquaints a man with strange bed-fellows, and this occasion was no exception to the rule, for how many of that domestic insect, which is always so much at home in the hostels of Japan, I fed with my own hand, though truly against my will, I should be afraid to say. How they fared I can not clearly tell, for though I may have been faint through want of sustenance, they certainly had no cause for complaint. However, it was the first time they had been out to dinner on foreign food, so one must make allowances for them, but I regret to state they made none whatever for me.

An early start next day was impossible, as it was not until 8.15 that the truant pack-horse and his laggard leader appeared on the scene. To account for the 12 hours delay, the latter explained that the former had become weak by the way, an excuse which could deceive no one, for on unloading the animal of its burden, it transpired that my share of it was only a small one, the would-be wily rustic having *en route* engaged for a mere trifle to carry on a still greater cargo for some one else, though I was to pay the full hire myself in addition to this extra charge.

The trick, however, failed of its object, and my friend was the loser by his cunning, since now I declined to pay more than a fair share, and not the whole of the hire, and the rest he was compelled to whistle for, or get it as he could.

A glorious morning made the walk on from Ichiba to Okawara, 2½ miles, very pleasant, and grandly did the rocky cliffs below the former village stand out as the Kashiogawa, down which we have been travelling, leaves us at the turn it takes westwards to join company with the Koshibugawa whose course we now have to follow almost up to its very source. A wide valley now opens out amongst the well-cultivated hills and on the lower slopes of these to the left, the pretty cottages and picturesque little temple of Okawara are perched in a sheltering grove of cryptomeria.

As we pass along the pathway leading up from the river bed to the village, the local belfry attracts our attention. This consist of a flat board of very hard wood, in shape like the ordinary notice-boards of the country, suspended underneath a narrow wooden roof, between two posts. When struck by a well wielded truncheon the board gives out a note which resounds far and wide as a call to the villagers to cease their labours and gather to the spot to hear the announcement it is desired to make. I was told that this was once quite a common object in country villages in former times, but that it is now very rarely met with except in the remotest parts.

And yet close by stands the largest and neatest village school I have seen for some time, a curious contrast with its foreign face side by side with this old relic of by-gone days.

A kindly welcome was accorded at the inn kept by Imai Takijiō, and though it was the first time he had been called on to cater for a foreign guest, yet so zealously did he, his family, and his domestics exert themselves that I fared more comfortably in this little out of the way hamlet than any where else during the whole of my trip. A chair and a desk were borrowed from the school, and every attention was shown that simple native courtesy could devise. So it was with an anticipation of genuine satisfaction that, when I had to say good bye for a couple of days or so, I was able to look forward to spending Sunday's quiet rest on my return to this hospitable inn.

We had been told at Ichiba that probably the local policeman of Okawara, one Hasegawa, would be able to give or gain information about Akaiishi San, and our expectations were not disappointed. For shortly, thanks to his intervention on our behalf, the very person we wanted arrived, a hunter, Morishita Takiya by name, who last year succeeded in reaching the summit of the peak in company with an official of the War Office who had been sent to carry out certain surveying operations in this neighbourhood for which the height and position of Akaiishi-san were particularly favourable. Him we at once engaged, and as a companion for him one of his friends whom he at once went to seek. By the time we had finished preparations, the men were both ready, and we set out for a walk of six miles to the place at which we had been told we could spend the night. The path thither was a remarkably good one for

the most part, though here and there an awkward passage had to be made over the débris of recent landslips which had obliterated all traces of the road and carried destruction far down the mountain sides to the river below. Leaving Okawara behind, the character of the scenery soon changes, a magnificent wild gorge succeeding the bright open valley with its level fields and terraced slopes. The road winds round the forest-clad heights far above the great torrent of the Koshibugawa, and passes through the neat village of Kamasawa, on the side of a steep promontory where a lateral valley opens out on the left, 3½ miles from Okawara. Then comes a descent to the level of the stream, and a tributary torrent is crossed by a bridge, after which an almost equally steep ascent takes us up once more to a height of some hundreds of feet above the river. But at length we come to a full stop, as the path suddenly ends, dipping down to the edge of the torrent, and then disappearing in the most abrupt and unexpected way.

But just above the spot where the track loses itself, stands the curious establishment of which we had been told. This consists of a rough structure containing one big room downstairs and several smaller ones in the *nska*, these latter being for the accommodation of the country folk who occasionally resort hither for the sake of the sulphur water bath which gives this odd shanty its *raison d'être*. To enter the house one has to pass by the two baths which stand on a raised platform on the left underneath a wooden shed. One of these is artificially heated to a temperature of about 120°, whilst the other is left at its natural temperature of half that amount. The advantage of having the two side by side is very great, and nowhere have I enjoyed this kind of bathing more than at this queer out of the world spot at the bottom of this lonely glen.

How politely the old grey patriarch of 73 received me and apologized for all the roughness and dirt which he said, he knew would be so trying! With modest pride he presented me with a little packet of *yubana*, the solidified deposit of the mineral spring which to him was no doubt, the most wonderful thing in the world. With what alacrity he skipped about—activity astonishing in one of his years—to get ready the best room he had got, turning out, as I afterwards discovered to my regret, a party to whom he had previously given it. Never shall I forget the polite amazement with which he watched his first foreign guest prepare and despatch the evening meal. I have had many pleasant experiences of kindly civility in one part or another of this land of bows and smiles and pretty speeches, but never, either in or out of Japan, have I met with a truer gentleman than this poor, untutored rustic dwelling all his days in an out of the way valley which “Civilisation” in its onward march has not yet reached.

Half-past six on the following morning saw us on the march for Akaiishi-san and as the route thither first lay up the torrent bed of the impetuous Koshibugawa—which by the way, gives to the bath house here its name of Koshibu-no-Yu—our climb was almost a repetition of that to the foot of Yari-gatake a week before. It was, however, never possible to take to the banks, and the whole of the time we were in the bed of the torrent our way lay over its rounded slippery boulders. Occasionally we had a grand bit of real climbing when in some narrower part of the channel it was necessary to turn some great rock at the side that jutted far out into the stream and barred the way. But the coolies seemed hardly to appreciate this form of recreation and on the descent studiously avoided such spots wherever it was possible. On either hand the cliffs that hem in the torrent, wooded very nearly from base to summit, rise up so steeply as to only leave quite a narrow band of the clear blue sky, which shows in lovely contrast with the dark hues of the sombre sides of the ravine. At length, after 2½ hours, steady going, during which we had crossed and re-crossed the stream a score of times or more, we were able to call a halt at the point where we had to leave its course and take to the precipitous pine-clad slopes of the great spur thrown out on the western side of Akaiishi San. On the left a wide valley opens up, the birthplace of the Koshibugawa, which is here joined by the wild waters of a torrent hurrying down from the south western slopes of the mountain. The spot is known to the hunters as Hirokawa, and may fairly be considered as the *sumoto* of Akaiishi, the true base of the peak. Two hours' hard scramble through the pine forest on the spur, brought us close to the point of its junction with the main mass of the mountain, our course being till now due east. A hollow spot here, called *Funakubo*, in allusion to its supposed resemblance to a boat—proved a capital place for lunch, and on making a move again we began to work round to the north. A couple of hours over the bare loose reddish rocks of the western slope brought us to a place in the midst of a great stony wilderness where the coolies—or

Original from

rather the one who was acting as "guide"—averred we should find water.

This, however, was a delusion, for none was to be seen, so, after depositing the baggage in a safe spot, we once more turned our faces eastwards and in an hour we were on the arête which runs from the summit of Akaishi nearly due north and forms part of the boundary between the provinces of Shinshu and Suruga, the latter of which here thrusts up a tongue like portion of its area between Koshu and Shinshu. This is bounded on the east by the great Shirane-san range, and on the west by that of which Akaishi is the highest point, whilst in it the head waters of the Oigawa (here known as the Tashiro-gawa) take their rise.

The climb up to the ridge, though not difficult, was somewhat tiresome, as the mountain path here is in a very bad state of repair, albeit as we safely arrived at the wished for goal it may be inferred that we left no stone unturned, both literally and figuratively, to secure success.

Once on the arête, another hour of ups and downs due south, brought us to its highest point, and so at 4 p.m., after not quite 10 hours' going, inclusive of halts, we were by the mark put up by the Rikugunshô official who was last year the first traveller to set foot on the summit. In fine weather a grand and extensive view must be gained here, but unfortunately the dark masses of gathering clouds and the commencing snow prevented us from seeing much of the distant landscape. Now and then, though, the dark curtain would be swept aside by the chilly wind and reveal just a glimpse of the neighbouring peaks of Shirane-san.

In the immediate foreground, looking eastwards, the view was unusually wild and grand.

The arête on the right plunges down most abruptly into lonely valleys, some of which are partly filled with snow, and care is needed as we tread the edge of the sharp ridge and turn an occasional corner, to avoid the most serious consequences. After spending an hour on the top, taking boiling-point observations and waiting vainly for a view, we turned to descend. The government survey gives the altitude of Akaishi-san as 10,147 feet which would appear to be about correct.

On arrival at the spot where the baggage had been deposited, the dark clouds now coming up swiftly from the south and the heavy rain-drops beginning to fall, warned us that no time was to be lost, and gathering up our goods we fled with all speed towards the head of a ravine down the north-east flank of the mountain where, the "guide" said, we should find water, wood, shelter. Quite suddenly, however, at about 6.30 a pall of black vapour swept up the valley and in a few minutes we were almost in darkness. Sending the two coolies on to deposit the baggage at the prospective bivouac and gather firewood, my Matsumoto companion and I followed more leisurely, for we were making the descent of the loose steep rocks of a dried-up water course, which, in the fading light, was most trying to my imperfect powers of vision. By and bye, however, we came down to a place where one of the coolies was engaged in clearing a space out of the dense patches of *haimatsu* on the edge of the torrent bed. "Where is the camping place?" We asked. "Why, here it is," was the reply.

"But the cave?"

"Oh, it's further down."

"How about the water, then?" I said.

"Well, the fact is the stream has dried up just here and water rises some distance lower down the ravine," said the coolie.

Preferring a little extra stumbling whilst one we were at it, with the prospect of a decent shelter, to a night spent out in the open and at a distance of I knew not how far from our water supply, I gave orders to move on, and by 7 o'clock or so, we were at the "grand cave" of which our "guide" had spoken in such admiring tones. I had not expected very much, it is true, but I must confess to somewhat of disappointed feelings when I found the shelter to consist merely of a couple of pieces of rock leaning against each other in such a way as to leave a space between them at the bottom of about 8 feet by 3, whilst as their upper ends did not meet there was nothing to hinder whatever the elements might bring in from above. However, I managed to stretch overhead a piece of oiled paper, meant to serve as a tent in case of need, so as to form a kind of roof. And just as this operation was finished down came the storm which had been brewing for some hours past. Whilst a thunderstorm is always a grand spectacle, it is nowhere so magnificent as among the mountains, as Byron has it:—

Far along,
From peak to peak, the rattling crags among,
Leaps the live thunder! Not from one lone cloud,
But every mountain now hath found a tongue,
And Jura answers, through her misty shroud,
Back to the joyous Alps, who call to her aloud!
(Childe Harold, C. III, ga.)

Though on this occasion the storm only lasted about half an hour, it was sufficiently severe for us in our scanty shelter, but soon the sky began to clear, and the stars looked out from above to answer the light of our campfire now beginning to blaze. Before turning in,—or rather, going to ground, I produced my revolver and fired a shot into space, much to the astonishment of the hunters who had never, they said, heard such a awful report as that which now echoed amongst the sides of the ravine. As a rule, their own old fashioned muskets, which much resemble an ancient horse-pistol with elongated barrel, emit a bang no more stunning than that of the penny pistol with its pink paper caps with which we struck terror into the hearts of very juvenile brothers and sisters in the days of our childhood. And on the present occasion it was ludicrous to note the extreme surprise of my companions. "I say, what a tremendous noise it makes!" exclaims one.

"Please Sir," says the other, "don't shoot again; it is too much, my ears won't stand it."

From the various reports given by the rest of our party the next morning, I am disposed to think that the night they passed was neither peaceful nor pleasant. For myself, however, I am able to do no more than remark, that having left flea infected *futons* in the valley far below, and judging by the fact that when I awoke at dawn my head was securely wrapped up in my mackintosh cape, the probabilities are that some portion of the night at least was passed in obliviousness to surrounding circumstances.

After the storm of the previous night a perfect morning greeted us as we made our way from our bivouac at 6 a.m. and climbed to the head of the ravine to rejoin our tracks of the day before. Not till we got well up on the west slope of the mountain did we realize the magnitude of the view which Akaishi San can give. Whilst the landscape on its eastern side was shut out by the intervening arête (and this must include the whole mountain mass of Koshu, with Fuji and the sea), the prospect westwards was grand. The long range of Komagatake (in Shinshu) stands out in the nearer foreground, whilst more to the north the whole chain of the Hida mountains, of which the sharp peak of Yaiigatake is the most striking feature, rises up in all the massive grandeur of its snow streaked ridges and its granite cliffs.

A quick descent through the cool scented shade of the forest of firs; a slow one over the boulders of the torrent, and shortly after one o'clock we are once more welcomed by the genial old custodian of the baths. And yet for all his trouble and attention he only wanted to charge us 4 *sen* apiece, and when pressed to take more was overwhelmed—sincerely, I believe—with gratitude. He told us that Hasegawa San, having grown anxious at our non-appearance in Okawara earlier in the day, had come up to the bath house to make enquiries about us. So when we arrived at the village later on, that worthy was relieved to find us safe and sound. Whilst in Okawara the landlord of the inn sent a messenger to a village some distance off for a curious stone which he thought I might be interested to see. It was about the size and shape of a turkey's egg, of a buff colour and quite smooth and round except on one side where a piece had been chipped off. From the frequent admiring references I heard made to this before I actually saw it, I judged it to be a great curiosity and wondered whatever it could be, since I was told that it had been discovered some time ago in the stomach of an *iwa shika*, a mountain antelope, the *chamois* of Japan.

That the animal had swallowed it I could scarcely believe, and yet it was certainly a puzzle to know how it had reached the creature's interior from without. It was not until I got back home and happened to be reading a chapter in Dr. Bonney's "Alpine Regions" that I obtained any clue to the mystery, but there I came across what is evidently the solution of it. On page 180 (chap. VI., Alpine Mammalia, &c.) I read as follows:—"Owing probably to the resin contained in so much of their food, and its fibrous character, a hard, dark coloured ball, from the size of a walnut to that of an egg, of a bitter taste, but pleasant odour, is often found in their stomachs. This is called 'Bezoar,' and it was anciently supposed to cure all evils, and be a protection even against musket-shots. A sceptical analyst, however, I fear, expelled it from the pharmacopœia."

Taking a regretful farewell of the kind-hearted people who had been my hosts with such good will, a sentiment of which I received a touching proof when the old lady of the house, on my leaving, proudly presented me with six potatoes, a real luxury when one can get so few fresh vegetables with one's food, we left to retrace our steps over the Ichinoze-toge to Takato. Spending another night there, we then crossed over the northern end of the Koshu range by the Kana-

zawa-toge from Midogaido to Kanazawa, on the summit being confronted with a glorious—almost startling view of Yatsu-ga-take, the "eight peaked mountain." From here I went down the Koshu Kaido in a *basha* to gain a little time. Externally the *basha* is a cross between an ambulance waggon and a prison van—certainly the feelings it is conducive of are not inappropriate to both these undesirable vehicles, and only those who have suffered a couple of days' torture in it can possibly realize the anguish of the most trying means of locomotion that this land of novelties can produce.

The road was in many places undergoing repair, i.e. at frequent intervals large portions of it were covered with boulders from the size of a football downwards, with the result that a good deal more of our route was walked than we had bargained for, with a corresponding loss of time. After the solitudes of the mountain valleys on the other side of the range, the busy traffic and bustling life on this great highway was a great change, but not a very pleasant one, although it had its diversions. One of these came on me in a curious way. Passing by a cottage which stood on a bank some 20 yards from the road, I was startled, almost horrified, at the sight of a human head lying, hair upwards, on a wooden table in front of the house. Whether it was a horrible reality or a native effort at reproducing the well known conjuring trick of Maskelyne and Cook I could not at first be sure. But at last as we drew closer, the truth dawned on me. It was the master of the house enjoying his hot bath in the cool of the afternoon, with the tub placed where he could unhampered watch what was going on before his cottage door.

A thunderstorm broke on us between Kôfu and Kajikazawa, though fortunately a roadside shelter was reached just in time to escape a drenching. Never have I seen more vivid forked lightning than on that afternoon ride. But the rain served us well, for after the drought of the previous weeks the torrent feeders of the Fujikawa had been somewhat impoverished, and now their volumes swelled so rapidly that the river itself was sensibly affected, and on our arrival at Kajikazawa it was prophesied that our journey down the rapids would be of more than average quickness.

At 4.30 a.m. on August 25th I said good-bye to my Matsumoto friend and embarked in the mail boat that was to take me down the river to the Tokaido at Iwabuchi. On the previous night I had been offered a private boat at \$2, though according to "Murray" the usual hire is \$4.50. However, as I knew the mail boat was obliged to be in Iwabuchi in time for the 12.7 up train to Tokyo *doka koka*, by hook or by crook, and having found on enquiry that the number of passengers would not be large, I preferred to book a seat in the same, for which I paid the sum of 35 *sen*, and did not regret the arrangement. Like the route I had travelled down the Koshu-kaido, the trip down the rapids of the Fujikawa is too well known to need description. The scenery, though by no means tame, is so much less striking than that of the Tenriugawa, the passage of which I made last year, that possibly I was insensibly led to underrate it. Perhaps the most curious type of a Japanese gentleman I have ever met was my next door neighbour in this mailboat. Long grey hair, carefully brushed over his head and neck, a fine almost white beard partly covering his chest, and cheeks as rosy and round as a peach in full bloom, all contributed to make a most interesting object for contemplation, and for once, in spite of the interesting surroundings through which we were passing, one here at least was constrained to drift by it heedless, though mindful of the poet's words that:—"The proper study of mankind is man." For his part my picturesque old friend seemed disposed to think otherwise, or at any rate only to give a partial acquiescence to that well-worn dictum. He appeared to hold that the proper study for him, at any rate, was the care of his moustache, for a large part of his spare time, when he was not engaged in eating or smoking, was spent in extracting, with a pair of forceps such as are used for drawing out splinters from the flesh, all stray hairs which a careful search detected in his upper lip. And I am bound to say that he did his work remarkably well, inasmuch as that part of his person was ultimately rendered as smooth as that of an infant.

So well did the sendoes work, and so strong was the current that in 6½ hours we were at Iwabuchi Station. Some of my fellow passengers whose hopes, raised high by the rate at which we had been travelling, were set on catching the 11.12 down train to Nagoya, however, had the mortification of seeing it just steaming out as we came gliding in.

"Well, and after all what is the good of this mountain climbing; isn't it all making a toil of pleasure?" is a question sometimes asked of those

whose favourite pastime it is. No better answer to such an enquiry can be given than to quote some remarks one made by one of the foremost pioneers of the Alps, Mr. E. Whymper, the well known conqueror of the Matterhorn and explorer of the great Andes of the equator. For, *mutatis mutandis*, those remarks have a similar force whether used with reference to the Alps of Switzerland or those of Japan. He tells us that the moral of mountaineering is this—that "it is the purest, healthiest, and manliest of all sports. And often, in grappling with every-day difficulties, sometimes in apparently hopeless tasks, encouragement has been found in the remembrance of hard-won victories over stubborn Alps. We who go mountain-scrambling have constantly set before us the superiority of fixed purpose or perseverance to brute force. They know that each height, each step, must be gained by patient labourious toil, and that wishing cannot take the place of working. They know the benefit of mutual aid, that many a difficulty must be encountered and many an obstacle must be grappled with or turned; but they know that 'where there is a will, there's a way,' and they come back to their daily occupations better fitted to fight the battle of life, and to overcome the obstacles which obstruct their paths, strengthened and cheered by the recollections of past labours, and by the memories of victories gained in other fields."

Of the mountains which well deserve the title of the Alps of Japan the traveller who penetrates within these charmed regions may rest assured that he will find man and his works conspicuous by their absence, for here

Beyond earth's voices there is peace.

Here he can wander and climb to his soul's content, holding communion, in all that is best and noblest in his being, with that nature which at every turn bears the impress of its great Creator's hand. For who can breathe the pure clear air of alpine heights and snows without feeling that there where he is drawn up into a nobler, better atmosphere, moral as well as material, his soul is being lifted up through nature into intercourse with nature's God?

And so the aspiration of the great Hebrew musician comes to have for him a two fold signification:

I will lift up mine eyes unto the hills
from whence cometh my help.

As it has been intimated that in connection with the foregoing articles, some hints on travel in the higher mountain districts of Japan might be profitably added, a few suggestions are accordingly offered in the hope that they may be of use to those whose experience has not yet reached to the districts remote enough from the beaten tracks to need a little special care and preparation for travel of a rougher kind than an ordinary visitor is accustomed to.

With regard to the general question of outfit, etc., for mountain travellers and explorers, the most valuable information ever published is to be found in the "Report of the Special Committee on equipment for Mountaineers," in the Journal of the English Alpine Club for May 1892, (published by Longmans, Green and Co., London, price 2s.). Every department of the question is dealt with in the most thorough manner, and the hints, *mutatis mutandis*, will be found to be of equal use to the traveller in the Alps of Japan or those of Switzerland, or on the "Frosty Caucasus" itself.

Valuable suggestions also are to be found in the Introductory portion of Murray's "Handbook to Japan," too well-known to need recommendation, though less information in the mountain routes is given in the body of the present edition of the work than could be wished by those travellers who prefer the unbeaten tracks to the regular road.

With regard to dress, a Norfolk-jacket with plenty of pockets, and loose knickerbockers, of a strong grey flannel will be found serviceable, whilst for under-wear the lightest and thinnest woollen, or silk-and-woollen, vests and shirts are best, since there is less risk of getting a chill after being over heated and then cooling down. A light travelling maud is also useful during halts at high altitudes, or bivouacs in the open.

If *waraji* are worn, care should be taken to have the soles of the *tabi* much thicker than those used by the natives, otherwise the feet are likely to suffer. The *waraji* give a better foothold on smooth rocks than hob nailed boots, but the latter are best when ordinary walking is being done. The blue cotton gaiters called *kiya-han* afford much more protection to the legs than woollen stockings when a way has to be made through the rough undergrowth so often found on the lower slopes of the mountains.

For ordinary boots a supply of Pound's Water-proof grease is invaluable.

A sheet, made into a bag and capable of being tied at the top; a ring air cushion to put under the hip when sleeping on the ground; and a water-proof ground sheet, will be found useful when

nights are spent away from inns. In such cases a good substitute for a tent can be made by means of three large pieces of strong oiled paper.

One piece is A shaped by folding it over a line stretched between two uprights, and the other two are tied to it by strings fastened on the edges.

For carrying purpose, the native *kori* is most convenient for provisions, books, instruments, &c., and if two or more are taken, they should fit into each other in such a way that when one is emptied the other may be put into it and so lessen the bulk.

For clothes and soft things, however, the Swiss *ruck-sack* is far better than anything else in the way of knapsacks and similar contrivances.

They are sometimes made of Willesden canvas, but I have found a sort of water proof cloth better. They consist of an oblong bag, say, 24 inches by 20, fastened at the top by a cord which can be attached to a brass ring about two inches in diameter. On this ring are sewn two straps which go over the shoulders, and, passing under the armpits, are fastened to the lower corners of the bag so as to allow the weight to rest in the strongest part of the back, just above the loins, the position being regulated by ordinary buckles. This "sack" is much the most comfortable and convenient device of the kind and has only to be used to be appreciated. By fixing straps and buckles under the lower end of the bag a mackintosh, shawl, or coat may be carried with little extra trouble.

For carrying drinks a vulcanite bottle covered with thick felt may be strongly recommended. If the liquid is wanted hot, the felt covering will keep it warm for a long time, while if it is desired to have it cool the bottle should be dipped in cold water, the evaporation of which from the soaked felt will keep the contents cold.

Maps, note books, etc., should be wrapped in some thin waterproof material to preserve them in case of one's clothing getting wet on the march.

A railway reading lamp is a great boon when in country places where the native lamps are usually of a poor kind; and it is far more satisfactory also than the native *chôchin* when walking has to be done at night on strange roads or rocky hillsides.

The question of food is to most persons of considerable importance. A man who is able to subsist entirely on the scanty resources of an out of the way hamlet is a rarity, and even if he is able to it is a question whether it is wise to do so.

Sometimes, however, one may be cut off from all sources of supply for several days, and it is well to have as much as possible in concentrated forms. "Bovril" makes a capital soup, and where hot water for this cannot be got, Valentine's meat juice with a little cold water is a valuable stimulant.

Halford's carried fowl is very appetising at the end of a day's work, and De Jongh's cocoa is the most conveniently made, and perhaps the most easily digested, by those who care for that kind of drink. Some travellers carry cold tea on the march and consider it both stimulating and refreshing. This is best made with cold water, and not with hot water afterwards allowed to cool. Few people would believe the difference there is between the two until they have tried both. The ordinary quantity of tea should be used, but instead of standing 5 minutes or so it should stand for as many hours.

Where it can be taken, however, cold coffee is perhaps still more refreshing, and can be strongly recommended.

A handful of good prunes, raisins, or dates may be put into the pocket at the beginning of a climb, the last being especially sustaining as well as tasty during the walk. Rice can always be got where the dwellings of men are met with, sometimes fish, and often eggs. A few simple medicines for ordinary ailments will generally be carried, and it is possible to get most of such things put in the form of tablets.

Of these perhaps the most handy and suitable for the ordinary traveller are the compressed drugs prepared by Burroughs, Wellcome, & Co. of Snow-Hill Buildings, London, E.C., and made up into a small pocket case under the name of "The Alpine Case." This is recommended by Mr. Clinton Dent, formerly President of the Alpine Club, a well known physiologist and surgeon, as well as a celebrated mountaineer. This case only weighs 8 ozs., and costs 21/-; a somewhat larger and more complete thing of the same kind being the "Mountaineer's Case," weighing 1½ lbs., and costing 25s.

Where the use of simple remedies is properly understood, much gratitude is the sure result of a little kindly employment of them in cases here and there met with amongst rustic folks, who never see a doctor once in a life time, perhaps, and know little of proper treatment for their common ailments.

A few little trifles taken as presents often help to secure the goodwill of those on whose help one is often quite dependent. A pocket-knife or a small compass given to the hunter who acts as guide, a pair of scissors to an inn-keeper, or a doll to his

little daughter, cost but little, and may bring in what is, under the circumstances, a considerable return. Above all things, be as polite as you can in your way, as the natives are in theirs, and you will often find things work much more smoothly. One generally finds that on many of the highways of foreign travel in Japan, the manners of the inn-keepers, &c., are extremely objectionable. There may be other explanations, but one certainly is this:—The lack of politeness and courtesy too often shown by the foreign traveller himself, the repetition of which in succeeding instances comes at last to be reflected in the unmannerly behaviour of the native himself. Whilst ice-axe and rope can practically be dispensed with in the Alps of Japan, unlike those of Switzerland, a piece of stout line often comes in useful and so will a good Alpine walking-stick, such as is sold for about 25s. by Hill & Co. 4, Haymarket, or Hennig & Co., 25, Coventry St., Haymarket, London.

As it is often necessary to do one's own cooking, whether at the country inns or when bivouacking on the mountain side, some sort of canteen is essential. It should be as compact and as light as possible. After trying various kinds, the present writer has at last found one which answers the above requirements almost completely. It is made of strong block-tin, and consists of a sort of sauce pan, 6 inches square at the top and 5½ at the bottom, the depth being 4½ inches.

A double handle of strong iron wire, about 3/16th of an inch in thickness, is fixed at one of the corners, being made so as to fold flat with the sides when not in use. Inside this pan is another which fits closely, but can be taken out and replaced with readiness. Inside this again are four oblong boxes the lids of which overlap the bodies an inch or so, fitting as tightly as possible.

These can be used for tea, coffee, jam, condensed milk, or whatever may be needed for constant use. The cover of the whole forms a frying pan, having a folding handle at one corner, whilst at the bottom, and closely fitting on to it, are a couple of plates, though of course the number may be easily increased if wanted.

The weight of this canteen is about 3½ lbs., and with the addition of a couple each of enamelled iron cups, knives, forks, &c., meets the needs of two persons. Of course a spirit lamp must also be taken with it, though it can be used, if necessary, over a fire or *kibachi*. Supplies of spirits or wine are to be obtained at chemist's shops in such towns as Takayama, Matsumoto, Takato, and elsewhere. [At all these places milk also is obtainable, but must be ordered overnight.] One of the greatest annoyances from which there is rarely any escape in native houses, is the ubiquitous domestic flea. Sometimes Keating's "Insect Powder" will keep it off, unless it be unusually hungry and correspondingly reckless. A solution of Jeyes' fluid in water, when used for washing the hands, arms, and neck, is also often efficacious. Another source of trouble is the unpleasant odour common to all Japanese inns, though this may generally be overcome by the constant use of a solution of Jeyes' fluid, a concentrated and more portable form of which, however, is to be had under the name of Creoline. This solution is also good for washing scratches and cuts, which may be further treated to advantage with an ointment known as Lano-creoline.

The above suggestions, it is hardly necessary to remark, may be added to or modified according to individual preference, though as nearly every item enumerated has been tested by the present writer in practical experience on one or other of a number of journeys in the mountain districts off the beaten tracks in Japan, it is believed that they may be of some little help to those travellers who wish to undertake journeys of a similar kind.

None of the writer's country trips have been made in the company of the "guides" usually taken on the most popular routes, with the result that expenses have been correspondingly low. A good companion is most desirable, and if the traveller has not enough knowledge of the Japanese language to make himself understood, a trustworthy native servant who understands him will be found sufficient. This plan is strongly recommended by some of the most successful of the travellers in the interior known to the writer, though he has found that even the country people are as a rule intelligent that a very little Japanese generally goes a long way.

In conclusion, the all important question of expenses claims a word. These are, naturally, much less when one travels off instead of on the ordinary routes most frequented by foreigners. In the former case innkeepers usually charge from 15 to 40 or 50 sen for *katago* (supper, bed, and breakfast) though a *chadai* is of course expected in addition. In the latter, the almost invariable price is 75 sen, whether the native food is eaten or not. Of the heavier expenses are those of transportation

of baggage, and, where a jinrikisha is available, of the traveller's person. For these, the remarks in "Murray" should be studied, though, it may be pointed out, the prices actually paid will often depend upon the persuasive powers one can employ in that most trying of all situations—striking a bargain. In any case this should be done over night, loss of time, patience, and money being thereby avoided.

The cost of the trip from Kobe to Yokohama described in the above columns, exclusive of provisions, etc., not purchased *en route*, but inclusive of expenses of a Japanese friend who travelled with the writer for the last nine days, came to \$68.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets on Monday and Thursday evenings at the Club Rooms, No. 86, Main Street.

SOLUTION OF PROBLEM No. 46.

- WHITE. BLACK.
1—Kt to Kt 6 1—K to B 3, or K 3
2—Kt to K 7, or B 4, acc.
(double ch. and mate)
2—Q mates at Q 7, Kt 7, or Q 4, acc.
1—K to Q 3, K 5, or B 5

Correct solutions received from J.D., Omega, Scacchi, W.H.S., J.W.E., O. Balk, and Digamma. M.A.W.—B to K B 3 is Black's reply to your key-move.

Correct solution of No. 44 received from O. Balk.

By C. PLANCE.

PROBLEM No. 48.

BLACK.

White to play and mate in two moves.

An unusually large chess match is on the tapis in England, the Northern counties having challenged the Southern counties. It is proposed to hold the meeting at Birmingham and to have fifty players on each side. We await further news with much interest.

In the City of London Chess Club the usual winter tournament is now in progress. There are no less than 140 players who have entered: "the list embraces the very cream of the Club, and the first class will include some of the very strongest metropolitan amateurs."

The new star Lasker, went over to New York at the end of September and is not expected to return to Europe before the beginning of 1893.

The following is one of the games recently played in the Master's tourney at Belfast (Ireland). We take the score and notes from the *British Chess Magazine*:—

ZUKERTORT'S OPENING.

White (Lee) Black (Blackburne)

- 1—Kt to K B 3 1—P to Q 4
2—P to Q 4 2—Kt to K B 3
3—P to B 4 3—P to K 3
4—Kt to B 3 4—B to K 2
5—P to K 3 5—Castles
6—B to Q 3 6—P to B 4

..... We should be disposed to agree with this most fully.

- 7—P to Q Kt 3 7—Kt to B 3
8—Kt to K 2 8—Q to B 2
9—Castles 9—R to Q sq.

..... On the principle of "Put your Rook in front of the opposing Queen no matter how many pieces intervene." Besides White's weak point is his Queen's pawn.

- 10—B to Kt 2 10—Kt to Q Kt 5
11—P to Q R 3 11—Kt x B

..... A most excellent exchange, which White should generally try to avoid, especially as after retaking, the Q remains unprotected at Q 3. In this case the loss of this B is felt severely later.

- 12—Q x Kt 12—P x B P
13—Q x P 13—P to Q Kt 3
14—Kt to K B 4 14—Kt to Q 4

- 15—Kt to Q 3 15—P x P
16—Q x Q 16—Kt x Q
17—Kt x P 17—B to R 3
18—K R to Q B sq. 18—Kt to Q 4
19—Kt to K 5 19—B to K B 3
20—Kt (Q 4) to B 6 20—R to Q 3
21—B to Q 4 21—B to Kt 2
22—R to Q B 2 22—B (B 3) x Kt
23—Kt x B 23—P to K B 3
24—Kt to K B 3 24—P to K 4
25—B to Kt 2 25—Q R to Q sq.
26—R to Q 2 26—K to B 2
27—Q R to Q sq. 27—K to K 3
28—K to B sq. 28—P to Q Kt 4
29—K to K sq. 29—Kt to Kt 3
30—R x R ch. 30—R x R
31—R x R ch. 31—K x R
32—K to K 2 32—B to Q 4

..... Here begins a fine specimen of end game play.
33—P to Q Kt 4 33—Kt to B 5
34—B to B sq. 34—B x Kt ch.
35—K x B
35 P x B, K to Q 4; 36 K to Q 5 is at all events not immediately worse.

- 36—K to K 2 35—K to Q 4
36—P to K 5
..... This is an important point (see last note).
37—P to R 3 37—P to B 4
38—K to Q sq. 38—P to Kt 3
39—K to B 2 39—Kt to K 4
40—B to Q 2 40—K to Q 6
41—P to B 4 41—P x P e.p.
42—P x P

Clearly Black wins by P x P f.e. K x Kt.

- 43—P to B 4 42—Kt to K 4
44—K to Q 3 43—Kt to B 5

It would be of no use to play B to B sq. and let the King walk in by way of his K 5.

..... Not at first sight so obviously advantageous as Kt x P, but see how it works out! A pretty ending to a well-played game. Lee fought well but was quite outplayed.

- 45—K x Kt 45—K to B 5
46—K to B 2 46—P to Q R 3
47—P to K R 4 47—P to K R 4
48—K to Q 2 48—K to Kt 6 and wins.

LATEST TELEGRAMS.

(REUTER "SPECIAL" TO "JAPAN MAIL.")

London, December 2nd.

There is reason to believe that the report of the committee of the Monetary Conference will be against Rothschild's scheme of purchase of silver at a fixed price, and that the prospects of any practical outcome of the deliberations of the Conference are vanishing.

Mr. Clayton has been unseated for Hexham, his return having been found to have been obtained through illegal acts.

[Delayed in transmission.]

London, December 6th.

The Committee of the Monetary Conference has pronounced almost unitedly in favour of the gradual withdrawal of gold coin under twenty francs and small banknotes.

The *Times* considers that the Monetary Conference has already failed, and that a sharp fall in silver will probably ensue.

Mr. Jay Gould is dead.

M. Ribot is forming a new Cabinet, and will combine the Premiership with the portfolio of Foreign Affairs.

Later.

Rothschild has announced that he will withdraw the proposals he made at the Monetary Conference in view of the refusal of the American delegate's support.

Mr. Hill has introduced a bill in the Senate for the repeal of the Sherman Silver Purchase Act.

["SPECIAL" TELEGRAM TO "JAPAN MAIL."]

Nagasaki, December 4th.

The *Ravenna* has arrived safely at this port, and the damage through the late accident has been found to be confined to the bow forward

of the collision-bulkhead. There is a large hole above the water-line, and the stem below water is badly bent, but the collision-bulkhead remains intact, and no cargo has been damaged, local cargo only being discharged. No particulars in regard to the cause of the collision are obtainable, nor will these probably be made known until they come out at the enquiry.

Nagasaki, December 5th.

It has now been decided to discharge and land all the *Ravenna's* cargo, and dock the ship for repairs immediately.

Nagasaki, December 6th.

The *Ravenna* goes into dock here to-morrow. It is stated that the enquiry into the circumstances of the collision will probably be held in Yokohama.

FROM "EL COMERCIO."

Madrid, November 18th.

The King and Queen of Portugal, who have been attending the Columbus celebrations, returned to Lisbon to-day, after a commercial treaty had been concluded between Spain and Portugal.

PASSENGERS.

ARRIVED.

Per British steamer *Gaelic*, from San Francisco:—Judge J. H. Boalt, Mrs. Boalt, Mr. A. Guilleaume, Mrs. Guilleaume, Mrs. S. Arnold, Mr. Lewis Morris, U.S.N., Rev. A. A. Bennett, Mrs. Bennett and infant, Chas. B. Bennett, Edwin T. Bennett, M. Elsie Bennett, Bertha F. Bennett, Albert A. Bennett, Harriet F. Bennett, Messrs. Chas. L. Drain, Chas. A. Taylor, Emma M. Lee, and Dr. H. Tripler in cabin. For Hongkong: Mr. D. L. Bliss, Mrs. Bliss, Miss Hope L. Bliss, Mr. Chas. T. Bliss, Miss Ada E. Tobey, Mr. A. T. Holden, Rev. E. S. Bickford, Mr. Stuart M. Brumagim, Mrs. E. S. Flowers, Miss Maud Morgan, Mr. Jas. McWilliams, Miss Regina M. Bigler, M.D., Dr. J. C. Sundberg, and Mrs. Sundberg and infant in cabin. For Shanghai: Rev. A. Sydenstricker, Mrs. Sydenstricker, Edgar C. Sydenstricker, and Miss Alice M. Stanton in cabin.

Per British steamer *Ancona*, from Hongkong via ports:—Commander Bell, Miss Vigers, Miss Andrea, Mrs. Brent, Miss Moss, Messrs. E. A. Bird, Arthur Bient, and Lew Fai Woon in cabin.
 Per British steamer *Zambesi*, from Tacoma, Wash., via Victoria, B.C.:—Mr. and Mrs. Walker in cabin; 147 Chinese in steerage.

Per British steamer *Empress of India*, from Hongkong via ports:—Mr. A. Gregory, Miss Ross, Mr. D. E. Brown, Miss Parker, Miss Stewart, Rev. Mr. and Mrs. Patch, Miss Howard, Mr. and Mrs. Mordhorst, Mr. M. de Bunsen, Mr. G. E. Woodhall, Lieut. O. Ehlers, Mr. and Mrs. Rollins and family, and Mr. A. Lopez de Vega in cabin; Messrs. R. W. Rolfe, Shuttleworth, Hugh S. Rose, T. G. Allen, and W. L. Sachtleben in second class; 7 passengers in European steerage, and 326 passengers in Asiatic steerage.

Per British steamer *Oceanic*, from Hongkong:—Messrs. J. M. Kelly and W. H. Wallace in cabin.
 Per Japanese steamer *Tokio Maru*, from Kobe:—Mr. Waslankoff, Mr. Lopez de Vega, and Mrs. Oyagi in cabin; Mr. Uyeno and Mr. Hagi in second class, and 27 passengers in steerage.

DEPARTED.

Per German steamer *Nuernberg*, for Hongkong via ports:—H. E. Minister Nakajima and family (Japanese Minister for Rome), Prof. Paternostro and family, Dr. L. Busse and family, Captain-Lieutenant Etienne, Messrs. F. B. Hayes, D. Thorp, Dankwerts, and one Indian in cabin; Messrs. Lo Duck Ton, Ching Mong Tow, Le Yee Pat and child, and E. Man Kai in second class, and 27 Chinese on deck.

Per French steamer *Salasia*, for Shanghai via Kobe:—Messrs. M. Abraham, Wong Liow Wo, Chow Tian Lip, Sutter, Salvery, Mr. and Mrs. Flothow, Messrs. Ah Yam, Veith, Koelher, J. Bertrand, Boelle, Gamain, H. Veaux, Monge, Meikle, C. H. Thompson, Mrs. and Mrs. J. McNab, Miss McNab, Messrs. John McNab, Jane McNab, Kitamura Hichiro, and Walter Herring in cabin.

Per British steamer *Gaelic*, for Hongkong:—Mr. and Mrs. W. W. Campbell, Mr. and Mrs. Hurlbut, Mrs. J. M. Jones, and Mr. H. L. Philip in cabin.

Per British steamer *Empress of India*, for Van-

couver, B.C.:—Mrs. Bruen, Mr. L. Boissevau, Mr. D. E. Brown, Mr. Gregory, Miss Harding, Miss R. Howard, Mr. and Mrs. Mordhorst, Mr. and Mrs. S. V. Morgan, Miss Morgan, Mr. G. Morgan, Rev. Mr. and Mrs. Patch, Miss Parker, Miss Rose, Mr. and Mrs. Rollins, Miss Stewart, Rev. and Mrs. G. S. Smith, Miss E. Smith, Mr. Vegas, and Mr. C. F. Heinlein in cabin; Messrs. Allen, Rose, Rolfe, Shuttleworth, and Sachtleben in second class.

Per British steamer *Oceanic*, for San Francisco:—Mr. J. O. Averill, Commander Bell, R.N., Madame Benezet, Messrs. T. B. Cunningham, J. A. Fraser, S. L. Husted, Jun., R. Isaacs, Miss Rose Isaacs, Messrs. J. M. Kelly, Kuino Shimichiro, C. T. Lindner, John Middleton, O. H. P. Noyes, H. D. Page, A. Parsons, O. A. Poole, J. P. Reid, Robinson, Miss Robinson, Mr. and Mrs. Shinamura, Mr. J. Stratz, Mr. Geo. Trotter, and Hon. Justice Wood in cabin.

CARGOES.

Per French steamer *Salasia*, for Shanghai via Kobe:—Raw Silk for France, 249 bales; Waste Silk for France, 608 bales.

LATEST COMMERCIAL.

IMPORTS.

In Cottons both 8½ and gibs. Grey Shirts are quoted a little higher to-day, as are also T-Cloths and Indigo Shirts. Turkey Reds and Woolens, on the contrary, are slow of sale and prices remain as last noted. The great decline in exchange rates has caused importers of Yarns to put up prices and stand firm at the advance; but buyers are loth to pay prices asked and are trying as far as possible to work down their stocks, purchasing for actual necessities only, and hoping for a change perhaps in their favour.

COTTON PIECE GOODS.

KEROSENE.

Since our last report the *Port Adelaide* and *Flintshire* have arrived with cargoes of Comet oil—increasing the stock of that brand by about 116,000 cases. There is very little business doing. Holders are strong with the fall in exchange, and

buyers begin to realize the fact that they may have to pay more for oil in the future.

QUOTATIONS.

Chester	\$1.75 to 1.77½
Comet	1.72½ to 1.75
Devon	1.67½ to 1.70
Russian Anchor	1.72½ to 1.75
Russian Moon	1.70 to 1.72½

SUGAR.

Not much done this week; but prices for Daitong and Canton are up 5 to 25 cents, while Brown Manila and White Java and Penang are down 5 to 15 cents. Market closes fairly strong at quotations.

PER PICUL.

Brown Takao	\$4.40 to 4.45
Brown Manila	3.90 to 3.95
Brown Daitong	3.85 to 3.90
Brown Canton	5.85 to 5.90
White Java and Penang	5.65 to 7.90
White Refined	—

EXPORTS.

RAW SILK.

Our last was dated the 2nd inst. Since then, settlements on this market amount to 676 piculs, divided thus:—*Hanks*, 47 piculs; *Filatures*, 367 piculs; *Re-reels*, 158 piculs; *Kakeda*, 104 piculs. Direct shipments have been 34 bales, so that the total export trade for the week amounts to 710 piculs.

There has been a fair amount of business doing from day to day, one or two days being fairly active. The tone of the market is much as last reported. Considerable business has been done in autumn-reeled *Filatures*, full size, and these are now exhausted in their turn, leaving nothing but winter reelings for future use. In sorts available for Europe, there are still some good parcels to be had, and reelers are current in their ideas, making a few sales from day to day. Best qualities of all descriptions are scarce and well held, the constantly declining exchange helping sellers to get fair prices for their wares.

Arrivals come in pretty freely, falling off somewhat at the close. The stock shows a slight increase on the week, but the visible supply to date shows a further decrease when compared with this day last year.

Exchange has drooped every day, with rather a smart drop at the end upon receipt of cable news to the effect that silver in London was down to 38½ pence per ounce. This should stimulate the export trade, but in the absence of any good news from the consuming markets, we do not seem likely to have higher prices here in the near future.

There have been two shipping opportunities since we last wrote, the French and German mail steamers leaving port together on the 4th instant. The former vessel, *Salasia*, carried 249 bales for France, and the latter, *Nuernberg*, had 75 bales for Genoa in transit. These departures bring the present export figures up to 29,687 piculs, against 26,515 piculs last year, and 10,676 piculs in 1890.

Hanks.—Rather more doing in this department, several small parcels being taken. *Fuyioka*, \$585; *Shinshu*, \$570; *Hachiogi*, \$515. The stock is very small—less than 400 piculs, and firmly held.

Filatures.—Some few buyers have operated in silks suitable for the United States, and claim that they have cleared out all the autumn reelings. The prices paid have been about equal to last week, and what decent quality remains is held in strong hands. In fine sizes, there has been a fair enquiry without heavy settlements, the higher grades somewhat neglected, but medium sorts have found buyers at prices ranging from \$700 to \$780.
Re-reels.—There has been some business in this department, and an advance of \$10 has been paid on Five Girl chop. *Shinshu* have also been done at \$762½, with *Bushus* at prices ranging from \$740 to \$640, while very low grade have been done, as before, at \$555.

Kakeda.—Several transactions noted on the basis of \$680 for No. 2 *Horsehead*, and \$730 for *Musume*; *Stork* chop, \$710; *Tortoise*, \$695.

In other sorts no business.

WASTE SILK.

In this branch there has been again large business, buying marching on with giant strides. Settlements aggregate 1,859 piculs, divided thus:—Cocoons, 248 piculs; Noshi, 344 piculs; Kibiso, 1,129 piculs; Sundries, 138 piculs. No direct shipments this week.

Arrivals fall off considerably, and the stock is reduced 1,200 piculs on the week. The visible supplies to date are about 5,000 piculs more than last year. Prices are somewhat lower, dealers being fairly current for nearly all descriptions. More than one half the stock consists of Noshi sorts, the bulk of the demand running on Kibiso.

There have been two shipping opportunities, the French mail steamer *Salanie* taking 608 bales of Waste and Cocoons, all for Marseilles. The German steamer *Nuernberg* carried 254 bales Noshi and Kibiso for Trieste, Milan, and Marseilles. These departures bring the present export figures up to 17,839 piculs, against 13,947 piculs last year, and 14,368 piculs to the same date in 1890.

Pierced Cocoons.—The remaining stock of good Cocoons has now all been purchased and 500 piculs still on hand consists of *Najiko*, *Sakusan*, and other inferior sorts, such as are classed under the head of Waste Cocoons.

Noshi.—Trade has fallen off from the previous week, and the settlements noted of late show some slight reduction in price. *Shinshu*, \$95; *Oshu*, \$125 to \$130; *Filature*, \$127½; *Hachoji*, \$125 to \$135; *Foshu*, \$70.

Kibiso.—A large business in this department. *Filatures* have been freely done at prices ranging from \$90 to \$105; large purchases of *Foshu* and *Bushu* ordinary at from \$35 to \$25.

Mawata.—No business, herein. Stock small with apparently no demand.

Neri.—Some large parcels have been done at \$17, ranging down to \$13½ for common quality.

THE GREATEST WONDER OF MODERN TIMES.
HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In 1 short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout May 1st, 1890.

AWARDED GOLD MEDAL L'POOL INTERN'L EXHIBITION, 1888.

YOKOHAMA: SATURDAY, DEC. 17TH, 1892.

SUMMARY OF NEWS.

THE *Tenriu Kan* left Shanghai on the 7th inst. for Keelung.

COUNT ITO, Minister President, is making gradual progress towards recovery.

H.I.M. THE EMPRESS, who has been indisposed for some time through cold, has now recovered her ordinary health.

THEIR IMPERIAL HIGHNESSES Princes Arisugawa Takehito and Komatsu Yorihito visited Yokosuka on Friday last.

THE presentation of diplomas to graduates of the Naval Academy at Etajima, in Hiroshima Prefecture, will take place on the 19th inst.

TELEGRAPHIC intelligences from Kanazawa and Toyama announce that a violent earthquake was felt there on the forenoon of Friday last about 10.42 o'clock.

THE Budget Committee in the Lower House has submitted its report, showing reductions to the amount of nearly 8 million yen in the Ordinary Rependiture.

It is stated that several wealthy merchants of Osaka and Sakai contemplate establishing a steel factory in the latter town with a capital of yen 300,000.

THEIR Imperial Majesties the Emperor and Empress have given donations towards the relief of the families of persons lost by the wreck of the *Chishima Kan*.

THE House of Representatives has passed a resolution pronouncing the Game Regulations unconstitutional, and declaring them without binding force from the outset.

THE Authorities have granted permission to the promoters of the Atami *Yinrikisha* Railway Company to construct the line. The original movers of the scheme met in the capital a day or two ago, and elected Mr. Takashima Toku-

yemon as Chairman of Committee. Among the promoters are Messrs. Okura Kihachiro, Hiranuma Senzo, and Tanaka Heibachi.

H.I.M. THE EMPEROR, who has been in disposed through cold, has recovered his usual health, and H.I.H. the Crown Prince, who has been suffering from fever, is also making progress towards recovery.

MR. YOSHIDA MASAHARU, Secretary of the Communications Department, has received permission from the Decorations Board to accept decorations conferred on him by the Shah of Persia and the Sultan of Turkey.

An earthquake was felt in Tokyo on the 11th inst. at 11.34m. 39s. a.m. The duration was 2 minutes 30 seconds, and the direction from W.S.W. to E.N.E., the maximum horizontal motion being 1.1 millimetre in 1.1 second.

THE members of the Tokyo Educational Society have presented a gold medal to Mr. Gimbayashi, newly appointed Governor of Saitama, by way of expressing their thanks for the services rendered by him while President of the Society.

H.E. BARON VON GUTSCHMIDT, the new German Minister to this Court, proceeded to the Palace on the 10th inst. at 10 a.m., to present his credentials to H.I.M. the Emperor. He was afterwards received in audience by H.I.M. the Empress.

THE total quantity of coals exported through the port of Moji in Kyushu during last month was 18,689 tons, of which 4,045 tons were forwarded to Shanghai, 7,395 tons to Hongkong, 1,765 tons to Chefoo, 750 tons to Jinzen, and 4,734 tons were for ship's use.

MUCH friction exists in the localities, several Prefectural Assemblies having passed, or threatened to pass, votes of want of confidence in the Governors and Chiefs of Police in the Prefectures. Suspension or dissolution of the Assemblies has followed in most cases.

A MEETING of the Cabinet was held at the residence of Count Inouye on the forenoon of the 10th inst., at which there were present Counts Kuroda, Yamagata, and Goto, and Messrs. Mutsu and Watanabe. Shortly after mid-day the Acting Minister President drove to the Palace to have audience with the Emperor.

A FATAL landslide is reported to have occurred in Yuokedani, a small village in the Kahoku district, Ishikawa Prefecture, shortly after midnight on the 4th inst. Two houses and two godowns were buried beneath the debris, and three persons were crushed to death. Two villagers were severely injured, and several others slightly wounded.

THE returns of telegraphic messages and receipts therefrom in the Empire for the month of November last were as follow:—Inland: messages, 405,044; receipts, yen 87,189.120; Foreign: messages, 4,373; receipts, yen 10,837.324. As compared with the corresponding month of the previous year, the above figures show an increase of 317 Domestic messages and yen 2,020.890 in receipts; and 55 Foreign messages and yen 1,673.182 in receipts.

A SHARP shock of earthquake was felt in Tokyo on the 9th inst. at 8h. 1m. 18. a.m. The tremor was experienced for 1 minute 30 seconds in the direction from S.E. to N.W., the maximum horizontal motion being 0.8 millimetre in 0.4 second. Another earthquake occurred at 10h. 43m. 57s. the same morning, the oscillation

lasting for 2 minutes 40 seconds. The motion travelled in the direction from E.S.E. to W.N.W., and the maximum horizontal motion was 1.5 millimetre in 1.5 seconds. The shock was weak.

SEVEN shipwrecked Koreans are reported on to have arrived in Yamaguchi Prefecture the 5th inst. The Koreans left Torai-fu in a boat for Chohatsu-ken on the 29th ult. A severe gale coming on, the boat was soon carried out to sea. They suffered severely from want of food, and were in a desperate condition when discovered on the 5th inst. by Japanese fishermen, engaged in fishing near Mirushima. The Japanese took them to Senzakura, in the Otsu District of the Prefecture, and reported the event to the Authorities.

SHORTLY after midnight on the 6th inst., a fire occurred at Maye-tanichi-mura, Momoo-gun, Miyazaki Prefecture. The flames, being fanned by a strong wind, spread in every direction, and before they could be got under 50 houses had been burnt down, and others considerably damaged. Some 14 dwellings were totally destroyed and 9 partly damaged at Fukuso-mura, in the Ashida District of Hiroshima Prefecture, on the forenoon of the 2nd inst. Early on the morning of the 5th inst., an outbreak of fire took place in a house at Kiyamacho in the Upper Masaki District of Kumamoto Prefecture. The flames were confined to the buildings where the fire originated, but a man and a horse were burnt to death.

MARQUIS MATSUDAIRA Koso, ex-Chief of the Echizen clan, who has been staying in England for some time for the purpose of completing his studies, returned to the capital on the 11th inst. Among the large number of persons who assembled at Shimbashi Railway Station to welcome the Marquis were Mr. Tatsuami, Director of the Bureau of Imperial Works; Mr. Saito, Chief Commissioner of the Trade and Industrial Bureau in the Agricultural and Commercial Department; the Governor of Tokushima; Judge Kuritsuka, of the Supreme Court; Judge Hasegawa, of the Tokyo Court of Appeal; Viscount Yuri, Barons Honda, and Aoyama, of the House of Peers; and Mr. Watanabe, Mr. Kato, and Mr. Oka, of the House of Representatives.

THERE is very little to be said about the import trade as markets remain mostly in the condition recently reported. The fall in exchange has continued, and those buyers who have been forced into operations have been compelled to pay enhanced prices, though much against the grain, as merchants in the interior seem inclined to run their stocks down to bare boards rather than spring another cent. This is especially the case in regard to Manchester goods, and consequently these have been taken on a gradually declining scale. Metals are also in small demand, though rates are unchanged for the few transactions put through. There is a good steady demand for Kerosene, that most in request at the moment being Russian oil, and full prices are paid. There is a fair amount of Sugar changing hands, and prices are unaltered. Considerable activity in the Silk market for Europe has caused a bit of a flutter among buyers for the United States, and the combined purchases for shipment in both directions amount to close upon 2,000 piculs. Prices continue on the upward line, unaffected by exchange. Waste Silk has also been well bought, and stocks show a slight reduction though these are still heavy. There is nothing to report in Tea. Exchange has continued on its downward course, though the latest is a slight indication of firmness.

EDITORIAL NOTES.

THE "KOKUMIN-NO-TOMO" ON THE SITUATION.

THE *Kokumin-no-Tomo's* utterances on political subjects must always be discounted, for the periodical is too strongly in sympathy with the so-called Popular Party, especially the Progressionist wing, to be regarded as an impartial critic of current politics. With due allowance for this circumstance, however, justice compels us to acknowledge that our contemporary's articles are always interesting and often instructive. Such certainly is the case with its latest essays on the present political situation. What will be the issue of the impending struggle between the Cabinet and the Popular Party? Before answering this question, the *Kokumin* takes a survey of the positions occupied by the confronting armies. The present Ministry's situation is peculiar. Its predecessors had reserves on which they could fall back in case of necessity. But the Ito Cabinet has no such reserves. If it be defeated, the event will mark the final defeat of the *Meiji* Government. Count Ito and his colleagues thus occupy a position of the gravest responsibility. Will they be able to maintain their ground? In the first place, the *Kokumin* discusses the strong points of the present Ministry. Foremost among them is its Minister President, Count Ito, "who, whatever complaints there may be against him, must be regarded as the foremost statesman of the present day." He understands what constitutional government means, and is credited with the intention of conducting the administration on constitutional lines. Nobody else can pre-empt the elder statesmen now in power. Secondly, the present Cabinet has no fear of restraints from outside: there are no *Kuro-maku* statesmen to impose terms. Thirdly, the chiefs of departments are in most cases men of sufficient ability and influence to maintain discipline among the officials under their control. Fourthly, whether deservedly or not, the Ito Cabinet enjoys the reputation of being a strong one. Fifthly and lastly, its conciliatory tendency and its apparent impartiality have had the effect of soothing the perturbed minds of the people. But numerous and important as its strong points are, they dwindle, the *Kokumin* thinks, into insignificance when compared with its weaknesses. First, its cohesion is defective, because it is composed of civil and military elements, mutually as repellant as oil and water. Whatever may be their private intimacy, Count Ito and Count Yamagata are not infrequently opposed to each other on political questions. There is also a constant danger of conflicts between the respective followers of these statesmen. Secondly, absence of avowed partisans in the Diet is a distinctly weak element. It is true that the National Unionists are opposed to the Popular Party, but they can never be counted unfailing supporters of the present Ministry. Thirdly, the Ministers of State have disappointed the high expectations which the people entertained of their willingness to correct administrative evils. In this context allusion is made to the half-hearted manner in which the question of interference in elections has been dealt with by the Government. Fourthly, another difficulty of the Cabinet is that it has to pay the debts of maladministration contracted by its predecessor. Fifthly, its so-called "negative policy" disgusts the people. They think that the Cabinet lacks courage either to adopt the Popular party's platform or to strike out an independent course of its own. Sixthly, the members of the Ministry are said to have lost much of their old energy; they have, in short, nearly played out their game. Seventhly and lastly, their long seclusion within the pale of officialdom has made them incapable of understanding the real wishes of the people. "In other words, they are not in touch with the times." Then, summing up the strong and weak points, our contemporary concludes that the latter outweigh the former very appreciably.

The *Kokumin* next proceeds to apply the same process of examination to the case of the

Popular Party. It commences by enumerating the *Min-to's* weak points. First, its opponents allege against it a want of able men, and the Tokyo periodical, though declining to traverse or endorse this criticism, acknowledges that the Opposition cannot boast of so many men of rank and distinction as there are in the Government. Secondly, the Popular Party lies under a charge of pursuing destructive tactics. Thirdly, it lacks knowledge as to details of administrative affairs. Fourthly, it labours under great disadvantages in matters of political combination, public meetings, and publications, in consequence of stringent laws bequeathed from the despotic régime of former years. Fifthly and lastly, it has promised much to the people, but has been unable in most cases to redeem its pledges. The *Min-to* is not to blame for this, but the fact itself cannot fail to tell against its influence. The *Kokumin* then turns to the congenial task of saying the best it can about the Popular Party. First, that Party has the credit and honour of representing the national aspirations of the people. "It is the child of reform and progress," the mainstay of the political life of the present day. Secondly, it possesses an undoubted majority in the House of Representatives; its entire strength is estimated at 171, consisting of 88 Radicals, 38 Progressionists, 19 members of the *Dōmei* Club, 11 members of the *Tohoku Dantai*, 5 members from Kii, and 10 Independents. Thirdly, not only does it command a majority in the House of Representatives, but it is also supported by the majority of the people, whose confidence it has deservedly earned by its heroic devotion during the past ten odd years. Fourthly, it pursues an aggressive programme, its principal aim being to pull down Clan Government, to establish a system of responsible administration, and thus to bring officialdom into touch with the desires of the people. Fifthly and lastly, if it be wanting in experience, it abounds in energy and activity; in other words, though its past history has been short, the future lying before it is of the most promising and bright description.

* * *

Comparing in this fashion the relative positions of the Government and the Popular Party, the *Kokumin* finds it easy to arrive at the conclusion that the latter will have everything in its hands in the present fourth session of the Diet. As for the criticism often made not only by supporters of the Government but also by the independent section of the public, that the Diet has not much to show for its three years of existence, our contemporary indignantly protests against the injustice of ignoring what has been accomplished by the Diet. First, it has effected reductions in public expenditure—reductions, which, though falling short of the Popular Party's expectations, have been of sufficient amount to compel the Government to reduce the salaries and number of its servants. Secondly, the Diet's watchful attitude has had a most salutary effect upon the management of the State's finances. Thirdly, the Diet has placed the country under a great obligation to it by instilling reformatory energy into the Executive. The *Kokumin* instances the good effects produced by the drastic changes in official organization proposed in the first session, and by the contemplated address to the throne on Military affairs in the second session. Fourthly, it has corrected many of the existing abuses in the Government and prevented the carrying out of certain injurious measures. Under this head, reference is made to the cases of the grant of subsidies to the Tea Manufacturers' Guild, the projected abatement of the selling price of the Miike Coal Mine, the sale of land under the Agricultural and Commercial Department, and so forth. Fifthly and lastly, the Diet has the credit of having forced the Government to restore some degree of discipline in its rank and file. Had there not been a Diet, would it have been possible, asks our contemporary, to effect these desirable reforms? Moreover, the blame that the Diet has not done more ought, in the *Kokumin's* opinion, to rest upon the shoulders of those who have persistently opposed radical reduc-

tions of public expenditures, amendment of the laws relating to newspapers and publication, reassessment of the taxable value of land and reduction of the land tax, and many other reforms. As to the contention that the Popular party neglects the industrial interests and defence of the country, the Tokyo periodical begs its readers to consider what the Government has effected in these fields. Spending more than 240 million *yen* upon the Army, even important forts still remain to be constructed. The Navy has consumed about 130 million *yen*, but its total tonnage is barely 50,000 tons, and even that figure includes old and useless ships. In the field of industry, what has the Government done? Nothing of importance. Such being the past record of the Government, it is very natural, says the *Kokumin*, that the Popular party should think it advisable to make thorough investigations and satisfy itself that the Government can be trusted, before it confides to the latter the conduct of any new undertaking in the fields just alluded to. For the Popular party is anxious to have full return for the money invested in any work. In conclusion, our contemporary would like to know what line of action the Government intends to take on the following questions:—reductions of public expenditure; amendment of the organization of the different branches of the administration; re-assessment of the taxable value of land; the amendment of the Newspaper, Publication, and Political Association Regulations; abolition of the Game Regulations; amendment of the system of local autonomy; colonization of Hokkaido; amendment of the Law of Election; and abolition of export duties. These questions are to be brought up for discussion in the present session of the Diet. It is now too late for the Cabinet to think of the creation of a majority favourable to it in the House of Representatives. Hence, the only course left, in the *Kokumin's* opinion, is to adopt the programme of the Popular party and thus put an end to the long history of clan administration. Otherwise the Cabinet is said to be doomed to an ignoble fate.

THE "CHISHIMA" COLLISION.

AN account has been sent to a Shanghai paper by one of the passengers of the *Ravenna* who was transferred to the *Empress*, in which the writer appears to have very much economised the truth. The journal declined to publish the full statement, but among other items given it is said that the French agent on board the *Chishima* had his wife and child with him, both of whom were lost, and that the second mate of the *Ravenna* had four fingers cut off. Both of these statements are denied by the *Nagasaki Express*, from which we take the following:—According to report, which of course must be received with all reserve, pending the official enquiry, the *Ravenna* had just passed the Kurushima Strait, when the red light of an approaching vessel was observed by the pilot and chief officer on watch. Being "red to red" no danger was apprehended, but as the sighted vessel appeared to be going at a very high rate of speed, to make doubly sure, the *Ravenna's* helm was ported to a slight extent, and judging by appearance the other vessel ported too. The *Ravenna* was then just south of Musuki-shima, and when those on board thought everything was all right, much to their surprise, as they gradually drew closer, it was observed that, for some unaccountable reason, the approaching vessel had altered its tactics, and had starboarded, a green light suddenly hove in sight. The *Ravenna's* helm was at once put hard-a-port, but as the red light had by that time disappeared, leaving the green light only visible, it was evident that the vessel was attempting to cross the *Ravenna's* bows. The close proximity of the vessels, added to the speed at which they were going, now rendered it utterly impossible to avoid a collision; and although the orders were instantly given to go "full speed astern" and "hard-a-starboard," on board the *Ravenna*, there was no time for these orders to take effect. The inevitable then occurred, and the two vessels came together with a terrible crash, which can be better imagined than described. The *Ravenna* struck the *Chishima* right amidships, between her two

Original from

funnels, and virtually cut her in two halves, causing her to sink almost instantly, taking with her all those who happened to be below at the time, or who were killed or injured in the collision. This, combined with the fact that the engines were going full speed astern, brought the *Ravenna* almost to a stand-still. Her boats were then immediately lowered, and search made for the survivors of the unfortunate sunken vessel, resulting in sixteen being picked up, including Lieut. Kaburaki, who was in command of the *Chishima*, and the French engineer. In the meantime the condition of the *Ravenna* was examined, and happily it was found that although her bow was completely stove in above the water-line, and twisted all out of shape below water, the forward collision bulk-head was thoroughly intact, and abaft that was not making any water. Shortly afterwards, the C. P. R. Co.'s mail steamer *Empress of Japan*, bound from Kobe to Shanghai, came on the scene, and by request took the *Ravenna's* passengers for that port and beyond on board. The *Ravenna* then steamed slowly to Horiye Bay, where temporary repairs were commenced, and steps taken to report the matter to the Co.'s Agents here, to which was added a request for a quantity of cement and bricks to be sent up in the Co.'s steamer *Ancona*, just on the point of leaving bound to Kobe when the unfortunate news was received. On Saturday morning the *Ravenna* resumed her journey under steam, anchoring off Isaki Lighthouse during the night, and arriving here on Sunday morning. The same day her local cargo was discharged, and early on Monday morning the discharging of her Hongkong and through cargo was commenced. This was completed yesterday, and she will be taken into the Mitsu Bishi Co.'s dock for repairs to-day. The damage to the *Ravenna* can be plainly seen from the shore with the naked eye, especially when she is broadside on; and a close inspection shows full well, not only the tremendous blow she must have struck the ill-fated *Chishima*, but also her thorough capability of withstanding it without fatally damaging herself. The damage commences by a comparatively clean cut through the stem and bow plates along the 24 foot mark, which extends aft some eight feet. From this down to the vicinity of the water-line, some six or eight feet is completely smashed in; and below that, down to, and including the forefoot, is so badly bent to starboard that it will have to be entirely renewed. On Monday morning we understand that Capt. Browne formally applied to H.B.M.'s Consul for a Court of Inquiry to be held, a full report of which we shall use every endeavour to obtain and publish as early as possible. Pending the official inquiry considerable reticence is, of course, observed with regard to giving information, consequently we are not in a position to state anything farther."

THE POWER OF THE ARISTOCRACY IN CHINA.

THE talented author of "Chinese Characteristics" seems to be again contributing some most interesting essays to the *North China Daily News* under the heading of "Co-operation in China." Referring to the influence exercised by families of which some member holds a high official position, he tells the following excellent tale:—

During the 18th century there lived a family named Lu, one of the members of which, attained to the lofty eminence of *Ko Lao*, or Grand Secretary. A family of this class, especially if it should be the only one of the sort in the district, exerts a commanding influence, and it is necessary for the local magistrate to conduct himself discreetly, in order not to win the ill-will of such a powerful corporation. It is well if he is able to collect from them even the ordinary land-tax, which all the soil of the Empire is supposed to pay. It is related of this family, that upon one occasion the district magistrate, having ordered the local constable to see to it that this tax was produced, the constable being helpless, was unable to do as he was told. Having been repeatedly beaten for his delinquencies in this respect, he presented himself at the entrance of the premises of his wealthy neighbour, and with earnest prostration begged the gatekeeper to intercede for him, and get the tax paid. The elderly widow, who was the manager of the establishment, having been informed of this plea, ordered her cart harnessed, and proceeded to the district magistrate's *yamen* for an interview. The official perhaps entertained a wild hope

that she had come to settle up her arrears of taxes, and even planned to borrow a sum of money of her, but she soon dispelled this idea, by telling him in so many words that she herself required a "loan" of a certain number of thousand of taels, which the magistrate was obliged to promise to get for her, at the earliest possible moment. As she rose to take her leave, she remarked incidentally that her gatekeeper had been much annoyed by some of the *yamen* underlings who hung about the premises under pretence of wanting a grain-tax, adding that she should expect to hear no more of such proceedings in future! Upon another occasion, while the *Ko Lao* himself was alive, a complaint was made to the district magistrate that a son of the *Ko Lao* had a maid-servant who was virtually imprisoned in the family mansion. She was originally hired, but having been betrothed and although it was time for her to be married, her employer refused to let her go. The district magistrate sent for the son of the *Ko Lao*, made known the charge, and desired the release of the person detained. He even went to the length of beating the attendant of the Lu family, who had accompanied his master, the latter being himself too lofty a subject for punishment. The son went to his home in a towering rage, and wrote a letter to his father in Peking, detailing the circumstances. Soon after this, the magistrate received the news of his promotion from the grade of *chih-chou* to that of *chih-fu*, or prefect, in the province of Szechuan. The journey to a new post is often a most serious matter for an official, and where, as in this case, he has the entire empire to cross, the trouble and expense are very great. He had no sooner reached this distant post, than he received a notification that he was promoted to another in the province of Yunnan, again involving an expensive and tedious journey. When he had at length taken up the duties of this office it was only to be informed that he was promoted afresh to the high rank of *Taotai* in some region beyond the Great Wall. He now began to perceive the significance of this strange series of events, and wholly unable either to bear the ills which he already had, or to support the prospect of perhaps greater ones yet to come, he 'swallowed gold,' and thus escaped further promotion and ruin!

ASSAULT ON MR. SHIBUSAWA EIICHI.

THE fates are particularly unkind to the Opposition in the House of Representatives. So surely as they assemble their forces for a campaign of eloquent diatribes against the residua of bureaucratic arbitrariness, and vote the Peace Preservation Regulations out of legislative existence, some incident immediately occurs to remind the public that the disturbers of good order whom these regulations are intended to control, need only opportunity to be as mischievous as ever. The most striking example of this discrepancy between radical theory and administrative practice was furnished when, in the interval between the passage of the abolition Bill by the House of Representatives and its debate by the Peers, the Government were obliged to put the obnoxious Regulations into force for the protection of the very members who had voted them superfluous. Other practical proofs that exceptional legislation is still necessary in Japan were forthcoming immediately on the passage of the Bill each session, and now, on the very day after the House of Representatives, despite the protest of the Government Delegate, recorded their opinion that the Regulations should be abolished, the *sashis* have again offered a convincing contradiction of that view. On Sunday, as Mr. Shibusawa Eiichi, the well known banker and merchant, was driving through Kabuto-cho, in Tokyo, on his way to Imado, four men dressed in the garb of *jirikisha* coolies, ran up to the carriage and hacked at the legs of the horse. Happily, instead of disabling the animal, they only alarmed it, and so accelerated its movements that their apparently projected assault upon Mr. Shibusawa himself became impossible. As the horse galloped off, however, they smashed the glass of the carriage windows, and one of the pieces cut Mr. Shibusawa's hand. Two of the men were arrested immediately, but we have not yet received any information as to their names or antecedents.

DORS CHLOROFORM ACT UPON THE HEART?

THE correspondent of *The Times* at Hyderabad has announced an important medical discovery, which, if fully substantiated, will go far to relieve the most powerful of anaesthetics of its worst reputation. Surgeon-Major Lawrie, he reports, has succeeded in proving positively, by means of "cross-circulation" experiments,

that chloroform has no direct action upon the heart. In the operations conducted by this investigator, when chloroform was given so that it had access to the brain alone, the blood-pressure fell, anaesthesia was produced, and the breathing stopped in the usual manner. When the chloroform was so applied that it had not access to the brain, but was carried to the heart and other organs, anaesthesia did not follow, no effect upon the breathing was perceptible, and there was no fall of the blood-pressure. The correspondent added that the details of this discovery, with tracings of the experiments would speedily be published in the *Lancet*.

THE PRIZE WINNERS IN THE RECENT AUSTRO-GERMAN RIDE.

As is well known, Austrians showed superior horsemanship in the recent prize contest with German military officers. For of the seventeen high prizes, thirteen were won by the Austrians, and of the forty-two smaller prizes, twenty-five were won by the same army. The list of officers, times of ride, and the prizes given, are as follow:—

- 1.—Prince Starckenberg, record 71 hours 34 minutes. Reward, special honours—Ehrenpreis of the German Emperor and 20,000 Marks.
- 2.—Baron Reitzenstein, 73 hours and 6 min. Honors from the Austrian Emperor and 10,000 Marks.
- 3.—Von Miklos 74 hours 24 minutes and 5 seconds, 6,000 Marks.
- 4.—Franz Höfer, 74 hours and 42 minutes, 4,500 Marks.
- 5.—Von Czavossy, 75 hours and 16 minutes, 3,500 Marks.
- 6.—Obst. Muzyka, 77 hours and 26 minutes, 3,000 Marks.
- 7.—Von Hinke, 77 hours and 35 minutes, 2,500 Marks.
- 8.—Jacob Scherber, 78 hours and 6 minutes, 2,000 Marks.
- 9.—Von Thaar, 78 hours and 16 minutes, 1,800 Marks.
- 10.—Von Kronenfeld, 79 hours and 6 minutes, 1,600 Marks.
- 11.—Lieut. Schmiedt, 79 hours and 10 minutes, 1,400 Marks.
- 12.—Von Förster, 79 hours and 44 minutes, 1,200 Marks.
- 13.—Baron Kielmannsegg, 79 hours 57 minutes, 5 seconds, 1,000 Marks.
- 14.—Graf Bathany, 80 hours, 900 Marks.
- 15.—Heinrich Scherber, 80 hours and 24 minutes, 800 Marks.
- 16.—Obst. Hofman, 80 hours and 37 minutes, 700 Marks.
- 17.—Rittmeister Stögl, 80 hours 40 minutes, 600 Marks.

Those who received 500 Marks each are as follow:—

- | GERMAN OFFICERS. | AUSTRIAN OFFICERS. |
|-------------------------------|-----------------------------|
| 1. Second-Lieut. Kimmle. | 1. Rittmeister Stool. |
| 2. Rittmeister Eisebeck. | 2. Lieut. Gormass. |
| 3. Rittmeister Tepper-Lasch. | 3. Oberst. Baron Saradauna. |
| 4. Pr. Lieut. Graf Westarp. | 4. Oberst. Baron Wolf. |
| 5. Sec. Lieut. Heyl. | 5. Oberst. Graf Vay. |
| 6. Pr. Lieut. Kummer. | 6. Rittmeister Basili. |
| 7. Sec. Lieut. Massow. | 7. Oberst. Graf Lubinski. |
| 8. Pr. Lieut. Distel. | 8. Rittmeister Haller. |
| 9. Prince Leopold of Prussia. | 9. Oberst. Buffa. |
| 10. Ritt v. Heyden-Linden. | 10. Oberst. Graf Paar. |
| 11. Rittmeister v. Gualer. | 11. Oberst. Creutzer. |
| 12. Rittmeister v. Kramsta. | 12. Rittmeister Tarjanyi. |
| 13. Rittmeister v. Witaleben. | |

This is only an approximate record, ascertained from the facts at hand. The German papers allege that the Austrians had the advantage in the race, in this, that they had the down grade while the German riders had the opposite. The decline is said to be 220 meters. Whether this made any perceptible difference in so long a race is perhaps open to doubt. The loss on both sides is said to be 32 horses. The riders were royally entertained at the points of destination, some of the leading officials taking part in the fête.

SUPPLEMENTARY BUDGET.

THE following is the Supplementary Budget now before the House of Representatives:—

SUPPLEMENTARY BUDGET.

(PAYMENTS TO BE DISBURSED BY THE TREASURY, OTHER THAN THOSE SET FORTH IN THE ORDINARY BUDGET.)

- 1.—To renew the contract of one foreigner in the service of H.I.J.M.'s Legation stationed in Russia, for the following period:—From January 1st of 27th year of *Meiji* to December 31st of 31st year of *Meiji*, at the monthly salary of \$39.00 (thirty-nine yen) gold.
- 2.—To newly employ one foreigner for H.I.J.M.'s Consulate at Mexico from April 1st of 26th year of *Meiji* to March 11th of 31st year of *Meiji*, at the monthly salary of \$100.00 (one hundred yen).
- 3.—To pay one foreigner who had been in the service of the Finance Department, a life pension of \$1,200.00 (twelve hundred yen) per annum, commencing with the 26th fiscal year of *Meiji*.
- 4.—To pay one foreigner in the service of the Department of Communications, a life pension of

Original from

\$600.00 (six hundred yen) per annum, commencing with the 26th fiscal year of *Meiji*.

5.—The term of employment of one foreigner in the service of the Custom House of Yokohama having expired, to employ another for three years commencing with the 26th fiscal year of *Meiji* (the time stipulated in the contract), at the monthly salary of \$300.00 (three hundred yen), providing him with an unfurnished house, and paying his passage money for the voyage home on the expiration of the term of service.

6.—To contract, in the 26th Fiscal year *Meiji*, for the payment of sums not exceeding the following limits, the payments to take place in the 27th Fiscal year of *Meiji* :—

For Military Schools :—Provisions..... \$80,000.00
For Military Schools :—Horses \$40,000.00
For Colonization Army :—Provisions... \$13,400.00
For Colonization Army :—Emigration Expenses \$13,600.00

7.—To renew the contract of one foreign instructor in the service of both the Naval College and Naval Accountant's School, for three years from June of 26th year of *Meiji*, at the monthly salary of \$200.00 (two hundred yen).

8.—To renew the contract of one foreign instructor in the service of the Medical School of the Navy for four years from April of 26th year of *Meiji*, at the monthly salary of \$70.00 (seventy yen).

9.—To contract, in the 26th Fiscal year of *Meiji*, for the payment of sums not exceeding the following limits, the payments to be made in the 27th Fiscal year of *Meiji* :—

For Naval arms, Ammunition, and Torpedo Expenses \$80,000.00
For Shipbuilding and Repairs \$50,000.00

10.—To renew the contract of one foreigner in the service of the Judicial Department for the period beginning January 1st of the 27th year and ending November 31st of 31st year of *Meiji*, at the monthly salary of \$200.00 (two hundred yen), and on expiration of the term of service to pay \$350.00 (three hundred and fifty yen) as passage money for voyage home.

11.—To contract, in the 26th Fiscal year of *Meiji*, for the payment of the following sums for the Artillery Arsenal of Tokyo and Osaka, and for the cloth factory at Senju, to purchase machinery and materials, matters of special Finance, the payments to be made in the 27th Fiscal year of *Meiji*, and not to exceed the following limits :—

Manufactory expenses for Tokyo
Artillery Arsenal \$40,000.00
Manufactory expenses for Osaka
Artillery Arsenal \$40,000.00
Raw materials for Tokyo Artillery Arsenal \$70,000.00
Raw material for Osaka Artillery Arsenal \$120,000.00
Raw materials for Senju Cloth Factory \$140,000.00

12.—To contract, in the 26th Fiscal year of *Meiji*, for the payment of the following sums for ship building work at the Yokosuka and Kure Naval Stations, the same to be disbursed out of the Shipbuilding Materials' Fund; which forms a matter of special Finance, and the payments to be made in the 27th Fiscal year of *Meiji*, within the following limits :—

For Yokosuka Admiralty \$210,000.00
For Kure Admiralty \$8,090.00

13.—To renew the contracts of Eight Foreign Professors of the Imperial University, or to employ substitutes, and to newly employ one more Professor on account of urgent necessity, on terms as hereinafter mentioned :—

One Professor from September 1st of 26th to September 10th of 31st year of *Meiji*, at the monthly salary of \$400.00 (four hundred yen), with a payment of \$650.00 (six hundred and fifty yen) as passage money for voyage home, in the year when the term of employment expires.

One Professor from November 14th of 26th to November 13th of 29th year of *Meiji* at \$370 (three hundred and seventy yen) per mensem, together with \$650.00 (six hundred and fifty yen) as passage money as in the preceding clause.

One Professor from May 26th of 26th to May 25th of 29th year of *Meiji*, at \$350.00 (three hundred and fifty yen) per mensem, together with \$650.00 (six hundred and fifty yen) as passage money as in the preceding clause.

One Professor from April 1st of 26th to July 10th of 29th year of *Meiji*, at \$300.00 (three hundred yen) per mensem, together with \$650.00 (six hundred and fifty yen) for passage money as in the preceding clause.

One professor from 26th Fiscal year of *Meiji* (time stipulated in the contract) to July 10th of 29th year of *Meiji*, at \$370.00 (three hundred and seventy yen) per mensem, together with passage money to the amount of \$650.00 (six hundred and fifty yen) as in the preceding cases.

One Professor from October 22nd of 26th to July 10th of 29th year of *Meiji*, at \$350.00 (three hundred and fifty yen) per mensem, together with \$650.00 (six hundred and fifty yen) for passage money, as in the preceding cases.

One Professor from November 11th of 26th to July 31st of 28th year of *Meiji*, at \$370.00 (three hundred and seventy yen) mensem, together with \$650.00 (six hundred and fifty yen) for passage money as in the preceding cases.

One Professor from May 23rd of 26th to July 10th of 27th year of *Meiji*, at \$125 (one hundred and twenty five yen) per mensem, together with \$500.00 (five hundred yen) for passage money, as in the preceding cases.

For each of the above eight Professors, to provide an unfurnished house, or to pay \$40 (forty yen) per month in lieu thereof.

One Professor from April 1st of 26th to July 10th of 29th year of *Meiji* at a monthly salary of \$125.00 (one hundred and twenty five yen).

14.—The term of employment of one foreigner in the service of the Higher Commercial School, having expired, to employ a substitute for three years from April 1st of 26th year of *Meiji*, at the monthly salary of \$120.00 (one hundred and twenty yen).

15.—To renew the contract of one foreigner in the employment of the First Higher Middle School, from September 9th of 26th to September 8th of 27th year of *Meiji*, at the monthly salary of \$200.00 (two hundred yen).

16.—To renew the contract of one foreigner in the employment of the Fifth Higher Middle School from May 8th of 26th to July 31st of 27th year of *Meiji*, at the monthly salary of \$200.00 (two hundred yen).

17.—The term of service of one foreigner in the employment of the Yamaguchi Higher Middle School having expired, to employ one substitute for the following period from July 22nd of 26th to July 21st of 28th year of *Meiji*, at the monthly salary of \$200.00 (two hundred yen), providing him an unfurnished house, and paying him \$250.00 (two hundred and fifty yen) as passage money for voyage home, on expiration of the term of service.

18.—To raise the monthly salary of one foreigner in the service of the Railway Bureau, the present amount of which is \$575.00 (five hundred and seventy five yen), to \$600.00 (six hundred yen) from the 26th Fiscal year of *Meiji*.

"CHOSEN-AME."

MR. KOBAYAKAWA has been good enough to send us a specimen of his *Chosen-ame*, which is a decidedly palatable affair. Probably most of our readers are agreeably acquainted with it, but we imagine that their pleasant associations will be increased by perusing the delightful advertisement attached to each box :—

CHOSEN-AME

the celebrated Japanese cakes known as the main products of Higo-province, which we manufacture of selected substances after a selected best mode. It is a special point of the cakes, that both the color and the taste would never vary though preserved for any long times. So they may be carried as provisions for army, for navigation, or for travelling on railway.

To use cut it to pieces by knife, string, or, after all, by scissors.

REPORT OF EXAMINATION CHOSEN-AME manufactured by K. ROYAKAWA Semba Ichime no, 12 Kumamoto

Quantative analysis March 16th. 1892
This article is whitish square long tender mass mild-sweet taste. Dissolved by water it makes white turbid. By examining it proves to exist of the followings:

Water	20.467
Nitrogenous	1.914
Sugar	33.211
Starch	12.005
Fat	0.663
Malt	24.389
Dextrine	7.380
Inorganic alkaloid	0.213

The examination proves itself good comfortable food.

THE ENGLISH LANGUAGE.

"To any one," says the *Asorian*, "who does his thinking and talking and writing in a foreign language, the English must be a queer one. A foreigner down on the U. P. dock yesterday looking at the steam vessels coming and going hither and yon, said :—'See what a flock of boats.' Some one said that 'flock' was wrong; what a 'fleet of boats' is the proper expression. Well, a lot of boats together would be a fleet, a fleet of sheep would be a flock, a flock of

girls would be a bevy, and a bevy of wolves is called a drove, and a drove of thieves is called a gang, and a gang of warriors is called a host, and a host of porpoises is called a shoal, and a shoal of cattle is called a herd, and a herd of children is called a troop, and a troop of part-ridges is called a pack, and a pack of swans is called a whiteness, and a whiteness of geese is called a gaggle, and a gaggle of brant is called a gang, and a gang of ducks is called a team, and a team of widgeons is called a company, and a company of teal is called a trip, and a trip of snipe is called a whisp, and a whisp of herons is called a sedge, and a sedge of quail is called a flock, and a flock of larks is called an exaltation, and an exaltation of peacocks is called a strut, and a strut of beauties is called a galaxy, and a galaxy of ruffians is called a horde, and a horde of rubbish is called a heap, and a heap of oxen is called a drove, and a drove of black-guards is called a mob, and a mob of whales is called a school, and a school of worshippers is called a congregation, and a congregation of soldiers is called a corps, and a corps of sailors is called a crew, and a crew of pirates is called a band, and a band of bees is called a swarm, and a swarm of people is called a crowd, and a crowd of—but this is enough to show that the English language has a good many words that while not exactly synonyms can be applied to mean an aggregation of units."

MEMORIAL ON TREATY REVISION.

THE Popular Party in the House of Representatives have prepared an Address to the Throne on the subject of Treaty Revision. The following is a translation :—

AN ADDRESS TO THE THRONE ON TREATY REVISION

May it please Your Majesty :—

I, Your Majesty's most loyal and faithful servant and President of the House of Representatives, desire most humbly to address Your August and Enlightened Majesty :—

We, insignificant and ignorant though we be, have been charged, by Your Majesty's grace and by the choice of the people, with the weighty responsibility of representing our country in the Diet; and we are therefore at all times earnestly solicitous not to impair Your Majesty's prestige or slight the trust reposed in us by the people. Thus, though sensible of our own demerits, a feeling of the deepest and most faithful loyalty to Your Majesty, and a zealous desire to obey the Great Constitution which Your Majesty has graciously granted to us, and to express the true opinions of the people, inspire a hope that the fruits of a constitutional polity will be realised, and that the national honour may be made to shine brightly throughout the world.

More than two thousand five hundred years have elapsed since Your Majesty's Imperial Ancestors ascended the Throne, and began to govern the people of this Empire. During that long period, owing to the enlightenment of our Rulers, on the one hand, and the loyalty of the people on the other, foreign countries were conquered, invasions were beaten back, and never once was the nation's honour forfeited or impaired. But in the eras of *Kaei* and *Ansei* (1848-1859) the Government of the Shogunate lost its power, and the people fell into a state of inactivity. It was then that advantage was taken of our condition by foreign countries, and we were induced to conclude most unfair treaties with them.

Your August and Enlightened Majesty then ascended the Throne, and grieving over the decline of the Imperial Household, and angered at the corruption of the Government, employed the weapons of war to eliminate accumulated abuses. Thus matters at once presented a new appearance and moral virtue grew daily. Alas the unfair treaties remained unrevived. The consequence is that our jurisdiction does not extend to foreigners, living within our borders, nor do we possess tariff autonomy. Notrepass on our national rights can be greater than these; and whenever our thoughts dwell upon the subject we are constrained to bitter regrets. The exercise of the extraterritorial system enables foreigners to obey only their own laws and to be subjected to their own judiciary within the territories of this Empire. Yet we, in their countries, are compelled to obey their laws, and submit to their jurisdiction. Further, the restrictions imposed in respect of Customs tariff, disable us from exercising our natural right to tax imported goods, whereas foreign countries impose heavy duties on goods exported by us.

Original from

Thus our judicial and fiscal rights being alike impaired, foreigners are enabled to behave in an arbitrary manner. The result must be that our commerce and industries will daily deteriorate, that the national wealth will decrease, and that in the end there will be no means of recuperating our resources. The fault of concluding such treaties must be attributed to the fact that the people of Your Majesty's realm, both high and low, were basking in tranquillity and peace, and as the country had been isolated for a long time, the Ministers of State were entirely ignorant of foreign conditions.

The considerations make it impossible for Your Majesty's subjects the forget to urgent necessity of Treaty Revision.

Your Majesty, benevolent and enlightened, grieving over the decline of the national power, and graciously considering the trouble of the people, sent, in early days, ambassadors to Europe and America, and instructed them to discuss the question of Treaty Revision with foreign Governments. That was in the 4th year of Meiji (1871). Thereafter, during a period of over twenty years, the Ministers of State have been commanded to employ their utmost ability and energy for the settlement of the question. There has been no interval of neglect nor any suspension of energy. But the efforts of those statesmen were continually unsuccessful, and they failed to appreciate the Imperial purpose, because they did not consult the opinion of the country at large. We, Your Majesty's servants, judging from the condition of other countries, are persuaded that every matter relating to international intercourse must be arranged in accordance with popular opinion, since such questions have a direct and vital bearing upon the welfare of the country. No Ministers of State are competent to settle these matters in accordance with their own views alone. Had popular opinion been consulted, and negotiation with Foreign Powers conducted in accordance with it, the treaties might have been successfully revised ere now. The right of concluding treaties belongs to the Prerogatives of Your Majesty; and we, Your Majesty's servants, are not permitted to interfere with it. But since Your Majesty has made oath to the gods in heaven above and in the earth beneath, to manage all the affairs of the nation and to administer the empire in accordance with popular opinion, we, Your Majesty's servants, representing the Lower House of the Diet and the opinion of the people of the Realm, may be permitted humbly to express our opinions. They are:—firstly, that the extraterritorial system be abolished; secondly, that the empire's tariff autonomy be recovered; thirdly, that the privilege of taking part in the coasting trade be reserved; and fourthly, that all foreign interference in our domestic administration be removed.

Your Majesty, wise and benevolent, has never disregarded the desire of the country. We therefore humbly pray that Your Majesty will graciously grant our petition, and hasten the conclusion of treaty revision, thus enabling us to live joyfully under the full exercise of Your Majesty's Prerogatives, and to bask in Your Majesty's benevolence. Thus most worshipfully do we venture to present this humble address to Your Majesty.

ALCOHOL.

The following is the text of the Government Bill for taxing alcohol:—

BILL FOR IMPOSING A TAX ON THE SALE OF SPIRITS.

Art. I.—Persons engaged in the sale of alcohol shall be divided into the following classes:—

1. Wholesale merchants, namely, those who sell alcohol to other merchants.
2. Retail merchants, namely, those who purchase alcohol from a wholesale merchant and sell it to consumers.

Art. II.—Any person desiring to sell alcohol must obtain a license from the Authorities.

Art. III.—Any person desiring to obtain a license shall, in accordance with Administrative Rules, deposit a sum of not less than 10 yen and not more than 1,000 yen, in cash or in national bonds as security.

Art. IV.—When any merchant delays the payment of his business tax, the amount shall be deducted from above security. If the security is insufficient, the merchant shall be dealt with in accordance with the provisions contained in the

Law relating to Delay of Payment of National Taxes, promulgated as Law No. 32 in the 22nd year of Meiji.

Art. V.—Any person who obtains a license, shall pay a tax annually at the following rates:—

1. Wholesale merchant—12 yen per *hoku* of alcohol.
2. Retail merchant—6 yen per *hoku* of alcohol.

Any person who sells alcohol that has not passed through the hands of a wholesale merchant, shall pay the tax for wholesale dealing as well as that for retail.

Art. VI.—The business tax shall be paid before the 31st day of the 1st month of the following year. Provided that any person who abandons his trade shall pay up to the time he closes the establishment.

Art. VII.—Every merchant shall keep an account book, and record all the transactions he has made.

The above account book shall be liable to inspection by officials appointed for the purpose.

Art. VIII.—Officials, in accordance with duly delivered orders of their superior, may inspect the account-book and other articles used in the trade.

Art. IX.—Any person engaging in business without a license shall be punished by the confiscation of all the alcohol, as well the articles and machines used in his business, in addition to being fined three times the amount of the tax. Provided that if any portion has been sold, the price obtained shall also be confiscated.

Art. X.—Any person making a fraudulent entry in his account book, or intentionally omitting any entry so as to reduce the tax, or who has so reduced it, shall be fined not less than 10 yen and not more 500 yen.

Art. XI.—Any person who neglects to enter items in his account book, shall be punished by a fine of not less than 2 yen and not more than 20 yen.

Art. XII.—In the case of any person who violates the present Law, the provisions for diminution of penalties, for aggravation of penalties on account of repetition of the offence, or for the concurrence of several offences committed by the same person, shall not apply. But cases falling under the 1st clauses of Art. 75 of the Criminal Code shall be excepted.

Art. XIII.—The present Law shall become operative on and after the 1st day of the 4th month of the 26th year of Meiji.

THE ATTACK ON MR. SHIBUSAWA RIICHI.

NOTHING definite is as yet publicly known about the motives of the *Soshi* who attacked Mr. Shibusawa's carriage on Sunday. But the opinion generally entertained appears to be that his opposition to the project of manufacturing the iron pipes for the Tokyo Water Works in Japan, instead of procuring them from abroad, provoked the *Soshi* to assault him. A certain coterie of exceedingly naive persons in the Capital believe, or profess to believe, that iron pipes manufactured in Japan would be not only cheaper but much better than pipes made in England, America, or elsewhere. Mr. Shibusawa knows much better. He is a practical man of wide business experience, and he understands the absurdity of supposing that any people could suddenly start in and get ahead of the world in a maiden effort to manufacture an article requiring considerable skill, ample command of cheap material, and thoroughly organized works. The truth of this view was amply demonstrated when the tenders for the first batch of Water Works pipes were opened recently. Only two Japanese firms made any offer, and while one, which possesses a plant of machinery and has long been engaged in cognate work, frankly admitted inability to produce more than a fraction of the pipes within two years, asking, at the same time, prices considerably higher than those of European and American tenderers, the other, having no plant at all and no facilities as yet, boldly undertook to do everything, and advanced financial proposals based on obviously impracticable hypotheses. But the *Soshi* do not trouble themselves about such details. They deem it patriotic to deny the possibility of anything foreign being equal to anything Japanese, and since Mr. Shibusawa's patriotism does not take that form, they set about drubbing him.

NO. 11. OF "COSTUMES AND CUSTOMS."

MR. OGAWA has published the second volume of his "Costumes and Customs." It contains twelve collotype pictures, all of them equal, in point of excellence of technique, to the best

work hitherto done by this very successful artist. The subjects are, for the most part, Tokyo *Geisha*, chosen doubtless from among the most beautiful of their class. The grouping and posing are distinctly good, but in this matter it is necessary to note that Mr. Ogawa has not worked alone, no less than six of the twelve plates having been contributed by Professor Burton. These six, with one exception, are particularly effective, two, which represent dances at the Koyokan, being the most beautiful things of their kind we have seen. The tenderness of the collotype does not, perhaps, lend itself readily to colouring, but it seems to us that a little skilfully done tinting would add immensely to the attractiveness of these interesting volumes. Mr. Ogawa has the field to himself in the matter of collotypes: no other Japanese artist appears to approach him. His series of albums, when concluded, will be a unique index to the scenery and costumes of Japan.

THE GLYPHIC EXHIBITION.

THE display of glyphic work recently brought to a close in the Art Galleries in Ueno was not up to the level which we have been accustomed to expect in recent years. That, however, is easily explained by the fact that all the best artists are now busily engaged preparing articles for Chicago, whither the bulk of Japan's exhibits will have to be shipped in the course of the next three months. There was, however, one very remarkable object in the Ueno galleries, namely, an ivory eagle in the act of rising from a rock. The wings measured six feet from tip to tip, and the modelling was full of force and grace. Needless to say, that every feather was chiselled with the greatest care, and that the details were in every respect most accurate. This extraordinary and unique specimen was originally designed for the World's Fair, we believe, but it has been secured by the Imperial Household Department, and will doubtless be placed somewhere in the Palace, where it will constitute a striking and beautiful object. The artist is Mr. Kaneda, of Muko-yanagi-haramachi, Asakusa. He spent something like three years over this work, the proportions of which may fairly be called colossal when we remember the material composing it. Certainly his long labour is well justified by the result. The idea of such an immense mass of ivory suggests, at first, a certain degree of coldness and deadness, but no impression of that nature is conveyed by the object itself, probably because the lines are so fully of vitality and force, and the chiselling of the surface is so delicate. Truly it seems a pity not to let this most imposing specimen of the ivory carver's skill go to the World's Fair, whether the Imperial Household Department or Mr. Kaneda himself sends it. Very few pieces of equal merit, and certainly none surpassing it, are likely to appear among the exhibits, so that, to hold it altogether from the view of the millions visiting the World's Fair would be to remove an important feature from Japan's advertisement.

COUNT ITO.

COUNT Ito is steadily mending. Two of the wounds on his head have healed completely, and the third is in a much better condition than could have been hoped under ordinary circumstances. Within the past few days there was some inflammation attended by suffering in the wounded jaw, and yesterday the physicians in attendance finally decided that the four front teeth must be removed. To save these had naturally been an object, but it is certain that their removal—which was effected yesterday without much difficulty—will relieve all pain and be speedily followed by the recovery of the injured part. On the whole, it may be predicted that the Count's complete restoration to health will be speedier than the original estimate.

UNION CHURCH.

THE Gospel Meetings held with Dr. Meacham's Congregation at the Union Church for the past ten days have steadily increased in numbers and interest. The Society of Christian Endeavour recently organized there by the Rev. Dr. Clark, of Boston U.S.A., has greatly aided the pastor

in his efforts to awaken a religious activity among his people, and the series of services thus happily commenced are to be continued for some days to come. Last evening's discourse by the Rev. W. H. Daniels, the missionary evangelist who is the chief speaker at these meetings, was on the gospel of the future. This signified the prophetic, as distinguished from the historic, Kingdom of the Son of God; which Kingdom is mentioned in the New Testament no less than 57 times, and is a prominent theme not only in the gospels but in the Epistles, and especially in the Revelations. The speaker thought that the word "Kingdom" was used in the prophetic scriptures just as it is in the historic scriptures, and that it signifies an actual government, over actual people, on this planet, of which state the Son of God is to be the personal and visible head; an absolute monarchy conducted according to the principles laid down in the teachings of Christ as recorded in Matt., chapters five, six, and seven. This portion of the first Gospel usually mis-called "The Sermon on the Mount" is really Christ's announcement of the Code of His Coming Kingdom. The address closed with a brief suggestion of what this Divine ideal of a Kingdom might be; including also a few hints at the ideal Church, the ideal family, the ideal business system, and the ideal Society, all on the basis of Christian loyalty, and by the actual application of "The Golden Rule."

At the Union Church on Wednesday, the Rev. W. H. Daniels continued the discussion of the Gospel of the Future. The special topic was the manner of the coming of the Kingdom for which Our Lord has taught his people to pray. First, the Kingdom will be ushered in by the appearance of the King in person, accompanied by a retinue of his resurrected and glorified saints. It is not necessary to set the theory of the gradual coming of the Kingdom over against the doctrine of its personal and imminent appearing; both these truths are taught in the Scriptures, only we need to be careful to discriminate between the internal kingdom as it exists in the hearts of Christ's faithful followers and the outward and formal projection of that kingdom as the actual government over mankind. Second; the coming of the King, for the second time, will be with power and authority, in contrast with his first coming as the child of a peasant woman born in a stable in Bethlehem. With that Kingdom the patient persuasion of rebellious sinners ends, and the almighty power of practical righteousness takes control of the world. Thenceforth during all the personal reign of the Son of God on earth, with the exception of a brief period near its close, outward sin will be impossible. There will be no evil spirits to tempt men to do wrong and the rebellions of those who shall still reject the love and service of Christ will be curbed and crushed by the sovereign will of the King. He will secure at least outward obedience at all hazards, and thus the spread of sin will largely be prevented. Sinners sometimes imagine that because they are now at liberty to disobey the laws of Christ's Kingdom, that it will always be so; but the divine King is publicly pledged, in the sight of angels and men, to take unto himself his great power and to reign over the nations. Finally, the coming of the Divine King to set up his personal Kingdom on earth will be sudden, to the horror of his enemies and the joy of his friends. In view of all these truths our safety as well as our duty calls us to seek the favour and friendship of Christ the coming King.

"Christ may come within the life-time of persons now living," said the speaker, the Rev. W. H. Daniels, at the gospel meeting in the Union Church last night. The unwise attempts of some students of prophecy to fix definitely the date of that future event had, as he believed, done great mischief to the faith of many good people; but, like all other gospel truths, the doctrine of the second personal coming of Christ, to reign on this earth, must endure not only the opposition of its enemies but the in-

judicious advocacy of its friends, there are a few plain teachings as to the approaching end of the present age, in the scriptures, but when men attempt to read between the lines they are sure to read into the text some very hurtful errors. We cannot be too careful to follow the exact line and limit of the divine revelation, especially where there is wide and honest difference of judgment among learned and religious men. "The gospel must be preached in all the world" before the personal coming of the Kingdom of Christ, but that work is now going forward right royally; and we who watch for the appearing of our Lord in power and glory may lift up our heads for the time of our redemption draweth nigh.—There will be no gospel meeting to-night on account of the funeral of Miss West.

RUSSIA AND CHINA.

FROM an essay by Mr. R. S. Gundry in the *Fortnightly Review*, under the above caption, we take the following:—

Writing two years ago, after a visit to Manchuria, with the late of Barmah and Tonquin fresh in his recollections, the present Minister of the United States at Peking hazarded a conjecture that "the vast outlying territories on the north and west of the Chinese Empire . . . will some time be subjected to a similar experience"; and Sir Thomas Wade, late H.M.'s representative in China, has expressed even graver apprehensions in speaking of the ignorance and apathy of the Chinese.

The words are pregnant with suggestion regarding the possibilities of the future in Eastern Asia. They echo, too, an anxiety which finds expression in high places in China itself; for, though the charge of ignorance is true as regards the mass of the people, there are enlightened statesmen who can perceive the danger.

The Taiping rebellion, and the advance of the Anglo-French armies on Peking, gave Russia the opportunity of wringing very important concessions from China in a treaty containing the following clauses:—

"The left bank of the river Amoor, from the river Aryoun to its mouth, shall belong to the Empire of Russia, and its right bank down to the river Usuri to China. The territories situated between the river Usuri and the sea, as up to the present, shall be possessed in common by the Empire of China and Russia until the frontiers between the two States shall be defined."

In 1850, General Ignatieff succeeded in imposing a fresh treaty confirming the first and ceding beside, the whole coast line between the Usuri and the sea, as far south as the Tumen river which constitutes the boundary of Korea.

Russia has been frequently accused of a desire to overstep the Tumen and add Korea to her Pacific seaboard. Vladivostok, her most southern port, is ice-bound during a portion of the year, whereas, the harbours of Korea are free from that inconvenience. She repudiates, of course, any such conception, and placed her disclaimer on record during the negotiations that attended our withdrawal from Port Hamilton. But China seems hardly yet convinced; having observed perhaps, like ourselves, that circumstances are occasionally too strong for the good intentions of the Czar. She may, however, find in the conflicting interests of others a safety greater than even treaties could ensure. For another great Power, hitherto little credited with designs of aggrandizement in the Far East, has been showing, lately, an interest in the once Hermit Kingdom that may prove its best safeguard against annexation to Primorsk.

At the opposite end of the long frontier the Marquis Tseng was able, at the next negotiations, to recover some of the lost ground sacrificed with such Oriental liberality in Chung-how's famous treaty. The Marquis procured the surrender of Kuldja without more serious concessions than the right to appoint Russian consuls at various points in Mongolia and Turkestan and facilities for commercial intercourse.

One important reason for China's anxiety to recover Kuldja was, that it constituted, in Russian hands, an open door into Sungaria; and it is mainly because they command passes into Kashgaria that she is disturbed by Colonel Yanoft's occupation of the Pamirs. But it is hardly possible for China to defend these outlying territories against Russia. The distances are too great in the absence of transportation facilities. It is 2,500 miles from Peking to Kashgar by the straightest route across Mongolia, and a railway must admittedly lengthen the distance by 900 miles. The mere mention of such distances is sufficient to affirm the urgency for railway communication if the territory is to be made defensible, and such an undertaking is surely beyond the reach of the Chinese Government under its present organization.

Turkestan and Mongolia are, however, regions of great distances, and it has been plausibly contended that China's best way of defending them will be by attacking Eastern Siberia, in case the emergency arise. It is indeed mainly towards Manchuria that Russia professes to be looking with apprehension where she speaks of China's aggressive designs.

The construction of line northward from Tientsin

toward Manchuria has actually been sanctioned, and the work so far advanced that the dispatch of troops during the late rising was materially facilitated. It is intended to push it on eventually to Kirin, the strategic centre of Manchuria. Kirin is situated in 43° N. and 127° E. on the upper waters of the Limgari, and is in communication by means of that river and its affluents with Tsitsihar, Sansien, and other principal rivers in northern Manchuria. Its importance has been recognized by the construction there of an arsenal which astonished Mr. James by its completeness and efficiency—"a large establishment filled with foreign machinery, with boilers and engines, and steam-hammers, such as one might see at Woolwich or at Elswick, all erected and managed by Chinese (trained of course under foreigners in China) without foreign assistance of any kind, turning out apparently excellent weapons, from repeating-rifles to machine-guns. Kirin is, in fact, the centre upon which all traffic between China and northern Manchuria hinges, and the roads are execrable, so that a railway would have a commercial as well as a strategic value. Up to seventy years ago, Chinese immigration into Manchuria was forbidden, but, although the prohibition was then removed, the absence of organization, and uncertainty of life and property, prevented at first, any considerable movement. Gradually, however, the tide gathered strength, and millions of Chinese are said to have crossed the frontier within the last twenty years, and are now spreading into Mongolia, and stretching out like a fan over Kirin and Tsitsihar.

China's wisest policy is to encourage this movement, Russia understands this well, and is said to entertain a lively fear of the progressive increase of Chinese colonization in the Usuri region, where the few Russian settlers command but indifferent success.

China is certainly pushing forward her military preparations more rapidly than her railways, but what is almost more surprising than her slowness to improve communications by land, is her neglect of the means of access by water expressly secured by the very treaties that register the Russian depredation. There is not a Chinese boat on the Amoor.

The bugbear of Russian aggression is ever present in Peking, as in Constantinople or Calcutta, and it is by no means impossible that China and England may gravitate to an alliance by force of circumstances. The Russians themselves have recognized the possibility of such an event; Turkey is no longer to be reckoned on, Persia is too weak, but China supported by British money and arms might render excellent service.

GOLDWIN SMITH'S SUGGESTION.

In a letter to *The Times*, Goldwin Smith submits a solution of the silver problem which he thinks is not now offered for the first time, but which he "respectfully commends to the attention of bimetallicists." He credits it to "an ingenious gentleman" in Washington. The proposal is that coins shall be made partly of gold and partly of silver, in order that "changes in the values of the two metals should exactly balance each other," and thus produce "a spontaneous adjustment." "In laying this device before the bimetallicists, Mr. Smith suggests that "a study of its properties and principles might put them on the road to truth." It might be convenient if the learned professor would follow the cautious example of Artemus Ward, and notify his readers at what point he leaves off being serious and begins to jest. Nothing in his letter marks the point of separation,—if there be one.

THE PRESS REGULATIONS.

THE Opposition in the House of Representatives, if the credit of being in earnest is to be extended to it, evidently imagines that Japan is a country into whose soil the most exotic institutions can be transplanted full grown; a country where systems can come to maturity in two decades that have barely attained complete development elsewhere in ten. The Radicals and Progressionists, severing at one blow all the bonds that have hitherto tied the press, would set it completely and finally free. Such large faith is greatly to be admired as a curiosity, but not at all to be commended from a common-sense point of view. Glad as we should be to think so, we find it impossible to believe that entire freedom of the press is yet possible in Japan. The men on whom devolves the responsibility of governing the realm and preserving the public peace are equally sceptical. But the *Fiyu-so* and the *Kashin-to*, who have no such responsibility, and who find the efficiency of their agitation hampered by any restraint upon liberty of speech, public meeting, political association, or organized demonstration, would boldly rescind every limiting law or regulation. In the

Original from

three first sessions of the Diet they introduced and passed a Bill for radically altering the Press Regulations. Want of time or inclination on the part of the Peers prevented these Bills from becoming law, and now, once more, in the fourth Session, the measure was introduced in the Lower House. Having been already so often debated and passed, the Bill seemed likely to be voted forthwith. But an unlooked for incident occurred. The present Cabinet—the Harmony Cabinet it might well be called—is anxious above all things to remove the friction existing between the Administration and the Legislature. It gave the House to understand that, while very willing to meet the liberty-of-the-press men half way, a wholesale removal of restrictions could not be consented to. The House thereupon wisely entrusted the Bill to a Special Committee, with the fully appreciated understanding that its provisions should be amended in the sense of a compromise. The Committee acted accordingly. It ascertained the irreducible minimum of the Government's demands, and introduced alterations preserving the article which requires that any one starting a newspaper must pay security, retaining in Government hands the power of suspension, but limiting its exercise to a week, and authorizing the Ministers of State for War and the Navy to prohibit the publication of any military matter concerning which secrecy seemed advisable in the national interests. These conservative changes having been made by a specially appointed Committee under a clearly appreciated understanding, seemed likely to be accepted at once. But the House suddenly turned round and rejected every one of them, voting the original Bill in its integrity. So uncompromising was the mood of the members that they not only threw out amendments of procedure and principle, but declined to listen even to emendations of the text on account of perspicuity and construction. In short they virtually declared their resolve to have no manner of compromise with the Government. This, of course, signified the sacrifice of the Bill. It will either be rejected by the Peers, or amended in the sense of a compromise, or vetoed by the Sovereign. But the thorough paced character of the Opposition's animosity continues beyond cavil. Do these men really want to effect reforms, or is systematic opposition their sole object?

THE BUDGET COMMITTEE.

THE Budget Committee's amendments are now out. They aggregate nine million *yen* of reduction, roughly speaking. There can be little doubt that the House will endorse them, and the burning question then arises, what will the Government do. Will it withhold its consent to the changes falling within the scope of the 67th Article of the Constitution? If so, the Second Reading cannot be voted by the House, the Budget will not come into existence, and the old *impasse* will be once again created. Or will there be a compromise? The latter is the course now beginning to be regarded as most likely, in view of the general policy of Counts Ito and Inouye, with whom are Mr. Mutsu and Count Kuroda. But the Government's willingness to compromise may not be reciprocated by the Opposition. Such a contingency seems very probable, judging from the mood displayed by the Opposition towards the compromise effected by it sown Special Committee in the matter of the Press Regulations.

TAX ON OFFICIAL SALARIES.

THE tax on official salaries which is now in contemplation, a Bill on the subject having been submitted to the Diet, will be a tax in every sense of the word should it be adopted. The proposer of the Bill is Mr. Ooka Ikuzo, an Independent member who has hitherto given his support to the Government in the great majority of cases, and whose speeches and manner of voting are always distinguished by moderation and good sense. Such being the case, one is disposed to think that the Bill may be intended as a sort of compromise between the very drastic reductions of official salaries proposed by

the Opposition, and the reasonable changes to which the Government might be disposed to agree in that direction. If, on the one hand, the reductions advocated by the Radicals were carried out, and, on the other, this new tax were imposed, Administrative officials would find themselves in very sorry plight. According to Mr. Ooka's Bill, an official receiving a salary of 100 *yen* annually or less would be exempt from the tax. But all salaries over a hundred *yen* would be liable. In order to convey a clear idea of the working of the Bill we shall set down a few figures:—

Office.	Salary. Yen.	Tax. Yen.
Secretaries	800 to 1,500	34 to 850
Judges (ordinary)	900 to 1,200	63 to 96
Chief Secretaries	900 to 1,500	63 to 385
Vice-Ministers of State	4,000	1 449
Ministers of State	6,000	666
Minister President of State	9,000	1,096

If, again, this tax were imposed in addition to the reductions recommended by the Opposition, then the results would be thus:—

Office.	Present Salary. Yen.	New Salary. Yen. (reduced and taxed.)
Minister President of State	9,000	5,340
Ministers of State	6,000	4,450
Directors of Bureaux	3,500 to 4,000	1,800 to 2,250
Chief Secretaries	900 to 1,500	744 to 1,195

It is possible that official salaries are a little too high at present in Japan, but such sweeping reductions as the above seem beyond all reason. A tax of from 5 to 11 per cent., as contemplated by Mr. Ooka's Bill, seems an ample diminution. A judge of the lowest grade who receives only 75 *yen* per month, would find it a serious business to be required to hand over to the tax collector 3.75 *yen* of this already very slender amount, and a Governor of a Prison seeing himself mulcted to the tune of 2.50 *yen* monthly out of his patty stipend of 50 *yen*, would curse the day that saw a Diet convened in Japan.

Political caloric is seldom accompanied by consistency. Mr. Yamada Taizo, a leader among the Radicals, has distinguished himself each session by vigorous support of his Party's pet scheme, reduction of official salaries. At present the Puisne Judges of Japan receive a wretched salary of from 900 to 1200 *yen* per annum. They barely attain the salary level of chief tax-collectors, Inspectors of Gendarmes, or Probationers in the Railway Bureau, and they stand considerably below Examiners in the Audit Bureau, Appraisers in the Customs, and Private Secretaries. Nevertheless the Radicals would still further reduce the emoluments of these very underpaid but very important officials, and Mr. Yamada Taizo is a prominent Radical. When, however, Mr. Motoda Hajime introduced, on the 9th instant, a Bill for abolishing the system of Collegiate Courts, Mr. Yamada Taizo did not hesitate to advance, as a reason for supporting it, that he should prefer one highly trained and competent man on the Bench to a conclave of mediocre judges. If Mr. Yamada really entertains this view, why does he vote for reducing the salaries of the Judges? The highest pecuniary prize within reach of the Bench, according to the *Fuyu-to's* financial programme, would be only 4,000 *yen* annually. They would give the President of the Supreme Court only 500 *yen* annually more than a Vice-Minister of State. And they would give to Puisne Judges stipends of less than 70 *yen* monthly. Yet Mr. Yamada Taizo talks of preferring a few highly trained and erudite Judges to a number of mediocrities. The fact is that the *Fuyu-to's* programme would accentuate the fault of the system already existing: it would drive all the good men from the Bench to the Bar, and make the former a refuge for incapables.

METALS.

S. W. ROYSE & Co.'s report of October 29th, says:—Business in Pig Iron has been in an unsatisfactory state during the whole of October. Prices have fallen slowly but steadily for Middlesbrough Iron, the total drop being, however, only some 9d. per ton: Scotch Iron is also a little lower. Stocks in public stores at Glasgow have decreased by some 15,000 tons. Little business at present at Middlesbrough, makers not caring about

selling, and buyers waiting in the confident expectation of a further fall in prices, as shipments to some ports have now practically ceased for some time to come, though it is thought that there may be some demand for shipment to Scotland, prices for Middlesbrough being so much lower than for Scotch. Shipments from Middlesbrough are returned as 49,472 tons, up to the 24th inst., as against 66,466 tons during the corresponding period of last year. In the higher priced metals there is often an upward movement at this time of the year, and this is the case at present. Copper has advanced steadily from about £44 5s. to £45 15s. Tin is about £2 per ton dearer, and is firm. Spelter is steady at an advance of about 15/- per ton. Lead has fluctuated a little, but the changes have been unimportant.

AVE ATQUE VALE.

MR. AND MRS. J. H. WIGMORE leave Tokyo on Monday by the 3.35 train from Shimbashi. It is a subject of great regret that Mr. Wigmore has determined to return to America, though we can well understand his desire to pursue the wider career which his abilities cannot fail to open to him in the States. During the three years of his residence in this country, his researches have been remarkably close and extended, and their results have thrown a flood of light on the customs and canons of the Japanese in pre-Restoration days. His last contribution to the Proceedings of the Asiatic Society is in itself a work that might well represent the result of three years' labour. Occupying 443 pages of the Proceedings, it traverses almost the whole ground of private law in old Japan, and though Mr. Wigmore calls it by the modest title of "Materials for the Study" of that difficult and hitherto untouched subject, we are strongly disposed to think that the essay will remain a monograph for many a year to come. This, however, represents only a small fraction of Mr. Wigmore's work. His letters to the *Nation*, his articles in these columns, his lectures and his various papers on Japanese financial, parliamentary, and legal problems, indicate a power of research and a capacity of analysis and synthesis of a very high order. Mr. Wigmore's continued presence in this country would have enormously helped to elucidate much which has remained, and must remain, a *terra incognita*, unless some one similarly gifted with industry and acumen undertakes to exploit it. In bidding him farewell, we may be permitted to predict for him a career of high achievement and solid usefulness, and to thank him in the name of all students of Japan in particular and of ethnology in general for the admirable results he has accomplished. Mrs. Wigmore, we regret to learn, has been confined to her room for some days by a severe attack of lacquer poisoning, and has thus been obliged to dispense with many of the farewell visits which her numerous friendships, both foreign and Japanese, would otherwise have dictated.

THE GOVERNMENT AND THE DIET.

THE fate of the Government's taxation Bills was definitely settled yesterday in the House of Representatives. They found no supporters. Even Mr. Awaya Shinazo, hitherto a staunch and fearless friend of the Cabinet, revolted openly and went over to the Opposition, announcing his disaffection in a most significant speech. The Government is thus placed in an embarrassing dilemma. Its own measure for reassessing the taxable value of land has been carried through the Lower House and presented to the Upper, whereas the sources of revenue by means of which it intended to carry out the reform are cut off. The Representatives are determined that Administrative expenses shall be economized sufficiently to provide funds for not only the reassessment of the taxable value of land but also a reduction of the rate of the Land Tax. Moreover, the Peers also, by a slender majority of 3 in a House of 133, yesterday voted to present to the Government a Representation urging the necessity of cutting down official salaries. This, undoubtedly, is the burning question of the hour. Is it impossible to effect the sweeping reductions advocated by the Op-

Original from

position without fatally impairing the efficiency of the Administrative machine? On the other hand, is there any chance that an exit from the present *impasse* will be found by such a concession on the Government's part? Can the Cabinet retain sufficient prestige and authority to administer the affairs of the empire if it admits, at the dictation of the opposition, that many millions of public money may be saved every year, and yet have not hitherto been saved? And supposing that the admission would not be fatal to all conservation of authority, is it reasonably probable that the Opposition will rest content with such a victory and refrain from further obstruction? These are immensely difficult problems.

CHINA NOTES.

THE simmering disquiet lately reported from Ichang has at last found vent, and a collision has occurred between foreigners and a Chinese mob. Curiously enough, the occasion chosen for the outbreak was the arrival of the newly appointed General; the moment the *Kiangtung* hove in sight with His Excellency on board, shouts of "Kill! Kill!" arose on all sides, and a serious scrimmage ensued. The roughs followed the foreigners into the Customs premises—whether they had retreated—and proceeded to reduce everything they could lay their hands on to its constituent atoms as far as their skill permitted. At last one of them, more valiant if less discreet than his fellows, aimed a blow at one of the Customs staff, and was promptly sent sprawling on the floor. "Then," says the Ichang Correspondent of the *N.-C. Daily News*, "some fun began." The assistants were driven into the compound, and the gates locked. They found themselves caught like rats in a hole, and the Customs men fell to work in what the chronicler calls glorious style, thwacking and banging the entrapped miscreants without mercy, entirely unmoved by the howls which testified to the effectiveness of the retribution administered. While the rank and file were being thus belaboured, the ringleader was secured; seeing which, his followers rushed out at a side entrance in dismay, many of them as possible getting their heads cracked *en route* by a couple of foreigners stationed on either side for the purpose. Meanwhile, Captain Ravenhill landed a party of bluejackets, the mob being still "howling and dangerous," and the outlook decidedly threatening. But no sooner did the men put in an appearance than the entire rabble dispersed, "like crabs on the sand." By this time the City Magistrate had emerged from his lair in order to awe the crowd, but happily there was no crowd to awe; the bluejackets returned to their ship, the electric search-light (which had done good service) was withdrawn, and order once more reigned in Warsaw. What the General thought of it all is not stated. The Correspondent whose account of the affair we have been summarising thus concludes:—

Thus we have taken one step "forrader" to the goal. Next time I suppose we may look for a little more letting of blood, for, according to the oldest inhabitant, had the steamer but arrived earlier, and the rioters got to work before, there would still have been more fun for they would have endeavoured to eke out the daylight at mischief.

This then, is the welcome accorded to the new general at Ichang and two foreign ladies, who, I hear arrived by the same steamer, take up a permanent residence here. We now await future developments, but meantime the plucky fellows of the Customs staff here deserve high praise: first for their great forbearance before they actually started; secondly for preserving the property of their employers from wreck; and thirdly, for the splendid way in which they broke heads when once they commenced business. Some of the Customs Chinese boatmen also fought like niggers; and their conduct deserves to be recorded. The captured leader has been handed over to the city authorities; he admits he is a student.

Mr. Everard, the British Consul, has acted throughout a very trying week in a vigorous manner and with the help of Captain Ravenhill can be relied on, whatever happens, to give the foreign residents prompt assistance.

Are any of our readers familiar with the expression "Yankee Cow?" It seems to be much in use among foreign seamen in the China Seas, and a Correspondent of the *Daily News* writes a letter explaining its origin. The "absurd

combination," he says, is nothing more than the English mariner's attempt to pronounce the syllables Yang-küch Kou, or Ram's-horn Hollow, the name of an ancient sea-port in Shantung. Corruptions of this sort are common enough, and their evolution is a most interesting and instructive study for those who have nothing better to do. A well-known example is John Tuck, a mysterious magnate familiar to British tars anchored off Canton in the days of the occupation. If referred to the Viceroy, whose Chinese title is Tsung-tü; in Cantonese Tsung-tuk. Another is the public-house sign of Goat and Compasses from the old pious legend "God encompasseth us." The number of such is legion.

Apropos of mobs and riots, a most interesting letter from Dr. Griffith John of Hankow (unfortunately far too long to quote) relates how two friends, dupes, and adherents of the notorious Chou Han, have been convinced of the error of their ways by personal experience of missionary doctors. So great was their distrust to begin with that one of them refused to drink Dr. John's tea, lest it should be bewitched. The young man had come to see if he could be cured of a hare-lip, but repeatedly went away from the hospital door, unable to screw up his courage to enter such an uncanny place. But he subsequently made Dr. John's acquaintance, was perfectly cured of his malformation, and acknowledged how grossly he had been deceived. Both he and his friend expressed their intention of going to "have it out" with Chou Han himself, and begged Dr. John to write a letter to that extraordinary genius for them to deliver in person. The following paragraph is worth extracting:—

I asked Mr. Jen why he hesitated to come to the hospital, and this was his reply:—"I was afraid that if I once entered I might never come out again. I thoroughly believed that the foreigners did gouge the eyes and cut out the hearts of men, women, and children. I know now that it is all false; but this is to be ascribed to the fact that I have seen. I believe that if Chou Han himself could only see, his feelings would change just as mine have changed." Then he told me that in Chang-sha ninety-nine out of every hundred at least thoroughly believe these reports about the foreigners and their doings. If two or three experienced Missionaries could settle down in Chang-sha, and carry on their work of preaching and healing at Chang-sha, as they are doing at Hankow, a great revolution would soon take place in the Hunan sentiment with regard to us. I pray that that day may soon come.

The *North China Daily News* appeals to the Japanese Government to lend a hand in the eternal crusade against the Woosung Bar. It appears that a case has recently occurred in which a Japanese steamer was detained no fewer than eight days by this intolerable obstruction. And not only have ocean-going vessels been thus inconvenienced; coasting-steamers, and even the light-draught Ningpo and river-steamers, have had to wait for hours and even days, to get sufficient water to cross. "This and similar detentions will, we hope, stir up the Japanese Government, if our Government, are tempted to lie back, satisfied with the assurance that the Chinese did with the dredger *Anding* everything that was possible, and that the removal of the Woosung Bar is an impossibility, and the obstruction an Act of God, to be borne patiently and no longer struggled with. As we have said before, this despair is unreasonable, and the interests at stake are far too large and too important for the Bar to be left as it is."

Prince Kung's reference to the Bar as a "Heaven-sent Barrier" has been much criticised—as though the Prince had spoken of it as a Divine gift, specially vouchsafed to the Celestial race as a means of inconveniencing their barbarian invaders. But the word 天 or Heaven is constantly used, not only in philosophical works, but in the commonest parlance, in the sense of Nature. A "heaven-produced" thing means simply a natural thing. The probability is that Prince Kung intended to say no more than that the Woosung Bar was the product of

natural causes. But of course that is no reason why it should not be removed, even according to Chinese modes of thought.

We congratulate our Shanghai morning contemporary upon having at last found salvation upon the currency dispute. It has been wobbling for some time; but now the logic of facts appears to have grown too strong even for traditional orthodoxy. Early in the present month it published an excellent and decisive leader on the subject. Since then it has shown signs of that peculiar zeal which is characteristic of converts—which expresses grieved astonishment at the continued blindness of former associates. "It is curious," exclaims the Shanghai journal, "how obstinately the London papers adhere to monometallism." We suspect that not so very long ago the *Daily News* would have written, "It is satisfactory to note how firmly the London papers adhere to monometallism." We welcome the change, which is all the more noticeable a little further on. Our contemporary must not rat again.

Two notable utterances have been made lately about this question. One is by Sir John Lubbock, who is not a bimetalist. Sir John proposes that the rupee should be taxed; that is, that a tax of ten per cent. should be levied on rupee-coinage for the benefit of the Indian Treasury, the effect of which would be to appreciate the rupee in its relation to gold, and at the same time to increase the revenue. "That sounds right," says the *Spectator*, "and would be very pleasant to the Indian Government; but it rather increases our intellectual difficulty, which is this: All monometallists say, and we should *prima facie* agree, that no action of any Government can alter the ratio between gold and silver, that being a question of their relative supply and demand. Sir John Lubbock agrees with this, but then observes that taxation at the Mints will alter the ratio. If so, then State action can alter it, and the first idea of the bimetalists, however unsound their method may be, is in principle correct." Of course it is.

Mr. Balfour's speech seems to have been very bold and uncompromising. It was delivered at Manchester, and was of course particularly acceptable to his audience. His idea is—we quote from the *Spectator*—that the appreciation of gold, which goes on continuously, and has no visible limit, is an injury to the world; that it is necessary to found currency on the wider basis of the two metals; and that a ratio between the two can be maintained by the Governments of the world. He maintains that the contrary theory, that the price of a commodity is outside the reach of legislation, is untrue, for that legislation does affect the value of silver both in England and France. "Of all conceivable systems of currency," said Mr. Balfour, "that is the worst which gives you a standard steadily, continuously, and indefinitely appreciating." On the face of it, a medium of exchange which fluctuates in value is a monstrous anomaly. Suppose the sovereign were worth 19/6 to-day and 21/- next week, what basis would there be for the commonest mercantile transactions in England itself? Let monometallism be established between Caithness and Cornwall, for say a month. How many monometallists would there be in Great Britain at the end of it?

MR. HOSHI TORU.

It is alleged that a plot has been discovered to attack Mr. Hoshi Toru by night. Mr. Hoshi, as President of the House of Representatives, has shown himself a fearless, impartial, and resolute man. He respects neither persons nor parties, but does his duty boldly and conscientiously. This does not altogether please the implacables. In their field of vision there is no such thing as a *via media*. A man must be either wholly in one camp or wholly in the other. So soon as they detect a semblance of impartiality, they immediately construe it into an evidence of disaffection. Some of

these gentlemen have prepared and circulated a document declaring that Mr. Hoshi does not sufficiently consult the interests of his Party, and, moreover, that he is in communication with the Government. The intention of such accusations was to pave the way for an attack by *soshi* which the plotters contemplated. But it is said that happily the whole scheme has been discovered, and that the police know the names of the youths designated to carry out the attack.

THE TOKYO CLUB MONTHLY DINNER.

ABOUT eighty persons sat down to the last monthly dinner of the Tokyo Club in the Roku-meikan. Four Ministers of State were present, Count Inouye, the founder of the Club, Count Goto, Mr. Mutsu, and Viscount Nirei. After dinner Professors Milne, Burion, and Mr. Ogawa delighted the convives with an admirable display of dissolving views, representing the beauties not only of Japanese scenery but also of the Japanese fair sex. Some really exquisite landscapes were shown, and also some most interesting pictures of earthquake effects. A particularly vivid representation of disaster at Charleston or Casamicciola was unexpectedly succeeded by a striking likeness of "Our Vice-President," Mr. H. W. Denison, which elicited an outburst of applause. Mr. Edwin Dun also appeared, a good deal larger than life but not more cheery, in the interval between the reflections of a vigorous geyser and a placid Fujiyama, and Mr. T. B. Glover's portrait in a characteristic position provoked a chorus of "Auld lang syne." The evening was delightfully spent, and proved, as usual, a means of bringing Japanese and foreigners into hearty fellowship.

MISS WEST'S FUNERAL IN TOKYO.

A LARGE congregation assembled in the Azabu Methodist Church yesterday, at 10 a.m., to pay its last respects to the lamented disciple of Gospel temperance, Miss West. The services were opened by singing "Rock of Ages" in English, after which the assembly was led in prayer by Rev. Kumiya, pastor of the M. E. Church in Tsukiji. President Ikeda of the Meiji Gakuin read the opening Scripture lesson. The gentleman appointed to deliver the funeral address not being present, Dr. Cochran, in his stead, delivered a very forcible and touching address respecting the departed friend and the noble work in which she was engaged. This was interpreted afterwards into Japanese by the Pastor, Rev. Hiraiwa, with some additional remarks. Rev. J. H. Ballagh, from Yokohama, offered the closing prayer in a very touching manner. The congregation then joined in singing "In the sweet by-and-bye," after which the Rev. Daniels offered the benediction. The remains were then taken to Shimbashi, and thence to Yokohama per train, where further services were held.

FOREIGN EMPLOYÉS IN JAPAN.

THE *Kokkai* has this paragraph:—"The salaries of the foreign employés of Japan are exceedingly high. We do not say this from the point of view of the country's wealth. The fact is that compared with the emoluments they would obtain in their own countries, the sums paid to them here are excessive. Hence their services might be secured at rates much less than those paid to them by the Japanese Government at present. When a new employé, coming to Japan, sees that a man of the same qualifications as himself, or even inferior qualifications, is receiving a higher salary, he makes comparisons in his own mind, and either asks for higher pay, or is too discontented to work as well as he might. This surely is very bad economy. Of course there is no help for the cases of persons who have already been engaged and whose terms of service have not yet expired. But it is advisable that officials who have to do with these matters should give serious attention to the question."

Japan is, of course, entirely justified in seeking to obtain the services of foreign experts at the lowest possible figures. We do not in the least quarrel with the *Kokkai* for urging that

view of the question. But we greatly doubt whether our contemporary's general proposition as to the excessive rates now paid will bear examination. Let us consider actual figures. In a Supplementary Budget now before the House of Representatives, appropriations are sought for re-engaging eight foreign Professors in the Imperial University. The salaries of these Professors vary from \$300 to \$400 per month. The general rate is \$370, and only one among the number reaches \$400. That is to say, men of the highest attainments, filling the most prominent and honorable positions in the sphere of Japanese education, receive from £600 to £640 annually. Does the *Kokkai* imagine for a moment that such rates of pay are high in comparison with the emoluments attaching to similar positions in Great Britain or America? If so, our contemporary labours under a very serious hallucination. The question is perfectly plain and simple. The *Kokkai* alleges that the foreign employés of Japan receive excessively high salaries; not merely high as viewed from the point of Japan's capacity to pay such stipends; but also "exceedingly high" as compared with the remuneration which their services would command in their own countries. Now, if this allegation be true, it admits of incontrovertible demonstration. We invite the *Kokkai* to demonstrate it. There can be no doubt that our contemporary speaks in good faith. Let it then set two columns of figures side by side; one representing the sums paid by Japan to her foreign employés; the other, the sums attaching to similar posts in Great Britain or America.

We have thus far spoken of simple arithmetic. Even on that score we distinctly challenge the correctness of the *Kokkai's* assertions. But simple arithmetic is very far from exhausting the question. There is another vital consideration that has to be included in the calculation. It is this—that the foreign employé in Japan has no future whatever before him. Promotion never comes. Public recognition never comes. An increase of emoluments never comes, or at best comes only in the form of a fitful and very limited recognition. There is no career before him. He is a mere hireling; a veritable servant. He has cut himself off from all the chances that lie in the path of industry and intellect in his own country. His monthly stipend, the enthusiasm of science, and the approval of his own conscience are his only rewards. At any moment he may be discharged, and find himself as low down on the ladder of fortune and fame as he was when he first placed his services at the disposal of Japan. The case is altogether different with persons treading the same paths in England and America. Every year of successful service constitutes there a title to larger recompense both financial and moral. Permanency of office, growing emoluments, increasing reputation, public recognition, an assured future, and a comfortable old age—these are the prizes that attach in Great Britain and America to scientific and scholastic posts such as we have been considering. Factors of this kind weigh many times heavier in the balance than a mere difference of so many dollars more or less per month. It is beyond all question that every fifty cents of professional salary in England possesses more real value than a *yen* in Japan. Let the *Kokkai* take this into consideration. In the temper of the present time, the note struck by our contemporary may easily swell into a diapason of discontent. Let us then having something like the truth told.

The *Kokkai* may ask why, if a position in England or America is so much preferable to a position in Japan, Englishmen and Americans do not stay at home instead of taking service in this country. The explanation is simple; the salaries paid by Japan are higher at the outset than those obtainable in the West, and, moreover, the novelty of the field is attractive. A man commencing his career in Great Britain or the United States cannot obtain as high rates of remuneration as Japan offers. Neither does he

understand that his prospects here are virtually limited to the reward offered at the start. He hopes that in Japan, as in the West, the future has always something brighter for a zealous, clever man than the past has given him. It is a vain hope, but by the time its vanity has been discovered, the race has left him behind. He cannot go home and take the place he would have reached had he been in the competition throughout. Therefore he holds to what he has. Japan has in her service several men who, so far from being over paid as the *Kokkai* alleges, are receiving salaries far below what their attainments and work should command, and far below what they would be receiving in their own country after the same time and the same general success.

We are not blaming Japan in this matter. She chose her course from the outset and has trodden it steadily. Her decision has always been not to give rank to any foreigner exempt from her jurisdiction, and not to recognise him as a member of her permanent service. She would probably have chosen differently had circumstances permitted, but since her choice has relegated her foreign employés to the place of mere servants, the fact must not be left out of the account when a comparison is made between the advantages and disadvantages of their position.

WHAT ENGLAND IS SAYING OF JAPAN.

THE process by which Englishmen learn to know about Japan is slow and somewhat fortuitous. The comparatively few persons who travel eastward read, doubtless in many cases though not in all, the standard works about the country, and some, even though they do not contemplate a journey of such length, read the writings of men like Norman, Arnold, "Loi" and so forth, for the sake of the literary ability of these authors and of the novelty of their subject. But there is all the while going on another and a much wider kind of education, the education imparted by the columns of the daily press and the periodicals. Frequently it is a decidedly misleading education, but on the whole, it arouses interest in things Japanese and helps to dispel the clouds of insularity which are happily beginning to lift from the horizon of the old country. Let us see what this ephemeral schoolmaster had to tell the people of Great Britain in the interval between our last two mails:

The *Court Circular* has discovered that the Emperor understands French. The news is conveyed in the following paragraph:—

M. de Guerville, who has just returned from a visit to Japan, says that when he was given Royal audience the Mikado insisted that he should be addressed in French, which he understands well. The Empress was becomingly dressed in a costume of light-grey silk, the creation of a Paris dress-maker, and made in the latest style.

The *Gentlewoman*, as becomes her sex, discussed a more domestic subject:—

Japanese laundresses have increased their prices! I must say I think they are justified in doing so, for their original charge was one penny for everything, from a collar to a counterpane. Some of the washer-folk have ventured to try and get a little more money than this from some of the foreigners, so a company has been started to wash all ladies' things at 2 dols. (8s.) per 100, and gentlemen's at 1½ dols. (6s.) per 100.

Oh, how I should welcome some of these moderate souls over here! When one thinks of 3s. 6d. to 5s. for a white dress it makes one green with envy.

Who can fail to sympathise with the plaintive lament of this dear little thrifty body whose frocks pass so expensively through the wash tub. But we may comfort ourselves with the reflection that the rise of prices spoken of by her is not universal throughout Japan. Take a foreign household in Tokyo, for example. The charges paid for washing are 2 *sen* per piece, large and small, for the general articles of daily use, and 1 *sen* per piece for things appertaining to the nursery. Two *sen* is not even a penny, but only two-thirds of a penny;

Original from

and one *sen* is a little less than a half-penny and a little more than a farthing. But why does the *Gentleman* taunt us with the suggestion that our dollar is worth four shillings. Ichabod!

Hokkaido, even distant Hokkaido, has just been attracting English attention. The *Financial Standard* has this to say about it:—

The longer we wait the more we see the similarity between this country and the islands which form the Mikado's Empire. A Consular report just received from Japan states that Government surveyors entirely bear out the estimate of American engineers with regard to the coal deposits of Yezo, which is an island about a large Ireland, containing no less than 150,000,000,000 tons of marketable coal. This is two-thirds the quantity which England is reputed to possess. After this discovery we do not see a very bright prospect for the coal beds of Tonquin, for which Mr. Chater, the well-known Hongkong financier, has obtained a concession from the French Government.

The *Liverpool Mercury* has a startling paragraph on the same subject, but the *Glasgow Engineer* gives a much more moderate estimate, for it states that according to an elaborate Japanese report, published last March, embodying the results of the most recent surveys, the workable seams in Yezo contain over 600 million tons, the total for the rest of Japan being 700 millions. There is a big difference between six hundred millions and a hundred and fifty thousand millions.

Industries. dealing in thoroughly practical matters, gives the following statistical items:—

During last month (September) Japanese imported from Great Britain 98 tons of bars and angles, 465 tons of railway material, 145 tons of cast and wrought iron, and 51 tons of lead, as compared with 446 tons, 31 tons, 154 tons, and 76 tons respectively in September, 1891.

According to the report of the Japanese Cotton Spinning Mills Association, thirty-four spinning mills, representing 324,800 spindles, were at work during the first six months of the present year. During that period the quantity of yarn spun by these mills amounted to 41,138,791 lb., giving employment to 5,420 men and 16,110 women.

A correspondent also addresses the same journal thus:—

SIR—I have read with much interest your recent leading article on this subject, which gives a very good idea of recent industrial progress in that country. As you remark, however, the official report on which the article is founded is not "so perfect as it might have been, either in matter or arrangement, as it is evident that those who supplied the information do not seem to have possessed the necessary technical skill and commercial knowledge to make it a model of what such a report should be." They especially have not distinguished between passing phases and permanent effects. They might have known that alternate periods of depression and of rapid extension in business seem to be the necessary consequence of the present industrial arrangements or rather want of arrangements. There can be little doubt that in Japan there were too many cotton mills started within a very limited time, and that the competition which was brought to bear upon them, and which they exercised on one another, had the effect of reducing their profits at the time the report was prepared. But that seems to have been only a very temporary effect, and soon after the report was completed a very great improvement took place. I find from a report which was published in one of the Japanese journals that a remarkable revival also took place in the demand for yarns, with the result that a great improvement took place in the dividends of the various companies.

It is stated that the general increase of prosperity shown by the dividends for the first half of this year is mainly due to the increase in the demand for yarn, but, to a certain extent, it is also owing to the raw cotton being purchased at a cheaper rate, and to the improvement in female labour. As you point out, Japan as well as Lancashire is finding out that the economic conditions of industry are more important than even the technical.

As to the question put by the writer of the Consular Report—whether it is wise for a nation of artist-artisans to take upon itself the burden of competition with the world in the great staples of Western manufacture—the leaders among the Japanese think that it is possible to attain a high position in the world of industry without sacrificing any of the peculiar artistic faculties for which their

country is celebrated; in fact, that modern industry may open up new and much wider fields for these faculties. YOUNG, & C., ORIENTAL.
London, 22nd October, 1892.

Mr. Okoshi's paper on the proverbs of Japan, read at the 5th Ordinary Meeting of the Japan Society on the 12th of October, has excited interest. Somebody has described proverbs as the "crystallised idiosyncrasy of ages," but such an epigrammatic blasphemer has no business to be seriously regarded. Proverbs are the most delightful of all intellectual links between the minds of our fathers of old and the thoughts of our own time. The rate of their disappearance from daily use is a fair measure of the widening interval that separates us from the past. Japan loves them and quotes them because her cults and creeds inspire above all things reverence and love for the men that are no more. She has time to look backwards. But for the busy world of the West there is only one impulse, a perpetual rush towards what the dying Laureate called the "star capped heights." A peculiar and decidedly novel feature of Mr. Okoshi's lecture was that his recapitulation of Japanese proverbs was accompanied by object lessons. "The subject of the lecture," we read in the *Queen*, "was illustrated by pictures, objects in metal, ivory, in lacquer and wood, which were lent by Lady Colin Campbell and Mr. Hart. The connection between the illustrations and the objects was pointed out by Mr. Ernest Hart in a lively description of the idea hidden in the artistic work, which is generally admired for its quaintness rather than its meaning. The miniature articles in ivory, instead of being merely carps, badgers, cats, &c., illustrate, it would seem, hundred of proverbs, such as "To be beaten is to win," "When in haste avoid short cuts," "When the cat is away the mice will play." To the "wit of one and the wisdom of many," the Japanese have added, in their artistic rendering of proverbs, a skill which is as delightful in its cunning as are the proverbs which they interpret, proverbs which have become part of the daily speech and the written language of the people.

Mr. Douglas Sladen's book, with the execrable title of *The Yaps at Home*, seems to have been favourably received. Why on earth a man should choose such a title it is difficult to conceive. Imagine calling a book *The Brits at Home*, or *The Germs and their Domestic Customs*, or *The Chins and their Habits*. A good title is difficult to evolve, but a worse title than Mr. Sladen's would also be difficult to discover. Mr. Sladen made up his mind that the Japanese are closely akin to Italians. He refers to this remarkable resemblance again and again in his book, but he gives only two grounds for the novel faith. One is that the curio shops of Yokohama remind him of nothing so much as the Mercato Vecchio, and the other that Mr. Shigeo is the Double of a Florentine. This is a capital example of the isolated pin points upon which some writers erect pinnacles of general theory. The peculiarity about the particular person alluded to by Mr. Sladen is that he differs in quite a remarkable degree from the ordinary type of Japanese. To take him as a standard of comparison is to deduce a universal law from an accident. But if we find it hard to share Mr. Sladen's mood in this respect, we by no means intend to condemn his book on the whole, for we regard it as a decidedly interesting and well-written addition to the library of works on Japan.

The *Daily Chronicle* has the following interesting note:—

A few weeks ago we referred to the wreck of Japanese junks on the north-west coast of America, and to the possibility of the continent having been unwittingly discovered and peopled by Chinese through a similar accident happening to a prehistoric Chinese vessel. Apropos of this, there has recently been found among a collection of objects from an Indian grave-house near the Chitkat village, at the mouth of the Chitkat River in Alaska, a wooden mask, which has for its eyes two large

Chinese bronze coins. The natives declare that the grave is that of a famous medicine man who lived 200 years ago, and Lieutenant Bolles, who found the object, is firmly of belief that the coins were obtained from a wrecked junk. This is not unlikely, though no dependence is to be placed on Indian chronology. In the climate of Alaska a wooden mask could scarcely survive for two centuries. Moreover, it must be remembered that for nearly a century there has been intercourse between China and the American coast, and that the early four traders sold their peltry in China, and refitted their vessels for Nootka and the northern coast in Canton or Shanghai.

YOKOHAMA LITERARY SOCIETY.

THE attendance at the Yokohama Literary Society meeting in Van Schaick Hall last evening fell short by one only of a hundred persons. The readings and original paper were all on Russian subjects and the music was principally from the works of Russian composers. The programme was as follows:—Pianoforte duet: "Sonata a la Russe" (Weber) Mr. J. T. Griffin, and Miss Griffin; Reading: "Introductory remarks on Russia, Mr. J. T. Griffin; Original Paper: "Tolstoi," Miss Birkenhead; Songs: "Fair Miuka," "The Postillion," Mr. F. Herb; Reading: "Nijni Novgorod," Rev. E. S. Booth; Pianoforte duet: "Spanish Dances" (Moskowsky), Mrs. Thorn and Miss Thorn; Reading: "Russian Gastronomy," Mr. J. T. Griffin; Song "Fiddle and I," Mrs. Borthwick, Violin obligato, Miss Moss; Reading: "Herr Wickiey and the Archimandrite's Banknotes, Mr. Balk; Song, Punctinello, Mr. Pollard; Russian National Anthem, Mr. Griffin.

THE KANAGAWA PREFECTURAL ASSEMBLY.

It is stated that the Cabinet has decided on the suspension of the Kanagawa Prefectural Assembly, and that an order in that sense was forwarded yesterday through the proper channels. We do not see what other course can be adopted towards the recalcitrant assemblies. They deliberately and willingly exceed their powers when they pass votes of want of confidence in Prefects and Chiefs of Police, and it is quite plain that if they were permitted to dictate to the Central Authorities whom they will have and whom they will not have to govern them and direct the local police, the appointment of these officials by the Government would become a mere farce. Whether the system now in operation be right or wrong, it must be maintained until altered by lawful process. But assuredly all this friction is most unhappy and disquieting.

"THE AWKWARD SQUAD."

THE *New York Sun* has a delicious bit of chaff at the expense of those who are investing lyrical tears in their hopes of inheriting the Laurel Wreath. We give it exactly as it stands:—

"Don't let the awkward squad fire over my grave," said Burns. The awkward squad is firing over Tennyson's grave. Sir Edwin Arnold, Mr. Lewis Morris, Mr. Alfred Austin, three of the aspirants for the laureateship, have lapsed into elegy. They have produced three pieces of sickening doggerel which ought to be punished with solitary imprisonment for life, or compulsory reading of their own works. Mr. Morris asks:

"Dear friend and honored master, art thou dead?" Undoubtedly Tennyson is dead, Mr. Morris. Haven't you heard of it? And you have given new reason why his death should be deplored. "I am Merlin, I am dying, I am Merlin who followed the gleam," remarks Mr. Austin. Mr. Morris can't die. Mr. Austin. Vivien is probably making the old man's life unhappy now by reading your verses to him in the forest of Brocelande or Bredigan. Sir Edwin Arnold's elegy is not only the worst piece of verse produced since the time of Amos Cottle, but it is as bad as anything else that he has written.

MR. CLEMENT SCOTT'S VISIT TO THE EAST.

MR. CLEMENT SCOTT has, we learn by yesterday's mail, postponed for a few days his departure on his long journey round the world, in order to be present at the Lyceum Theatre on the first night of Henry Irving's revival of "King Lear," which is fixed for Saturday, 5th November, if not the Thursday before. Mr. Scott has been present at every Lyceum first night since 1863 (thirty years ago), when Fechter took the theatre to produce "The Duke's Motto," and Kate Terry enchanted all literary and artistic London. He has seen and criticised every performance of Henry Irving and Ellen Terry since they first

Original from

stepped on the stage, with the exception of Irving's performance in "Ivy Hall" and Ellen Terry's juvenile gambols under Mr. Charles Keary, though of course Mr. Scott was a boy player long before that. The first performers that Mr. Scott can distinctly remember are Madame Vestris in "King Charming" at the Lyceum in the "forties," and James Anderson with Miss Vandenhoff in the "Lady of Lyons" in 1850 at Drury Lane—not bad memories for a man of fifty. Mr. Scott sails for Egypt on board the P. and O. *Pekin* on 11th November.

THE PRINCE IMPERIAL.

We regret to learn that His Imperial Highness the Prince Imperial is very ill. The malady is said to be typhus fever, but we trust that this rumour may yet turn out to be erroneous. The Prince is not naturally robust, and a sickness so grave as typhus fever could not fail to expose him to considerable danger.

We are glad to be able to state that the Prince Imperial's malady shows signs of distinct improvement. Since Monday the fever has sensibly abated, and the physicians now look forward to a speedy recovery. The news of this happy turn will be received with universal rejoicing in Japan, not merely because the Prince is the Emperor's only son, but also because His Imperial Highness gives promise of very high capacities.

The Prince Imperial is now pronounced out of danger. His temperature and pulse are normal, and complete convalescence may be looked for soon.

LIEUTENANT ROOKE.

THE escape of Lieutenant Rooke, one of the nine only survivors of the *Roumania* disaster, can hardly have been more miraculous, says an Indian paper, than his preservation on the frontier eighteen months ago. It may be remembered that Mr. Rooke was cut down by a fanatic, and that whilst he lay on the ground helpless at the mercy of the Ghazi, his horse launched out with his heels and protected his master from what would undoubtedly have been a death-blow, till assistance arrived. The would-be murderer, who declared that he had no personal feeling against Lieutenant Rooke, but was actuated solely by a desire to win Paradise by slaying a Sahib, was subsequently hanged at Quetta.

THE AMATEUR PERFORMANCE.

We desire to draw attention to the array of talent set forth in the advertisement of the amateur performance to be given in aid of a local charity and the funds of the Public Hall on Tuesday evening next, and to point out that there is every probability that there will not be a seat untaken. We are in a position to state that each item of the musical portion of the entertainment will be great treat and a distinct success, and it is only necessary to glance over the names of the ladies and gentlemen engaged in "Little Toddlekins" to see at once that the rattling old farce will be represented in such fashion as to bring down the house.

THE RAILWAY COUNCIL.

THE meeting of the Railway Council, for which the public has been looking forward with no inconsiderable interest was held for the first time on Tuesday in the room usually used for holding Courts of Marine Enquiry in the Department of Communications. We learn from the vernacular papers that the day was occupied wholly in determining the regulations for conducting the meetings. The second meeting was to take place yesterday morning at ten o'clock, when questions relating to the extension of several private railway lines were to be considered.

TOKYO TEMPERATURE.

THE temperature in Tokyo has been lower during the past ten days than for some years past in the corresponding period of the year. In places which the sun does not reach it remains the whole day. Hopes are entertained that this cold wave will purify the air and ward off dis-

ease, a muggy December having often been attended by a considerable amount of sickness. Reports from various parts of the country show that there have been great variations of temperature, in some places as much as 40 degrees in 24 hours, and in several districts this has induced numerous cases of various ailments.

THE STRIKE IN HONGKONG.

MATTERS remain very much as they were at the Kowloon Docks, the boilermakers and engineers being the only men actually on strike. Little inconvenience, however, has been experienced by the Company, and the necessary repairs to the *Yarra* were soon effected. Though the malcontents have not shown any disposition to give trouble, preparations have been made for any ebullition of feeling.

The Dock strike was brought to a termination yesterday, says the *Daily Press* of the 7th inst., the men practically agreeing to accept the Company's terms, and to-day they will return to work. The arrangement come to is that the men are to work increased hours to entitle them to a day's pay for overtime. Whereas formerly they got a day's pay for working four and a half hours overtime, they will in future work six hours for the same wages.

THE SPANISH CABINET.

THE *Official Gazette* announces that, according to a telegram from Viscount Nomura, Japanese Representative in France, a change has taken place in the Spanish Council of Ministers. Señor Sagasta becomes President of the Council instead of Señor Antonio Canovas del Castillo, and the Marquis de la Vega de Armijo takes the portfolio of Foreign Affairs, *vice* the Duke of Tetuan. The Cabinet, in short, returns to its composition of 1890.

ANOTHER RIOT AT ICHANG.

THE *N.-C. Daily News* of the 5th inst. says:—News was received yesterday afternoon by wire of a riot having occurred at Ichang on Friday evening on the arrival of the *Titub*, or Provincial Commander-in-Chief. H.M.S. *Est* landed a force of blue-jackets for the protection of the Europeans, and no foreigners were injured. All is now quiet. Our Ichang correspondent hinted in his last letter that some more trouble might be expected, with the large number of students now in the city.

THE Messageries Maritimes steamship *Yarra*, now in the dock at Yokosuka, is expected to return to Yokohama on Sunday, 18th inst., to secure her departure from this port to Kobe and Shanghai, on Tuesday, 20th inst., at 6 a.m.

THE *Asahi Shimbun* states that while on her way to Kobe the *Neirstein* has taken the ground at Ohama, near Bakan, owing to an accident to her machinery.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

An alarming rumour is circulated in the capital to the effect that, in view of the refractory tendency of the Diet, the Government intends to advise the Sovereign to order a prorogation. It is further reported that, should the Diet remain unreasonable after the termination of the prorogation, it will be dissolved. This rumour is not believed by a large section of the public, but there is no doubt as to its circulation in circles supposed to be well informed of political secrets. The *Choya Shimbun* evidently credits the story, for it warns the members of the Diet against going too far in their wanton opposition to the Government. The Cabinet, having done everything in its power to conciliate the Diet, naturally expects to be met by the latter in a like spirit. Should the members of the Diet prove so perverse as to mistake the Cabinet's anxiety to pacify them for a sign of weakness, they will very soon find out their mistake. For, in that event, the Cabinet

will not hesitate to adopt decisive measures. The *Choya* even goes so far as to remark that the present Ministry, when once it makes up its mind, will be far more prompt and firm in the execution of its decision than were any of its predecessors.

The *Jiyu*, the Radical organ, observes, evidently in reply to the *Choya*, that the Popular Party is not afraid of a dissolution of the Diet. But at the same time it professes to doubt whether the Cabinet is so ignorant of its own interests as to resort to such a suicidal course. The last general elections resulted in the return of a number of men who owed their success entirely to official protection. The presence of such men is a disgrace to the Diet, and the Radical organ would welcome an opportunity to deprive them of their seats. In this respect, a dissolution of the Diet would, in our contemporary's opinion, be a great favour to the Popular Party. Strong as the *Jiyu's* language apparently is, no careful reader of its article can fail to perceive that it is at heart very anxious to avert the threatened catastrophe. For it takes much pain to persuade the Cabinet of the unwisdom of dissolving the Diet. It may even be assumed that the *Jiyu's* apparent equanimity is the result of confidence that the impending collision between the Cabinet and the Diet on the Budget and other questions will not be suffered to reach a dangerous point.

The principal subject of discussion in the press during the present week has been the resolution passed by the House of Representatives on Tuesday to the effect that the Imperial Ordinance relating to the Game Regulations is a violation of the constitution. The arguments advanced on both sides have been noticed in these columns, and we shall here confine ourselves to a review of the opinions entertained by the papers of different parties as to the bearings which the resolution has upon the Ministry. The organs of extreme Progressionists, such as the *Hochi Shimbun* and the *Mainichi Shimbun*, maintain that the Cabinet ought either to dissolve the Diet or to resign. The interests affected by the Game Regulations are comparatively insignificant, but the question, say these journals, involves constitutional points of great importance. Now that the Diet has at last unanimously declared the Regulations unconstitutional, the Ito Cabinet must decide between an appeal to the country and surrender of power.

The Radical organ, the *Jiyu*, is more moderate and perhaps also more ambiguous. It is not satisfied with Count Goto's declaration that the Government will take no cognizance of the resolution under consideration. Such a declaration it regards as a slight upon the Diet, and it advises the Cabinet to treat the Diet at least as its equal. Beyond these generalities, it refuses to travel, not deeming it opportune to define what course of action the Cabinet ought to take in the juncture. Evidently, the *Jiyu* does not agree with the *Kaishin-to* papers in thinking that the Ministers are bound to tender their resignation.

Some of the Progressionists themselves seem to think that the Ministers are not called upon to resign. The *Yomiuri Shimbun*, which always expresses the views of the moderate section of that Party, believes that everything will go right, if the Cabinet advises the Sovereign to sanction the new Game Law now about to be passed by the Diet.

The *Nichi Nichi Shimbun* ridicules the resolution as a child's act. A resolution passed by one House of the Diet has no effect, according to the principle of the Japanese Constitution. In spite of all the talk of the House of Representatives, "the Game Regulations," says the *Nichi Nichi*, "will remain in force, so long as the Ministers of State take no notice of the resolution."

THE POLICE IN TOKYO.

IN a recent issue we alluded to the conduct of a Tokyo policeman who required a foreign lady to descend from her horse when the Imperial cortège was passing along the street. Further particulars subsequently learned have modified the view we then expressed. It appears that the lady was not in the street along which the EMPEROR was about to pass, but in a side street leading thither. She was, in fact, unconsciously approaching the line of the Imperial route, and, when informed of the fact, would have turned and ridden back had not the policeman insisted on her dismounting. In so acting, the constable of course exceeded his orders. Neither custom nor regulation prescribes that the public shall be detained on foot in every avenue of approach to the road reserved for the EMPEROR'S passage. As to whether it is permissible to sit on horseback or in a carriage in the actual line of route, we cannot speak with assurance, but certainly the habit of the police is merely to keep the centre of the street clear, and to allow the public to congregate on either side, on foot or in *jinrikisha*. Horses, or horsed vehicles, however, appear to be kept out of the crowd as far as possible. On occasions of State Progresses the whole street is reserved, as well as a certain portion of the approaches to it. The chief difficulty with foreigners is that they are not accustomed to the observance of invariable ceremonial in respect of Imperial comings and goings. In Great Britain the QUEEN, under ordinary circumstances, passes through the streets in precisely the same manner as do any of her subjects. She does not disturb the traffic in the smallest degree, and the idea of anyone being obliged to dismount from horseback or draw his carriage to one side until the Royal vehicle has gone by, is never entertained. But on occasions of State Progress the case is very different. The police and troops then reserve the street just as they do in Japan, and, from the mere point of view of safety to life and limb, we doubt greatly whether any equestrian or any vehicle drawn by horses would be permitted to remain in the actual street along which the cortège is to travel. As to the side streets, however, there can never be any doubt. Nor is there in Japan. The officious constable on the 25th ultimo behaved in a manner that his superiors would never sanction, and it is to be regretted that steps cannot be taken to identify him for purposes of reprimand. What has to be remembered, however, is that, although a nominal distinction exists in Japan between State and Ordinary Progresses of the SOVEREIGN, every passage of the EMPEROR through the streets is, in fact, invested with a degree of ceremonial unknown in the West except on special occasions.

Foreigners will do well to be prepared for this, since in such matters visitors to this country must of course comply with the etiquette of the land. Neither a Chinaman nor a Parsee removes his head-gear as a token of deference in his own country, but if either the one or the other were to remain covered in a London street when the QUEEN passed he would quickly discover his mistake. So, in Japan, foreigners must comply with Japanese forms. On the other hand, it is certainly desirable that the police of Tokyo should be instructed more accurately. On the 29th ultimo, a constable sought to compel a foreign lady to remove her hat as the EMPEROR passed, and, contrary to the habit of Tokyo police, he showed some rudeness in attempting to emphasize his view. There can not be any regulation which requires ladies to uncover their heads on such occasions. We believe that this constable, also, was led away by ignorant zeal. In point of fact foreigners are, as a rule, more willing than the Japanese themselves to show respect to the EMPEROR as he passes, and it is alike unfair and injudicious to signal them out for a display of wholly needless and misdirected authority. The Japanese nation would be greatly humiliated were the belief to be entertained and declared by foreigners that whenever the SOVEREIGN leaves his Palace, Occidentals had better shut themselves into their houses. It would be very easy to establish such a creed, however, if a few constables were to follow the unwarranted example of their two comrades on the 25th and 29th ultimo. Therefore we venture to suggest to the Chief of the Metropolitan Police that, for the sake of the country's reputation, to say nothing of courtesy and hospitality, constables should be more clearly instructed as to the precise nature of their duties in connection with the comings and goings of the EMPEROR.

TOKUSHIMA PREFECTURE.

THE exceedingly unsatisfactory state of affairs in some of the provinces has driven the Cabinet to take an exceptional step. Readers who have followed the course of events must have perceived that the example of baiting and defying the Government which has been so persistently set by the *Kaishin-to* and the *Jiyu-to* since the opening of the Diet, has gradually extended to the localities. When men like Messrs. INAGAKI SHIMESU, ARAI SHOGO, TATEKAWA UMPEI, TANAKA SHOZO and others, under leaders of such light and learning as Messrs. SHIMADA SABURO and KONO HIRONAKA, make it their daily business to obstruct the progress of legislation, belittle the Ministers of the Crown, and propagate the notion that under representative institutions the patriotic and proper course for the people's representatives is to be perpetually in antagonism to the Government, it is not unnatural that

the same programme should be adopted by the constituencies which have sent these gentlemen to the Diet. Perhaps, indeed, the cases should be reversed. Perhaps, the parliamentary obstructionists only echo the sentiments, and carry out the wishes of the constituencies. But it is hard to think that. The inhabitants of the provinces used always to be such law-abiding and peaceful folks, and their development of defiant qualities has followed by such a long interval the commencement of truculent displays in the Diet, that we can scarcely regard the latter as not standing in a causal relation to the former. At all events it is beyond question that if anything like harmony reigned in the House of Representatives between the political parties and the Government, the wretched friction now reported from the provinces would never have taken place. Whether the Opposition is justified in adopting such tactics we need not consider here. Oppositions have frequently behaved similarly in the Occident without losing contemporary credit or being pilloried in history. But the point is that Japan has never been accustomed to anything of the kind. It is still beyond her comprehension that warfare in the Diet may be consistent with peace outside its walls, and that the authority of the SOVEREIGN'S Government may be deserving of all deference though the Ministers authorized to exercise it are treated with something very like contempt in parliament. The country will learn this lesson sooner or later, but in the interim the provincials have so far lost their heads that the task of governing them is exceedingly difficult. In Saitama, in Niigata, in Fukuoka, and in Tokushima the Prefectural assemblies have virtually declared that their Governors must be changed, and news telegraphed from Okayama on the 12th instant indicates that there also strong pressure is being brought to bear on the Local Assembly with the object of forcing it to pass measures which will at once produce a deadlock. In short, the attitude of these various places must be described as frankly defiant. Now, whatever a Governor of a Prefecture may be, and however faulty his methods, it is plain that so long as he holds his commission from the SOVEREIGN, a Prefectural Assembly is not vested with competence to vote for his removal, or to abstain from all practical exercise of its deliberate functions while he remains in office. There are duly prescribed methods of moving the Central Authorities to transfer or retire a local Governor, but no Local Assembly is entitled to take the matter into its own hands, and if the Central Government permitted anything of the kind, the efficient administration of the empire would at once become impossible. A decisive measure had therefore been taken in Tokushima Prefecture.

In accordance with the 89th Article of the Law of Organization of Cities and Prefectures, an Imperial Ordinance has been issued dissolving the Assembly. New members will have to be elected within three months, during which interval the Governor has competence to administer the Prefecture on his own authority. It is to be feared that a similar step will have to be taken in other prefectures also, and inasmuch as the people everywhere declare their resolve to return the former members, conditions of friction are inaugurated which may involve very serious results. Nothing could be more regrettable than such a state of affairs. That it is a reflection of the systematic opposition carried on in the Diet seems an unavoidable conclusion.

THE GAME REGULATIONS.

ON Tuesday the House of Representatives, by a vote 174 to 73, decided that the Game Regulations issued in October are unconstitutional. A great deal has been written and said about these Regulations, but so much of it has been the outcome of obvious ignorance, that the debate in the House comes as a welcome indication of the views really held by the opponents of the Regulations. Those views may now be stated in the briefest manner. They are, first, that the issue of any such Ordinance is in excess of the powers vested in the SOVEREIGN by the 9th Article of the Constitution. Secondly, that since the Regulations modify an existing tax, their enactment by any process other than that prescribed with regard to "laws" is a violation of the 62nd Article of the Constitution. Thirdly, that since the 27th Article of the Constitution guarantees the right of property of every Japanese subject against any restrictions other than those imposed by "law," therefore an Ordinance imposing such restrictions is unconstitutional. Let us very shortly examine these three points.

The 9th Article of the constitution declares the EMPEROR competent to issue Ordinances "necessary for the maintenance of public peace and order and for the promotion of the welfare of this subjects." The Ordinances here referred to are not "urgency Ordinances," but "Administrative Ordinances." That is to say, they are Ordinances issued under ordinary circumstances. So far as the 9th Article is concerned, if it can be shown that an Ordinance is in any way calculated to maintain public peace and order and to promote the welfare of the people, its issue is constitutional. No one attempts to deny that the Game Regulations are more or less designed to secure these ends. The introducers of the condemnatory motion themselves admit as much. Hence their essay to establish a violation of the 9th Article was an obvious extravagance.

The 62nd Article of the Constitution distinctly provides that neither can a new tax be imposed or an existing one modified except by recourse to "law." But the same Article, with equal distinctness, excepts "administrative fees" from the "taxes" contemplated in the above restrictions. The payments prescribed by the Game Regulations are voluntary payments made by persons desiring to obtain shooting licenses. They differ essentially from taxes in the fact that they are not levied for the purposes of revenue or imposed as a common duty to be discharged by all. Their voluntary and partial character, however, though it may suffice to exclude them from the category of ordinary taxes, does not suffice to include them in that of "administrative fees." For the latter purpose it must be shown that payment of a license fee secures to the payer some special compensatory service from the Administration. This is where the real difficulty of the problem occurs. Much may be said on both sides. The Government, acting with the advice of the best Japanese and foreign experts, has declared its absolute conviction that fees paid for game licenses are administrative fees. The Opposition, with equal assurance, assumes a contrary view. It has to be remembered, however, that whereas the Government's original judgment was not affected by any interest or prejudice whatever—the question being absolutely without political importance—the parties in opposition are, on the contrary, swayed by a paramount desire to condemn all official procedure. All thoughtful outsiders will agree that only the temerity of ignorance can betray anyone into a dogmatic verdict in either sense.

The 27th Article of the Constitution guarantees the right of property of every Japanese against all restrictions other than those imposed by "law." It is alleged that the holder of a shooting license acquires some sort of title to trespass upon other people's lands, and thus to disturb their right of property. The pretence is beyond the range of any ordinary comprehension and need not be considered here. It does seem, however, that unless the Opposition had been conscious of an exceedingly weak case, they would never have attempted to bolster it up by such arguments as the first and third of the above.

The supporters of the motion consisted of the *Jiyu-to*, the *Kaishin-to*, and the *Domei* Club, together with some National Unionists and Independents. It does not appear that they regard their decision very seriously, for they declined, by a majority almost equally large, to amend the language of the motion in the sense of challenging the Government's tenure of power.

The motion itself is peculiar in more than one sense. It is not a Bill, but simply a "decision" (*Ketsugi-an*). In other

words, it does not go up to the Peers. Hence it now stands unchallengeable so far as parliamentary action is concerned. Further, it proceeds to the extraordinary length of declaring that an Imperial Ordinance which has been in operation for a month, was invalid from the outset. It rescinds retrospectively as well as prospectively. That is something novel in the history of legislative assemblies. It is also something impossible in administrative practice. The House of Representatives is very happy in being free from the responsibility of giving effect to its own decisions.

"SOSHI."

FROM what we gather as to the ways of *soshi*, these gentry proceed in such a manner that the people on whose behalf they appear to exercise their lawless methods are often less responsible than might be imagined. A case illustrating this recently came to our notice. The hero is a quiet unobtrusive member of the House of Peers, who, during the sessions of the Diet, lives in perpetual apprehension of intrusion by *soshi*. He does not, indeed, fear any violence at the hands of these political parasites. They do not either threaten or demonstrate, but merely solicit. On the eve of the Diet's opening, or immediately after its session commences, the youths present themselves by twos and threes at the member's residence, and ask for food and lodging. Gifts of money they never seek. All that they require is a roof to cover them and food to sustain them. In return, they undertake to act in the interests of their host, without, of course, defining the precise nature of the action contemplated. Up to the present he has succeeded in keeping them out, but one of the penalties of his success is that he is obliged to rent a part of his house, since, if the *soshi* saw him occupying a spacious mansion and possessed apparently of sufficient means to keep it up, he would find it almost impossible to resist their importunate attempts to quarter themselves on him. We do not suppose that there are many instances of a member so much annoyed on the one hand, and so willing, on the other, to live under the shadow of an unnecessary annoyance. But the strong probability is that, in numerous cases, the *soshi* have found it a successful policy to thrust themselves upon reluctant patrons by insidiously limiting their proposals to food and shelter and refraining from any definition, which might be startling, of the services they propose to render. A Japanese finds it very difficult to refuse importunities of such a kind, especially if the persons seeking hospitality happen to belong to his own province and even to his own district, a feature to which the *soshi* doubtless pay

texture of Japanese life there is a thread of obligation often too slender to seem worthy of notice in Western eyes. In prosperity, a man is expected to recognise the claims of his most distant relations. When he becomes an official, his duty is to extend every possible aid to the young office-seekers of his native place. When he starts an industry or inaugurates a commercial enterprise, he must find employment for all persons having the slightest claim of consanguinity. When he reaches a position of any prominence in politics, he is morally bound not to turn his back upon such of his provincials as choose politics for a career. One result of these widely ramified obligations is that the Japanese seem to fail constantly in matters of organization. There is no absolute freedom of selection. The man best suited to fill a post has to be set aside in favour of some one with a moral claim, and the number of persons associated for the conduct of an undertaking has to be regulated by considerations other than those of pure economy. Another result is that *soshi* can grow and flourish. These unwholesome parasites, instead of being peremptorily dismissed, are temporized with in deference to some tenuous claim or on account of some remote contingency. To give food and board to four or five of them for a few weeks is not a serious tax. Morally invertebrate people find such a concession much less painful than a stern refusal. Thus the *soshi* obtain a tolerated footing in a household, and by and by they take muscular means of showing their gratitude or demonstrating their necessity. It is an evil that feeds upon itself, and grows fatter all the time by the process. Mr. MINAYE, the latest victim before Mr. SHIBUSAWA, appears to have harboured *soshi*, and through their lawless zeal in his behalf, he had his arm hacked by other *soshi*. Thus an atmosphere suited to the development of these parasites is created. When violence is in the air, they find a *raison d'être*. They would soon cease to exist were the time less deficient in moral courage.

THE END OF AN EXTRAORDINARY CAREER.

NO reports of serious illness immediately preceded the announcement of Mr. JAY GOULD'S death, and it may therefore be inferred that his end was sudden; yet the event could not have been wholly unexpected, in view of the numerous and rigid precautions with which the failure of his health had latterly compelled him to surround himself. On more than one occasion, warning had been given that his life was dependent upon precarious chances, and that accident might at any moment bring his course of adventure to a fatal close; and although these statements were for a considerable time believed to be deceptively designed, to facilitate the execution of his gigantic schemes, the

evidence of his increasing weakness became at last too direct and pronounced to be disputed. After his pitiful collapse in the midst of a memorable railroad conference, no one questioned that his bodily power was wasted beyond recovery. Since that occurrence, few signs of his participation in great enterprises have been visible, and it was supposed that his business activity could no longer be directed to the accumulation of new stores of wealth, but merely to the establishment of a firm legal claim upon the vast possessions already in his grasp. To accomplish this, and to preserve what remained to him of physical vitality, were thought sufficient tasks for his declining energies.

The duty of reviewing, however hastily, the life and achievements of this extraordinary man is not an attractive one. If adherence to the rule that nothing but good be spoken of the dead were demanded in his case, the only possible alternative to an annalist guided by common opinion would be to pass his name unnoticed and his deeds unrecorded. For it does not appear that, by the great bulk of his countrymen, he was ever credited with a worthy action or—unless in his intimate domestic relations—with an impulse that was not selfish and predatory. In what light his character will be regarded by justly critical Americans of the next generation, we can not foresee clearly. But contemporary judgment, loudly and repeatedly proclaimed, has been so scathing and relentless that it has often seemed to us incredible how any human being could year after year continue to exist under it. To pass from early manhood to mature age through a ceaseless storm of invective; to know that one is shut out from the sympathy of his fellows by an animosity which is never for an instant relaxed, and never tempered by a word or thought of kindness; to feel one's self the object of an abhorrence which is always manifest, even when thinly disguised under a pretence of servile adulation;—these are ordeals which few men have been called upon to bear. Yet JAY GOULD is said to have endured them not only with composure, but with a perpetual air of careless and sneering unconcern. At no time did he suffer himself to appear sensible of the odium in which he was held. To popular opinion and its moral consequences he seemed utterly different. It was only when brought into personal peril by some supremely hazardous exploit that his assurance deserted him; and experiences of this kind were so infrequent, and so dexterously veiled in obscurity, that they had but slight effect in diminishing his reputation for callous and reckless effrontery. He over-rode, said his critics, the hostile sentiment of the community as audaciously as he scoffed at its rights and trampled on its laws.

To observers from afar it has been a marvel that a career like his, if truly represented by common report, could prosper

in any land where society is held together by principles of order and integrity. It has been pointed out, however, that his rise and first steps of progress were coincident with a period of such disorganization and instability as the great Republic had never before witnessed. The excesses of the war had uprooted many of the old traditions, and the bonds of moral restraint were everywhere loosened. Opportunities for desperate speculation were open to the unscrupulous in all directions. A little while before, JAY GOULD had been a toiling civil engineer, without means, and without expectation of fame or fortune. Chance threw him into contact with that mass of tinsel imposture, JAMES FISK, just then emerging from the chrysalis of his peddler's waggon, and beginning to soar in the spangled metropolitan sphere of his choice. Hand in hand these kindred spirits plotted and pillaged, until the more aggressive and notorious of the pair was laid low by an assassin's bullet,—the victim of one of his own horde of victims. It was regarded as characteristic of the survivor that he lost no time in converting to his private possession, by methods recently disclosed in the New York courts, the entire bulk of his murdered partner's property, leaving the latter's family in a state of comparative penury, from which they never afterward rose. With the disappearance of FISK from the scene, many supposed that the stupendous game of so-called spoliation would come to an end, but it was soon apparent that JAY GOULD'S unaided resources were more than sufficient to keep alive and to multiply the projects previously conducted by the joint combination. All that he handled turned to gold for his purposes, and to ashes for the needs of other men. There seemed to be no limit to his ambitious greed, or to his faculty of satisfying it. Great lines of railroads, telegraphs, and steamships fell into his clutch, some to be wrecked and plundered, others to be utilized more permanently in his campaigns of conquest and absorption. Law had no terrors for him, the tribunals with which he mainly had to deal being merely convenient parts of his system. If meddling newspapers asked ugly questions, he bought them, and used their influence for his special ends. Once or twice, not oftener, he met with rebuffs, and was forced to disgorge some of the millions he had gathered; but the millions thus refunded bore but a small proportion to his immense aggregation, and before he reached his fiftieth year he had amassed a property surpassing in magnitude the largest acquired by any other citizen's individual exertions, and exceeded by only a few—perhaps two at the most—of the great inherited American fortunes.

That JAY GOULD was in many important senses a danger to the country in which he dwelt, and that the course he consistently pursued was menacing to

public confidence and tranquillity, has been persistently maintained by persons familiar with the financial history of the United States during the past third of a century. The exceptional power which he wielded was always thought liable to be exercised to the injury of the community. Property of every description was contaminated by his touch. The slightest rumour that he was about to connect himself with any railroad or similar corporation had the instant effect of creating a panic among the shareholders, and lowering the market price of stock and bonds. Toward the close of his life he was commonly regarded as incapable of any proceeding in which some discreditable motive could not be detected. When he took the step—unprecedented in his record—of offering a gift of thirty thousand dollars to a certain church fund, presumably at his daughter's request, a chorus of derision followed the transaction, in which the donor and the recipients were assailed with equal contumely. We can recall no other example of a man so conspicuous in the world's affairs, whose name was never mentioned with consideration or respect, and for whom no reputable place could be found in the estimation of his fellow creatures. His death will be the subject of many melancholy commentaries, but that it will elicit any sincere expression of regret, outside of his circle of personal association, it would be unreasonable to believe. Yet, in recording this contemporary view of an extraordinary man's career, we are strongly tempted to doubt whether many persons could be found who, possessing his exceptional faculties, would have used them differently, and whether a great part of the obloquy heaped on his name is not inspired by sentiments as unworthy as any of those attributed to him.

NEW CODES AND OLD CUSTOMS.

XII.

IT remains to take notice, briefly, of certain criticisms, recently made, that bear upon the present subject.

The first to be considered are contained in the Manifesto of the Code Opponents, appearing last June. Of the innuendoes and loose statements contained therein it is impossible, even if it were worth while, to take notice. We have in the preceding chapters endeavoured to be concrete in method, and we shall notice those points only where that document specifies distinctly the point of conflict between custom and Code. This it does in eight instances only; four of these concern family law and public law, which are here out of our purview.

The first charge is that Art. 22 and 26 of Book II., declare barracks, Government offices, etc., to be public property and untransferable as such, and, hence, "even though the Diet sanctions the sale, none of the above named property may be disposed of

to private individuals. This * * no longer forms a part of modern codes, and certainly does not agree with the prevailing practice in Japan." But it will be apparent to any one that an Administrative ordinance may at any time declare such property no longer devoted to public purposes, that is, no longer "*hors du commerce*;" and it is then immediately acquirable by private persons. The assumed perpetual untransferability of such property is absolutely without foundation in the Code.

The next charge is that Art. 233 of Book II.

confers on individuals the right of using for industrial or agricultural purposes any water found in streams or canals, even though the appropriation of such water causes great inconvenience to hundreds of persons, and even though the water has to be conducted through other people's grounds in order to be utilized. . . . If these laws go into force, a few greedy individuals would be able to appropriate the supply which has heretofore sufficed to meet the wants of hundreds of agriculturists.

We quote the full statement because it will show how deliberately demagogic is the misrepresentation which the authors have here dared to make. Art. 233 reads:

Every proprietor who has the right to use natural or artificial waters lying without his estate may, on paying compensation, require a passage over the intervening estates, for industrial as well as for agricultural and domestic purposes.

The harmony of this provision with existing custom has already been shown. But the statement in the Manifesto erroneously reports this Article; no right to use waters is given by it, but merely a certain facility is given to those who (by other principles) are found to possess such rights. The Manifesto has read into this Article the provision of Art. 229, establishing rights of taking flowing water for riparian owners. Even here the effect of the Article is grossly misrepresented. We need not take account of the qualifications imposed ("without modifying the direction or the volume") which the Manifesto completely ignores; we need only cite the next Article (230) which prescribes that

in case of disagreement between riparian owners and others desiring to make use of the water, the Courts shall decide, taking into consideration local usages and harmonizing the needs of household hygiene with the interests of agriculture and industry.

In the face of this Article, how was it possible for authors not planning to deceive their readers to employ the positive and sweeping language above quoted, and to assert that

a few greedy individuals would be able to appropriate the supply which has heretofore sufficed to meet the wants of hundreds of agriculturists?

This one instance ought to be sufficient to discredit the whole document; but we must note briefly the third citation. This is Art. 31 of the Commercial Code, which, it is said, requires "every trader to keep minute accounts of his business," and then sets forth the various transactions required to be entered. The moral is said to be that

to keep books after the fashion prescribed would involve the employment of a trained book-keeper and of a law student, an expense which the majority of traders are not in a position to defray.

It will scarcely be believed that at the very

beginning of this Art. 31 occurs the provision (which the Manifesto carefully ignores) that the trader "is bound to keep books in the manner usual in the branch of trade in which he is engaged, and fully setting forth the conduct of his business," and four classes of transactions in particular are then specified for daily record. The clause in italics puts quite a different complexion on the meaning of the Article, though it did not suit the purpose of the authors to refer to it. It is a fact, of which these writers are apparently ignorant, that the art of book-keeping has been carried to a very fair degree of variety and complexity by the Japanese merchant, and that the requirements of the Code will clash very seldom with their usages. This these lawyers might doubtless have learned if they had even glanced at the 100 pages describing Commercial Books, in the "Collection of Commercial Customs," printed 12 years ago and described in the "Introduction" before us; but such a method, or indeed any method, of informing themselves on their subject has been sedulously neglected by these masters of innuendo and evasion.

A fourth citation remains. Art. 824 allows Japanese registration to ships owned (1) entirely by Japanese subjects, or (2) by firms or companies domiciled in Japan under Japanese jurisdiction, provided (a) all the partners, or (b) one half the partners, if a limited firm, or (c) all the directors, if a stock company, are Japanese subjects. The authors declare, carefully abstaining from setting forth this Article, or the words in italics, that "it will be possible for ships to be owned and registered by companies more than one half of whose shares are held by foreigners;" and on this basis alone it protests that "a law which plays into the hands of foreigners is certainly to be deprecated. With such a law in operation the coasting trade would soon pass into the hands of foreigners." This is a fair sample of the extravagant, not to say baseless, conclusions that are put forth to readers from whom the evidence for these conclusions is carefully concealed. That all the directors of a company shall be Japanese subjects is a safeguard sufficient at once to discredit the statements of the Manifesto; but they allow no intimation to escape that any such limitation exists.

We have spoken very plainly about this Manifesto, because we think that the evidence of insincerity is too clear to be doubted, and because a demonstration of this, on the points where demonstration is possible, will enable us to judge how trustworthy are its authors' statements where they confine themselves to general and intangible assertions which elude direct disproof.

XIII.

THE other criticism of which some notice is unavoidable is contained in an article

published some months ago under the title "Tokugawa Laws and their Administration." It was professedly a résumé of the material contained in a collection of Tokugawa laws recently published in Japanese. The "Materials for the Study of Private Law" will show, on a comparison, how un-representative and untrustworthy the former collection is. But upon it were based certain generalizations so incorrect and misleading that attention must here be called to the new opportunities offered for their disproof by the volumes of the Asiatic Society. We shall not attempt here to offer this disproof of the errors founded on the perusal of the Japanese collection; ample refutation will be found without difficulty in the pages of the Asiatic Society's volumes. We shall only say that among the generalizations thus worthy of peremptory contradiction are the following:—

A perusal of such reports of the law cases as are extant reveals the fact that the morality or immorality of actions, rather than their legality or illegality, was the chief subject of inquiry with the Tokugawa judge.

The laws issued were of the vaguest description, savouring more of the character of moral precepts and exhortations than of laws.

The laws were all based on the fundamental principle of Confucianism—the submission of the younger to the elder, of children to parents, wife to husband, and so on.

With the judge who administered these laws the relationship of the litigants determined the nature of the verdict.

Individual rights, as such, were not recognized. Men's social acts were invariably controlled and guided so as to be made to subserve political ends.

Law and Morality were to the men of those days synonymous terms. Tokugawa legislators themselves saw no distinction between them.

The written laws which guided their decisions were few, and such as existed were so loosely worded as to be capable of the most varied interpretation.

In the majority of cases which came before the courts, social custom, political considerations, and the current ethical code, rather than any written law bearing on the case *sub judice*, swayed the mind of the judge.

We feel bound to declare, with the Asiatic Society's volumes as our vouchers, that every one of these nine generalizations is either totally untrue or radically misleading. Some of the charges are of so serious a nature that one is impelled to call them nothing less than gross libels on the Tokugawa legal system and on the civilization of Japan. Some future time must serve for a detailed refutation; meanwhile, the reader who wishes to have correct ideas can do nothing better than erase these generalizations completely from his memory. But one statement in particular we feel it necessary to disprove here, because it bears most intimately on the methods of Tokugawa jurisprudence and upon the legal traditions and spirit of the country and their harmony with the juristic spirit of the West. Besides, the demonstration of the error in this case can be made so clear and in so short a compass that it will perhaps be accepted as a type of what might be effected with the remainder also. The passage reads:—

In the days of Hidetada, a magistrate called Shimada Yuyu, who had been administering justice for 20 years, purposed publishing a full account of the cases that had come before him. This

was forbidden by the Shogun, who acted on the advice of the *Gorojiu*, or Chief Councillors of State. The ground of the objection is worth recording. It was contended that since the verdict in each case must depend on the facts elicited, and since these facts cannot possibly coincide in any two cases, it would only lead to mistakes were the decisions of judges to be based on verdicts pronounced by others. *The process of generalisation is one which the legal expert must use sparingly. Every case must be decided on its own special merits, and the power to detect those merits is one whose development would be seriously hindered were the habit of vesting verdicts on precedents to become common. Such was the view of the legislators of the Tokugawa era.*

The italics are ours, and they represent generalizations of which the writer (following his own phrase) should have been more sparing. We have not seen the passage from which the above statements are amplified; but it may be said without any hesitation that they are absolutely incorrect and represent the exact opposite of the truth. For the one particular point in which the Tokugawa judiciary approximated to the English rather than the French or German judges of to-day was their greater reliance upon legal precedent. *The first resort of the Tokugawa judge in case of doubt was to search for precedents.* It is not too much to say that this was one of the distinguishing and notable features of their jurisprudence, as exposed in the official compilation published by the Asiatic Society. We quote a few of the clearest examples, short passages which, even apart from their context, will demonstrate this characteristic. The pages are those of Part III., Section I., of the Asiatic Society's series:—

I then examined the precedents. (29.)

I made further examination, and finding no precedent in my own Court, I inquired of the Superintendent, etc. (36.)

I accordingly asked the [Town Magistrate] about this; and he answered that, although there had been no precedent for this suit of Chiye, wife of Shinshichi, etc., yet it was the ordinary practice, etc. (36.)

We have perused your letter, in which you say, etc., that you think it desirable for the two Courts to adopt a uniform practice on the subject. (31.)

We understand you to refer to the case, etc., and we searched for precedents on that point, but found none. We discovered, however, a case in which this Court was asked, in Gembun, IV., 10 (November, 1839), etc. But in Kwansei, VI. (1794) etc., the Full Chamber decided (there being no precedent), etc., etc. We trust that you will lay the matter before the Full Chamber, so that our practice for the future may be determined. (34.)

The date of this case was 1829; the search had therefore covered nearly 100 years at least.

This has been our regular practice, etc., so that if we suddenly changed it and ordered, etc., much confusion might occur. * * We have no precedent for allowing, etc. We shall feel it necessary, at least in the suit now before us, to adhere to our former practice. * * You explain that it has been customary with you to, etc., and that it would be very inconvenient were this custom to be supplanted by a rule requiring, etc. We think that you are right. But, on reviewing the precedents to which you referred us, we find that in these the rule you follow is applied without distinction between the, etc. We are desirous to see a uniformity, if it be possible, in the practice of the different Courts, and we made inquiry of [the Temple Magistrate]. He replied that your custom of making no distinction between, etc., though settled as far as you are concerned, has not yet been the subject of a general agreement of the Courts, so that it cannot be regarded as unchangeable. (46-48.)

Of course in principal actions there are sometimes cases, etc. But such cases are rare, and exceptional cases may be treated in an exceptional manner. For ordinary actions, whether, etc., we may lay down the general rule, etc. (48.)

We have sought for precedents on this point, but have found only one, a ruling of the Chamber of Decisions, in Kyoho II. (1717); running as follows, etc. In analogy to that case, if the plaintiff here, etc., you may, etc. (57.)

This case is dated 1838; thus the rule ran back 120 years.

But we do not think that any exception should be made for that class of debtors. First, it would result in non-uniformity of practice if we employed different processes in similar actions, etc. (93.)

The matter may perhaps be regarded of lesser consequence for, etc. But our decision in this case will be taken as a precedent for the future. Furthermore, the exceptional treatment of the loans of the Lord of Kii, etc., might give rise to the rumour the Government makes distinctions between near and distant relations, which might, etc., stain even the honour of the Shogun himself. (144.)

Upon searching for precedents it appeared that in the last Ape year (1848) a similar case had come before our colleagues of the other Department, etc. In that case they had not been able to discover any precedent, and had inquired of us. (153.)

In order to avoid non-uniformity of practice we beg to bring the matter before you. (154.)

We made inquiry of you recently, etc., and desired to know whether there was any precedent for, etc. You then replied that, although in your Department also no precedent existed, you were of opinion, etc. (155.)

Such is my opinion, though after careful search I can find no precedent applicable to the case. I enclose, however, a case which I found; though after all you may not consider it worth notice. (161.)

Are we not reading the letter of some English or American case-lawyer of to-day?

On due consideration we find that no instance has ever been known (except in the case of, etc.), where one of the gentry has brought an action for, etc. We except also the case of Matsudaira Tarozayemon, who recently, etc. It is true that there are precedents when, etc. But these were cases of genuine deposits, etc. If those should be allowed to, etc., all sorts of irregularities would be introduced. On the whole, reflecting that ever since the period Horeki (1751-1763) interest loans, etc., have invariably been, etc., we regard it as unreasonable that this Office should now make a special exception for the benefit of, etc. (170-172.)

This case is dated 1861.

Money loan actions shall, as above provided, be determined according to the old usages and precedent. (179.)

Being unable to discover any enactments or precedents on the point, you have made inquiry of us as to the existence of any enactments or precedents relating to, etc. (180.)

We have no precedents covering the cases you state, but we send you, as above, our opinion. (189.)

I should like to obtain some precedent. . . . My answer is that after due search I can find no precedent on the point you inquire about. (216.)

Of these actions before [the Town Magistrate.] I did not know last year, when the action was decided as above by me; but now, on being apprised of them, and on comparing the different actions, I perceive that though in each case the fact of the forfeiture of the benefice existed, yet two opposite rules have been adopted for the same state of facts, etc. Such a result is quite undesirable; and, on further reflection, I concluded that decision of [the Town Magistrate] was the correct one for the following reasons. . . . Desiring, therefore, to establish a uniform rule for such cases (which we cannot suppose will not occur again), I now etc. (239-40.)

As it is undesirable that there should be conflicting rules on the same subject, I have considered the matter again. (241.)

With this precedent before us, it seems proper enough that Zenyemon, the surety, etc. (36.)

I cannot find any precedents in my office, and I therefore consult you on the point. . . . Your letter of consultation has been received, and search has been made for precedents. I found that there has been a regular practice on the subject. (307.)

These are arguments in favour of regarding him as Ichisaburo's successor. How should the action be decided? There are no precedents to go by. There are, however, cases in which it has been held, etc. Shall we follow this principle? etc. I am unable to come to a decision and beg to consult you. (335.)

A perusal of the pages of the volume it—
Original from

self of Legal Precedents gives one a much more vivid impression of this characteristic of Tokugawa judges than these bare extracts can convey. If, therefore, each of the statements above italicized were taken in exactly the reverse sense, it might then, and only then, be said with truth, in summing up, that "such was the view of the legislators of the Tokugawa era."

But, it will of course be asked, how is it that we can receive such contradictory impressions from two such similar sources of information? The explanation is not difficult. It is as if one should take up the report of some trial in the Elizabethan Star Chamber and predicated on this foundation certain generalizations concerning the English legal system of the present century; or as if one should attempt to judge the jurisprudence of the United States, not knowing the volumes of the National or State Supreme Courts, from the records of trials in the backwoods. In other words, the collection which served as the foundation of the article in question is not representative of the TOKUGAWA legal system either in the time it deals with or the sources it represents. The rules of certain *daimyo* for the behaviour of their *samurai* cannot be taken as the real material of jurisprudence, any more than the barrack-room regulations of HIS IMPERIAL MAJESTY'S Lancers can be ranked with the decisions of the Supreme Court or the statutes of the Diet. Most of all, the TOKUGAWA era is not to be judged by the legal material of the first half of the 17th century; and the regulations cited in the above article are all within on close to that period. The Supreme Court had not then been fully established. IYEMITSU had scarcely completed his (and his grandfather's) great work of laying the foundations of a strong administrative system. The inheritance of these two rulers was disorder and martial misrule; their bequest to their successors was peace, order, and commercial prosperity. Only in the beginning of the next century, under the great YOSHIMUNE, the 8th Shogun, did the fruits begin to show themselves plentifully. The first period from which we have the right to judge the full grown parliamentary system of England is the time of PITT; the first period in which we have a right to look for material representative of the TOKUGAWA legal system is the time of YOSHIMUNE. Of what account is it, then, that a certain SHIMADA figures, in the early days, in the incident related above? Whether such a request was made, or was rejected, or why it was rejected—all this avails nothing in the face of the copious proofs that the spirit and practice of the law for the last century and a half have been to exactly the contrary effect. When we treat Japanese laws historically, we may take all the grist that comes, placing it in proper perspective and proportion. But when one is con-

fessedly attempting (as in the article above quoted) to found a political argument for the new Codes on the defects and crudities of the legal system already existing here, then one is bound to draw the line fairly, marking the limits of the last and best periods of the TOKUGAWA era, the periods by which it has a claim to be judged.

Our survey, so far as the material at hand has made it possible, is now complete. We have endeavoured to be concrete in method, and to employ no inferences for which the evidence was not at hand. We began by asking the question: Are the new Codes in conflict with the existing customs of Japan? We at first expected, it may be confessed, that the answer would be less satisfactory than it has been. The doubts that may be raised, the direct discrepancies, and the points of legislative policy open to dispute, have dwindled far below our expectations. We have seen that the leading ideas of Code and custom (where comparison is possible) have the same content; that where latitude could be given, the new Code has allowed to local varieties of usage the freest play; and that where novelties or inflexible rules have been determined on, the conditions were such as to admit of the exercise of legislative discretion. Looking once more over the detailed comparisons of the foregoing chapters, we cannot see how there can be more than one answer to the question we started with,—the answer that in any fair sense the Codes are *not* in conflict with the existing customs. The ultimate thing to be ascertained is whether this nation has been so devoid of legal institutions and notions that the principles of the new Codes will be utterly out of place amid this civilization; or if not, whether the new scientific rules are substantially out of harmony with fixed notions already prevailing in unscientific shape. Whether we take details of comparison, or whether we measure the conditions of the situation broadly and in the rough, it seems to us that both these inquiries are to be answered distinctly in the negative.

IMPERIAL PARLIAMENT.

FRIDAY, DECEMBER 9TH.

HOUSE OF PEERS.

The House did not meet, the Committees only coming together.

The House met at 1.15 p.m., the Order of the Day being:—

- 1.—Government Bill relating to the Tax on the Sale of Alcohol.
- 2.—Appointment of a Special Committee to report upon the same.
- 3.—Private Bill (First Reading) for supplementing the Weights and Measures Law.
- 4.—Private Bill (First Reading) for rescinding Law No. 23 of the 2nd year of Meiji.
- 5.—Private Bill (First Reading) for supplementing the City Government Organization.
- 6.—Private Bill (First Reading) for amending the Organization of the Law Courts.
- 7.—Private Bill (First Reading) for amending the Organization of Prefectures and Cities.
- 8.—Representation relating to Public Forests.
- 9.—Private Bill (First Reading) for rescinding the Peace Preservation Regulations.
- 10.—Representation relating to the control of the four great rivers, Kiso, Yodo, Tone, and Shinano.
- 11.—Private Bill (First Reading) for abolishing the import duty on raw cotton.

- 12.—Private Bill (First Reading) for amending the Medical Diploma Regulations.
- 13.—Private Bill (First Reading) for amending the Standing Orders of the House of Representatives.

The President announced the receipt of the following:—

- An answer from the Minister of State for Finance to the Question on the subject of the import of alcohol.
- A Question relating to the loss of the *Chishima Kan*, from Mr. Aoyama Hōgata and others.

The Question with reference to alcohol—submitted by Mr. Kanaye Mitsugi and others—set forth the fact that the import of alcohol had increased immensely of late years, being $3\frac{1}{2}$ times as great in 1890 as in 1889, and 7 times as great in 1892 as in 1889; that the spirit was largely employed for the purpose of manufacturing Japanese *sake*; that the brewing of the latter had consequently diminished to the extent of causing a loss of over five millions of revenue to the State; that while the Government found it necessary to impose a heavy tax on *sake* and tobacco in order to obtain funds for reassessing the taxable value of land, this important source of loss was neglected; and that foreign imports were thus encouraged. The Questioners asked what steps the Government had taken or intended to take.

The Answer of the Minister of State for Finance was as follows:—

The Government considers it advisable to impose a tax on alcohol and has introduced a Bill in that sense.

Mr. Mutsu, Minister of State for Foreign Affairs, said:—

GENTLEMEN,—I have with me here a copy of certain Questions addressed to the Government by Mr. Inouye Kakugoro and others, with reference to Korean affairs. It is my intention to answer these Questions as fully as possible, but as some of the matters touched bear upon phases of foreign policy which require reserve, it may not be in my power to give you entire satisfaction. The main points of the Questions are four, and I shall address myself to answering these in detail. With regard to the first, namely, the Government's action in respect of an alleged breach of the Telegraph Convention—which I find wrongly described in the Question—with Korea, I regret that I am not in a position to speak openly. Not that there is question of anything so important as a secret of foreign policy, but merely that this Telegraph Convention was concluded in relation to an agreement made by Korea with a certain German firm, and as the latter is still unpublished, the former must also remain private. Some of you, gentlemen, appear to regard this Telegraph affair as of great moment, but that is an exaggerated estimate. The Convention is of no serious consequence. It was made when Count Inouye held the portfolio of Foreign Affairs, and I can assure you that the rumours of Korea having treated it as waste paper are not well founded. In the second place, with regard to the line of telegraph between Fusan and Seoul, there is no special reason why I should offer explanations, and there is a distinct difficulty in the way of my doing so. For Fusan and Seoul, as you know, lie in Korean territory, and when I am asked to describe the methods of working a line of Korean telegraph lying within the Korean borders, it is not easy for me to give an explicit answer. Looking, however, at the speech delivered by Mr. Inouye when presenting the Question, I observe that he has fallen into rather a grave error. I find it there asserted that telegrams sent by Japanese over the line are delayed. That, probably, is the ground of complaint. But you will agree that if between man and man it is essential to adduce distinct evidence in support of an accusation—as, for example, when the Korean telegraph officials are charged with purposely delaying telegrams handed in by Japanese—similar accuracy is all the more necessary when the question is international. The Koreans, however, are still more or less inexperienced in the use of telegraphs, and it is not easy to determine in their case how much be due to wilful neglect and how much to intentional obstruction. The presenters of the Question refer to the incident which occurred in the residence of the Tai-won Kun, but that will not be found a sufficient proof. I see by Mr. Inouye's speech that he alludes to a long delay having occurred in the transmission of a telegram sent by the Japanese Representative in Korea to the Foreign Office in Tokyo, but I am sorry to have to inform him that he is wrong in his facts. He alleges that Mr. Kajiyama's telegram relating to the Tai-won Kun incident was despatched on the 17th of the month, and did not reach Tokyo until the 22nd. But the truth is that the telegram was handed in on the afternoon of the 21st and that it was received in Tokyo on the afternoon of the 22nd. I do not say that a

day between the two capitals can be called rapid transmission, but certainly it cannot be regarded as proof of wilful tardiness. I may mention that the incident in the Tai-won Kun's residence is here stated to have occurred on the 16th, but in reality it occurred on the 17th. You will doubtless find all these details tedious, but I could be briefer were the Question couched in clearer terms. The third point refers to the prohibition of the export of grain. This occurred in September, 1890, and much trouble and time were involved in determining whether and to what extent losses had been caused. The Korean Government came distinctly to the conclusion that the action of the local authorities had been a violation of the Treaty, and the amount of compensation to be paid is now under discussion. But there has been no question on either side of cutting down or increasing the amount demanded by the other. Nevertheless, the delay that has occurred being distinctly inconvenient, I have been taking all the steps in my power to bring the matter to a settlement. When it comes to a question of actually paying money, we cannot be surprised that delay should occur. Japan and Korea do not furnish a solitary example. I think you will find that in almost all cases, negotiations between States for determining the amount to be handed by one to the other, have been more or less tedious. It must not be understood, however, that bargaining is taking place between Japan and Korea. But it would not be consistent with my official duty to explain to you the details of negotiations now actually in progress. Coming to the fourth point, the fishing business at the island of Seishu, I find the ideographs employed a little perplexing; but reading them as they stand, the meaning appears to be that the Japanese Government has failed to take note of a breach of so-called "fishing regulations." There are no such regulations. The 42nd Article of the Trade Regulations is also indicated. Neither of the two Governments has failed to consider that Article. Japanese fishermen were in the habit of fishing off the coast of Seishu, and the Korean Government repeatedly asked the Japanese Government to have these operations suspended until the 30th of November, 1891. The Trade Regulations were to come into force from the 1st of December of that year, and on the 1st of December some Japanese, going thither to fish, got into a fight with the Koreans. The affair was described in very graphic terms by the *Chinsei Nippo*, but it was not by any means such a serious business. The fact seems to be that the local authorities of Seishu were ignorant of the time when the Trading Regulations came into force, and, in their ignorance, they interfered to prevent fishing. It has been alleged that the Koreans attacked our countrymen with guns and spears; and it has also been alleged that our countrymen raided the local office with various lethal weapons in their hands. But all that is gross exaggeration. The fishing is now going on peacefully enough, and there is no breach of Treaty, so far as we can see, on Korea's part. I think these explanations will suffice.

Mr. Inouye Kakugoro said that the Minister had spoken of difficulty in deciphering the ideographs used in the Questions. Very likely. He, Inouye Kakugoro, was not a scholar. He was a farmer's son; if he wrote badly, he could only confess his ignorance. But if the meaning were obscure on account of the calligraphy, he ventured to think that the Minister might have inquired what was intended, and that such a course would have been more dignified and considerate than to bring the matter before the House. He had been corrected, also, in his terminology. He had employed an abbreviated term in alluding to the Telegraph Convention. But truly that was a paltry matter. Much more important was the question of secrecy. He alleged that an agreement had been violated, and the charge was met by a statement that the agreement was secret. Such a reply suggested that so long as a Foreign Minister did not choose to divulge the nature of a covenant, he could never be called to account for having failed to enforce it. Secret the convention might have been, but its violation was open, and under the circumstances it was surely necessary to explain its terms. Again, the Minister had corrected his dates. The telegram of Mr. Kajiyama had not been despatched from Seoul, they now learned, until the 22nd. Very well. He accepted the correction. But another question arose. The incident in the Tai-won Kun's residence had occurred on the 17th. How did it happen that Mr. Kajiyama sent no information

of it to his Government until the 22nd? Was that the way to discharge the functions of Japanese Minister in Seoul? Then, Mr. Mutsu had said that really he could not undertake to tell them how a line of telegraph was worked which lay within Korean territory. Perhaps not. But when the manner of working the line had connection with a convention between Japan and Korea, he ventured to think that such an answer hardly became a Minister for Foreign Affairs. They had been told that the Korean local officials had made a mistake. Ignorant of the fact that an international covenant had gone into force, they drove away the Japanese fisherman by force. Well, as to that, if they went to the prison at Tsudajima, they would find a great many unfortunates working out penal sentences for violating laws of which they had been ignorant. Not to know the law was never admitted to be a valid excuse in the case of an individual. Why should it be admitted between nation and nation? Finally, the Minister had told them that whereas the prohibition of the export of grain had occurred in August 1890, and whereas the fact of its being contrary to Treaty had been admitted, the amount of indemnity was still undetermined. What could he said about such a method of negotiation? The minister had told them that questions relating to money payments by one State to another were always tedious. He found no proof of that in history. Delay was often involved in determining whether a country had been in the wrong, but once that fact was established, there should be no difficulty in determining the amount of indemnity.

Mr. Mutsu replying, said that Mr. Inouye had propounded a difficult question, but truly only one answer could be given, namely, that the facts of the Telegraph Convention might not be divulged. However often they asked him, his answer must be the same. So long as the Convention did not appear in the *Official Gazette*, his mouth was sealed. With regard to the indemnity for the prohibition of the export of grain, there appeared to be a misunderstanding. The difficulty was not between the two Governments. There had not been any demand made by Japan, or any counter proposal advanced by Korea. It was simply a question of examining the numerous claims put forward. They could understand this easily if they remembered that a great number of traders had been affected by the prohibition, and that each had his own case to put forward and his own statement of injury to make. As for the allegation that the Korean local authorities had violated the Treaty and that the Japanese Government had overlooked the incident, he could only say that Mr. Kajiyama had addressed himself with all proper promptness and resolution to the Korean Government, and that the incident had been satisfactorily closed. He begged the House to make its mind easy. There remained no unatoned-for violation of treaty on Korea's part. The Minister concluded by paying a compliment to Mr. Inouye's eloquence and erudition.

Mr. Inouye asked the House whether it considered that the Minister's answer had been satisfactory, but did not press for a reply.

Mr. Shimizu Bunjiro asked a question about Korean affairs, but the President ruled that as it had no connection with Mr. Inouye's Question, it could not be put without going through the prescribed formalities.

Major-General Aoyama Hogara explained his Question about the loss of the *Chishima Kan*. He dwelt upon the importance of a navy, as illustrated by the fact that the first Napoleon found nothing in the whole world that he could not conquer except the British Navy under Nelson. He claimed that the collision by which the *Chishima* was lost, had occurred within the effective radius of a light-house's illumination and on a moonlight night. He dwelt upon the seriousness of two ships being lost to the small Japanese Navy, as the *Unbō* and *Chishima* had been lost; and he declared that the object of his inquiries was to strengthen public confidence in the Admiralty. But his questions did not extend beyond asking the

Minister of the Navy to explain the steps which had been taken to fix the responsibility of the loss.

Mr. Takata Sanaye, as President of the Committee, made a brief report of the Committee's progress, explaining that owing to the very large number of petitions presented, he refrained from entering into details, but would ask the House to examine the printed report distributed among the members.

The House proceeded to the Order of the Day.

Mr. Tajiri, Vice-Minister of Finance, explained that alcohol had come to be largely used in preparing spirituous liquors in Japan, and the Government found it necessary, for fiscal reasons, to take some measures. It would be superfluous for him to tell the House what they already knew, namely that the import of alcohol had largely increased, and that if its sale were not taxed, the State would suffer a heavy loss of revenue.

The Bill was entrusted to a Special Committee nominated by the President.

Mr. Imai Isoichiro, introducing the Weights and Measures Supplementary Law, said that the Weights and Measures Bill had been very carefully considered by the Upper House in the first session, but, owing to lack of time, had not received full attention from the Lower. The Law was very good so far as it went, but practice had demonstrated some defects, and the Bill now introduced was intended to remedy them.

The Bill, after a brief discussion, was passed through all its Readings in the following form:

BILL RELATING TO ADDITIONAL PROVISIONS OF THE LAW OF WEIGHTS AND MEASURES.

The following clause shall be added to Art. VIII. of the Law of Weights and Measures:—

"Any person who has obtained a license for sale, may repair scale-cords and weight-cords, which are not made of metal."

The following clause shall be added after the 3d clause of Art. IX. of the Law of Weights and Measures.

"Repaired scale-cords and weight-cords, which are not made of metal, require no inspection."

The Bill for abolishing Law No. 12, by which the cities of Tokyo, Osaka, and Kyoto were placed under a special system of government, was opposed by the Government Delegate, but the House passed it through all its Readings.

The Bill for supplementing the Law of Organization of Cities was also passed without debate in the following form:—

BILL FOR SUPPLEMENTING THE LAW OF ORGANIZATION OF CITIES.

The following clause shall be added to Art. 72 of the Law of Organization of Cities, which was promulgated as Law No. 1 in the 21st year of Meiji.

In Tokyo, Kyoto, and Osaka, the Headman of each *Ku*, or his representative, may assist and control the administrative affairs, and matters relating to finance, under the direction and superintendence of the Headman of the *Shi* and of the Revenue Officers.

Mr. Motoda Hajime, introducing the Bill for amending the Organization of Law Courts, explained the principal features of the Bill namely, the abolition of Collegiate Local Courts; publicity of proceedings in Collegiate Courts; elevation of Bailiffs to the place of officials, and so forth.

Mr. Kiyoura Keigo, Vice-Minister of Justice, said that the Government was strongly opposed to the abolition of Collegiate Courts. The jury system did not exist in Japan, and in order fully to carry out the provisions of the Constitution and to secure due administration of justice, a bench of associated judges was deemed absolutely essential. With regard to the other proposed amendments, there was no special objection.

Mr. Miyagi Kozo opposed the Bill. He strongly objected to meddling with matters of such grave importance as the organization of the Law Courts until ample time had elapsed for testing the system now in force. It had had only two years' trial, and there was no guarantee that, if the present Bill were passed, fresh alterations might not be proposed in two years more. They could not conceal from themselves the fact that this problem, so vital to the interests of the people, was in

Original from

danger of being obscured by the dissensions of Law Schools wedded to the systems of different countries. He spoke at length in favour of Collegiate Courts.

Mr. Yamada Taizo preferred one good captain to a number of half-trained soldiers. He should vote for abolishing Collegiate Courts.

The Bill was entrusted to a Special Committee of 9 nominated by the President.

The Bill for amending the Law of Organization of Cities and Prefectures was then introduced, the chief changes proposed being that members of City and Prefectural assemblies should be elected directly, instead of being chosen from and by the members of District Assemblies; and that the special provisions relating to large land-owners should be rescinded.

The Government Delegate opposed the Bill, as did Mr. Ogaki Hyoji, the latter pointing out that whereas, under the present system, over six million persons had a voice in the election of members of City and Prefectural Assemblies, the proposed change would reduce the number to a little over a million.

The Bill was entrusted to a Special Committee of 9 chosen by the Sections.

The House rose at 5.45 p.m.

SATURDAY, DECEMBER 10TH.

HOUSE OF PEERS.

The House met at 10.20 a.m., the Order of the Day being:—

Report of the Special Committee on the Project of Law for establishing a Court to Litigate Disputes relating to Official Competence.

The President reported the receipt of various Bills from the Lower House; and of the Government's Reply to a Question from Prince Niho and others with relation to a Steel Factory.

Marquis Hosokawa, on behalf of the Special Committee, reported in favour of the Law for Establishing a Court to Litigate Disputes relating to Official Competence, and explained the reasons for establishing such a Court, as well as the amendments which the Committee recommended in the provisions of the Law. He added that, according to the information given by the Government Delegate, the expense of the Court would be very small.

LAW FOR THE LITIGATION OF DISPUTES RELATING TO OFFICIAL COMPETENCE.

CHAPTER I.—ORGANIZATION.

Art. I.—Disputes relating to the limits of official competence shall be adjudicated in the Court of Official Competence, as provided for in this law.

Art. II.—The Court of Official Competence shall have one Chief, and thirteen Counsellors, all of whom shall be holders of other official posts.

Art. III.—Counsellors shall consist of five judges of the Court of Cassation, three Counsellors of the Administrative Court, and five Administrative officials of high grade.

Art. IV.—The Chief Judge of the Court of Official Competence shall be the chief of the said Court, unless prevented by circumstances from so acting, in which case the senior Counsellor shall take his place.

Art. V.—In the adjudication of a dispute coming under this law, the Court shall consist of the Chief of the Court and six Counsellors, four of whom shall be judges of the Court of Cassation and Counsellors of the Administrative Court.

Art. VI.—The Court of Official Competence shall have secretaries in its service.

CHAPTER II.—COMPETENCE.

Art. VII.—The cases to be adjudicated in the Court of Official Competence shall be such as may be brought before the Court by the Minister President of State, the Ministers of State, the Superintendent General of Police, the Governor of Hokkaido, the Chief of the Railway Bureau, and Governors of Cities and Prefectures, relating to the transactions of administrative offices, and bearing upon matters under their respective control and management, under the following circumstances:

1. When a case before any of the Judicial Courts is considered to come within the competence of either an Administrative Office or the Administrative Court, and not to be judicable by a Law Court.

2. When a case before the Administrative Court is considered to come properly within the competence of an Administrative Office, and not to be judicable by the Administrative Court.

CHAPTER III.

Art. VIII.—Disputes as to Official Competence

shall be brought before the Court in writing, stating the reason, or reasons thereof.

Such document shall consist of the original and two copies, except in case of the presenter being one of the parties to the suit, in which case only one copy is required.

Art. IX.—The documents relating to disputes as to Official Competence shall be forwarded to the Court of Official Competence through the Court within the jurisdiction of which the case arises.

The Court shall issue a receipt for the documents when received.

Art. X.—When a case is brought before the Court of Official Competence, its prosecution in a Law Court shall be suspended.

A suit before the Court of Official Competence shall be considered to commence when the documents in reference thereto are sent into the Court within the jurisdiction of which the case arises.

When, in accordance with the tenor of this article, proceedings in a Law Court are suspended after the completion of oral discussion, judgment cannot be given in the suit.

Art. XI.—When the nature of the case brought before the Court of Official Competence, is such that a Court of Law has already been able to give temporary effect to its judgment, the Law Court within the jurisdiction of which the case arises, shall suspend the said effect, and no appeal shall be allowed against the suspension.

Art. XII.—On receiving the documents relating to disputes of Official Competence, the court shall forward information to the parties to the suit, together with copies of documents. When one party to the suit is an administrative office the information shall be sent to the other party only.

Art. XIII.—The party receiving the information as stated in the preceding Article, can send in a reply within a period of fourteen days, accompanied with two copies of the same.

Art. XIV.—On receipt of the reply, the Court shall send a copy of the same to the Administrative Office by which the suit was instituted.

Art. XV.—After the lapse of the period stated in Art. XIII., the Court, whether in receipt of the reply or not, shall forward all the documents relating to the dispute to the Court of Official Competence, together with a document stating its own views. Should the case have been instituted by a Court of Law, the documents shall be forwarded through the Minister of State for Justice.

Art. XVI.—When a case of dispute relating to Official Competence is brought by a lower Administrative Office, the Minister of State under whose control the office is, can forward his views in writing to the Court of Official Competence.

CHAPTER IV.—WITHDRAWAL OF A SUIT.

Art. XVII.—The Administrative office bringing a suit can apply to withdraw it, at any time before judgment is given.

The Minister of State can apply for the withdrawal of a suit brought up by any of the Administrative offices under his supervision, at any time before judgment is given.

Art. XVIII.—The Application for withdrawal of a suit shall be forwarded to the Court of Official Competence.

Art. XIX.—When a suit is withdrawn by application, all the documents in reference thereto, shall be returned to the Minister of State for Justice, or to the Administrative Court.

The Minister of State for Justice shall return the same to the Court within the jurisdiction of which the case arose.

The said Court shall inform the parties of the withdrawal, and shall then be competent to continue the suspended legal procedure, or to cancel the suspension of the temporary effect of the judgment.

CHAPTER V.—ADJUDICATION.

Art. XX.—On a day previously appointed, the Court of Official Competence shall open the Court by summoning the parties to the suit, when they will be orally examined.

The Court shall not suspend its sitting even if either of the parties fail to appear on the day appointed. The merits of the absentee's case shall be judged by documentary evidence.

Art. XXI.—The Chief Official of an Administrative Office may appoint a substitute to appear in the Court.

The said substitute shall prove his capacity to act by a document prepared for the purpose.

Art. XXII.—A decision of the Court of Official Competence shall be determined by the opinion of the majority of the judges.

Art. XXIII.—The reasons for the decision shall be stated in the judgment of the Court, which shall be signed and stamped by the Chief Judge and the Counsellors.

The original of the said decision shall have the stamp of the Court of Official Competence affixed thereto and shall be countersigned and stamped by the secretary of the said Court.

Art. XXIV.—The Court of Official Competence shall forward one original text of its decision to the Administrative Office by which the suit has been brought, and three copies of the same document either to the Minister of State for Justice or to the Administrative Court. When reference to the Court of Official Competence has been made by one of the parties to the suit in question, the above documents sent to the Minister of State for Justice or to the Administrative Court, shall be two in number.

The Minister of State for Justice shall forward the said documents to the Law Court within the jurisdiction of which the case arose.

Art. XXV.—The Law Court within the jurisdiction of which the case arose, shall forward the original text of the decision to each of the parties to the suit.

Art. XXVI.—The decision of the Court of Official Competence shall be binding on Law Courts, on the Administrative Court, and on Administrative offices, so far as concerns the matter of the suit.

Art. XXVII.—Re-examination shall not be made after the Decision of the Court of Official Competence.

Art. XXVIII.—The court within the jurisdiction of which the case originally fell, shall continue the suspended legal procedure, or cancel the suspension of temporary effect of its judgment, made in accordance with the tenor of Art. XI, in the following instances:—

1. When the case is decided as coming within the competence of a Law Court, and not within the competence of an Administrative Office or the Administrative Court.

2. When the case is decided as coming within the competence of the Administrative Court, and not within the competence of an Administrative office.

Art. XXIX.—When a case has been decided as not coming within the competence of the Court before which it was originally brought, no costs shall be charged. Any disbursements already made on this account shall be equally borne by both parties to the suit.

Art. XXX.—No fees shall be charged in connection with a suit in the Court of Official Competence. But any expense incurred in bringing the suit shall be defrayed by the party incurring it.

SUPPLEMENTARY REGULATIONS.

Art. XXXI.—Documents relating to disputes as to official competence shall be signed and stamped by a barrister-at-law, except when such documents are forwarded from an Administrative Office.

Art. XXXII.—The Administrative Offices referred to in Articles VII. and XXVIII. include the public offices which transact administrative affairs of *Fu, Ken, Districts, Cities, Towns, and Divisions.*

Art. XXXIII.—When a judgment has already been given on a case, but no appeal has yet been made, the case is considered in law as still belonging to the Court by which the judgment was given.

Art. XXXIV.—Any procedure not provided for in this Law, with reference to the litigation of disputes relating to the limits of official competence, shall be governed by the Law of Organization of Courts, and the Law of Civil Procedure, and the Court of Official Competence shall be guided by the provisions of those Laws.

Art. XXXV.—Rules and regulations necessary for the enforcement of this Law shall be determined by Imperial Ordinance.

A long discussion ensued, Messrs. Kinoshita, Watanabe, and Viscount Tani opposing the Bill, on the ground that the Court would become chiefly a tribunal for standing between the people and the remedies offered by ordinary processes of law.

The Second Reading was ultimately thrown out, and the House rose at 2.30 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m., the Order of the Day being:—

- 1.—Report of the Special Committee on the Barristers Bill.
- 2.—Representation relating to the management of Public Forests.
- 3.—Private Bill (First Reading) of a Bill for rescinding the Peace Preservation Regulations.
- 4.—Representation relating to the engineering control of the Four Great Rivers, Kiso, Yodo, Tone, and Shinano.
- 5.—Private Bill (First Reading) for abolishing the duty on imported Cotton.

The President announced the receipt of the following:—

Answer from the Minister of State for Education to a Question from Mr. Shimizu Bunjiro.

QUESTION RELATING TO EDUCATIONAL MATTERS.

On the 25th of October in the present year, the Minister of State for Education issued an Instruction to the effect that the decision of the various

Original from

Cities and Prefectures with regard to text books of ethics required in the Primary Schools should be deferred until the 4th month of the 27th year of *Meiji*. Concerning this instruction we desire to ask the following questions:—

(1) After the promulgation, on the 30th of October in the 23rd year of *Meiji*, of an Imperial Rescript relating to moral education, the Department of Education fixed the Policy to be adopted by it on this subject, and having assembled the educational officials of the various Cities and Prefectures, explained to them the spirit of the Imperial Rescript, the Departmental Notifications and the Ministerial Instructions. Further, with regard to that policy, the following communication was addressed by the Chief of the Bureau of School Affairs to Governors of Cities and Prefectures on the 7th of Oct. in the 24th year of *Meiji*:—

With reference to the instructions given by Inspectors of Schools in the 5th month of the 20th year of *Meiji*, to the effect that the sections of Ethics in the Primary Schools should refrain from coming to any decision on the subject of educational text books, I am now directed by the Minister of State for Education to inform you that a decision on this subject is required. As a point of precaution I may add that the text books decided upon as above will of course be subject to the inspection and approval of the Department of Education.

In accordance with this communication, it followed, as a matter of course, that after October of the 24th year of *Meiji*, the Governors of the various Cities and Prefectures set about investigating and deciding the question of ethical text books. But in October of the following, that is to say the present year, Departmental Instruction No. 8 was issued, deferring a decision for two years longer. Was this because the educational policy is not yet determined, or was there some other necessity for the issue of such an instruction?

(2.) Two years have already elapsed since the issue of the Imperial Rescript on the subject of Education, yet its spirit does not seem to have yet been carried into effect. The Minister of State for Education ought therefore to lose no time in coming to a decision on the subject of ethical text books, whereas instruction No. 8 alluded to above, tends to produce fresh delay. The Government is responsible that the Imperial Rescript does not receive perfunctory treatment. We therefore venture to seek an explanation upon this point also.

(3.) Instruction No. 8, alluded to above, required that Governors of Cities and Prefectures should defer any decision on the subject of ethical text books until the 4th month of the 27th year of *Meiji*. But the examination and determination of such books by the Department of Education itself does not appear to have been suspended. If the Department has not suspended the operations of the examiners, and if certain text books have already been decided upon, with what object is their temporary use forbidden between the present time and the 27th year of *Meiji*?

Presented in accordance, &c.

(Signed) SHIMIZU BUNJIRO and others.

REPLY OF THE DEPARTMENT OF EDUCATION.

The communication addressed by the Chief of the Bureau of School Affairs on the 7th of the 10th month of the 24th year of *Meiji*, indicating that a decision would be required on the subject of ethical text books, cannot be supposed to have referred to an immediate decision, but merely indicated that the appearance of suitable text books which, on examination, would be found to satisfy the standard laid down at that time, should be looked for. In the 5th month of the present year, instructions were issued that as the choice of good text-books was of vital importance to the success of education, the publication of suitable books should be awaited, and after the most careful examination a choice should be made, anything like a hasty decision on such a subject being avoided. The instruction issued by the Department of Education in the 10th month of the present year, simply gave greater explicitness to the general caution embodied in the Instruction of the 5th month, and being intended to secure that the best works should be selected from among the great number offering, was not in any sense at variance with the policy previously followed. In fact, the purpose of those various Instructions was to emphasize the fact that in view of the vital importance of moral education too much care could not be exercised in determining the text books to be used.

Educational text books, considered from the point of view of the rôle they play in forming the people's character, as well as from that of financial economy, ought not to be lightly changed when once decided upon. No argument, therefore, can be found for the use of temporary text books, and moreover, economical considerations forbade it.

(Signed) KONO TOSAMA,
Minister of State for Education.

A Question from Mr. Shimizu Bunjiro with regard to money paid to Korea.

Mr. Shimizu Bunjiro declared himself dissatisfied with the Minister of State for Education's answer, and hoped that the Minister would himself attend and offer explanations. He also spoke with regard to his Question about money returned to Korea. It was understood that a sum of twenty-two thousand yen, being interest which had accumulated on a loan made to Korea, had been returned to the latter last spring, and that the return had been obtained through the efforts of Messrs. Omiya Chobei and Masuda Nobuyuki, employes of the Korean Government, and through the good offices of Mr. Kurino, Chief of the Political Bureau in the Foreign Office, who belonged to the same province as Mr. Omiya. It appeared that the transfer of this sum to Korea on the authority of the Foreign Office alone, had been a distinct excess of competence, and full explanations were desirable.

Admiral Ito, Vice-Minister of State for the Navy, said that he proposed to answer the Question put by Major-General Aoyama the preceding day, with reference to the loss of the *Chishima-Kan*.

Mr. Abe Bankon moved that the reply be given in secret session.

Major-General Aoyama declared that there was nothing secret about the business.

Admiral Ito proceeded to explain that Major-General Aoyama had been mistaken in saying that the collision took place on a moon-light night. The moon had already set when the catastrophe occurred. As to the question of which side was in fault, no opinion could be pronounced until the regular investigation had been concluded. The complaint made by Major-General Aoyama that whereas the contract speed of the *Chishima* was 21 knots, she had only made 19 knots on her trial, was true. But the fault did not lie with her build. The trouble was in the boilers. Such incidents were common in ship-building, wherever the dock-yard. The contract price of the ship with her armament had been 669,689 yen, and she was not insured.

Mr. Konishi Juninosuke asked why a Vice-Minister of State had come to reply to Major-General Aoyama's Question. A Minister of State should have come. Was any explanation offered?

Mr. Seki Naohiko complained generally of the method adopted by the Government in answering Questions. A Question had to be supported by over thirty members. It ought to be answered by a Minister in person. The habit of sending a written answer to be read by the Chief Secretary, or deputed a Vice-Minister to reply showed an insufficient sense of the importance of such matters. He moved that the House express an opinion on this point.

Major-General Aoyama said that he had asked an important Question, being much troubled about the loss of the *Chishima*. He wanted to know what business the Captain of the ship had to come back alive, having lost his vessel.

The President said Mr. Seki's motion must take the form of asking the House to determine whether Ministers of State might answer Questions by proxy. He inquired whether Admiral Ito appeared as representative of the Minister of State for the Navy.

Admiral Ito replied in the negative.

The House proceeded to the Order of the Day.

Mr. Maruyama Neisei, on behalf of Mr. Hatoyama, Chairman of the Special Committee, reported that the Committee approved the Barristers Bill with some amendments, the principal of which were, first, that no restrictions should be imposed on the place of practice of barristers; and secondly, that they should not be required to pay security into the Local Court.

After some questions and desultory discussion, the Second Reading of the Bill was voted:—

LAW FOR BARRISTERS.

CHAPTER I.—QUALIFICATION AND SERVICE OF BARRISTERS.

Art. I.—Barristers may receive instruction from suitors, and shall comply with the regulations determined by the laws of the ordinary court or by decrees of the courts of justice.

Art. II.—Those who desire to become barristers must possess the following qualifications:—

- (a.) They must be Japanese male subjects having the competency of the Civil Code.
- (b.) They must have passed the two Regulation Examinations set for that purpose.

Art. III.—By the first examination the extent of legal knowledge, and by the second the practical skill of the candidates, will be tested.

Regulations for the examination and practical training of candidates shall be determined by the Minister of Justice.

Art. IV.—Graduates in Law of the Imperial University, or of the previous Tokyo University; graduates of the previous Law Academy attached to the Department of Justice, and supplementary officials of that Department, shall not be required to pass the first examination.

Persons having the qualifications of a Judge or a Public Prosecutor shall be admitted to the privileges of a Barrister without examination.

Art. V.—No person can be admitted a barrister

- (a.) Who has been convicted of a crime, unless such crime be of a political nature, and who has not been rehabilitated.
- (b.) Who has been convicted of a delict punishable with hard labour.
- (c.) Who has been adjudged insolvent and has not been rehabilitated, or who is an undischarged bankrupt.

Art. VI.—A Barrister is not permitted to occupy any public office to which a salary is attached. He may be a member of the Imperial Diet, a standing member of local assemblies, or discharge functions specially entrusted to him from a public office.

A Barrister is not permitted to engage in commercial affairs, unless he has obtained permission from the Barristers' Society.

CHAPTER II.—REGISTER OF BARRISTERS' NAMES.

Art. VII.—Every Local Court shall be provided with a copy of the Register of Barristers.

A Barrister must belong to the Court where his name is filed. Provided that he cannot file his name in more than one Local Court.

Barristers belonging to a Court wherein a suit is instituted shall alone be employed as counsel for persons who come under Art. 258 or 279 of the Code of Criminal Procedure.

Art. VIII.—Those who desire their names registered shall be presented to the Minister of State for Justice through the medium of the Public Prosecutor's Office to which they belong.

To the form of registration shall be subjoined testimony relating to Arts. 2 and 6.

Art. IX.—Persons who have received permission to register as Barristers shall pay 20 yen as commission.

Every change of register from one Court of Justice to another necessitates the payment of 10 yen commission.

Art. X.—Regulations relating to the Registration of Barristers shall be determined by the Minister of State for Justice.

CHAPTER III.—RIGHTS AND DUTIES OF BARRISTERS.

Art. XI.—No person can discharge the duties of a Barrister before his name is properly filed in the Register of Barristers.

No Barrister can practise in the Supreme Court before the expiration of three years after his name is registered.

The above provision does not apply to Judges or Public Prosecutors who have served as such for over three years.

Art. XII.—Any Barrister may practice his profession within the territorial limits of the Local Court, in the Appeal Court to which the Local Court is attached, and in the Supreme Court. When a case in which he is concerned is transferred to another Court, he may practise there without regard to the present provision.

This article does not prevent Barristers from appearing in suits for others in Special Courts of Justice appointed by Special Laws.

Art. XIII.—In the case of a deficiency in the number of Barristers practising in a District Court, official authority may be given to the adjoining Courts to allow some of their Barristers to assist in the work of the Court, or, on application, suitable candidates may be admitted.

Art. XIV.—Unless a Barrister can certify an appropriate and reasonable excuse he cannot refuse to discharge any duties which the Court may relegate to him.

Art. XV.—Barristers may not practise in suits of the following nature:—

1. Cases in which the Barrister has been in consultation with both parties, or received the private instructions of the opposing party.
2. Cases which have been conducted before him while acting as Judge or Public Prosecutor.
3. Cases in which he has acted as mediator.

Original from

Art. XVI.—Barristers cannot contract to receive a portion of the benefit arising from a suit, neither can they acquire by money any right therein.

Art. XVII.—Should a Barrister be denied full instructions on matters concerning a suit, he shall promptly report the affair to his principal, and if he does not properly discharge all the functions appertaining to the prosecution or defence of a suit, he shall be liable for all the damages thereby caused.

Art. XVIII.—Barristers shall fix the District Bureau to which they belong near to the Local Court within whose territorial limits they practise, and they shall present their reports to the Bureau.

Should Barristers leave the Bureau for more than a week they are required to report to the Bureau.

Art. XIX.—At the time of registration a Barrister is required to deposit a sum of money as security for any indemnity or fine which may arise from any miscarriage in his profession, in the Local Court where he files his name. When his security is reduced, he shall not be permitted to practise again until he has raised it to the full amount.

The amount of such security shall be determined by the Minister of State for Justice according to the conditions of the different districts. It shall not be less than 100 *yen* and not more than 300 *yen*.

Art. XX.—Barristers are allowed to utilize the services of aspirants to the Bar who have passed their first examination, as such employment would materially assist the latter in their practical training.

CHAPTER IV.—BARRISTERS' SOCIETIES.

Art. XXI.—Barristers shall institute a Barristers' Society in which those who belong to a Local Court may be enrolled members.

Art. XXII.—The Barristers' Society shall be under the supervision of the Public Procurator General in the Local Court.

Art. XXIII.—A Barristers' Society shall have a President; and a Vice-President, if necessary.

Art. XXIV.—A Barristers' Society shall meet in general session at stated times yearly, and in case of necessity an extraordinary session may be called.

Art. XXV.—A Barristers' Society is permitted to admit supernumerary members at its own discretion, but if it has more than 20 ordinary members it ought to admit no supernumeraries.

Art. XXVI.—Each Barristers' Society shall regulate itself by rules which must receive the sanction of the Minister of State for Justice, being presented to him in the first instance through the medium of the Presiding Public Procurator.

Barristers shall strictly observe the Rules of the Barristers' Society to which they belong.

Art. XXVII.—The rules for Barristers' Societies shall determine the election and duties of the President and Vice-President; regulation of the General Meetings; the procedure of the Society and its supernumerary members, the debates, guarantee, and fees, and the maintenance of the morals of Barristers, besides rules necessary for the performance of other business of the Society.

Art. XXVIII.—The result of the election of President and Vice-President, the general and supernumerary members' Meetings, with the subjects of debate, must be presented to the Public Procurator General.

Art. XXIX.—In a Barristers' Society no subject other than laws, orders, or matters expressly provided in the Rules of the Barristers' Society, and questions submitted from the Minister of State for Justice, shall be discussed.

Art. XXX.—The Presiding Public Procurator can at any time enter a Barristers' Meeting and has the power to forbid the Society from reporting the matters of debate.

Art. XXXI.—If any of the resolutions of a Barrister's Meeting infringe the laws, orders or rules of the Society, the Minister of State for Justice can either declare them ineffectual or totally abolish them.

CHAPTER V.—DISCIPLINARY PUNISHMENTS.

Art. XXXII.—Should a Barrister commit an act which is contrary to his professional status or which is deemed sufficient to destroy his professional credit, the President of his Society, in order to submit the transgressor to disciplinary punishment, shall, after the decision of a general or supernumerary Meeting, report the fact to the Presiding Public Procurator. The Public Procurator General, acting on the report of the President of the Meeting, shall grant the request demanded.

Art. XXXIII.—Disciplinary punishments passed against members of the Barristers' Society shall be referred to the Appeal Court which controls the district.

Art. XXXIV.—Disciplinary Punishments shall be as follow:—

(a.) Reprimands.

(b.) A fine of less than 100 *yen*.

(c.) Suspension of professional privileges for a period not exceeding one year.

(d.) Expulsion.

Art. XXXV.—As regards the execution of Punishments, the same regulations as to the Disciplinary Punishment of Judges shall be applied.

SUPPLEMENTARY RULES.

Art. XXXVI.—Persons at present practising at the Bar are permitted to be made Barristers without examination, if they have petitioned for the registration of their names 60 days before this law comes into force.

Art. XXXVII.—Barristers now practising can carry on their business until otherwise determined, despite territorial limits, if cases are placed in their hands before the date of operation of this Law.

Art. XXXVIII.—The provisions of clause 1 of Art. XI. shall not apply to Barristers enrolled before the promulgation of this Law.

Art. XXXIX.—The present law shall come into operation on the 1st day of the 5th month of the 26th year of Meiji (1st May, 1893).

Notification No. 1A of the Department of Justice, dated the 13th year of Meiji (1880), relating to Regulations for Barristers, shall cease to be operative from the day on which the present Law comes into force.

Mr. Saito Riosuke, introducing the Representation as to Public Forests, explained that the object in view was the ultimate transfer of public forests to the hands of private individuals. At present the aim of the Government seemed to be to get all the best forests into its own hands. But the results of the system were very insignificant. The gross revenue derived from State forests was only a million *yen*, and the expenditure exceeded six hundred thousand. The Government was engaged in a survey which had been undertaken on the hypothesis of fifteen years' work. Twelve years had still to run, and it did not seem at all wise from a financial point of view that so much delay should take place. Want of funds was the alleged reason, but the money required for completing the survey in the course of a year or two, would be easily recovered when the forests now in the hands of the State were sold to private individuals. He adduced statistics to show that in European countries the proportion of forest land in the hands of private persons was much larger than in Japan. He desired to see at least from 12 to 13 million acres transferred to private enterprise out of the 22 million acres now held by the State:—

THE REPRESENTATION RAN AS FOLLOWS:— REPRESENTATION RELATING TO THE MANAGEMENT OF STATE FORESTS.

The management of forests having long been neglected, the growth of the nation's wealth has been correspondingly impeded. Investigations into the actual condition of forest lands were undertaken by the Government with the view of revising the system of control. But the chief object of the revision was to obtain official possession and direction of all the good forests; a measure which, even supposing that it might have remedied some of the existing abuses, could scarcely fail to beget others in their stead. We consider it advisable that all forests, except those the official ownership of which is absolutely essential to the preservation of public peace, should be transferred to the hands of private individuals or local associations, and we are persuaded that the transfer would promote the prosperity of the country. It would be necessary, however, that a system of superintendence and limitation should be established. The Government has undertaken to survey all the forests in a period of fifteen years, twelve of which have still to elapse. But the development of the national resources is too urgent a matter to permit such leisurely methods. Some means must be devised for enabling the survey to be quickly completed. We therefore request the Government to prepare and submit to this House a Bill for the management of State Forests, together with estimates of the expenditure required.

Presented by

SAITO RIOSUKE,
KUROKAWA SHUZO,
and 33 others.

Mr. Nakamura Yaroku found himself obliged to oppose the Representation. In the Budget two years ago a sum of 850,000 *yen* had been appropriated for the survey of forests, and the Government had then explained that the main part of the survey was already completed, and that the whole would be concluded and the maps drawn by 1894. He saw no reason therefore, to take any such step as that now suggested, prior to the completion of the survey.

After some further discussion, the Representation was entrusted to a Special Committee of 9 nominated by the President.

Mr. Uozumi Itsuji, introducing the Bill for rescinding the Peace Preservation Regulations, said that the abolition of these Regulations had been already three times voted by the House, but the Government had been always opposed to the measure. The present Cabinet, however, might take a different view. It professed to be anxious to bring the workings of the administrative machine into harmony with a constitutional polity, and it could show the sincerity of its desire by agreeing to abolish these Regulations, which belonged essentially to despotic methods of Government.

Mr. Watanabe, Vice-Minister of Home Affairs, said that the Government was compelled to oppose the proposition. The statement that the Peace Preservation Regulations were not in keeping with constitutional institutions was applicable to their form only. The fact was that they served to secure the peaceful working of such institutions. The House must be very well aware that the fever of politics had attained a very high degree of late years and that numbers of irresponsible waifs banded together to disturb the political arena, resorting to force in times of elections, subjecting law-abiding people to all sorts of intimidation, and even assaulting the members of the House themselves. It was impossible, in the face of such a state of affairs, to think that the time had come for abolishing these Regulations.

Mr. Yamaguchi Chiosaku wished to ask the Government Delegate whether any benefit had been derived from the exercise of the Regulations.

The Vice-Minister answered in the affirmative. In answer to another question, he said that, according to the Government's belief, the time was not far distant when the Regulations might be abolished. He frankly admitted that mistakes had been made on the last occasion of enforcing the Regulations, but said that investigations were now in progress to make amends for those errors.

The House voted for the Second Reading of the Bill, and passed through the Second and Third Readings at once.

The Representation relating to the Engineering Control of the Four Great Rivers was then briefly discussed, and entrusted to a Special Committee of 9 nominated by the President. The Representation ran as follows:—

REPRESENTATION RELATING TO THE ENGINEERING CONTROL OF THE FOUR GREAT RIVERS.

In the second session of the Imperial Diet, in the 24th year of Meiji, the House of Representatives presented to the Government a Representation relating to the engineering control of rivers, and investigations into the condition of the nine great rivers, as well as other smaller rivers under direct control of the Government, were commenced. But among rivers under the direct control of the Government, there are some for which engineering works must be concluded as rapidly as possible. These rivers are, the Kiso, the Yodo, the Tone, and the Shinano. It is for the interest of the country that works connected with these rivers should be accomplished without any delay. We venture to indicate some of the most urgent works in this category:—

1. Kiso River.—For the repairs of this river, we trust that the Government will present to the Diet during the present session, a Bill increasing the amount of continuing expenditure already granted so as to hasten the completion of the works for the Kiso, Nagara, and Ibi Rivers, the increased grant to be included in the appropriations for the present year.

2. Tone River.—For the repairs of this river, we trust that the Government will present to the Diet during the present session, a Bill for increasing the amount of continuing expenditures, already granted, so as to hasten the improvement of the banks which are not safe in flood time.

3. Yodo River.—As the repairs of this river have been suspended at present, and in consequence the *Fu* and *Ken* along its course are suffering greatly, we trust that the Government will present to the Diet during the next session, a Bill increasing the appropriations so as to hasten the works.

4. Shinano River.—With regard to the repairs of this river those on the upper and lower parts, and on the Aka River, have not been completed within the allowance granted, and in consequence

much damage has been sustained by the people along their course. We therefore trust that the Government will draft a Bill increasing the amount of continuing expenditures, and present the same in the next session of the Diet.

Presented by YUMOTO YOSHINORI.
Supported by MATANO KAGETAKA
and 100 others.

The House rose at 6.15 p.m.

MONDAY, DECEMBER 12TH.

HOUSE OF PEERS.

The House met at 10.40 a.m., the Order of the Day being:—

- 1.—First Reading of a Government Bill for re-assessing the Taxable Value of Land.
- 2.—Appointment of a Special Committee to report upon the same.
- 3.—First Reading of a Bill sent up from the House of Representatives for supplementing the Weights and Measures Law.
- 4.—Appointment of a Special Committee to report upon the same.
- 5.—First Reading of a Bill sent up from the House of Representatives for abolishing Law No. 12 of the 22nd year of Meiji.
- 6.—Appointment of a Special Committee to report upon the same.
- 7.—First Reading of a Bill sent up from the House of Representatives for supplementing the Town Government Organization Law.
- 8.—Appointment of a Special Committee to report upon the same.

The President reported the receipt of the following:—

- A Bill for taxing Official Salaries, and exempting Incomes; presented by Mr. Hara Tadao and others.
- A Representation relating to the Reduction of Official Salaries; presented by Mr. Kaga Nobunori and others.
- A Bill for amending the 19th Article of the Conscription Law; presented by Mr. Hayashi Toshiyuki.

The Minister of State for Finance said:—

GENTLEMEN.—I think it advisable to submit for your consideration the views I entertain with regard to the Bill for reassessing the Taxable Value of Land. The measure has more or less connection with the various Bills submitted by the Government to the House of Representatives for providing sources of State revenue, and in speaking of it I am consequently obliged to refer to the general financial policy of the Government. I trust, therefore, that you will excuse me if I appear to pass beyond the subject under immediate consideration. It is scarcely necessary for me, I think, to speak of the national administration, seeing that you are well acquainted with it. But I may call attention to the Government's conviction that the paramount objects to be kept in view are the increase of the empire's prestige abroad, and the development of the people's resources at home, these two aims being pursued simultaneously with whatever degree of celerity circumstances of the time and the finances of the country permit. You will agree, I am persuaded, gentlemen, that the best interests of the State forbid that either of these objects should be neglected on account of the other, or that one should be subserved to the other. The Budget of the present year is compiled in accordance with this policy. One of the methods which we propose to adopt for strengthening the country's military defences is to make arrangements for the construction, within a period of seven years, of two powerful armoured vessels, and, within a period of six years, of one cruiser and one despatch boat. Again, among the plans which we desire to pursue for the development of the national resources, are the more vigorous prosecution of work for the engineering control of rivers, which have for some years been under consideration, and the removal of inequalities in the incidence of the Land Tax by reassessing to a certain extent the taxable value of the land. These measures will produce a deficiency of revenue to the extent of twenty-seven or twenty-eight hundred thousand yen, and to meet this deficit we consider it most advisable to increase the taxes on Saké, Tobacco, and Incomes, Bills for which purpose have been prepared and submitted to the House of Representatives. Such are the main lines of our financial policy. In the House of Representatives I explained fully that the various financial measures bearing upon it were related to each other, and ought to be discussed in that mutual connection, but the Representatives passed only the Bill for reassessing the Taxable Value of Land, the other financial Bills being still in the hands of Special Committees. I am firmly persuaded that the Representatives, not neglectful of the duty of providing for the security of the realm and the growth of national prosperity, will not allow such an unhappy contingency to arise as that no provision of funds can be made for the building of men-of-war and the reassessment of the taxable value of land. Nevertheless, as the House of Representatives has passed only this Bill for the Special Re-assessment of the Taxable Value of Land, and has not yet discussed the financial measures connected with it, I am sorry to be obliged to ask you to consider whether it will be advisable to come to an independent decision upon this Reassessment Bill, pending the settlement of

the question whether financial resources will be provided for carrying it out side by side with the building of men-of-war for the defence of the Empire. I trust that you will give the matter your fullest attention and extend due consent to the Bill.

Mr. Yamaguchi Naofusa said that from the Minister's speech he inferred a close relation between this Bill for Reassessment, and the other Bills relating to increases of taxation. Was it to be understood that the Bills must stand and fall together, and that the Government desired the House of Peers to suspend final judgment on the Reassessment Bill until the fate of the taxation Bills in the Lower House was known?

The Minister of Finance replied that he had not thought of making any suggestion as to the House's manner of voting, but that he had sought merely to convey the fact that the reform contemplated by the Reassessment Bill could not possibly be carried out unless some compensatory sources of revenue were found. It was true that inequalities existed in the incidence of the land tax, and it was also true that the Government desired to amend them, if possible. But the financial circumstances of the State had to be considered, and the Government by no means considered that the hardships of this unequal incidence were so severe as to call for redress at all costs.

Viscount Soga inquired whether the necessary funds might not be obtained by some system of reducing Administrative Expenditure.

The Minister replied that if some system of effecting reduction were forthcoming, the needed surplus of revenue might doubtless be found, but unless the proposed system were expounded, it was impossible for him to give a definite answer.

The Bill was entrusted to a Special Committee of 15 elected by the whole House.

The Supplementary Weights and Measures Bill was entrusted, after some questions, to a Special Committee of 9 nominated by the President, as were also the Bills for abolishing Law No. 12, and for supplementing the Town Government Organization Law. The House rose at 3.30 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m., the Order of the Day being:—

- 1.—Report of the Special Committee on a Private Bill for amending the Law of Public Meeting and Political Associations.
- 2.—Report of the Special Committee on a Private Bill for amending the Law of Registration.
- 3.—First Reading of a Private Bill for abolishing the Import Duty on Raw Cotton.
- 4.—First Reading of a Private Bill for revising the Medical Diploma Regulations.
- 5.—First Reading of a Private Bill for amending the standing Orders of the House.
- 6.—Representation relating to the Extension of Navigation.
- 7.—Representation relating to the reopening of Matsuzaki Harbour.
- 8.—First Reading of a Private Bill for taxing Official Salaries.

The President announced the receipt of the following:—

- A Question relating to the administration of Cities and Prefectures; presented by Mr. Fukuda Hisamatsu, and others.
- Bill for abolishing Governmental Savings Banks; presented by Mr. Kozuka Zennosuke and others.
- Bill for abolishing the Tax on Marine Products in Hokkaido; a Bill for supplementing Imperial Ordinance No. 61 of the 11th year of Meiji; a Bill for extending the operation of the Business Tax and Miscellaneous Tax Regulations to Hokkaido; a Bill for extending the operation of the Local Land Tax Regulations to Hokkaido; and a Bill for establishing a Local Assembly in Hokkaido; presented by Mr. Hyakuman Unosui and others.
- Bill for abolishing the tax on vehicles; and a Bill for amending the Shipping Tax Regulations; presented by Mr. Tsuzuki Hidetaro and others.

The House then proceeded to the Order of the Day.

Mr. Fukuda explained that his Question as to the administration of Cities and Prefectures was dictated by the unfortunate friction now existing between Governors and Local Assemblies. He wished to know whether the Government had any policy for ameliorating such a serious situation. His own belief was that official interference in elections had been only the proximate cause of the trouble, and that the real origin lay much deeper. But, however that might be, some remedy must be found. Considering what had recently occurred in Saitama, Tokushima, and Niigata, it might almost be said that the working of the local administrative machinery was completely out of gear. In reply to the action taken by public-spirited men in the localities, the Government had explained that since Local Governors held office by au-

thority of the Emperor, it was most improper that votes as to their removal or transfer should be passed by Local Assemblies. Such an answer seemed inconsistent with the spirit of representative institutions. The Government appeared to have no resource except to suspend or dissolve the Local Assemblies. Was that the policy they intended to pursue? He desired to have an explicit answer, because upon the nature of the plan indicated by the Government must depend the subsequent steps taken by him and his fellow-thinkers.

Mr. Ito Daihachi, on behalf of the Special Committee, reported in favour of the Bill for amending the Law of Public Meeting and Political Association, with certain modifications.

The House voted to proceed with the Second Reading at once, and after discussing the Bill clause by clause, passed it finally as amended by the Special Committee.

Mr. Node Shozaburo, on behalf of the Special Committee, reported that the Committee recommended the passing of the Bill for revising the Registration Law, but had modified it so that, instead of transferring the whole business of registration from the District Courts to the Divisional Headmen's Offices, either the former or the latter should be available for the purpose according to the convenience of the persons desiring to register. Several minor changes had also been made.

The House voted for the Second Reading, after some discussion.

Mr. Kato Masanosuke, introducing the Bill for abolishing the import duty on Raw Cotton, entered into statistics showing the progress of the cotton spinning industry in Japan, and said that it was of vital importance to the prosperity of the country to encourage manufacturing enterprise. There seemed a reasonable prospect that Japan might one day be able not only to supply herself with cotton manufactures, but also to export them to Korea and China. One method of bringing about that desirable conjuncture was to facilitate the supply of the raw material, and he strongly urged the necessity of removing all duty upon the import of foreign-grown raw cotton.

Mr. Higashio Reitaro inquired whether, in event of the Government abolishing the duty upon a foreign import, it would not forfeit the power to re-impose the duty.

Mr. Kato replied emphatically in the negative.

Mr. Sasaki Shozo asked whether it was certain that Japanese manufacturers would benefit by the proposed change. Might not the foreign merchants continue to charge the same price for the imported cotton?

Mr. Kato thought that no one need be uneasy on that score.

Considerable discussion ensued. Messrs. Watanabe Yoshigi and Kanmochi Tomotsune opposed the Bill on the ground that Japan should try to grow her own cotton and that there was hope of her being able to do so, whereas the free introduction of foreign raw cotton at the present juncture would certainly delay the process. They urged that manufacturers evidently found their account already in the cotton-spinning industry and needed no special help. If there were question of encouraging the export of Japanese cotton manufactures, the best method to pursue would be a system of drawbacks.

The Bill was entrusted to a Special Committee of 9 chosen by the Sections.

Mr. Yamada Taizo, introducing the Bill for amending the Medical Diploma Regulations, explained that the chief object of the Bill was to preserve from extermination the physicians of the old school who still played a useful part in the country.

Dr. Hasegawa Tai asked how proposers of the Bill reconciled his project with the fact that the drugs and simples of the school he wished to preserve were no longer articles of commerce.

Mr. Yamada replied that he did not take count of such things. His sole idea was to secure equal treatment for all schools of medicine.

Mr. Higashio asked how examinations as to

the proficiency of physicians of the Chinese School were to be conducted; to which Mr. Yamada answered that he left that point to the Minister of State for Home Affairs.

Mr. Watanabe, Vice-Minister for Home Affairs, being questioned as to whether he saw any method of conducting such examinations, said that truly he failed to perceive what could be done except to take the *Shokanron* as text book. But he took the opportunity of saying, on behalf of the Government, that the adoption of the course indicated by the Bill must be distinctly injurious to the progress of sound medical science in Japan.

The Bill was finally entrusted to a Committee of 9 nominated by the President.

The House rose at 6.30 p.m.

TUESDAY, DECEMBER 13TH.

HOUSE OF PEERS.

The House did not meet, the Committees alone assembling.

HOUSE OF REPRESENTATIVES.

The House met at 1.20 p.m., the Order of the Day being:—

- 1—Decision relating to the constitutionality of the Game Regulations.
- 2—Private Bill (First Reading) for a system of Game Regulations.
- 3—Private Bill (First Reading) for amending the Standing Order of the House.
- 4—Representation relating to the Development of Navigation.
- 5—Representation relating to the opening of Matsugasaki Harbour.
- 6—Private Bill (First Reading) for taxing Official Salaries.
- 7—Private Bill (First Reading) for amending the Mining Law.
- 8—Representation relating to the reform of the Navy.
- 9—Representation relating to the rescinding of the Premonition Law.

The first measure on the Order of the Day was read as follows:—

DECISION WITH REGARD TO THE GAME REGULATIONS.

The Game Regulations, promulgated by Imperial Ordinance No. 48, being opposed to the Constitution, are inoperative from the outset. This House, therefore, decides that it does not accept the Government's Ordinance.

Mr. Takata Sanaye, introducing this measure, said that its general purpose was to pronounce the Regulations unconstitutional, and to declare that, consequently, they had no binding force. In discussing the matter, he should address himself first to prove that the Regulations were contrary to the Constitution; and, secondly, to show how the House ought to proceed with regard to them. The Articles of the Constitution which the Regulations violated were the 9th, the 62nd, and the 27th. He did not deny that the Game Regulations might be more or less necessary "for the maintenance of public peace and order, and for the promotion of the welfare of the subject," as laid down in the 9th article, where the Sovereign's power to issue Ordinances was defined. But he contended that Ordinances issued under the 9th Article must be chiefly calculated "for the maintenance of public peace and order, and for the promotion of the welfare of the subject," whereas these Game Regulations were chiefly designed to protect individual rights. The former Game Regulations had been submitted to the Senate for approval, but these new Regulations had been promulgated simply on the authority of an Imperial Ordinance; a difference of process which plainly indicated their unconstitutionality. Turning now to the 62nd Article, they found it laid down that new taxes could not be imposed or existing ones modified except by law. This limitation did not extend, however, to "administrative fees or other revenue having the nature of compensation," and the point to be considered consequently was whether the license fees fixed by the Game Regulations were of the nature of taxes, or whether they belonged to the category of administrative fees or revenue having the nature of compensation. He maintained that they belonged to the schedule of taxes. Speaking frankly, it must be admitted that they partook to some extent of the nature of administrative fees, but on the whole they must be classed with taxes. The most convincing proof was that a distinction was made between pursuing game for sport and pursuing it as a means of livelihood. If the charge for a passport were an ad-

ministrative fee, pure and simple, why should a sportsman have to pay more for his license than a man who made the capture of game a profession? In point of fact, the distinction ought to tell in exactly the converse sense. The conclusion must be reached that the license fee was a tax on luxuries (*Kyofun-zei*) and such imposts were regarded as taxes by all students of jurisprudence in the West. Moreover, in Budgets compiled previously to the new Regulations, the fees for shooting licenses had invariably been included among "taxes," a fact sufficient in itself to show that the Government did not regard them as administrative fees. The Government, in reply to Questions, had denied that these fees for shooting licenses belonged to the domain of taxes, but he thought that, after what he had said, the fallacy of such a contention would be apparent. The problem of what constituted and what did not constitute a tax might be discussed with more propriety by jurists than by politicians. For the House, the plainest course to pursue in coming to a decision was to observe the system hitherto followed by the Government. According to that system, the fees were undoubtedly a tax, and if the Ministry desired to change a tax, they must obtain the consent of the Diet. Otherwise, they were guilty of a distinct breach of the Constitution. Finally, the 27th Article of the Constitution provided that the right of property of every Japanese subject should remain inviolate and could not be restricted except by law. A man carrying a license to pursue game could not, however, avoid trespassing on the property of other persons and thus violating their rights. To subject individual rights to any such restriction the processes of law were alone competent, and to attempt anything of the kind by Imperial Ordinance was distinctly unconstitutional. The Ordinance being unconstitutional, could not possess any binding force, and he therefore called upon the House to declare its resolve not to accept it.

Mr. Awaya Shinazo asked whether the Regulations would lose binding force simply by a declaration of the House that it refused to accept them.

Mr. Takata replied that without any such decision the Regulations already possessed no real binding force.

Count Goto, Minister of State for Agriculture and Commerce, said:—

GENTLEMEN,—You have now before you a resolution on the subject of the Game Regulations. The Government regards it with unbounded surprise. Mr. Takata's statement of the reasons for introducing it, enables me to form some conception of the meaning, and leads me to offer a brief explanation. Mr. Takata has told you that the Ordinance is in conflict with the provisions of Art. 9 of the Constitution. But it was precisely in the exercise of the power conferred by that Article that the Government issued the Ordinance. Mr. Takata affirms that any Ordinance issued under Art. 9 must be chiefly devoted to promoting the welfare of the people and maintaining peace and public order. I confess that I am unable to follow him. How is this question of "chiefly" to be determined. Does it refer to a third of the Ordinance, or to a fourth of it, or to what fraction of it? If you admit, as Mr. Takata has done, that the Regulations are in some degree designed to preserve peace and order and promote the welfare of the people, then you cannot escape the conclusion that their issue is authorized by the 9th Article. As for the alleged infraction of the 62nd Article, it depends upon the assertion that fees for shooting licenses are taxes and not administrative fees. But the Government is absolutely assured that they are administrative fees. The inference drawn from their former Budgetary classification as "taxes" has no value, for the Government does not regard the items of the Budget as establishing any standard in such matters. Further, there is not the least validity in the argument that the Game Regulations impose restrictions upon the right of property. On the contrary, their purpose is to maintain that right. The Government is persuaded, therefore, that the Regulations do not in any way violate the Constitution. Mr. Takata told you that so soon as the Regulations are shown to be unconstitutional, their conflict with other laws need not be demonstrated. So, too, since I have shown you that they are not unconstitutional, it is unnecessary

for me to enter into other points. But with regard to the character of your proposed decision, I wish to say a word. Let me ask you, what possible value can your declaration have that you do not accept the Regulations. Are not the Regulations already in operation in Japan? I have never heard of such a contention as that a decision of this House can deprive an Imperial Ordinance of retrospective binding force. Even if the Regulations be unconstitutional, surely your decision on the subject should be confined to declaring them so. I can assure you that, for the reasons I have stated, the Government will not be swayed by any decision at which you may arrive of such a nature.

Mr. Tanaka Shozo said that the Minister of State for Agriculture and Commerce had recently told the House that the Cabinet Ministers held office by appointment of the Emperor, and would not resign whatever decision the Diet pronounced. There was no reason to be surprised that a Minister enunciating such a doctrine should differ from the House's interpretation of the Constitution. But he desired to be informed distinctly whether Count Goto intended to announce that the Cabinet would similarly disregard the decision of the House in this instance, or whether Count Goto agreed with Count Ito's commentary on the Constitution.

Count Goto replied that the vote of want of confidence which had elicited the comment in question and the matter now before the House were different. He saw no occasion to bring them into the same category for any purpose. As to whether his interpretation of the Constitution tallied with that of Count Ito, he had never discussed renderings of the Constitution with other members of the Cabinet, and he did not feel called upon to submit any interpretation of the Constitution to the House in answer to questions put at the present juncture.

Mr. Tanigawa Shochu said that the 9th Article of the Constitution interdicted the alteration of any existing law by means of an Ordinance. Were the Game Regulations any kind of law?

The President called the member to order. He was not entitled to discuss Constitutional interpretations under the guise of questions.

Mr. Tanigawa altered his query into—"Are the Game Regulations a law or not?"

Count Goto replied that they were not.

Mr. Shimizu Bunjiro congratulated Count Goto on the thickness of his skin. The celebrated Chushi might take points from him in shamelessness.

Count Goto said that the thickness of a man's skin did not appear to be an especially suitable subject for debate in the House of Representatives.

Mr. Konishi Jinnosuke opposed the motion. He agreed in thinking the Game Regulations unconstitutional, but he considered that the House would be altogether exceeding its competence if it undertook to declare that the Administrative measure, promulgated by Imperial Ordinance and put into operation some time previously, had been from the outset unconstitutional and without binding force. The correct course in his opinion would be to memorialize the Throne as to the unconstitutionality of the Regulations and to abide by the Imperial decision.

Mr. Yamada Toji said that the 9th Article of the Constitution forbade the alteration of any existing law by the machinery of an Ordinance. But if the Game Regulations were examined, they would be found to contain a special provision relating to the punishment of fraud. That was plainly an alteration of the Criminal Code. As to the last speaker's contention that a declaration of an Imperial Ordinance's invalidity would be contumelious, he claimed that the House's first duty was to determine the constitutionality or otherwise of a measure. He had heard with unbounded astonishment the statement of the Minister of State for Agriculture and Commerce that no respect would be paid by the Government to the House's expression of opinion. Such a position could scarcely be assumed by a Cabinet having any respect for the spirit of representative institutions.

Mr. Inouye Kakugoro opposed the motion and strongly condemned the course to which its proposers would fain commit the House. These very men had raised their voices only

three days previously against the impropriety of passing hasty judgment on such an important issue as the House's confidence in the Government; yet here they were inviting the House to declare that the Government had been guilty of a violation of the Constitution, and that an Imperial Ordinance which had already been some time in operation could not be allowed and was without effect. They had the right of making representations to the Government or addressing the Throne. The latter course would place them in the route to obtain a clear and impartial verdict as to the constitutionality of the Regulations, but instead of adopting it, they were invited to take a precipitate and grave step. The fact was that this question was being treated in a party spirit, and the supporters of the motion, instead of being guided by the letter and spirit of the law, were allowing themselves to be carried away by what was supposed to be public opinion. They had already acquired some experience of the results of deciding constitutional questions precipitately. Every attempt of the kind had ended in their discomfiture. As for the legal arguments advanced in support of the motion, they were told that a tax could not be imposed or altered by an Ordinance, that a Law could not be changed by an Ordinance; and that restrictions upon the subject's right of property could not be imposed by an Ordinance. But with regard to the first point, they themselves admitted that a fee for a game license partook of the nature of an administrative fee. Yet, while making this radical admission, they maintained that inasmuch as the fees for game licenses had been included among taxes in the Budget from days prior to the promulgation of the Constitution, therefore, they must be regarded as taxes now. In other words, because a mistaken classification had been adopted in the times when accurate distinctions on such points were not required, therefore the principle represented by the mistake must be accepted as final in perpetuity. It was true that a Law might not be modified by an Ordinance, but before building any argument on that foundation, they had to prove that there was question of a law. In pre-Constitution days Ordinances and Laws had been virtually one and the same. Many enactments which undoubtedly belonged to the category of laws had been promulgated by Ordinance. They must consider not the legislative methods of the past, but the nature of the measure themselves. To say that the old Regulations were a law, and that therefore they could not be altered by Ordinance, was merely to beg the question. He regarded it as very singular and a little inexplicable that they should show so much readiness to deduce hard-and-fast principles from the ancient procedure of a Government which they were now so prompt to accuse of unconstitutionality. Previous speakers had contended that the right of private property was restricted by the regulations: that they conferred on a licence-holder competence to trespass on another's land. Such an argument must be termed a mere make-shift. No man's land need be trespassed upon if he choose to adopt any of the ordinary precautions against trespass, neither did the fact of possessing a game license entitle its holder to put so much as one foot into the property of another if the latter were unwilling. Finally, even granting that the Regulations were unconstitutional, it was exceedingly doubtful whether the House had competence to pronounce any decision as to the validity or otherwise of an Ordinance *ab initio*. He warned them to pause before they placed themselves in a false position. There were other and legitimate means of settling the question.

Mr. Tsunoda Shimpei supported the Bill, but adduced no new arguments.

Mr. Takanashi Tetsushiro, in a speech of considerable length, supported the proposal, but moved an amendment, namely, that instead of declaring the impossibility of endorsing the Regulations, the House should invite the Government to consider its responsibility in connection with them. He condemned the whole policy of the Cabinet, and declared that this

opportunity should be taken either to compel a fresh appeal to the country or to bring about the Cabinet's resignation.

Mr. Tatekawa Umpei followed in the same general sense, but opposed the suggested amendment.

Mr. Suyematsu Kencho, Government Delegate, traversed all the arguments advanced in support of the unconstitutionality of the Game Regulations. They were not in conflict with the 9th Article of the Constitution, because their purpose was "to maintain public peace and order and promote the prosperity of the people." They were not in conflict with the 27th Article, because, so far from restricting the right of property, they assisted to protect it. They were not in conflict with the 62nd article, because the fees levied under them did not belong to the category of taxes. The only argument of any apparent force adduced to show that license fees were taxes, was the statement that they had been classed with taxes in former Budgets. But a Budget dealt simply with revenue and expenditure. It was not an instrument for determining and distinguishing the legal character of the various items included in it. Apart, too, from the question of constitutionality, they were about to pronounce a decision as to the validity of the Ordinance *ab initio*. How could effect be given to such decision? How could its operation be made retrospective in respect of the various measures already taken under the Ordinance? He called upon them to think seriously before they took a step so subversive of good order.

The closure was put and carried.

A motion to entrust the measure to a Special Committee was put and lost. The House decided to vote by closed ballot.

The ballot with regard to Mr. Takanashi's amendment, showed 78 "ayes" and 176 "noes." The ballot with regard to the original measure showed 174 "ayes" and 73 "noes."

The Project for a new Game Law was then introduced and entrusted to a Special Committee of 9 chosen by the Sections.

The House rose at 5.45 p.m.

WEDNESDAY, DECEMBER 14TH.

HOUSE OF PEERS.

The House did not meet, the Special and Standing Committees alone assembling.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m., the Order of the Day being:—

- 1.—Supplementary Budget for the 25th year of Meiji.
- 2.—Second Reading of the Barristers Bill.
- 3.—Report of the Special Committee on the Newspaper Regulations Amendment Bill.
- 4.—Report of the Special Committee on the Publication Regulations.

The Chief Secretary read the following documents:—

REPLY OF THE MINISTER OF STATE FOR THE NAVY TO A QUESTION BY MAJOR-GENERAL AOYAMA.

The Minister of State for the Navy has not neglected to take all necessary procedure with regard to the loss of H.I.M.S. *Chishima-Kan*, which was sunk by coming into collision with the British merchant steamer *Ravenna*, on the 30th November, between the Islands of Yoko and Mutsuki, off the coast of Iyo. But as the Court of Inquiry convened to examine into the circumstances of the collision and to determine on which side the fault lay, has not yet reached a decision, the Minister cannot furnish any information on these points. As to the question of the vessel's speed, it is true that on trial she attained a speed of only 19 knots, whereas her contract speed was 21 knots. But as the former speed was sufficient for the duties she would have been required to perform, the Department agreed to take her over, in consideration of a reduction of 429,563 francs from her contracted price. Her failure to develop the estimated speed was due simply to a leakage of steam, and had nothing to do with her general construction. Had the defect in her machinery been repaired, it was expected that she would have developed the original estimated speed. Her price, armament included, was 534,630,872 yen, and the total expenses incurred in connection with her up to the present day have been 13,339,595 yen. She was not insured for the voyage out, because delivery having been taken in France, and the Japanese flag having been hoisted

there, she became from that moment a unit of the Imperial Navy, and consequently was not insured, none of the ships of the Navy being insured.

REPLY OF THE MINISTERS OF STATE FOR FINANCE AND FOREIGN AFFAIRS TO A QUESTION BY MR. SHIMIZU BUNJIRO.

In the 15th year of Meiji, the Treasury placed in the hands of the Specie Bank a sum of 170,000 yen, to be lent to Korea. The rate of interest charged by the Treasury was 4 per cent. The Bank lent money to Korea at 8 per cent., it having been agreed that the 4 per cent. over and above the interest payable to the Treasury 1 per cent.—which excess did not belong to the Treasury—should go to the Bank by way of Commission, and the remaining 3 per cent. should be allowed to accumulate, and be held by the Bank for disposal in accordance with instructions from the Ministers of State for Finance and Foreign Affairs. These two Ministers instructed the Bank to restore the amount to Korea, and a sum of 20,727,611 yen was accordingly paid over.

The President announced the receipt of the following:—

A Bill for amending Law No. 15 of the 22nd year of Meiji; presented by Mr. Nakamura Yoroku and others.

A Bill for amending the Regulations of the Bank of Japan, and a Bill for taxing the Bank of Japan; presented by Mr. Ishida Kanosuke and others.

Mr. Shimizu Bunjiro complained that the reply given to his question was not satisfactory. He understood that the accumulation of interest had been intended as a precaution against any failure on Korea's part to act up to her agreement. Why, then, had the money been fruitlessly paid over to her? That was what he wanted to know. Further, if the money did not belong to the Treasury, to whom, then, did it belong?

The House proceeded to the Order of the Day.

Mr. Kono Hironaka, on behalf of the Budget Committee, explained that the Committee had authorized him to report on the Supplementary Budget for the current year in advance of the general Budget for next year, because rapid changes in the market prices of goods and financial convenience dictated that order. The portion of the Supplementary Budget relating to grants on account of inundations, had not yet, however, been fully considered, it having been submitted to the Committee at a late date. With regard to the rest of the items, the Committee reported favourably, certain reductions being recommended, and some items in the Department of Communications being eliminated as not properly belonging to a Supplementary Budget.

Mr. Tajiri, Government Delegate, said that as the proposed reductions would entail considerable inconvenience, he trusted the House would agree to the Budget in its original form.

Many questions were asked, especially with reference to the item for "Joint Police Expenditure" in the Department for Home Affairs, some of the members being evidently suspicious as to the circumstances which had necessitated an increase of 124,793 yen in this branch. Considerable discussion also took place with regard to the additional sums demanded for the ordinary expenditure of the Department of Communications, the House being disposed to infer that despite its previous refusal to sanction the new works contemplated by that Department, the Minister had persisted in following his own original plans.

The Supplementary Budget was then taken item by item, the Committee's amendment being voted in every instance with one exception.

Before putting the Budget finally to the vote, the President inquired whether the Government's consent was required in respect of any of the items, and having been answered in the affirmative by the Chairman of the Budget Committee, asked the Minister of State for Finance to inform the House whether the Government's consent would be given.

Mr. Watanabe, Minister of State for Finance, replied:—

GENTLEMEN.—The items of expenditure included in the Supplementary Budget for the 25th year of Meiji, are all necessary. That such is the case has been explained by me from the beginning of the session, and confirmed distinctly by each of the Government's Delegates. Your House, never-

theless, has deemed it advisable to make reductions in several items, and I am now asked to state whether the Government gives its consent to such of these reductions as fall within the purview of the 67th Article of the Constitution. It is needless for me to say that great difficulties will be experienced when these altered items have to be carried into practice, and that the Government would prefer to invite your careful re-consideration of the Budget as originally submitted. But the time for giving effect to the provisions of this Supplementary Budget being very close, its passage without a day's delay is desirable, as was explained to you a short time ago by the Chairman of the Budget Committee. We have no recourse, therefore, but to come to an immediate decision. I accordingly inform you on behalf of the Government that we consent to the reductions proposed by you in such items of this Supplementary Budget as fall under the provisions of Art. 67 of the Constitution.

The Supplementary Budget was then voted.

The Barristers Bill was discussed item by item, but before passing the 7th Article the House was counted out at 5.50 p.m.

THURSDAY, DECEMBER 15TH.

HOUSE OF PEERS.

The Standing and Special Committees alone met.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m., the Order of the Day being:—

- 1.—Barristers Bill; Second Reading continued.
- 2.—Report of Committee on Bill for amending the Press Regulations.
- 3.—Report of Committee on Bill for amending the Publication Regulations.
- 4.—Report of Committee on Bill for amending the Copyright Regulations.
- 5.—Report of Committee on Bill for amending the District Government system.
- 6.—Private Bill (First Reading) for amending the Standing Orders of the House.
- 7.—Representation relating to the extension of Navigation.

The President announced that the Government had requested that the debate on the Address to the Throne with reference to Treaty Revision be held in secret session.

Also, that the Government requested the House to use all possible expedition in discussing and disposing of the Bills for amending the Income Tax Regulations, for amending the *Saké* Brewing Tax Regulations, for amending the Supplementary *Saké* Brewing Tax Regulations, for amending Law No. 24 of the 22nd year of *Meiji*, for amending the Tobacco Tax Regulations, and for adding to the Capital of the Central Famine Relief Fund.

A Reply was read from the Minister President of State to a Question relating to the amalgamation of Local Districts.

The President announced the receipt of

A Bill for changing the Limits of the Jurisdiction of Law Courts; presented by Mr. Takasu Minzō and others.

Mr. Kono Hironaka, Chairman of the Budget Committee, reported the Committee's decision as to the Budget for the next fiscal year. He confined himself to saying that the amended Budget had been placed in the hands of the President, and reserved his explanations as to the principles that had guided the Committee.

The House proceeded to the Order of the Day.

Mr. Yamada Taizo moved as an amendment to the Barristers Bill that no Judge or Public Procurator should be allowed to practise as a Barrister until the expiration of one year from the time of resigning his position as a Judge or Public Procurator. He advocated the amendment in a speech of some length, emphasizing the great importance attaching to the proper discharge of a Barrister's functions, and pointing out that a strong tendency existed at present to resign the Bench for the sake of practising at the Bar, and that it did not appear expedient to exchange the duties of Judge or Procurator at a moment's notice for those of a barrister. In answer to a question, he explained that his amendment had reference only to the case of a Judge or Procurator acting as Barrister in the Court where he had been hitherto serving as Judge or Procurator.

The motion did not obtain the fixed number of supporters.

The remainder of the Bill was discussed clause by clause, the Committee's amendments being accepted in almost every case, including the elimination of Art. XIX., which provided

that Barristers, on registration, must deposit a sum of not more than 300 *yen* and not less than 100 *yen* by way of security for the proper discharge of their duties.

Mr. Hatano Denzaburo, on behalf of the Special Committee, reported in favour of the Bill for amending the Press Regulations, with certain amendments, the principal of which were the granting of the power of suspension of a newspaper for a period not exceeding one week; the granting of power to the Ministers of War and the Navy to forbid the publication of military items injurious to the interests of the State, and the exaction of security money in varying sums according to the place of publication.

These amendments evoked several questions. The House finally voted to proceed with the Second Reading, and to open it at once.

On coming to discuss the Bill article by article, the House showed a disposition to reject the Committee's amendments and vote for the original Bill.

Mr. Suyematsu Kencho, Government Delegate, reminded the members that when the Bill was originally introduced, the Government's dissent from it had been distinctly announced. It was understood, however, that with some modifications the Government might consent, and in view of that understanding the Bill had been entrusted to a Special Committee, although, considering that it had been passed in previous sessions, such a preliminary might have been dispensed with. But the House now seemed disposed to reject the Committee's amendments and adopt the Bill in its original form. It became, therefore, his duty to point out that whereas the Government's consent might be secured by mutual concessions, that consent must inevitably be withheld if the Bill were passed as it stood.

The House nevertheless rejected the Committee's amendments in every case and voted for the original Bill.

Mr. Ito Daihachi, President of the Special Committee, while expressing his great regret and humiliation that the Committee's amendments had met with so little favour at the hands of the members, begged the House to pause before passing the Bill in its present form. They were carrying their animosity to unreasonable lengths. Many provisions of this Bill, as it now stood, were at variance with the Bill already sent up to the House of Peers for amending the Law of Public Meeting and Political Association. He did not in any degree resent the rejection of the amendments advocated by the Special Committee, but he should greatly regret to see the House pursue such a contradictory course.

Mr. Hatano Denzaburo spoke in the same sense. He charged the House with endorsing a Bill which they had not examined, precisely after the fashion alleged to be practised by inefficient Administrative Chiefs of Bureaux who affixed their seals to documents without reading them, and he declared that such procedure was merely playing at legislation.

Mr. Motoda Hajime said that there was now no hope of getting the Bill into proper form. Better send it as it was to the Peers.

The President thought that to re-commit the Bill to a Committee would only lead to fresh complications. He advised passing it as it was. A means of amending it would doubtless be found subsequently.

The House voted the Second and Third Readings at once.

Mr. Ito Daihachi, on behalf of the Publications Regulations Amendment Bill Committee, reported in favour of the Bill with certain amendments, and hoped that the House would treat these amendments with more consideration than it had done in the case of the last Bill.

Mr. Suyematsu Kencho, Government Delegate, said that the Government had no desire to withhold consent from the House's measures. He therefore trusted that this Bill would be passed in such a form as not to necessitate dissent, and that the House would remember the

connection between this measure and that relating to the Press.

The House voted to carry the Bill to a Second Reading.

Mr. Ito Daihachi, on behalf of the Special Committee, reported that very few amendments had been considered necessary in the Bill for amending the Copyright Regulations.

The House voted to carry the Bill to a Second Reading.

The First Reading of the Bill for amending the District Government system was then taken.

The discussion turned at the outset on the amendment providing that District Headmen should be elective instead of being nominated by the Government as at present.

Mr. Sakamoto Kitei asked whether such an amendment would not be a violation of the Constitution which provides that the Emperor appoints and dismisses officials.

Mr. Kudo Kekun denied that anything unconstitutional was contemplated. The House was merely asked to vote whether the office of District Headman should be elective or not.

Mr. Asakura Chikatame strongly opposed the proposal. He asked the House to consider the experiences already furnished by elections; how the public peace was disturbed, what corruption took place, and what ill will was engendered. If such lamentable results attended the election of members of the Diet whose personal connection with the electorate was comparatively small, what might not be expected in the case of elections for the purpose of choosing Headmen, who were intimately connected with the electors?

Mr. Kato Kichiyemon contended that such an argument constituted no solid objection when compared with the advantages to be gained by the reform. As yet the system of District Government had gone into operation in only 13 Prefectures, and the present was the time to amend it.

The House voted to carry the Bill to a Second Reading, but declined to proceed with it at once.

The Bill for amending the Standing Orders of the House was read as follows:—

BILL FOR AMENDING THE STANDING ORDERS OF THE HOUSE OF REPRESENTATIVES.

(N.B.—Portions included in brackets are to be excised and italicised portions added.)

Art. 86.—Any member desiring to propose a Law, Address, Representation, or resolution (*ketsugian*) which expresses the opinion of the House, shall make a draft thereof, and present it, with an explanatory note, to the President, after it is signed by the required number of supporters. The President shall thereupon cause the draft to be printed, and distributed among the members.

Art. 92.—At the second reading of a Bill each article shall be read and voted upon separately in succession. In the case of an Address or Representation the whole draft shall be read.

Art. 127.—When the President considers it necessary, or when it is demanded by not less than twenty members of the House, an open or closed ballot shall be employed in lieu of a show of hands.

If objection be made to the method of voting, and if such objection be supported by more than twenty members the objection shall be considered valid without any further discussion.

Art. 160.—If for some reason a member expects to be unable to attend the House for several days, he shall apply for leave of absence for a definite period, stating the reason, and leave shall be granted. If a member has not been able to attend the House for some time, owing to [official business] sickness, or some other unavoidable cause, he shall send in an excuse for his absence stating the reason therefor.

Presented by KAWAGOE SUSUMU and ISOMURA YOSHIYUKI.

Supported by UYEDA RITAKO and 20 others.

After a brief discussion the Bill was rejected. The House rose at 6 p.m.

THE YOKOHAMA SAILING CLUB.

This Club having concluded its sixth season, during which 24 races have been sailed, viz., 12 by each Division, we now give the following analysis of the same:—

A. DIVISION.

Date.	Courses.	Miles.	Wind.	Character of Race.	Winners.
May 21	Home	8.5	Strong	Class	1. Daimyo.
May 24	Nakane	10.5	Variable	Handicap	1. Princess Maud.
June 7	Tomiooka	17.0	Very Light	Handicap	1. Daimyo.
June 18	Home	8.5	Very Light	Class	1. Daimyo.
July 4	Kawasaki	26.25	Light	Handicap	1. Princess Maud.

In the above tables all the distances are expressed in nautical miles, and the elapsed times are computed from the actual times taken to sail each race, without any correction for time allowance, which is omitted on account of the yachts having sometimes sailed under arbitrary handicap.

It will be seen at a glance that the Sailing Club has not been at all fortunate in the matter of wind. The B. Division suffered most from this cause but with two or three exceptions all the races this season were sailed in very light breezes, and one A. Division race could not be finished.

The Record Prizes in the various classes were won as follows:—

39 Raters Aborigine with 2 Points.
32 Raters Daimyo with 20 Points.
26 Raters Molly Bawn with 19 Points.
17 Raters Jessie with 17 Points.

The average speed of the Record Prize winners is lower even than last year which was also a season of light winds. As these prizes have again been won by the same boats we are able to give the results of the two seasons together for comparison:—

Raters	1891.	1892.
39 Aborigine	17.0 miles at 3.28 knots.	8.5 miles at 2.17 knots.
32 Daimyo	16.0 miles at 3.73 knots.	15.75 miles at 3.71 knots.
26 Molly Bawn	24.5 miles at 3.48 knots.	15.75 miles at 3.45 knots.
17 Jessie	36.5 miles at 3.31 knots.	58.5 miles at 2.91 knots.

There is little to be said about the 39-rating class, only one out of three boats entered in that class having finished a single race.

Daimyo again held her own against the whole fleet, as well as in her class, and appears to be sailing better than ever; Momotaro, her only dangerous opponent, being only able to beat her in a good breeze, for which opportunity seldom offered in the prevailing light winds of last summer.

The interest in the 26-rating class has somewhat decreased in consequence of the withdrawal of *Lady Louise*, *Tortoise*, and *Mary Jane*. The last named was altered in the spring, her centre-board having been removed and a lead keel substituted, making her a fine, able boat. Her sail plan was increased at the same time, thus placing her in the 32-rating class. This left the racing in the 26-rating class practically between *Molly Bawn* and *Princess Maud*, who divided the honours fairly evenly. The 21-rating class never seems to have found favour, although under the present rules a good seaworthy boat for this class, fit to cruise anywhere in the Bay, could be built and kept up at much less expense than a 26-rater. A boat on similar lines to the *Isabel* would answer well for this class; she would be a safe and comfortable boat, with plenty of room for a party of friends and comparatively inexpensive. At the present time the small boats of the 17-rating class seem to be coming more into favour, and thirteen of these have competed at different times during the season. The plan of offering a second prize for the smaller boats of this Division has had the effect of bringing out some new ones, and giving increased interest to the racing. If the Sailing Club Committee are careful to encourage the little 12-raters we may look for still better sport next season, as boats of this size are very inexpensive, and do not require a sloop to look after them. The break-water when completed will much improve the harbour for small boat sailing, and the small boat sailors are already looking forward to having a good time next year. *Jessie* was, as usual, at the top of her class, but towards the end of the season *Petrel*, having been improved by some slight alterations, began to come to the front, and another season may yet prove herself to be as fast as her

hitherto successful rival. *Isabel* was most unfortunate, as she is the strong wind boat of this class, and strong winds not being the order of the day she failed to get any prizes.

In England many of the small racing boats are owned and successfully sailed by ladies, but as yet in Yokohama the sport has not become popular with them, and although ladies are sometimes seen afloat in the harbour, with one or two exceptions they seldom venture themselves in a race. We were one day pleased to see a lady at the helm of the *Momotaro*, sailing her in a fresh breeze, and for the encouragement of the fair sex we must mention, that on that occasion the *Momotaro* came in a winner by half an hour, by far her best performance this season. Yachting is a healthy recreation, and one of the few sports in the East in which ladies can join with their husbands and brothers. Of course the rough part of the work must be left to stronger hands, but they can easily learn to steer, and not only get enjoyment out of the sport for themselves but add zest to it for the sterner sex by their presence.

The Yacht Racing Association of England will soon have to consider whether they will continue the present Length and Sail Area Rule or make some new rule. Whether there is any change made or not, we may expect much valuable information from experts before it is settled, and yachtsmen will no doubt find a great deal about their favourite sport in the pages of the *Field* during the coming year that will be of interest of them.

LETTER FROM LONDON.

(FROM OUR OWN CORRESPONDENT)

London, October 28th.

All that was mortal of the late Poet Laureate, was laid to rest in Westminster Abbey last Wednesday. Next to the late Robert Browning in the Poets' Corner, was the place selected for the last resting place of the late Lord Tennyson. The state funeral accorded the late poet was the most impressive ceremony witnessed in London for many years. The Queen and the Prince of Wales were represented at the service, and sent wreaths to be placed on the grave.

There has been considerable speculation since Lord Tennyson's death as to whom the Queen would elect to fill the vacant Laureateship. The suspense, however, virtually ended when it became known that Sir Theodore Martin would have the first refusal of the appointment. While the selection was still a matter of conjecture, a number of names were put forward as being eligible for the offices of "Poet in General to the Queen," among which may be mentioned those of G. C. Swinburne, Edwin Arnold, Lewis Morris, Robert Buchanan, William Morris, and Alfred Austin.

The Japan Society of London held a meeting in the Society of Arts last week, when a lecture was given under the chairmanship of Mr. Diosy on the similarity of English and Japanese proverbs. The audience learnt that such sayings as "Set a thief to catch a thief," and "It's never too late to mend," had their counterpart in Japanese. Dr. Ernest Hart entered into some very interesting explanations of the specimens of Japanese art which he had lent from his large collection to illustrate the lecture. The Combative Carp were there in their hundreds by the side of realistic statues of Phryne and Hercules à la Japonaise, and the God of Laughter. Dr. Hart related the myths connected with the Japanese Olympus. Two leviathan screens lent by Lady Colin Campbell were also exhibited—splendid specimens of the golden age of Japanese art, for Dr. Hart seems to think that in matters relating to art, the East is at present in as much a state of decadence as the West. One of the screens represented the seven philosophers walking in a bamboo grove. After the lecture, the chairman, Mr. Diosy, stated that the society now numbered 275 members and he hoped it would have reached its third hundred when it meets again in two months' time for a discussion on the fascinating subject of fans.

Considerable consternation was caused when the news reached London of the wreck of the P. & O. steamer *Bokhara*. Several messages had been received in reference to the vessel's delay in arriving at Hongkong, but until the very last it was believed that the worst that could have happened was that the engines had broken down and the ship was making for port under sail. The sad intelligence of the large number of lives lost, and the total wreck of the vessel, therefore burst upon those interested with terrible suddenness. So seldom have P. & O. steamers been lost or even partially wrecked, and the reputation of safe carriage obtained by the company from this fact has been so thoroughly established of recent years, that people

have come to look upon a voyage in a P. & O. steamer as attended with about as much risk as a constitutional walk in the Park. This sad calamity, however, most unpleasantly reminds one that the risks to which those "who go down to the sea" are exposed, are by no means a thing of the past.

The Inman liner, *City of Paris*, has broken all previous records across the Atlantic during her last voyage, having gained an hour and 34 minutes on the hitherto quickest time, which was also accomplished by the same vessel in July last. On the last trip she arrived at Sandy Hook from the Mersey, including the stoppage at Queenstown, in 6 days 2 hours 24 minutes. Her time from Queenstown to Sandy Hook being 5 days 14 hours and 24 minutes. The best day's run was 530 knots, as against 520, maximum made in July; whilst the average speed for the voyage, 20.7, is nearly a quarter of a knot increase on the previous performance.

Among the list of new publications this week, appears a work entitled "The Japs at Home," by Douglas Sladen; Messrs. Hutchinson & Co., publishers; 15/. The book, which is splendidly illustrated, has had a large sale, and I understand the first edition was sold out a few days after leaving the Press. A second edition will be ready next week.

"How long will a ship last, under ordinary circumstances, is a question that has been dealt with by Mr. Robert Thompson, the new President of the Northeast Coast Engineers and Shipbuilders, who states that the period varies according to where the ship is built. Vessels constructed in Norway last on an average thirty years. Italian ships average twenty-seven; British, twenty-six; German, twenty-five; Dutch, twenty-two; French, twenty, while those built in the United States hold out for eighteen years only. The average death-rate of the world's shipping is about 4 per cent, and the birth-rate exceeds this by 1 per cent.

The Imperial Institute is now approaching completion. The rooms set apart for the accommodation of Fellows have been open since midsummer, and the portion available to the general public is now almost finished. The crowning feature of the Institute will be a complete peal of bells, which will be second in London only to the great peal of St. Paul's. These bells are the gift of an aged Australian lady, in commemoration of Her Majesty's Jubilee, and by permission of the Princess of Wales are to be designated the "Alexander peal." The only condition specified by the donor is that the bells shall be rung on the birthday and accession day of the Queen, and the birthdays of the Prince and Princess of Wales. They are to be completed and rung for the first time on the occasion of the inauguration of the Institute by the Queen next year.

Mr. Joseph Whitehead has just completed a bust of the late Mr. W. H. Smith which is to be placed in the vestibule of the Council Chamber of the City of London, where the busts of Lord Palmerston, Lord Derby, General Gordon, and various city dignitaries at present stand. The bust is executed in Carrara statuary marble, and presents a very effective likeness of the late statesman.

The case of Mrs. Maybrick is revived again by Mr. Stead in this month's *Review of Reviews*. A letter has been received by the Editor of the "R. of R.'s" purporting to contain the dying confession of a man who declared that he conspired with another person to bring suspicion on Mrs. Maybrick, by putting arsenic in the wine-glass and food that had been used by Mr. Maybrick. This, however, he stated, was done after Mr. Maybrick's death and to his knowledge no poison was administered to him at all. The letter comes from South Africa and is written in broken English by a Dutchman, who had promised the dying man to send his statement to Sir Charles Russell, the leading counsel for Mrs. Maybrick at the trial. As, however, he received no reply from Sir Charles he decided to put his case before Mr. Stead. Mr. Stead believes in the authenticity of the communication, and having reviewed the whole of the evidence in the case which has come to light, states, as his conclusion that Mrs. Maybrick is being tortured to death for a crime of which she is innocent. After realistically describing the horrors which Mrs. Maybrick is undergoing in her solitary confinement, Mr. Stead winds up by strongly urging the Home Secretary to take immediate action in the matter.

The Prince of Wales made his first appearance on the race-course last week since the death of the Duke of Clarence, when he was present at the Newmarket Autumn meeting, to witness the Cesarewitch.

A team of amateur cricketers sailed last week in the *Kaiser-i-Hind*, bound for India. Several of the members are almost unknown to the cricket public, but included in the list are the familiar names of Lord Hawke, Mr. F. S. Jackson, Mr. G. F. Vernon, and Mr. C. W. Wright. Lord Hawke

has been the moving spirit in the enterprise. At Bombay the cricketers are sure to meet with a hearty welcome, for Lord Harris is said to be in as good form as ever, and in no way allows his Governmental duties to interfere with his enjoyment of his favorite game.

Mrs. Langtry seems to be having rather a bad run of luck just now. After a short run of the "Queen of Manoa" which proved a complete failure, a new commercial play "Agatha Tylden, Merchant and Shipowner," by Edward Rose, was staged on Tuesday evening, and the verdict of the public is again decidedly unfavourable. Miss Tylden is the daughter of a Blackport shipowner who has died before the plot begins. Having no one to advise her but a weak-minded old head clerk, it seemed natural that the most satisfactory way of carrying on the business would be to marry a man of some commercial enterprise. However, Miss Tylden thinks differently. She rejects the proposal of one friend, Macfarlane, who suggests amalgamating his firm with hers by entering into a life partnership and refuses to marry another, Hugh Ainsworth, although he has been devoted to her from childhood and bids fair to creditably fill the position formerly held by her late father. It is the ambition of the young heroine to carry on the business herself. Ten years elapse, and things have not been going over well. For some reason, best known to the author, Hugh Ainsworth, who is now a partner in a well-known firm of London financiers, is sent down to examine the books of Messrs. Tylden. Here comes the crisis of the play. The scene is in the office of Miss Tylden, telegraph tape, telephone speaking tubes well in evidence. Ainsworth having gone through the books of the firm declares it to be hopelessly insolvent. In impassioned language he begs Miss Tylden to sign a petition in bankruptcy. However, in the nick of time a blind nobleman who, as he says, is "absurdly rich" comes to the rescue with £80,000, and the firm of Tylden & Co. sails merrily on. The heroine, again the head of a prosperous concern, accepts the offer of her former suitor, Ainsworth, who, by the way, has been by no means too tender in his financial dealings with her, and then the play comes to an end. Mrs. Langtry with charming grace tries to make the most of the title rôle, and although the character is well adapted to her natural resources, it was easily seen that she was fighting against too great odds. The unsympathetic tendency of the play and the absurdly intricate commercial details that had to be waded through, are for the most part perfectly unintelligible to the major part of the audience. By the way, time appears to deal kindly with the "Jersey Lilly," and at the present time she looks as young and piquant as when she first made her début on the stage.

Mr. Geo. Grossmith, the popular "one-man" entertainer, left England for America on Wednesday in the *Teutonic*. I understand that if he can make his engagements fit in, he will make the return trip by way of the Orient, giving entertainments en route.

Buffalo Bill's "Wild West" show came to an end last week, when the buck-jumpers, mustangs, saddles, harness, grand stands, scenery, tents and general "props" were sold under the hammer. Colonel Cody sat on horseback near the auctioneer during the sale, and gave the bidders the benefit of his personal knowledge, which seemed to be so universally in favour of every animal sold that some of the buyers were ungracious enough to insinuate that the gallant colonel might have "spoke sarkastick" in some cases. According to the colonel, the animals were given away at the prices they fetched, but taking into account that it is not every one who wants to go scampering over rough prairies at break-neck speed, and then stop suddenly with a jerk of the bit that would be enough to pull any ordinary hackney's head off, the figures obtained were really quite as good as might be expected. The majority of the horses fetched an average of about twenty guineas, while Colonel Cody's own cob, a present to him from Rosa Bonheur, realised 100 guineas. The last lot on the catalogue was a team of four handsome mules, which have been driven daily in the "Deadwood Coach" during the season. Three hundred and eighty guineas was the price paid for these, with their elaborately ornamented harness, and it was rumoured that the proprietors of Pears' Soap were the buyers.

SUPPLEMENTARY BUDGET FOR 1892.

(PASSED BY THE LOWER HOUSE.)

ORDINARY EXPENDITURE.

DEPARTMENT OF HOME AFFAIRS.

8.—Hokkaido Administrative Board.		
20. Weights and Measures Examination Expenses	259,562	unchanged

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets on Monday and Thursday evenings at the Club Rooms, No. 86, Main Street.

SOLUTION OF PROBLEM No. 47.

WHITE. BLACK.
1.—B to R 7 1.—Anything
2.—Q, Kt, B, or R mates acc.

Correct solutions received from Omega, Scacchi, W.H.S., O. Balk, J.D., and Digamma.

SOLUTION OF PROBLEM No. 1 (BY E. G. B. VALLE) IN PRESIDENT'S PROBLEM COMPETITION.

1.—K to B 6 1.—K x Kt
2.—K to Q 5 (dis. ch. and mate). 1.—P x Kt
2.—R mates at Q 7. 1.—Q moves or P advances
2.—Kt x P on K 2, or O to R 8, acc. (mate).
[If Q to Kt 8 or to R sq., either of these moves mates.]
1.—R moves
2.—Kt x P on Kt 5 (mate).

Correct solutions received from W.H.S., Shogi, Omega, J.D., Ed. Batavus, O. Balk, G.S., and H. L. Fardel.

PROBLEM No. 49.
BY R. H. SEYMOUR.

White to play and mate in two moves.

The tournament is progressing well in the local Chess Club, the second round now being played. We hope to give the score of the first and second rounds next week. As it looks now, Messrs. Balk, Davieson, Mason, and Schiff are going strong and the final tussle will probably be contested by some of these players.

Herr Lasker seems to be continuing his triumphant progress in the New World. We clip the following from a recent copy of the *New York Times*:—

AN ARTISTIC CHESS GAME.

LASKER DEFEATS J. W. BAIRD IN A REMARKABLY CLEVER CONTEST.

Herr Lasker gave another exhibition of fine chess strategy yesterday afternoon, when he beat J. W. Baird in a most artistic manner.

The game was one of the best contested of the series, the unlooked-for sacrifice of the pawn by Lasker on his twenty-third move and the rare vigour and precision with which he brought about the utter demolition of the adverse position are an apt illustration of the German master's style.

This is Lasker's twentieth victory; he will play

the last game of the series at the Manhattan Chess Club with E. Delmar. The game in full:—

A JAPANESE CENTRAL MISSION.

BY REV. W. T. A. BARBER, M.A.

The present state of Christian Missions in Japan, and the effect of the anti-foreign reaction on the adherents of a creed necessarily introduced from foreign lands, offers a most interesting problem to the sympathetic outlooker, and a most important subject to the faith and prayer of the Western Churches. The world is familiar with the revolution which, in a moment seized a gallant nation from the further edge of the East, and set it marching abreast of the progress of the world. Three or four years ago that nation reached the crest of the westernising; the schools were crammed to suffocation with boys and girls learning English, and the ordinary routine of the mathematics and science of the West; the picturesque, but inconvenient, native dress was rapidly disappearing in the great cities—even the pretty Japanese ladies, with their becoming *coiffure* and robes, were rapidly changing themselves into waistless and dowdy imitations of second-rate Englishwomen. Parallel with these signs came a large influx into the Christian—i.e., the Western—Church. But the barque of Japanese life rides on choppy and changeful seas; already it has passed from crest to trough. Native dress is once more in the ascendant; schools, built large for the hopes of the moment of success, lie half-empty, and the communicant rolls of most of the missions are diminished or stationary. The reasons of this rapid change cannot be enlarged on here. The immediate irritating cause has been the ill-success of the attempt of Japan to shake herself free from the extra-territoriality clauses of the European treaties. By the conditions of these, foreigners resident in Japan are amenable to the jurisdiction of their own consuls, and not to Japanese law. The aspirations of a Westernising nation naturally yearn for the removal of the last stigma of barbarism. But popular confidence takes long to grow, and so far the Western Powers decline to take the risk; Japanese *amour propre* has been deeply wounded, and the vainest race in the world revenges itself by a hasty recoil from the manners of the civilisation which thus demonstrates its contempt for its imitator. The self-styled *national* party, which distinguishes itself by its anti-foreign expressions, yet out-Westernises the world in its agitation, during the first year of the new-founded Japanese Diet, asked for powers beyond those of the recent Liberal Constitution. It seeks to force the Government to resign if censured by the majority of the Diet, and has had to be content with the calm firm-seatedness of a Cabinet formed on the Prussian model and receiving its appointment imperturbably from the Emperor, irrespective of the blatanacy of political parties. But deep beneath all other reasons and expressions of reaction lies the innate fickleness and love of change of the Japanese. Like the French, brave, vain, artistic, neat, sensitive, quick, they are also, like the French, ever ready to toss away the toy of the previous hour and to clutch a fresh one.

Ever since Paul wrote to the Galatians the Christian missionary has found quick initial success and subsequent special difficulties in dealing with such a people. It is of no use to grow discouraged and to give up the attempt. The solution of the problem is this—recognising the volatile elements of change, by a holy opportunism to use the right means for winning the respect and affection of a nation, quick and susceptible, even if unstable. Thus it is that the desire for education has been utilised by almost every one of the missionary societies at work in Japan; large and handsome Mission Schools are to be found everywhere, and no inconsiderable degree of success has been gained through this means. Notable among these is the Doshisha, at Kyoto, where, even in this time of depression, some 700 boys and girls are being taught, and where it rarely happens that a "graduate" has not in his course become a Christian. Our own Society is not represented, but our work is suitably and ably done by our healthy daughter, the Methodist Church of Canada. The traits of resemblance are perfect, and there is a curious thrill of pleasure to the British Methodist in passing from the work of other missions, excellent and satisfactory as it is, to that which vibrates with the same modes and utterances of spiritual life as his own. Naturally the work in Tokyo, the new capital of the empire, excites special interest. A splendid girls' school, taught by devoted women, instinct with true Christian life, gives much hope for the homes of the future. Society classes, led by three of the girls, one of them sorely beset by unbelieving parents; regular Bible lessons; meetings for prayer in which girl-voices sound—Methodist in utterance of spiritual communion; a strong Christian influence leading to the Saviour—all these signs delight with the hope and belief that here is being built up the firmest future of the Church. In fact, to attend a service in the large Azabu Church, with its Canadian-educated native pastor, its self-supporting congregation, its pews of bright boys and girls, is an inspiration to the visitor, who listens while he longs for the interpreter of the gift of tongues.

Elsewhere are similar congregations, though unassisted by schools. But the most striking department of the work of the Mission is the Central Tabernacle service of Rev. Dr. C. S. Eby, who avowedly imitates the West London Mission of Rev. H. P. Hughes. The phrase, "a holy opportunism," has been used above. None more fit can be found for Dr. Eby's modes. His reasoning is this, "The Japanese love change, debate, show. We will have no hole-and-corner business in secluded parts of the city. We will settle ourselves in a central site, and will show them we mean to stay and to win this city." Tokyo is the citadel of the nation's intellectual life. Its university and its graded schools give a resident population of some fifty thousand students, from schoolboys upwards. Win these, argues Dr. Eby, and Japan is won. A tabernacle has been built, burnt, rebuilt, electric lighted, organed, pianoed, and frequently filled—all during the last two years. Something like 20,000 dollars have been spent. Social and literary meetings, lectures, concerts, and the like, are means used to draw the young men, and the religious aim of the enterprise is always held well to the front. During a recent short visit to Tokyo I naturally visited this seat of work, so utterly unlike anything possible in unprogressive China. The Wednesday evening meeting was notable by the extension of the right hand of fellowship to those who had joined the Church during the preceding quarter. Some of these were quite little boys, attending the primary or middle schools of the neighbourhood, who, though the sons of heathen parents, had experienced no hindrance in their desire to confess Christ. During the eighteen months of the active work of the Mission there have been a hundred applications for baptism, and more than fifty have been received into the Church. In many cases these were young men coming up to the University from districts where Christianity had scarcely been known. The peculiar minglement of the social with the religious was evidenced in the conduct of this meeting, where, after an address on mission work in China, volubly translated by a graduate of the University, ices were served round, and a violin duet by two girls, students in the Tokyo School of Music, followed by the story of Daniel given by a youth after the fashion of the tea-house story-tellers, occupied the rest of the evening, which closed with a double doxology in Chinese solo and in Japanese unison! The arrangement had been left in the hands of the Japanese themselves. The following Saturday evening was devoted to a regular entertainment, comprising recitation, readings, vocal and instrumental music in the style to which England is so accustomed. The main interest naturally attached to the Sunday services. The

Original from

morning service of the ordinary Church type is not largely attended. In the afternoon an audience of some couple of hundred young men, almost entirely unbelievers, assembled to hear a lecture from Rev. Dr. Cochran on "Moses, the Liberator and the Legislator." This formed one of a series, reminding me strongly of a similar set, delivered at the Madras Christian College, a series offering a magnificent, even unique, opportunity of reaching a thoughtful and independent class of the nation's brightest youth. The lecture was first delivered in pointed English paragraphs, and then translated into flowing Japanese by the same Tokyo graduate as has been mentioned before. I felt fairly thrilled at the skill and power with which the lecturer brought home to the consciences of his hearers the great moral and spiritual truths of his theme. He concluded by announcing as his next Sunday's theme, "Justin Martyr." In the evening a crowded audience assembled to hear a sermon, illustrated with magic-lantern slides. Dr. Eby has in his own house a manufactory of Scripture slides, photographed and coloured by Japanese, and hopes, ere long, by the sale of spare copies, to make this part of his mission self-supporting. He binds himself down to no absolute continuity of detail in his plans, but changes as the notices flagging of interest. Of course, the main reliance is in the strong Christian influence among their fellow-students of the young men already brought to Christ.

It would be unwise to appraise this bold effort. It seemed to me that the experiment is well worth trying. The results are probably less satisfactory than those of ordinary steady mission work in the solidity and permanence of the Church built up, and there are evident traces of the danger of attracting from the more ordinary Churches around. But the Canadian Mission is proving its worth of the high trust reposed in it by neglecting no means, determinately and bravely aiming at the flower of the nation's youth, and its reward is in a thoroughly representative and all-round work, which must have a grand effect on the future. Here, at any rate, there is growth and life. Different types of Christian intelligence will lead to sympathy with different sides of this work. As experienced in the mission problems of another land, I rejoice in both sides. Coming fresh from a field where patience is the first of all needful qualities, I couldn't help asking Dr. Eby what he and his English prototype would have done had their lot fallen in China, and expressing my belief that less than a year would have broken either of them down. His answer was suggestive. "God knew that was so, He has sent neither of us there. My work is here, I use this method." By fruits shall we know. Let one personal trait conclude these notes. Struck with the expense of the undertaking, I asked Dr. Eby, "Have you the audacity [I used a shorter Anglo-Saxon term] of your prototype?" "Ah, sir," said he, "I think I should have at home; but it is hard to have—audacity—at five thousand miles distance."

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, December 9th.
The Monetary Conference is now about to discuss the general bimetallic scheme.

London, December 12.
In the United States Senate, Mr. Stewart moved an amendment to the Sherman Act by the free coinage of silver and the issue of Treasury Bonds based upon silver deposits.

London, December 15th.
The Monarchists and the revolutionists of all shades are seeking to fan the growing discontent, both in Paris and throughout France, with the present régime, consequent upon the daily extension of the Panama Canal scandal.

["SPECIAL" TELEGRAM TO "JAPAN MAIL."]

Nagasaki, December 13.
The *Ravenna* Court of Enquiry will be held in Yokohama about the 20th inst.

[FROM THE "SINGAPORE FREE PRESS."]

The United States Delegates have submitted their proposals to the International Conference, and consider that it will be necessary to establish an International agreement for providing an unlimited coinage of both gold and silver bullion into full debt-paying money, fixing the ratio of both the metals and creating a uniform charge to the public for coining their gold and silver.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Nagato Maru*, from Otaru via ports:—Messrs. Z. Kadoya, G. Jinko, M. Kunitatsu, and T. Ino in cabin; 69 passengers in steerage.

Per Japanese steamer *Kobe Maru*, from Shanghai and ports:—Mrs. Lucy B. Blanchard, Rev. H. J. Foss, Mrs. Uchida, and Mrs. Oyeda in cabin; Mr. Yamada and Mr. Yamamoto in second class, and 52 passengers in steerage.

Per British steamer *Tacoma*, from Hongkong via ports:—Mr. J. H. Miller and Mr. W. E. Bridgeman in cabin; 79 Chinese and 7 Japanese in steerage. For *Tacoma*: Mr. and Mrs. F. Dodwell and 4 children in cabin.

Per Japanese steamer *Sendai Maru*, from Kobe:—1 passenger in cabin; 5 passengers in steerage.

Per Japanese steamer *Omi Maru*, from Kobe:—Mr. J. Hara, Governor of Yamaguchi, Mr. H. Tomioka, Chief Engineer (Navy), and Lieutenant Commander K. Ito in cabin; 3 passengers in second class, and 18 passengers in steerage.

Per French steamer *Yarra*, from Marseilles via ports:—Messrs. Turuda Komekitchi, Riband, Cherel, Devergie, Mrs. Marshall, Messrs. Hatano, Munter, Wilson, and Hanbury in cabin.

Per Japanese steamer *Hioho Maru*, from Hakodate via ports:—Mr. Y. Yagihashi in cabin; Mr. T. Takahashi and Mr. Y. Kotoku in second class, and 37 passengers in steerage.

Per Japanese steamer *Yokohama Maru*, from Shanghai and ports:—Mr. and Mrs. Whithall and daughter, Mrs. Wm. Thompson and 4 children, Mr. M. Abraham, and Mr. Wallace in cabin; Messrs. John Sullivan, H. W. Flint, and J. Ninham in second class, and 23 passengers in steerage. For *Hakodate*: 4 passengers in steerage. For *Otaru*: 2 passengers in steerage. For San Francisco: Miss Funk, Rev. Chas. Beal's son, and Rev. and Mrs. Medhurst and 2 children in cabin.

Per American steamer *City of Rio de Janeiro*, from Hongkong:—Messrs. J. B. Cousins, John

Doe, and Chun Fat Chum and native servant in cabin.

DEPARTED.

Per British steamer *Ancona*, for Hongkong via ports:—Messrs. A. H. Nathan, L. M. Conwell, C. H. Hill, J. B. Gilliat, F. H. B. Ellis, W. H. Wallace, Mr. and Mrs. Fein Son and child, Mrs. Fun Lum and child, and Mr. Ah Yet and child in cabin; 3 Chinese and 2 Japanese in steerage.

Per Japanese steamer *Kobe Maru*, for Shanghai and ports:—Mrs. Michinaga, Miss T. Stewart, Mrs. Ishikawa, Mrs. Steadman, Mr. Lee Bew Sang, and Mr. S. J. Caswell in cabin; Mr. S. Imanichi in second class, and 45 passengers in steerage.

CARGOES.

Per British steamer *Ancona*, for Hongkong via ports:—Silk, 97 bales; Waste Silk, 494 bales.

Per British steamer *Tacoma*, for Tacoma, Wash., via Victoria, B.C.:—

Per Japanese steamer *Kobe Maru*, for Shanghai and ports:—Treasure, \$24,000.00.

REPORTS.

The Japanese steamer *Nagato Maru*, Captain Ekstrand, reports:—Left Otaru the 6th December at 2 p.m.; had strong W.N.W. winds and passing snow squalls; had same weather to Hakodate, where arrived the 7th at 9.15 a.m. and left the 8th at 8 a.m.; had gentle S.S.W. winds and cloudy weather. Arrived at Oginohama the 9th at 6.30 a.m. and left at 0.20 p.m.; had strong N.W. winds and clear weather; off Inuboye wind light and variable with light rain showers; thence clear and fine weather to port. Arrived at Yokohama the 10th December at 1 p.m.

The Japanese steamer *Kobe Maru*, Captain Haswell, reports:—Left Shanghai the 4th December at 11 a.m. Arrived at Nagasaki the 6th at 3 a.m. and left the same day at 3 p.m. Arrived at Moji the following day at 3 a.m. and left again at 7 a.m. Arrived at Kobe the 8th at 3.20 p.m. and left the 9th at noon. Arrived at Yokohama the following day at 3 p.m. Experienced moderate N.E. winds and fine, cloudy weather to Nagasaki; thence to Kobe had light northerly winds, and dull, cloudy weather, moderate N.E. winds were met with and fine, clear weather along the coast to Yokohama.

The Japanese steamer *Kumamoto Maru*, Captain Olsen, reports:—Left Fushiki the 4th December at midnight; had light winds from N.W. and fine weather until 4 p.m. on the 5th when the wind freshened from the south with increasing sea and every appearance of bad weather; at 6 p.m. wind chopped round to westward, and freshening all the time with heavy squalls and rain, increasing sea; at 11 p.m. blowing a whole gale from N.W., dangerous cross sea, ship labouring heavily with a heavy list to starboard and taking large quantities of water overhawl; decided to run to Funakawa; at midnight similar weather, squalls much heavier; on the 6th at 1.35 a.m. anchored at Funakawa, the weather continuing the same throughout the whole day; on the 7th, at 7 a.m., weather having moderated slightly left for Yokohama at 8 a.m. Wind and sea increasing, ship making very little head way; at 9.20 a.m. terrific gale, sea confused and dangerous; ship sometimes entirely submerged in water; bow up again for Funakawa, arrived there at 10.35 a.m.; on the 8th, at 8 a.m., left again for Yokohama; had moderate W. and S.W. winds with heavy sea and squally weather to Shiriya-saki, which was passed at 1.7 on the 9th; thence to Kinkasan, which was passed at 10.50 p.m. moderate S.W. and W. winds, fine weather and moderate sea; thence to Inuboye, which was passed at 4 p.m. on the 10th, moderate N.W. and variable winds; at 9 p.m. wind freshening from westward with very heavy sea; at midnight blowing a whole gale high dangerous sea, shipping large quantities of water forward; at 6.55 a.m. on the 11th rounded Noshima, wind and sea moderating a little and gradually decreasing on nearing Yokohama, which arrived at noon, had strong north-easterly current between Inuboye-saki and Noshima.

The Japanese steamer *Senda Maru*, Captain Tittle, reports:—Left Kobe the 11th December at 10 a.m. and proceeded full speed for Shiotsu; fresh W.N.W. breeze and clear weather. Arrived

at Shiotsu at 1.24 p.m. and left at 2.50 p.m. same evening and proceeded full speed for Yokohama; had moderate to fresh breeze at N.N.W. with clear weather and smooth sea to Oshima, which was abeam at 8.46 p.m.; thence to port fresh to strong W.N.W. and west winds with fine, clear weather and high following sea. Arrived at Yokohama the 12th December at 5.30 p.m.

The Japanese steamer *Mike Maru*, Captain Thompson, reports:—Left Otaru the 8th December at 2 p.m.; had moderate S. to S.W. winds, overcast sky, and threatening to snow; on the 9th at 5.30 a.m. passed Okushira light, strong southeasterly winds and freshening, slight sea, cloudy, overcast weather with sleet; at 10 a.m. moderate gale from N.N.W. with hard squalls of wind accompanied with frequent heavy snow storms, moderate sea, same weather continued throughout to Hakodate; passing Shirakami at 1 p.m. and arrived at Hakodate at 5 p.m. Left the 11th at 8 a.m.; had strong N.W. winds and freshening, accompanied with thick snow, land obscured; at noon moderate gale from W.N.W., hard squalls of wind with blinding snow storms, weather clear at times, high sea; at 12.30 p.m. passed Shiriyasaki; at 1 p.m. wind and sea decreasing less snow and weather cleared; on the 12th at 3 a.m. passed Yamada, gentle to moderate westerly winds and fine, clear weather, slight sea, which continued throughout to Oginohama, arriving there at 2 p.m. and left the same day at 11 p.m.; from Oginohama to Inuboye, passed at 6.30 p.m., had gentle to moderate S.W. to westerly breeze with fine, clear weather, slight southerly swell; at midnight moderate wind and fine, clear weather, high southerly swell; on the 14th at 3.40 a.m. passed Noshima, strong breeze and freshening with high sea; at 7.13 a.m. passed Kanon-saki, light airs and misty. Arrived at Yokohama at 8.45 a.m.

The Japanese steamer *Hiogo Maru*, Captain M. Matsumoto, reports:—Left Hakodate the 14th December at 10 a.m.; had gentle west-north-westerly breeze and snowy weather till 9 p.m.; thence similar breeze and fine weather. Arrived at Oginohama the 15th at 9.25 a.m. and left at 1.50 p.m.; had gentle north-westerly and fine weather. Arrived at Yokohama the 16th December at 3.15 p.m.

The Japanese steamer *Yokohama Maru*, Captain Swain, reports:—Left Shanghai the 8th December at 1.45 p.m.; encountered strong N.W. gales with occasional snow showers, up to arrival at Nagasaki the 10th at 8.20 p.m. Left Nagasaki the 11th; had continued strong N.W. gales and snow showers at intervals. Arrived at Kobe the 13th at 1 p.m. and left the 15th at noon; had fresh to moderate N.W. and N.E. winds and fine, clear weather up to arrival at Yokohama the 16th December at 5.30 p.m. Passed nothing of note except, large sailing ship standing for Kobe off Rock Island, yesterday.

The Japanese steamer *Sagami Maru*, Captain Pender, reports:—Left Kobe the 15th December at noon; had from gentle to moderate north-westerly winds and fine, clear weather to Oshima, which was passed at 8.25 p.m.; thence to midnight gentle to light variable wind increasing to moderate breeze from N.N.W., with clear weather continuing to Rock Island, which was passed at 11.30 a.m. on the 16th; wind then hauling to N.E. with cloudy weather and moderate breeze, similar winds and weather to port. Arrived at Yokohama at 5.25 p.m. On the 16th at 10.40 a.m. passed German ship *Frieburg* 10 miles W.S.W. of Rock Island and steering west.

The American steamer *City of Rio de Janeiro*, Captain Ward, reports:—Left Hongkong the 10th December at 3 p.m. Arrived at Yokohama the 17th December at 1.50 a.m. Passage, 6 days, 9 hours, and 8 min. To the north end of Formosa had strong N.E. gales with a very heavy head sea; thence to Yokohama had moderate N.N.W. breeze; thence to port fine weather.

LATEST COMMERCIAL.

IMPORTS.

The Market remains, in most respects, as last noted. The drop in exchange has continued, and buyers have been compelled to pay full prices for goods purchased, which they claim leaves but little or no margin for them, as interior merchants are far below the parity of this market—and will probably go without rather than pay up.

EXPORTS.

RAW SILK.

Our last was dated the 9th instant. Since then, settlements on this market amount to 1,650 piculs, divided thus:—Hanks, 148 piculs; *Filatures*, 1,232 piculs; *Re-reels*, 145 piculs; *Kakeda*, 107 piculs; *Oshu*, 18 piculs. In addition to this, direct shipments have been 144 bales, and the total export trade of the week is therefore 1,800 piculs.

The fair daily business reported in our last has since increased until we had a very large business, with advancing prices. The initiative seems to have come from Lyons this time where there has been apparently a considerable revival in trade. This news has led to large operations on this market, principally in fine-sized *Filatures* of medium and best quality. The activity thus caused has induced some little buying also for the United States, and altogether we have had a lively week with high prices, in spite of further weakness in exchange.

Supplies come in from the interior to a fair extent, but not sufficient to keep pace with the sales, and the stock shows a decrease on the week of 900 piculs. It will also be noticed from our statistics given below that the available supplies to date are over 3,000 piculs less than they were this time last year.

Exchange has drooped from day to day, until at last we are once more about on a parity with the price of silver bullion in London.

There have been four shipping opportunities since we last wrote. The Canadian steamer, *Empress of India*, December 9th, took 426 bales; the American mail *Oceanic*, December 10th, 278

bales; the English mail *Ancona*, December 11th, 97 bales for Europe, and the Northern Pacific steamer *Tacoma*, on the 13th, had 500 bales for the New York trade. These departures bring the present export figures up to 31,036 piculs against 28,993 piculs last year, and 11,446 piculs at the same date in 1890.

Hanks.—Some revival in the demand, and about one-third of the stock on this market has been settled at about late rates, hardening towards the close, especially for anything of decent quality.

Filatures.—The great bulk of the trade has been in this department, principally for Europe, although the coarse-sized *Filatures*, such as they are, have been much enquired for the last two days. In European sorts, a rise of \$20 or \$25 has been paid, and quotations now stand as per our list at foot. Good, desirable parcels are now getting to be scarce and with the prevalent demand are very firmly held.

Re-reels.—A small business in this department, quality generally being very unsatisfactory, even taking into account the time of year. Tortoise chop has been done at \$780, with others in proportion. Very common *Re-reels* are noted at \$550. In other chops no business.

Kakeda.—Considerable enquiry for best grades, of which the stock is very small. One parcel supposed to be Extra is reported sold at \$790, while there is a talk of some No. 1 at \$772½; other grades, as to which buyers complain of the mixed quality, are held as follows: No. 1 *Horsehead*, \$730; No. 2, \$680; No. 3, \$640.

In *Oshu* and *Taysam* sorts, no business has been done.

Settlements and Direct	32,900
Export from 1st July	30,500
Stock, 16th December	10,000
Available supplies to date	42,900

WASTE SILK.
There has again been a large business in this branch, although settlements are not so plentiful as in the previous week and the buying entered in the daily sales amounts to 1,300 piculs, distributed thus: *Cocoons*, 64 piculs; *Noshi*, 590 piculs; *Kibiso*, 646 piculs. Direct shipments have been trifling, and the business of the week practically stands at 1,300 piculs.

Prices are firm in sympathy with the Raw Silk market, but without any notable advance. Arrivals from the interior do not keep pace with sales and the stock is reduced 800 piculs on the week.

There have been three shipping opportunities since we last wrote. The *Empress of India*, December 9th, carried one bale of Tama for the New York trade. The English mail *Ancona*, 494 bales for Europe and the *Port Adelaide*, (Canal steamer for New York December 14th), had 12 bales of *Cocoons*. These departures bring the present export figures up to 19,336 piculs against 15,275 piculs last year, and 15,335 piculs at the same date in 1890.

Cocoons.—The remaining stock is cleared out on

the basis of \$65 for medium grade, and the season for these may be considered closed.

Noshi.—Good inquiry for *Joshu* and some large lines are entered at from \$65 to \$72. There have been large purchases of *Oshu* also at from \$130 to \$140. Nothing done in other sorts.

Kibiso.—A large business at the beginning of the week, but latterly the market is more quiet. *Filatures* have been done to some extent, prices ranging from \$85 to \$100. In *Hira* sorts a large parcel of *Hachoji* was entered at \$25½; another parcel of *Mino* at \$62½ and some *Zaguri* at \$54.

Nothing reported this week either in *Mawata* or *Neri*.

1Y.

THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BARZAN, in his work entitled "The Nile Tribunes in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Courne, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."
Sold by all Chemists and Medicine Vendors the throughout World.
May 21st, 1890.

YOKOHAMA: SATURDAY, DEC. 24TH, 1892.

SUMMARY OF NEWS.

H.I.H. PRINCE KOMATSU (junior) left the capital on Friday last for Sano.

THE Law of Premonition was put into operation in Tokyo and Yokohama on the 21st inst.

THE political situation causes much uneasiness. Universal uncertainty prevails as to the issue.

MR. TANIO TOSHI, Sectional Chief, and Mr. Saito Kyushin, engineer, of the Yokohama Waterworks Office, have been dismissed.

THE House of Representatives has voted, in every case up to the present, the sweeping reductions recommended by the Budget Committee.

THE sittings of the Imperial Diet will be closed for the Winter vacation on the 24th inst., and will be resumed on the 9th of January next.

TELEGRAPHIC intelligence from Matsuyama under date the 16th inst. announces that several rice-brokers having gambled in stocks have been arrested.

AN Imperial New Year's entertainment will be given to the members of the both Houses of Imperial Diet on the 5th prox. in their respective Houses.

THE Emperor has sanctioned a marriage between H.I.H. Princess Ayake, elder sister of H.I.H. Prince Kunihiko, and Viscount Takenouchi Koretada.

MADAME YANAGIWARA, a Lady in Waiting, was despatched by the Empress on the 18th inst. with an Imperial present to Marquis Date, who has been suffering from a dangerous illness.

AN application of Mr. Asano Soichiro, of Tokyo, for permission to construct oil tanks at Kanagawa has been accepted by the Local Authorities. The cost of the work is estimated at yen 30,000.

THE House of Peers has unanimously rejected the Bill for reducing the rate of the Land Tax,

and by a majority of 110 to 40 has thrown out the Representatives' Bill for rescinding the Peace Preservation Regulations.

THE spread of rinderpest in Tokyo was believed to have been checked, and the order preventing cattle passing through Asakusa and the neighbourhood was rescinded on the 19th inst. But the disease has appeared again.

THE rumoured removal of the Japanese Minister Resident in Korea has become an accomplished fact, Lieutenant-Colonel Kajiyama being released from his post on the 16th inst. Mr. Oishi Masami has succeeded him.

THE *Ravenna-Chishima* collision case, which had occupied the Court of Enquiry at H.B.M. Consulate since Tuesday last, was concluded to-day, when the President announced that the Court would adjourn until two o'clock on Wednesday next, when its decision would be given.

THE editor and publisher of the *Nichi Nichi Shimbun* have been sentenced to imprisonment with hard labour and a fine of 50 yen for libelling the House of Representatives, a criminal suit having been instituted against them by direction of the House. They have appealed against the sentence.

A CONFERENCE attended by Counts Inouye, Goto, Kuroda, Oyama, and Yamagata, and Messrs. Mutsu, Kono, and Watanabe was held in the Ministers' Chamber in the buildings of the Diet on the afternoon of Friday last. The proceedings commenced at one and concluded shortly before five o'clock.

THE dividends of the following companies for the second half of the present year are estimated as follows:—Kanegafuchi Cotton Spinning Company, 8 per cent.; Tokyo Yarn Company, 2½ per cent.; Japan Edible Sea-weed Company, 12 per cent.; Japan Weaving Company, 5 per cent.; Tokyo Tramway, 10 per cent.; and Tokyo Electric Light Company, 5½ per cent. per annum.

H.I.H. PRINCE KITASHIRAKAWA, who was lately appointed Commandant of the Sixth Army Division, Kumamoto, gave a farewell entertainment on the 18th inst. at the Hama Detached Palace to members of the Imperial Family, Ministers of State, high officials of the Army and Navy, the Superintendent-General of the Metropolitan Police, the Vice-Ministers of various Departments, and the Governor of Tokyo.

A TELEGRAPHIC message from Osaka under date the 19th inst. reports that in consequence of the rise in price of the chemicals used in the manufacture of matches, the manufacturers of the City have agreed to cease working on the 20th inst. Another telegram from that City announces that owing to the great conflagration at the premises the Osaka Cotton Spinning Company, the price of the shares, which were sold at yen 137 each on the 19th inst., dropped to yen 90 the following day. The message further states that the remains of eighty-eight persons who were burnt had been discovered up to the evening of the 20th inst.

On the 15th inst. the body of a young woman was discovered at Shimo-machiya, in the Koza District of Kanagawa Prefecture, which is located along the line of the Tokaido Railroad. The circumstance was at once reported by the Koza Police to the Procurator's Bureau in the Yokohama Local Court. Public Procurator Kokubu, proceeded to the District the following day to inspect the body, and the examination proved that the woman much have been strangled. It

is also believed that the murder took place on a train, and that the body was thrown out of a carriage.

DETAILS of the great conflagration which took place in the town of Shidzuoka on the night of the 14th inst., show that at 11.40 o'clock when the flames broke out in the residence of a woman called Murata Shin, at No. 21, Hitoyadocho, Ichome, a strong gale was blowing over the town. In a few moments, the flames had been carried in all directions, and they destroyed about 370 houses, of which 12 were situated in the street where the fire originated, 125 in Ryogayeicho, 76 in Ottecho, 119 in Gofukuchio, 2 in Shimoishicho, 32 in Fudanotsujicho, and 2 in Shichikencho. All the official buildings in the town, with the exception of the Prefectural Government office, were burnt to the ground, and the offices of the *Taimu Shimbun*, the *Shidzuoka Nippo*, the *Yi-tsuru Nippo*, and the *Shidzuoka Minyu* were also destroyed.

A DESPATCH from the Hokuroku province reports that severe shocks of earthquake were felt there on the 9th and the 10th inst. At Anamidzu, the tremors were most severely felt and much damage was done to buildings. At Seppi-mura the oscillations were not less severe, but no injuries were discovered. The earthquake was even more strongly felt at Kanamaru in Kajima District, where some three or four houses were totally overthrown, and about fifteen were considerably damaged, few buildings in the district remaining uninjured. Many landships also occurred, and several fissures were produced. The earthquakes, which have not occurred in these districts for some time, were during the night, and great excitement was caused, but no loss of life is reported.

THE Import trade is as good if not a little better than last reported, exchange conditions being a great drawback to transactions. The sale of Yarns has been restricted partly on account of the uncertainty of rates, and buyers are held off by the attitude of holders, who are asking from 50 cents to a dollar a picul above recent quotations. Grey goods are firm, though no actual rise has been obtained for parcels taken. More money has been paid for Turkey-Reds, and these have been freely bought. Woollens are not in much demand, but prices are well maintained. There is a slight improvement in the Metal trade, and though the lots taken have not been large, rather better figures have been reported. Holders of Kerosene are strong in anticipation of the coming demand consequent upon exhausted supplies reported from the interior. There has been rather more done in Sugar, and quotations for Canton Brown have been raised. In the principal Export things have been lively—"bordering on a boom" being a fair description of the week's business in Silk. Shippers complain of being unable to find parcels to suit the requirements of their clients, yet over 3,000 piculs have been taken, and more business could certainly have been done had the quality been forthcoming. Waste Silk has also been a heavy business, 3,416 piculs leaving passed the scales. Stocks of both have been reduced, the arrivals bear no comparison to the sales, and the stock of Raw is at present less than half the amount on the market here at the same date last year. A few hundred piculs of Tea have been bought, but the business is trivial. The export amounts to 28,300,000 lbs. Exchange goes down, down, and rates are the lowest ever known in Japan. At the close there is a firmness, but this perhaps is only a temporary check.

EDITORIAL NOTES.

THE RADICALS AND THE PROGRESSIONISTS.

As we foretold, the relations between the Radicals and the Progressionists have become more and more strained with the progress of the session, until an apparently final estrangement has now taken place. It is true that all friendly intercourse between them was stopped a few weeks ago in the sequel of the offence given by a speech of Mr. Shimada Saburo, a Progressionist leader. But they still continued to negotiate about movements in the Diet, in the name of the Clubs to which the members respectively belong. Even that, however, is now to be discontinued. The immediate occasion for this last rupture was furnished by the conduct of the Progressionists about the Bill for Amending of the Newspaper Regulations. At the outset, they made a compact with the Radicals to adopt the moderate amendments of the Special Committee. Not only, however, did they ultimately disregard this agreement, but by a clever ruse they also managed to betray the Radicals into supporting the original Bill, which, we may mention, had been introduced by one of the Progressionist members. The ruse was this:—Seeing that the Radicals were resolved to back the Special Committee, the Progressionists invented a story that the National Unionists intended to oppose the Special Committee's recommendations and steal the Radicals' thunder by supporting the original Bill. The Radicals, being a comparatively simple-minded and straightforward set of men, believed this story, and thinking that there was no hope of the amendments proposed by any committee being passed by the House, very reluctantly agreed to please the Progressionists by supporting the Bill in its pristine form. But when it came to a division, the National Unionists voted for the Special Committee's amendments, whereupon the Radicals were naturally indignant at the trick played upon them by the *Kaishin-to* politicians. On the 16th instant they sent a delegate, Mr. Nishiyama, to the Progressionists to give them notice that henceforth there should be no intercourse whatever between the two parties under whatever guise. Mr. Nishiyama saw Mr. Shimada and made this announcement directly to him. Mr. Shimada tried to explain away the misunderstanding, but the Radical delegate declined to listen, alleging that he had been entrusted only with the duty of carrying the notice and not with that of discussing it. Nothing is as yet known as to the sequel of this affair.

THE RAILWAY COUNCIL.

THE second meeting of the Railway Council was held in the Department of Communications on the 15th instant. Although stenographic records of the proceedings are said to be taken, the meetings being secret, only the main points of the matters taken under consideration by the body find their way to the vernacular press. From these we gather that the questions dealt with at this meeting were the application of the Settsu Tramway Company for permission to alter its line to an ordinary railway; that of the Nippon Railway Company for the construction of a branch from Shiriuchi to the port of Same via Hachinohe, and that of the Kobu Railway Company for the extension of its line from Shinjuku to Misaki-cho in Tokyo. Whilst the two former applications were passed without much debate, the Misaki-cho extension caused considerable discussion, at the close of which the majority were in favour of postponing the subject until a decision had been reached about the "Central line" to connect the capital with Nagoya; for in case of the adoption of the alternate line starting from Hachioji instead of that from Gotemba the purchase of the railway would become necessary. To allow of the extension of the line in face of these facts was considered inexpedient. The question of altering the Standard gauge of Japan from 3 feet 6 inches to 4 feet 8½ inches arose. A special committee of five, consisting of Messrs. Matsumoto, Ishiguro, Watanabe, Murano, and Takahashi, was nominated to investigate and

report on the subject. The third meeting is to be held on the 20th instant.

We learn that the more important work of the Railway Council will not probably begin till next year, when the results of the surveys of the various lines proposed to be constructed within the so-called "first construction period" are expected to be completed. The several parties of engineers of the Railway Department who were despatched during the summer to make the surveys, returned at the end of the last month. They have since been busily occupied in the preparation of drawings and reports, with the view of getting them in a presentable form for the Council by the end of this month.

As the Railway Council is destined to become a body of which a great deal will be heard hereafter, and as several additional nominations have recently been made to it, it may not be out of place to give the names and positions of the persons composing it:—

PRESIDENT.

General Kawakami Soroku, Sub-chief of the General staff.

MEMBERS.

Viscount Inouye Masaru, Director of Railways, Mr. Kawazu Sukeyuki, Vice-Minister of Communications.
General Kodama Gentaro.
Mr. Arishima Takeshi, Chief of the National Debt Bureau.
Mr. Saito Shuichiro, Chief of the Bureau of Agriculture and Commerce.
Mr. Matsumoto Seichiro, Chief of the Traffic Bureau, Railway Department.
Mr. Furusawa Umi, Chief of the Post Bureau, Communications Department.
Colonel Takahashi Korenari.
Captain Arima Shinichi, I.J.N.
Mr. Ishiguro Isaji, Engineer of the Public Works Bureau.
General Viscount Tani, Member of the House of Peers.
Viscount Hotta Seiyō, Member of the House of Peers.
Mr. Watanabe Kōki, President of the Ryomo Railway Company and Member of the House of Representatives.
Mr. Kawada Koichiro, President of the Bank of Japan and Member of the House of Peers.
Mr. Murano Sanjin, Vice President of the Sanyo Railway Company and Member of the House of Representatives.
Mr. Komuro Shinobu, Member of the House of Peers.
Mr. Wakao Ippai, Member of the House of Peers.
Mr. Ito Daihachi, Member of the House of Representatives.
Mr. Saito Riji, Member of the House of Representatives.
Mr. Minoura Katsuo, member of the House of Representatives.

SPECIAL (RINJI) MEMBERS.

Major Yamane Takesuke.
Major Yamaguchi Keizo.
Mr. Nakane Jinichi, Councillor of the Railway Department.
Mr. Shibusawa Eiichi, President of the Tokyo Chamber of Commerce.
Mr. Tamura Taihei, President of the Osaka Chamber of Commerce.

MANAGER (KARJI).

Mr. Den Kenjiro, Secretary of the Communications Department.

THE MEETING OF THE RADICAL MEMBERS OF THE DIET.

THE Radical members of the Lower House held a meeting on the 17th instant. Count Itagaki was in the chair. Addressing his followers on the subject of the much talked of Bill for the amendment of the Newspaper Regulations he regretted that an unforeseen circumstance—he alluded to the ruse said to have been employed by the Progressionists—had led to the rejection of the moderate recommendations of the Special Committee. The views of the Committee being well known to represent the attitude of the Radicals, their comparatively moderate nature had evoked much unfavourable criticism from the *Kaishin-to* organs and other papers. Count Itagaki, however, did not hesitate to declare his conscientious belief that the course originally adopted

by his Party was best calculated to promote the cause of freedom of speech, since otherwise there was no hope of the Bill receiving the approval of the Government. After the delivery of this speech, the Radicals resolved to adopt the Government's Income Tax Bill with some modifications, one amendment being to fix the lowest limit of taxable income at 300 yen. This was followed by an announcement that with regard to the proposals made by the Progressionist Party to abolish the tax on vehicles, the Radical Party had declined to confer with the Progressionists. After the meeting, Count Itagaki convened a conference of the divisional heads of the Party, and urged on them the necessity of rejecting the Government appropriations for the construction of war-vessels, so long as the Government did not take steps to adopt the measures proposed by the Radicals for the reform of the Navy. He alluded to the rumour that some of the Radicals had changed their minds and agreed to support the appropriations. But the divisional heads assured him that the rumour was unfounded. There is a suspicion, however, that they were not quite sincere in their assurance.

THE LATE CAPTAIN SAMS.

A "STAFF OFFICER" writes to the *Standard*:—I have not seen it noticed in any reports on the loss of the *Bokhara*, that the Captain of that ill-fated vessel served as chief officer of the *Ganges*, of the Peninsular and Oriental Company, when the latter vessel was our Army floating hospital in the Harbour of Suakin, during the Eastern Soudan Campaign of 1885. I returned to England in the *Ganges* on the expiration of hostilities, and can testify to the high character for kindness and seamanship shown by Captain Sams, under Captain Andrews, then the commanding officer, to all on board, sick, wounded, and convalescent. I made an effort to get the medal and Khedive's star granted to both these officers, a precedent having been given in the Egyptian campaign of 1882, but for some reason, although the late Colonel Duncan, M.P., took the matter up, and Sir G. Graham, the General commanding the forces, supported the application, the Naval authorities declined to entertain it; consequently these slight recognitions were not obtained. In view of the fact that we are anxious to encourage officers of the Mercantile Marine to join the Royal Naval Reserve, it seems a pity when opportunities of recognition occur, they should not be seized, especially as, in 1882, Commanders and Chief Officers of Transports received these decorations. I may add that I was quartered at Hongkong in 1873, when the *Bokhara*, I think on her first voyage soon after leaving with the Home mails, ran on an unknown rock, now named the "Bokhara rock," had to return to Kowloon, and was only saved by the pluck of her then Commander, Captain Tomlin, and the way in which her stokers kept the fires going until she was docked.

LORD SALISBURY ON THE CONSTITUTION.

It is highly amusing to read the conflicting opinions expressed by the different party-papers upon Lord Salisbury's article in the last *National Review*. The *Spectator* calls it brilliant, and says it is the ablest contribution the writer has yet made to the political discussion before the country. The *Star* pretends to "pause in blank astonishment" as it reads "the schoolboy-like, or at best undergraduate-like," effusion. The *Standard* says the earlier portion of it is a clever piece of sardonic criticism and the concluding half a timely, temperate, and conclusive admonition of the perils that are threatening us. The *Daily News* of course has nothing but contemptuous anger for both article and writer, while the *Saturday Review* is probably right in guessing that the latter part of the Marquis's essay will be more distasteful to Ministerialists than the earlier. Lord Salisbury deals delightfully with Mr. Frederic Harrison's now notorious article about "Driving Home Rule home." It is curious, indeed, that a grave philosopher and teacher should have laid himself open to such almost universal ridicule; the five hundred Gladstonian sweeps with whom he threatens to swamp the

House of Lords will probably not soon be forgotten, any more than his Bombastes Furioso description of the Lords inevitable and dismayed surrender when "Mr. Gladstone and the nation are thundering at their doors." In such a case, remarks Lord Salisbury, the Lords probably would surrender—even if the nation were thundering alone. The dry humour of that is exquisite. "But it must be a real nation and real thunder." At present those conditions are certainly not fulfilled. Lord Salisbury further points out that if 21 constituencies, with Gladstonian majorities varying from 3 to 62, and amounting in sum total to only 765 out of some six millions, had gone the other way, there would have been no Gladstonian majority at all. "Can any one in his senses," asks the *Spectator*, "speak of that number of votes in the balance—a number attained, too, in most cases by distracting the minds of men from the true issue, by all sorts of petty interests and promises which have no connection with the true issue,—as giving a result that the merest breath of popular caprice might not easily reverse?" Not less cogent, too, are the remarks of the *St. James's Gazette*. "Let the Home Rulers 'sweep the country;' let them come back to power, on an election fought after the country has seen the Home Rule Bill, a hundred seats to the good in Great Britain alone, to say nothing of Ireland; and then they may indeed speak with the Peers in the gate. In the meanwhile the House of Lords may laugh at Gladstonian threats, whether they emanate from demagogues or philosophers. For every Gladstonian knows in his heart that if the Lords did delay or defeat Mr. Gladstone's Home Rule Bill, so far from falling victims to the just wrath of a roused and indignant nation, they would be rapturously applauded by a large minority in Ireland, in Scotland, and even in Wales, and enthusiastically supported by the great bulk of the people of the not unimportant country named England."

COUNT OKUMA ON THE SITUATION.

THE *Nippon* has again been able to elicit from Count Okuma some very interesting remarks on the situation. Indeed, interesting accounts of interviews with distinguished statesmen have become one of the principal attractions of that enterprising if somewhat adventurous journal. We do not pretend to know how far the present account may be correct, but judging from past experience, we find no difficulty in believing that our contemporary's report is trustworthy on all essential points. The distinguished leader of the Progressionist party commenced by expressing disappointment at the unexpectedly weak conduct of the Diet in the present session. The Popular party is the principal motive force in the Diet, but he regretted to observe that its note had been discordant from the outset, and that of late there had been indications of a rupture between the various sections composing it. He was sure, however, that neither the Radicals nor the Progressionists would combine or coöperate with the National Unionists, because between the latter and either of the former there lay an impassable gulf of antagonism not only in political opinion but also in personal feelings. Then turning to the present condition of the struggle between the Government and the Diet, Count Okuma observed that war is waged with one of two objects, either to humble an enemy or to get something out of him. The present struggle between the Diet and the Government is, in his opinion, conducted on the latter principle. The Diet is well satisfied if it obtains some substantial gains from the Government. The Cabinet has no fixed policy towards the Diet: it merely shapes its conduct according to the requirements of the moment. One of the principal causes that prevent the Government from pursuing a definite policy is, in the Count's opinion, the peculiar relations existing between the Minister of Justice, Count Yamagata, and the National Unionists. Count Ito and Count Inouye are unable to carry on the Government in a more brilliant manner, "because they are surrounded by a fog of commonplace ideas." But nevertheless, these two statesmen are the foremost of all those connected

with the Government, and when the situation reaches an extreme stage, they have, Count Okuma believes, courage either to resign or to dissolve the Diet. Either of those courses would be advantageous for the Government to pursue. But the Count proceeded to say that there was yet another possible course, namely, to induce Count Itagaki and a few other politicians of the Popular party to take office. That, in his opinion, would be the least advisable programme of all. He then made the following avowal:—"With regard to administrative policy, I agree with Counts Ito and Inouye; the only point on which I differ from them relates to the constitution of the Cabinet. Count Ito insists on the system of Neutral Cabinets (*Chosen Naikaku*), while I advocate the system of Responsible Cabinets. Here is the root of all the difference between us. Count Inouye, however, inclines towards Responsible Cabinets. I wonder if Count Inouye will be able to turn Count Ito from his erroneous opinion?" The Progressionist leader again assured his interviewer that, speaking individually, both Count Ito and Count Inouye are remarkable statesmen. But looking at them as parts of the Cabinet, they lose their individuality in the common-place atmosphere that environs them. The same remark, said the Count, applies equally to the statesmen of the Opposition.

Alluding to Count Okuma's remarks about a coalition between the Ito Cabinet and the Radicals, the *Nippon* observes that, although that course is deprecated by the Progressionist leader, many persons are impatiently desirous of bringing about such an alliance. Our contemporary even goes so far as to state that the scheme is taking a practical shape.

The *Nippon* attaches a mysterious note to the above account of its representative's interview with Count Okuma. "A light has come from the south," it says, "while another light has issued from the north. They have met in the skies and became one light." These two lights evidently apply to Count Inouye and Count Okuma, respectively. Assuredly the air is full of mysterious rumours.

INCREASE IN THE PRODUCTION OF GOLD.

Is the currency question going to be settled for us in what both bimetalists and monometalists would agree in considering the most natural way? Silver is not the only metal whose production is increasing, after all. The scarcity of gold appears to be no longer what it was. Here are the figures, vouched for by *The Times*:—

The yield, it says, is yearly increasing and that of 1891 was the largest ever recorded. In round numbers, the production for the last five years was 2,1887,509,760 oz.; 1888, 5,251,000 oz.; 1889, 5,641,000 oz.; 1890, 5,586,000 oz.; and 1891, 6,033,000 oz. The chief feature of recent years has been the development of the Witwatersrand Goldfields. In 1889 it was only 34,897 oz.; it was in 1891 729,213 oz. The total for the whole Transvaal in 1892 is expected to reach 1,250,000 oz.; or 21 per cent. of the world's supply. At present the nations stand:—United States, 1,586,500 oz.; Australia, 1,169,200 oz.; Russia, 1,019,000 oz.; but it is expected that in 1893 the Transvaal will reach the second place. It is a curious reflection that the little States formed by men whose only desire was to get away from civilization, and lead a patriarchal life, untouched by outside influences, should end in being fed by the greatest gold mine the world has ever seen.

There is a letter upon the subject in the *Spectator*, which is also worth considering.

RENAN-ANA.

THE *Fortnightly Review* has three most charming articles upon Ernest Renan. The last, by M. Hugues de Roux, deals with Renan's table-talk, and shows the great Hebraist and critic as a man of the gentlest and most polished wit. Here are one or two examples. When M. Fréycinet, the Minister for War, was standing for the Academy with a considerable political position but no literary qualifications, some one asked Renan if he would vote for him. With a good humoured smile he answered, "I'll vote for him with both hands—unless, indeed, M. Carnot wishes to compete." On another oc-

casión Princess Mathilde was speaking a little bitterly of M. Taine for having written as he did of Napoleon I.—but for whom she might then have been selling oranges in the streets of Ajaccio. "Ah, Princess," said Renan, nodding, "for merely having told the truth I fell into the bad graces of a much greater lady than you." "Whom do you mean?" "Our holy Mother Church," was the reply. "Oh, M. Renan," cried an old woman to him once (she had just lost her only son), "if God is good why does He allow such things to happen?" With a sigh Renan extended his hands, palms outward, in deprecation. "He would like to prevent it, but He is not able to yet." For Renan believed that God Himself was in process of development. But then his ideas of God were peculiar. So must have been some of his literary tastes, great critic as he was; for he avowed himself unable to read Flaubert's "Madame Bovary" on the ground that it was too badly written!

MR. TAGUCHI UKICHI ON THE ABOLITION OF EXPORT DUTIES.

MR. TAGUCHI UKICHI, editor of the *Ketsui Zasshi*, delivered an interesting lecture on the subject of the abolition of export duties, at a recent meeting of the Economical Association, which was attended by a large number of the members of both Houses of the Diet. He commenced by expressing satisfaction at the increasing interest taken in the question by practical men of business. The abolition of export duties, he thought, was the most urgent of the many questions now demanding immediate attention. He regretted that, although his countrymen had come to understand the importance of the position Japan is destined to occupy in the new political and commercial system likely to be developed in this part of the globe after the completion of the Siberian railway and the opening of the Nicaraguan Canal, they do not yet seriously consider the means of enabling Japan to take advantage of the unique opportunity that then be will thrown in her path. The so-called Oriental Question (*Tosho mondai*) is now a very popular theme of discussion in a certain circle of scholars and politicians, the most prominent figures in this field being Mr. Inagaki Manjiro, author of *Japan and the Pacific*, and Mr. Oishi Masami, author of the *Nippon Ni-dai Seisaku*, who was recently appointed a Minister Resident. These two men have written and spoken much on the subject; but their incessant efforts do not extend beyond encouraging their countrymen, in general terms, to make full use of the splendid opportunity coming in sight. They make no attempt to indicate what practical measures are essential to the realization of these high expectations. Indeed, the views which they have lately been proclaiming with such noise, Mr. Taguchi claims to have treated of as early as the beginning of 1889. It is true that they have laid stress upon the importance of constructing docks; but that, too, is an old question, already fully discussed by Mr. Taguchi himself and by men like Mr. Tokumomi Ichihiro, editor of the *Kokumin-no-Tomo*, and Mr. Sakatani Yoshiro, of the Finance Department. Mr. Taguchi regrets extremely that Messrs. Inagaki and Oishi have not made the slightest allusion to the important question of abolishing export duties. That, in his opinion, is one of the most vital measures to be carried out by Japan, if she wishes to become a prosperous commercial nation. Indeed, Mr. Inagaki even hints disapproval of the abolition of export duties. Free trade, Mr. Taguchi declares, is one of the essential conditions of Japan's future prosperity, and the abolition of export duties is advocated as an initiatory step in the right direction. The instance of Hongkong is cited by way of illustrating the beneficial effects of free trade. The wonderful development which that little British colony has made in the short space of half a century is ascribed to the circumstance that its harbour is thrown open to the commerce of the world without any injurious artificial restraints in the shape of customs duties. The question of

twenty years of endeavour. The Foreign Office had not taxed foreigners, as it might have done. The Foreign Office had not yet asserted Japanese jurisdiction over the foreign communities. For all these failures it was to be punished by a fine of 29,880 yen. At the same time, Mr. Ozaki was careful to point out that there was no intention of "bullying" (*ijimeru*) the Foreign Office. The idea was simply to rouse its officials to greater zeal. If they consent to be roused, then, doubtless, Mr. Ozaki will vindicate his reputation for consistency by proposing that they be restored to the nation's good graces, and re-instated in the annual enjoyment of the 29,880 yen now taken from them. It is really startling to hear such a speech from a man so clever as Mr. Ozaki Yukio. He has succeeded in converting into a veritable burlesque the attitude of the Budget Committee towards the Foreign Office, and in committing the House of Representatives to arrogate the Sovereign's prerogative of reducing or augmenting official salaries according to the merits and achievements of their recipients. Of course the explanation of this quaint ebullience is to be sought in the fact that the *Kaishinto*—among whom Mr. Ozaki occupies a leading place—are particularly hostile to the present Minister for Foreign Affairs. Any opportunity to attack the Department over which Mr. Mutsu presides is welcome to them.

COUNT OKUMA AND COUNT YAMAGATA.

THE *Nippon* of the 20th instant reports a meeting which recently took place between Count Okuma and Count Yamagata. It says that on the 17th instant a four-wheeled carriage was observed to enter the gate of Count Okuma's residence at Waseda. The visitor, who proved to be no other than the ex-Minister President and present Minister of Justice, was at once shown into a secret chamber where he had a long conversation with his host. While the interview was taking place, no person, even a servant, was allowed to enter the room. Such is the version of the story published by the *Nippon*, which journal is naturally perplexed to understand what business these two statesmen, standing, as they do, at opposite extremes of political opinion, could have found to require a secret conference. Did the *Nippon* refer to this conference when it spoke in its previous issue of a mysterious meeting of two lights in the skies one coming from the north and the other from the south? We thought that our contemporary meant Count Inouye by "the light from the south," because it talked of thunderbolts and so forth, and Count Inouye is sometimes known by the name of "the thunderbolt statesman." Perhaps the *Nippon* was at first misinformed and supposed that the recent visitor to Waseda was really Count Inouye. Be this as it may, we are in a position to help our contemporary out of its perplexity regarding the meaning of the strange meeting between the *Kaishinto* leader and the Minister of Justice. The fact is, that the meeting had no political significance whatever. On the lamented death of Count Yamagata's son a short time ago, he received extremely touching messages of sympathy from Count Okuma. The meeting which has been magnified into such significance by the *Nippon*, arose simply out of Count Yamagata's desire to return thanks to Count Okuma personally. According to our information, Count Yamagata had meant only to leave his card, but was specially asked by Count Okuma to enter and have a talk. When they were seated together, they were joined by Mr. Koizuka, editor of the *Mainichi Shimbun*, and a few members of the Diet, and the party talked for some time on indifferent topics of various kinds.

THE LAW OF PREMONITION.

ONCE more the course of events has proved singularly unkind to the champions of liberty in the House of Representatives. We have before remarked that so surely as they vote for rescinding the Peace Preservation Regulations, some incident occurs to prove that unfortunately the time has not yet come for such a reform. Apparently fate intends to be similarly ironical

about the equally obnoxious Law of Premonition. Against this also the House of Representatives has been arraying itself, and now, while the Diet is actually in session, the disagreeable Law has had to be put into operation. The Chief of Police, acting, of course, under due authority, issued orders for the enforcement of the Law at 1 p.m. on the 21st inst., and before evening 24 *soshi* had received warning to depart from the capital within twenty-four hours. The operation of the Law was extended to Yokohama also, but we have not yet learned any details concerning the latter. It is not stated, of course, what circumstances constitute the proximate cause of the measure thus taken by the police, but we can easily conceive that the *soshi* were discovered to have contemplated more or less serious breaches of the peace during the existing crisis of political events now closely impending. Several good citizens of the capital will breathe much more freely now that these truculent and irresponsible young agitators are banished out of harm's way. But it is to be sincerely regretted that recourse to such an expedient has again been found necessary. The Peace Preservation Regulations and the Law of Premonition are pieces of legislation which constitute a dark blot on Japan's escutcheon and greatly disturb the world's estimate of her law-abiding character. It is not the existence of such statutes that disgrace her, however, but the necessity for their existence, and all her well-wishers will heartily welcome the day when she can safely dispense with both of the obnoxious laws.

MR. THEODORE WORRES' PICTURE.

By the kind hospitality of the Mexican Representative and Madame Rascon, the leading Japanese residents and the members of the foreign community of Tokyo were enabled, last Saturday, to view the picture just painted by Mr. Theodore Worres, whose representations of Japanese life and customs have already attracted attention in Europe and America. The picture is the largest and most elaborate of any hitherto painted by Mr. Worres in Japan. It represents one of the celebrated danseuses of Kyoto dancing to the music of a Koto. The scene is laid in a verandah of Yaami's Hotel in Kyoto, so that the trees surrounding the inn and the extended view over the city—the view so familiar to all who have visited Kyoto—afford an excellent middle-distance and background. Mr. Worres has chosen for the pose of the little *maiko* the moment when she is just sweeping round, fan in hand, with the peculiar undulatory movement characteristic of the Japanese dancer. The drapery is painted with admirable realism, and the picture constitutes, on the whole, a remarkable contribution to the gallery of Japanese scenes now growing rapidly in Western salons. It is to be sent to the World's Fair, we believe, where it will doubtless attract attention. The arrangements made on Saturday for the display of the picture were excellent, and the hospitalities of the Mexican Legation were, as usual, dispensed with all the grace conceivable.

THE APPROPRIATIONS FOR THE CONSTRUCTION OF WAR VESSELS.

MEMBERS of the Diet, who are desirous of having the taxable value of land re-assessed, are exerting themselves to get a majority in the Lower House for the support of the Government's appropriations for the construction of war-vessels. Mr. Amakasu, a well known member of the Radical party and chairman of the Special Committee charged with the Bill for the Re-assessment of the taxable value of land, is said to have had a conference with the Minister of Finance. As the result of this conference, so the story runs, a number of Radical members of the Diet now intend to support, with some modifications, the appropriations asked by the Government for the construction of war vessels. It is believed that, unless these appropriations are granted, the Government will withdraw the Bill for the re-assessment of the taxable value of land. The leaders of the *Yiyu-to* have been thrown into great consternation by the reported change of mind on the

part of some of their followers with respect to the Naval appropriations. As we have already noticed, Count Iiagaki strongly condemned such a course at a recent meeting of the *Yiyu-to* members of the Diet. It is now reported that, not satisfied with his recent admonition, he has since addressed a circular to his followers in the Diet, calling upon them to be true to the decisions of their party, and warning them that, if they disregard those decisions, decisive measures will be taken against them. This letter will no doubt have the effect of terrifying into submission many of the wavering members, but it is doubted whether some of the Radicals may not even brave such consequences by supporting the Navy appropriations in exchange for a reform which has occupied their attention more than anything else.

The *Chu-o Shimbun* publishes the following table showing the number of members of all parties for and against the appropriations for the construction of war-vessels:—

	Against.	For.	Those who did not vote.
Radicals	85	5	—
Progressionists	38	2	—
Kii Members	—	—	5
Dōmei Club	15	6	—
Yuraku-Gumi	2	8	—
Koritsu-ha	6	8	—
National Unionists	—	68	—
Chu-o Kōshō-bu	—	29	—
Oriental Radicals	2	—	2
Shiba Shukaijo	—	19	—
Total	148	145	7

From this table, it is seen that those in favour of the appropriations are in a minority of three. But it is hoped that the five members from Kii, who at present intend to absent themselves when the question comes up for discussion, may be induced to change their minds, for they are supposed to be under the influence of Mr. Mutsu. At any rate, the fight on this question will be a close one.

KILLED BY A JELLY-FISH.

AT Port Darwin a boy who was bathing in the sea baths met his death by being stung by a jelly-fish. The fish fastened itself to the boy's body and so tenacious was its grip that it could only be released by pulling it off in lumps, which, however, was only a matter of seconds, assistance being promptly at hand. A doctor living within a few hundred yards was sent for, but as soon as he saw the boy he pronounced him beyond all human aid. On one arm and on the left side of the body of the boy were the marks made by the jelly-fish, but death was probably due in part to the sudden shock and extreme pain which attended so unexpected an attack. From the stinging to the boy's death was only a matter of from two to three minutes.

FUNERAL OBSEQUIES FOR THE OFFICERS AND MEN OF THE "CHISHIMA KAN."

A FUNERAL service on an imposing scale was conducted yesterday on account of the officers and men of the Imperial Japanese Navy who lost their lives by the sinking of the *Chishima Kan*. Her Britannic Majesty's Chargé d'Affaires, the French Chargé d'Affaires, Captain Ingles, R.N., and a Lieutenant and a party of Seamen from H.B.M.'s *Leander* were among those present. The Captain of the *Leander* was unfortunately prevented by illness from attending.

EARTHQUAKES AT TIMOR.

CAPTAIN SHANNON of the E. & A. Steamship Co.'s steamer *Catterthun*, on his last voyage up from Sydney, reports:—On the ship's arrival at Timor (3 p.m., 28th November) it was reported that a very heavy shock of earthquake had been felt at 2 a.m. that morning, and while the ship was at anchor there during the night of the 28th, two shocks were distinctly felt on board, the vessel shivering all over as if grating along a coral reef. One shock was felt at 9.30 and the other at 11.40, and each was accompanied by a low rumbling noise. The shocks were so distinct that they were felt by every one on board. The residents of the place

were in great fear, but up to the time of the ship's departure no damage had taken place, with the exception of the side of a house (the residence of a Mr. Santos) having fallen in and several walls having collapsed.

THE METROPOLITAN JOURNALISTS AND THE NEWSPAPER REGULATIONS.

THE journalists of Tokyo are making strenuous efforts to secure the passage through the Upper House of the Bill for the Amendment of the Newspaper Regulations. The representatives of the different newspapers and magazines in the Capital, held a conference on the 19th instant at the *Kyosen Dosha* Club at Hiyoshicho, Shimbashi, nearly thirty persons being present. They decided to form a league for the attainment of their object, and discussed the principal points of the Bill recently sent up to the Peers by the Lower House. Recognising, apparently that the Bill in its present form has no hope of receiving the assent of the House of Peers, they resolved to approve the provisions requiring security money from publishers of political journals and rendering journalists liable to imprisonment with hard labour. As to the vital question of suspension, they were ready to approve prohibition of the sale and distribution of the particular issue of a journal containing obnoxious matter, but declared themselves opposed to the idea of suspending a journal for a number of days. On this point alone, they mean to stand firm; the rest may be left to the Government's option. Such is the basis which the Tokyo journalists league would have the Peers adopt in modifying the Bill. It was also resolved, first, that four *Kanji* be elected to take charge of the business of the league; secondly, that an office be established in a convenient quarter of the city; thirdly, that the members of the House of Peers be interviewed on the subject; fourthly, that a reunion of the journalists of the capital be held on the 22nd instant; and fifthly, that communications be opened with provincial journals to secure unanimity of action.

It is very likely that, should the Peers be disposed to send back the Bill to the Representatives with modifications on the lines mapped out by the Metropolitan Journalists' League, the Lower House will agree to the amendments.

THE HOUSE OF REPRESENTATIVES VERSUS THE "NICHU NICHU SHIMBUN."

THE libel case brought by the President of the House of Representatives against the publisher and editor of the *Nichi Nichi Shimbun* was heard at the Tokyo Local Court on the 21st instant. The seats reserved for the public had all been occupied some time before the proceedings commenced, and a large number of eager spectators could not obtain admission. The most conspicuous places in the gallery were filled by the writers and publishers of the incriminated journal. Justice Matsunaga presided, the prosecution being conducted by Public Prosecutor Kawashima, and the defence by Messrs. Yamada Kinoshige, Suzuki Jubi, Shionoya Tsunetaro, and Miyako Keizaburo. The Public Prosecutor maintained that the article in the *Nichi Nichi Shimbun* of the 16th instant, was a gross libel upon the whole House of the Representatives. That the whole House was attacked he claimed, because of the expression "three hundred heads," with which the article opened. He argued that the action of the publisher and the editor of the *Nichi Nichi* fell under the scope of Art. I. of Law No. 28, 1889. The points raised by the defence were numerous. First, it was pleaded that the publisher, Mr. Amenomori Iwanoshin, having been confined to his house by sickness at the time the article was written and published, as proved by a medical certificate, could not be held responsible for the contents of the paper. Secondly, that even if he had not been absent from his office, he ought not to be held responsible, since the Newspaper Regulations make an explicit distinction between an editor and a publisher, and he, being the publisher, was not properly subject to any penalty for what

appears in his paper, except in certain special cases. Thirdly, that the article in question was not libellous, having been written for the sole purpose of admonishing certain members of the Lower House who, for some time, had been behaving in a most discreditable manner, especially with regard to the amendment of the Newspaper Regulations. Counsel for the defence produced copies of several Tokyo papers, such as the *Nippon*, the *Kokumin Shimbun*, the *Kokkai*, the *Mainichi*, etc., which had criticised the conduct of members in similar language. What the *Nichi Nichi Shimbun* did was merely to repeat the criticisms that had been written by other papers about the notorious conduct of some members of the Diet. Fourthly, as to the nature of the expressions used by the *Nichi Nichi*, it was a delicate question to determine whether they were defamatory or not. Such a point must be decided with due regard to the character of the persons against whom the remarks were directed, as well as to the nature of the occasion which elicited the article. Counsel further quoted expressions that had been used by some members of the Lower House in speaking of Ministers of State, and claimed that, in addressing politicians so regardless of delicacy and dignity, the *Nichi Nichi* was justified in using strong language, for upon such persons ordinary language would produce no impression. Fifthly and lastly, Counsel contended that the article was not directed against the House of Representatives collectively, but only against some of its members. The term "three hundred heads" did not necessarily mean the Lower House collectively, the word, "three hundred" having been used simply in the sense of "many," a common figure of speech under similar circumstances. The proceedings, which commenced at 10 a.m. were concluded at a quarter past noon, and judgment was delivered on the 23rd instant. The Court found Mr. Yamasaki Yosuke, editor, and Mr. Amenomori Iwanoshin, Publisher and Printer, guilty of the crime laid to their charge, and sentenced them to one year's imprisonment with hard labour and a fine of 50 yen each. It is scarcely necessary to say that this wonderful sentence was at once appealed against.

H.B.M. COURT FOR JAPAN.

THE Winter Vacation will commence on Saturday, the 24th December, 1892, and end on the Tuesday, 10th January, 1893. During this period no ordinary civil suits other than those already set down for hearing will be heard, except by special order, and the time allowed defendants to answer petitions filed between the days above named will be computed from the 11th January, 1893. Admiralty, Bankruptcy, Summary, Civil, and Police cases will be taken as usual, and the Offices of the Court will be open from 10 to 12 o'clock daily.

TROUBLE IN SAPPORO.

A TELEGRAM despatched from Sapporo on the 19th instant at 8 p.m. announces a curious episode. On the 18th instant, at 1 p.m., says the message, the people of the *Hokkaido Mat-nichi Shimbun* stirred up the firemen, caused the fire-bell to be rung, and with over a hundred men, made a raid upon the office of the *Hokumon Shimpō*, which they set on fire. Much disturbance ensued, and over ten persons were wounded. This is newspaper rivalry with a vengeance.

MADAME MUTSU.

WE are requested to state that as Madame Mutsu is occupied attending to her only daughter, who is seriously indisposed, she desires to convey to her friends her regrets and excuses at not being able to receive them on Wednesday during the remainder of the year, or to have the pleasure of visiting them.

THE PREMONITION LAW.

THERE are many conjectures, of course, about the enforcement of the Premonition Law, but the Tokyo New Agency alleges that the proximate cause is the discovery of the *soshi's* resolve to make things hot for certain big

merchants who are supposed to be contributing largely to the spending of Japan's money abroad, and for members of the House of Representatives who oppose the Popular Party's measures. The Police, alone, understand these things fully.

THE P. AND O. FLEET.

ON the 1st October the P. & O. Company possessed a fleet of 54 steamers of 220,898 registered tonnage and 225,150 horse-power; since then the *Bokhara* has been lost. The *Australia* and the *Himalaya* head the list in size, being of 7,000 and 6,898 tons respectively; then follow the jubilee steamers, *Arcadia*, *Oceana*, *Victoria*, and *Britannia* of over 6,000 tons each.

AN O.B.C. DIVIDEND.

MR. BREMNER writes:—"I have the pleasure to inform you that I have now received instructions from the Liquidator by telegram to pay a dividend of 20 per cent. on 16th January next to creditors whose claims have been sent in and admitted."

THE HEIGHT OF YARIGATAKE.

IN the paper recently published in these columns, "Mountaineering in the Japanese Alps," the height of Yarigatake was incorrectly printed as 10,000 feet. It should have been 10,500 feet.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

A momentous crisis seems to be impending in the political world, judging from the general tone of suspense and uncertainty which pervades the whole press of the capital. Everybody seems to feel that things are out of joint, and that something startling may take place at any moment. But nobody is certain as to the character and the shape which the expected incident will assume. Situations like the present have happened often enough in the past few years. But there is one significant circumstance which distinguishes the present case from all others. On the eve of past crises, the organs of some one party at any rate were always found ready and willing to define the course of policy that ought to be pursued by their fellow-thinkers. But in the present juncture, all parties seem to be equally unwilling, or unable, to speak out their minds. The only apparently reasonable interpretation of this circumstance is that all are alike uncertain as to the part they will have to play in the coming drama. They all hope to find themselves in leading positions, but all shrink from attempting anything which may compromise their hopes. To speak plainly, it seems to be generally believed that the Government is contemplating a definite approach to either or both of the two wings composing the Opposition. Will it succeed in securing the co-operation of both at the same time? If not, with which of them will it decide to ally itself? Such appear to be the principal questions now engrossing the attention of practical politicians. We do not of course pretend to say that the Government is really considering such a step. On the contrary, we are rather disposed to think that the statesmen now in office are in the last degree unlikely to pledge themselves rashly to any course virtually amounting to the introduction of Government by party. Things are not yet ripe for that consummation in Japan. Hence, in what we write here, our endeavour is simply to reflect faithfully the impressions produced by a careful perusal of the vernacular press during the week.

The only paper that has spoken frankly about the present situation is the *Fiji Shimpō*, although suggestive articles have been published by the *Choya Shimbun* and the *Chu-o Shimbun*. The *Fiji Shimpō* considers that the Government is now on the bank of the Rubicon, uncertain and hesitating to take a final decision. In this critical situation two courses offer. The first is to fall back, though at the eleventh hour, and pursue an independent line of policy, regardless of the wanton opposition of the Popular

party but in conformity with the wishes of the independent section of the nation. The second is to boldly cross the stream and unite with the Popular party. For its own part, our contemporary would like to see the Government adopt the former course. The *Fiji* believes that, standing aloof from party politics and disgusted with the destructive attitude of the Opposition, there is a section of the nation large and powerful, although the men forming it do not noisily advertise themselves after the manner of political agitators. Persons of this description are found everywhere throughout the country. They have been disappointed, according to the *Fiji*, at the step which the Government has taken on the question of land re-assessment. They would not have refused to give whatever moral support they could to the present Cabinet, had the latter remained true to its duty and pursued an independent course of policy, instead of trying to please the Popular Party by adopting a reform which is regarded by all impartial observers as antagonistic to the best interests of the nation. But it is never too late to mend. The *Fiji* advises the Government by all means to return to its original standpoint and resume an independent policy, with the true interests of the country always in view. Nevertheless, the *Fiji* fears that the Government has gone too far to retrace its steps. In that case, it has no alternative but to direct its course towards the establishment of a Responsible Cabinet. At all events, the Government has to make its decision promptly and finally; for nothing, in the *Fiji's* opinion, can be more dangerous than to continue an attitude of uncertainty and hesitation. The present Cabinet has, on the one hand, alienated the affections of the independent classes by its ill-considered endeavour to please the Popular Party, while, on the other, the Popular Party itself shows no signs of receiving its quondam foes with open arms. Deserted by one and treated with indifference by the other, the Cabinet is in danger of serious dissensions within itself. It is advised to make a decision as quickly as possible.

The *Chūō Shimbun*, which is believed to be the organ of a section of the National Unionists, takes much pains to persuade the public that the Progressionist Party has undergone, or is about to undergo, a metamorphosis. Our contemporary believes that Count Okuma, the leader of that party, is now ready and even anxious to enter the Cabinet. His alleged declaration to a representative of the *Kokumin Shimbun* that neither Count Ito nor Count Inouye would dare to bury the past in oblivion, is interpreted as a hint to these statesmen that if they can see their way to receive him back into their company, he will be very glad to join them. The *Chūō* is evidently ill pleased with the turn things are taking, and endeavours to heap abuse upon the *Kaishin-to* as well as on the *Jiyu-to*, so as to discredit them with the people.

The same remark, we are obliged to confess, may be applied to the *Chōya Shimbun*. It has been doing its utmost to ridicule the Radicals for their alleged transformation into a moderate and conciliatory party. It now advises the Progressionists to show their true character either while the Diet is in session or when it comes to a close. The true and most congenial rôle for the Progressionists is not to oppose the Government, but to serve as its unreasoning instruments. "The sooner you doff your mask, the better for all parties concerned." Such, in brief, is the gist of the *Chōya's* article—a purely dust-stirring composition.

The Radical organ, the *Jiyu*, alluding to the recent meeting between Count Okuma and Count Yamagata, observes that all the idle rumours now circulated concerning alleged negotiations between the Cabinet and the Progressionist party are matters of utter indifference to the Radicals. These rumours, continues our contemporary, only indicate that the Cabinet has begun to be uneasy about its ability to cope with the Opposition. "Appearances go to show,"

that the Ministry is now endeavouring to adopt the wishes of the people and pursue a new policy. The forces have already been set in motion, and we only wonder how the commotion will terminate."

The Progressionist organs maintain profound silence, although on minor questions of the day they write as though the Popular Party were determined to fight with the Government as inveterately ever.

The Budget, which is now under discussion in the House of Representatives, does not, strange to say, receive from the press half the attention concentrated on it in former sessions of the Diet. Not only in the press but within the House itself, there is observable a marked degree of indifference. The large reductions recommended by the Budget Committee are being voted by the House without the slightest show of resistance. It is also noticeable that nearly one-third of the members' seats are vacant. Such a state of affairs is curious. There is no doubt that the present House of Representatives attaches at least as much importance to the Budget as its predecessor did. Two explanations offer. One is that the opponents of the Budget Committee's Report, finding themselves completely outnumbered, think it useless to offer any resistance. The other and more probable is that they have in their minds certain future contingencies which alter the situation so completely as to make it possible or necessary to go over the same ground on a new basis. It is even rumoured that the debates on the Budget are not hurried forward, as they would be under ordinary circumstances, the delay being designed to defer the final stage of the discussion to some time in January, when the Minister President may have sufficiently recovered to attend to the question personally. In short, it seems to be agreed on all sides that some sort of compromise will be effected before the Diet meets again after the New Year's vacation which commences from the 25th instant. Whatever may be the explanation, it is an undoubted fact that the papers are paying comparatively little attention to the subject. Only the Progressionist organs make some comments. But they pretend to believe that the Government will find difficulty in agreeing to the amendments now being voted in the House of Representatives, because the Ministry has already accepted the far more sweeping reductions made in the Supplementary Budget for the current year. The Minister of Finance's speech is also taken as a proof of the conciliatory attitude of the Government.

The *Nippon* regrets very much that serious political complications should arise year after year on the same question of public expenses. Until this question has been disposed of finally, it will be impossible to carry on constitutional Government smoothly. Our contemporary holds the Yamagata Cabinet primarily responsible for such state of things, for in that Cabinet's Budget extremely incomplete and the sweeping reductions voted by the Diet had to be agreed to. After its first victory, the Diet naturally imagines that it can vote reductions in any money bill introduced by the Government. In the case of the Budget now before the House of Representatives, the *Nippon* thinks that there are grounds for some of the reductions that have been proposed by the Committee. It declares the Cabinet bound to put an end, once and for all, to this unsightly practice of bargaining over the Budget after the manner of petty traders.

The questions of the re-assessment of the taxable value of land and the construction of war-vessels attract much journalistic attention. They are regarded as inseparably connected. The Bill for re-assessing the table value of land is now before Upper House. Even if that House should pass it, however, its acceptance by the Government is generally believed to depend upon the Lower House's willingness to vote the appropriations for the construction of war-vessels. The *Kokumin Shimbun*, which is

strongly opposed to the building of men-of-war, remarks that the reason why the Upper House still defers discussion on the Re-assessment Bill is because, in obedience to the desire of the Government, it awaits the verdict of the Lower House on the Naval appropriations. So soon as the latter are rejected by the Representatives, the former will be thrown out by the Peers, and *vice versa*. Our contemporary bitterly complains of the unreasonable conduct of the Peers, but has not a word to say against the Representatives.

The Opposition organs have been violently shocked by a report that several members of the Popular party propose to vote for resuscitating the Naval appropriation which have been entirely erased by the Budget Committee. The degree of consternation into which these journals have been thrown by the report is proved by their violent condemnation of the conduct attributed to the zealous supporters of the Re-assessment Bill within the Popular Party's camp. These men are threatened with expulsion from their respective parties, and are assured that they will be branded with the disgrace of deserting the people's cause. The distressed journals are not inclined to think that the present Cabinet will stoop to the use of money for getting the Navy appropriations passed by the House of Representatives; but they believe that the shrewd tacticians in the Cabinet will not lack means to bring over to their side some of the Opposition members of the Diet.

The House of Peers is honoured by all sorts of preaching from the vernacular press on the subject of the Bill for the amendment of the Newspaper Regulations now in its hands. The metropolitan journals, with a few exceptions, have formed a league for the sole purpose of bringing pressure to bear upon the Peers, and they are inviting their provincial contemporaries to send delegates to the capital for a demonstration which they have in mind. The Special Committee of the Upper House has decided to recommend the retention of the provisions relating to security money, punishment with hard labour, and suspension. As to the last mentioned clause, the Committee propose to fix the maximum length of suspension at one week. The papers are very angry with the Committee for proposing to preserve the clause relating to suspension at all. The Opposition journals in particular being loud in their condemnation of the Committee's amendments. The Peers are warned against being duped by false scholars who are dependent upon official favours. They are also threatened with a violent outburst of popular passion should they be weak enough to be guided by these false prophets. The *Nippon* thinks the attitude of the Peers on the question of the Newspaper Regulations will furnish an unerring guide as to the real character of the Cabinet, which lays claim to being a constitutional Ministry.

The Bill for the imposition of a tax on the sale of alcohol seems to be in principle approved by the majority of the metropolitan papers. But they are agreed in doubting whether the measure proposed by the Government will suffice to effect the desired object, namely to check the undue importation of alcohol from foreign countries. In the first place, they ask whether the Government has well considered that protest which the foreign Powers are sure to make against the imposition of the new tax. Secondly, they are afraid that the proposed law will not prove any obstacle to people who buy alcohol direct from foreign merchants and convert it into various kinds of drink. This apprehension is based on the fact that the law provides only against the sale of alcohol, and cannot be enforced against foreign merchants. Thirdly, the law does not exempt alcohol employed for medicinal purposes as well as in many useful industries. Altogether the draft project submitted to the House is pronounced very incomplete, and the papers advise the Committee entrusted with it to make thorough investigations and due amendments.

Original from

THE HOUSE OF REPRESENTATIVES AND THE "NICHU NICHU SHIMBUN."

THE House of Representatives on the 16th inst. decided by an almost unanimous vote that the President be instructed to take criminal action against the *Nichu Nichu Shimbun* on account of an article which had appeared in the columns of that journal. We have translated the article in our report of the proceedings, so that readers can judge for themselves what nature of provocation the House had to endure. As to that we refrain from comment, a criminal suit being on the tapis. It may be interesting, however, to note that the law under which the prosecution will doubtless be undertaken is No. 28 of 1889, entitled "A Law for protecting the Diet and its Members" (*Gikai narabi ni gi-in hogo-ritsu*), of which the 1st article runs as follows:—

Any person who slanders or insults the legally constituted Diet, shall be punished by imprisonment with hard labour for a period of from two months to two years, together with a fine of from 10 to 100 yen. Provided that, criminal proceedings must be taken by the House before any question of crime can be raised. It is a common saying in the West that a corporate body has no soul to be saved nor any character to be blasted, but the laws of Japan protect the Diet, at all events, as a corporate body, and the President of the House of Representatives should have little difficulty in obtaining judicial cognizance of his plaint. Doubtless this incident will recall the celebrated debate in the English House of Commons on the 12th of March, 1771, on the motion of Colonel ONSLOW to bring before the House for punishment "three brace of journalists" who had ventured to publish a speech of the Colonel's and to call him "little Cocking George." The debate lasted till 5 o'clock in the morning during, which time the House divided twenty-three times, one division being on an amendment that not only the printers be summoned, but also "their compositors, pressmen, correctors, blackers, and devils." The Japanese House of Representatives, proceeding by clearly defined provisions of law, had no difficulty. A very short time sufficed for it to make up its mind and pass an almost unanimous vote.

It cannot fail to strike any one reading the Debate that if the House is jealous of utterances outside its walls which may impair its dignity, it pays very little heed to what transpires in its own debates. Nothing written about it by any public journal could possibly disgrace it so much as did the conduct of Mr. TANAKA SHOZO in connection with this very question. Mr. TANAKA stood up in his place and declared, in the most emphatic manner, that the newspaper article concerning which the House was about to instruct the President to institute criminal proceedings, had been inspired by the Minister of State for Home Affairs, composed in the Cabinet, and written by Mr. ITO MYOJI, Chief Secretary of the Cabinet. Not a single mem-

ber rose to remonstrate against the monstrous libel. The House not only passed it in silence, but suffered Mr. TANAKA to repeat it in still more energetic language, and allowed another member, Dr. HASEGAWA TAI, to express approval of Mr. TANAKA'S accusations. Thus, while indignantly taking measures to vindicate itself against insulting journalistic utterances, the House of Representatives permitted one of its own members to openly insult the whole Cabinet in the grossest manner and to utter a malicious libel against a Minister of State and a Chief Secretary. Everything said by a member of the House in his place is privileged: the Law of the Houses guarantees him against legal prosecution or administrative punishment. Underlying the liberty thus secured to him is the theory that, standing in the presence of a tribunal which is the very fountain head of law and order, he will never be allowed to trespass beyond the limits of due propriety. The Japanese House of Representatives has unhappily demonstrated that its sense of the responsibilities attaching to its privileges is glaringly inadequate. Were it animated by a genuine sentiment of self-respect, we cannot think that it would have suffered one of its members to disgrace it so signally. Mr. TANAKA SHOZO, indeed, is not regarded very seriously. He has established for himself the unenviable privilege of being treated with comparative indifference. But so long as he remains a member of the Diet, the House of Representatives must accept the responsibility of his acts, and those acts, unrebuked as they are, appear to us incomparably more hurtful to the House's reputation than fifty newspaper articles could be.

THE HOUSE OF REPRESENTATIVES AND THE GAME REGULATIONS.

THE House of Representatives persists in treading the curious route which it entered when it passed a vote annulling the new Game Regulations. That it should have recorded its opinion as to the constitutionality or otherwise of the Regulations was perfectly *en règle*, for many people hold that the issue of such Regulations, except by due process of law, is a distinct violation of the Constitution. The general public, indeed, if we may judge from journalistic utterances, seems to have formed only a very superficial estimate of the affair. We read expressions of horror, for example, at the notion that such a subject as the preservation of game could have been held to justify an urgency Ordinance, and that any Government, professing to be guided by the spirit of representative institutions, should have ventured to play the arbitrary part of abstracting the matter from the purview of the Diet. These criticisms sound plausible and even forcible, but their value is im-

paired by the fact that there never was question of an urgency Ordinance at all. The Constitution reserves to the EMPEROR power to issue two kinds of Ordinances having the effect of law, namely, urgency Ordinances and Administrative Ordinances. The former are issued under the provisions of the 8th Article, and are warrantable only in the presence of "an urgent necessity to maintain public safety or to avert public calamities." The latter are issued under the 9th Article, and the justification for their issue is that they must be "necessary for the carrying out of the laws, or for the maintenance of the public peace and order, or for the promotion of the welfare of HIS MAJESTY'S subjects." The Game Regulations were issued as an Administrative Ordinance, under the provisions of the 9th Article, and that the EMPEROR is entitled by that Article to issue any regulations which he may consider essential to any of the objects enumerated therein, is beyond all question. There is, further, another important difference between Urgency and Administrative Ordinances: the former have to be submitted to the Diet during its next session; the latter need not be submitted to the Diet at all. It is difficult to be influenced by the arguments of critics who have evidently failed to distinguish even the fundamental character of the legislation they discuss. But whether the Ordinance be of the Urgency or of the Administrative class, the power of issuing it must be exercised within the limits of the law. In other words, no provision of the Ordinance must conflict with any provision of existing laws or of the Constitution. It is here that the difficulty occurs. The Game Regulations provide that a certain sum must be paid for a license by any person desiring to pursue game. The Constitution provides that no tax can be imposed or modified without the consent of the Diet. If, then, the price paid for a license be a tax, its imposition or modification by an Ordinance, instead of by due process of law, is unconstitutional. But if it be classifiable as an Administrative fee, then to deal with it by means of an Ordinance is perfectly lawful and constitutional. The Government claims that such payments are administrative fees; the Opposition avows that they are taxes. That is the whole question. Evidently it is an exceedingly delicate question, well worthy of discussion by experts. But the critics are, for the most part, absolutely confident. With the assurance that does not characterize angels, they rush in and denounce the Government in terms which suggest that the Ministers of State have been guilty of some flagrant and heinous abuse of power, and that only contempt for Constitutional restrictions could push them to such an excess. This extravagance is amusing. It also consists well with obtuseness displayed in connection with the subsequent history of the affair. For we find these extremely

Original from

confident critics waiting to see what reception the Representatives' "Bill" will receive from the Peers, whereas the striking feature of the affair is that the measure introduced in the House of Representatives was not a Bill at all but merely a Resolution (*Ketsugi-an*). It was simply a declaration of the House's opinion, and as such does not go up to the Peers or to the Throne either. Now, that the House of Representatives is entitled to record its opinion on any topic, is beyond dispute. But that the House of Representatives, which forms only a fraction of the Legislative body, has competence to pronounce an Imperial Ordinance invalid *ab initio*, is a startling and novel proposition. Yet that is what the House of Representatives did. Not only did it announce its conviction that the issue of Game Regulations by means of an Ordinance was unconstitutional—which it had an indisputable right to do—but it also went on to determine that the Ordinance was invalid from the outset—which it certainly had no manner of right to do. Laws are enacted, repealed, or modified by the SOVEREIGN and the two House of Diet. One House alone is utterly incompetent to deprive any law or Ordinance of validity. It was open to the House of Representatives to pass a Bill for annulling the Game Regulations on the ground of unconstitutionality, and to send the Bill for discussion by the Peers, and ultimately for Imperial sanction, by duly prescribed process. But of its own solitary authority to rule an Ordinance out of the statute book, was a flagrant excess of power on the part of the Lower House. In the very act of asserting the Constitution, the Representatives set an example of seriously violating it. Moreover, as stated above, they are persisting in their false route. For the Budget Committee has excised from the items of revenue all fees collected on account of game licenses, the alleged reason for the excision being that the license fees must be classed as taxes. It was pointed out to them that to invite the Government to include under any heading whatsoever in the Budget, monies collected under the provisions of an invalid law, was like hanging the highwayman and appropriating the proceeds of his theft. But they would not listen to any of these things. In short, the Representatives are behaving just as though the legislative powers divided between the SOVEREIGN and the two Houses of the Diet were combined in the Lower House alone. This appears to us to be the second gravely false step taken by the majority in the Lower House during the present session. The first was when, on the motion of Mr. SHIMADA SABURO, they voted a resolution that the Ministers of State may be summoned to listen to a speech made by one of the members; which amounts to declaring that any member is competent to make a Representation to the Government, whereas the Law con-

fers such competence only on the House in its collective capacity. The second is this usurpation of independent and final authority with regard to an Imperial Ordinance. There is no reason to be surprised that errors should be perpetrated in these early days of parliamentary inexperience, but unfortunately the two errors distinguishing the present session greatly accentuate the difficulty of the situation in which the Administration and the Legislature find themselves.

IMPERIAL PARLIAMENT.

FRIDAY, DECEMBER 16TH.

HOUSE OF PEERS.

The House met at 10.50 a.m., the Order of the Day being:—

- 1.—Bill (First Reading) for abolishing the Peace Preservation Regulations; sent up from the Lower House.
- 2.—Appointment of a Special Committee to report upon the same.
- 3.—Bill (First Reading) for amending the Public Meeting and Political Association Regulations; sent up from the Lower House.
- 4.—Appointment of a Special Committee to report upon the same.
- 5.—Bill (First Reading) for amending the 17th Article of the Conscription Law; presented by Viscount Hayashi Tomoyuki.
- 6.—Representation relating to the reduction of Official Salaries; presented by Mr. Kage Nobunori.

Viscount Tani said that the disaster which had befallen the *Chishima Kan* and her crew, could not be passed over in silence. He desired, on behalf of the House, to convey expressions of sincere sympathy to the friends and relatives of the deceased officers and men, and also to place on record the House's regret for the loss of the ship.

Prince Konoé and several members supported the motion, which was passed without comment.

The President asked the House's permission to change the Order of the Day in order to discuss the Supplementary Budget for the current year, which had been sent up from the Representatives, and concerning which the Government had requested all possible despatch to be used.

The House consented.

Mr. Hosokawa Junjiro, President of the Budget Committee, said that the Committee would undertake to present its report on the supplementary Budget by the 19th instant, if the House instructed it in that sense.

The House agreed, and then proceeded to the Order of the Day.

No questions being asked as to the Bill for abolishing the Peace Preservation Regulations, it was entrusted to a Special Committee of 9 nominated by the President.

Viscount Soya said that this Bill had now been three times sent up from the Lower House, but, owing to one cause or another, had failed to evoke a decision from the Peers. The fact had provoked much criticism, and he now desired to move that the Special Committee be instructed to present its report within a week's time.

The House passed the motion.

The Bill for amending the Public Meeting and Political Association Regulations was entrusted to a Special Committee of 9 nominated by the President, but a motion of Mr. Hayashi Soyemon, that the Committee be instructed to present its report within one week, was thrown out, as was also a motion by Viscount Matsudaira that the report must be presented within two weeks.

The Bill relating to the Conscription Law having been temporarily withdrawn, the Representation relating to Official Salaries was read as follows:—

REPRESENTATION RELATING TO THE REDUCTION OF OFFICIAL SALARIES.

When a nation's resources are duly husbanded, its people are harmonious and happy, and diligently engage in their respective businesses, so that the nation, even though small, becomes rich and strong. But when the public resources are misapplied, the people grow discontented and lazy, so that poverty and feebleness result for the nation, even though it be large. Japan is a small nation in the East. Having remained for several

hundreds of years in seclusion, she has now to take her stand in the arena of universal competition, and must seek to occupy a successful position by fostering her national strength. To that end, education must be encouraged, the military equipment must be completed, commerce and industry must be developed, Hokkaido must be opened, and in other directions also various outlays have to be incurred. All these undertakings increase the expenditures of the State. Yet our annual revenue is not much more than eighty million *yen*. If such an amount be compared with the incomes of powerful foreign nations, the discrepancy makes us lament our insignificance and feebleness. Now is the time for the people both high and low, to economize all unnecessary outlay, and to apply the money saved to some practical use. According to the existing Administrative Organization, the amount of official salaries is over fifteen million nine hundred and eighty thousand *yen*. Deducting the salaries of military and naval officers, and diplomatic and consular officials abroad, a sum of over ten millions two hundred and sixty thousand *yen* remains. This total represents more than twelve percent of the whole revenue of the country. On the other hand, inasmuch as officials receive such high salaries, they gradually become luxurious and wasteful, and everything appertaining to the Government is splendid and showy, with the result that the simplicity of the people is impaired and they fall into extravagance; while there simultaneously spring into existence the abuses of commercial immorality, personal greed, and the predominance of individual interests. The wealth of the nation decreases. Deceitful merchants and overpaid officials alone become daily richer. The people at large grow discontented and lazy. Friction between rulers and ruled augments to such an extent that cries of "reduce Administrative Expenditures" and "lessen the burdens of the people" resound all over the empire. Unless the Government corrects these abuses now with a strong hand, the future of the nation is indeed critical and lamentable. We therefore sincerely hope that the Government will return to its original intention of economizing the wealth of the nation, and that having regard to the cause of universal discontent, it will at once reduce official salaries to about seven per cent. of the revenue, dismiss all superfluous officials, and economize all needless expenses, thus setting an excellent example of industry and simplicity. If such a courageous measure be adopted, able and faithful scholars will come forth to serve administrative posts regardless of the amount of the emoluments they may receive. Further, a reduction of expenditure to the extent of over four million five hundred thousand *yen* will not only enable us to build two iron-clad men-of-war annually, but the goodwill of the people will also be reawakened, their discontent will change into satisfaction, and their laziness into diligence. Thus the nation will once more become simple, and its burdens being decreased, it will grow rich and strong. So soon as the Government shows discretion in choosing able and honest men, abolishing the abuse of favoritism, correcting the habit of extravagance, and coöperating harmoniously with the people, the national rights will be asserted and we shall attain a permanently superior position in the world. What can be better than such a prospect of tranquillity and happiness? Ever since the 18th year of *Meiji* (1885) though the Administrative Organization has undergone several reconstructions, no effort has ever been made to restore to the people joy and content. We therefore venture to present this Representation relating to the reduction of official salaries. With regard to the abolition or amalgamation of various offices and the dismissal of superfluous officials, so as to facilitate administrative processes and thereby not only economize wasteful expenses but also make the Administration efficient, since these reforms belong to the functions of the Government, we make no detailed reference to them here.

Presented by KAGE NOBUNORI.

Supported by Prince KONOÉ ATSUMORI, and others.

Mr. Kage Nobunori said that to secure the happiness and prosperity of a State nothing was more essential than harmony between rulers and ruled. It could not be said, however, that such harmony existed at present in Japan. The constant cry of the nation was for economy of administrative expenditure and lightening of the burdens of the people. He believed that the abuse chiefly responsible for this unhappy state of affairs was to be sought in the inequality existing between the emoluments of the official class and the circumstances of the people. The salaries and luxurious habits of officials were

out of proportion with the general standard of living, and it resulted that not only was a pernicious example set, but also great discontent was engendered. He trusted that these considerations would secure the support of the House for the Representation which he had the honour to present.

Viscount Tani supported the Representation. His views had not been hastily formed. The Representation now before the House was, in truth, in accord with the Representation (*Kinken Shobu no Kengi-an*) introduced by himself last session. He did not support the doctrine now so prevalent among the people that administrative expenditure should be reduced merely for the sake of cutting down the Land Tax. His contention was that many other works of national importance called for prompt action. If the resources of the State permitted, he would be the first to vote for liberal salaries to officials. But when he observed the country's urgent need of an increased Navy, of military equipment, and of coast defence, he was ready to give even the clothes off his back to further these vital objects. The need of the time demanded that all should make every possible sacrifice on behalf of their country, and, being thus persuaded, he entertained no doubt that the Representation would be adopted by the House.

In answer to a question by Baron Ozawa, Mr. Kage said that the first purpose of the Representation was to secure a reduction of official salaries. But it also aimed at cutting down the number of superfluous officials.

Mr. Miura Yasu said that since the Restoration many reductions had been effected in official salaries, but it was impossible to feel satisfied yet. The example of luxury and extravagance set by officials must be ascribed to their excessive emoluments. In 1870, when the late Okubo had set about building for himself an official residence in Nagata-cho, Saigo Takamori had found fault with its magnificence. Yet the house in question would scarcely pass to-day as the official residence of an ordinary *sonin* officer. With regard again to the full dress uniform of officials, it used originally to be worn only in connection with foreign intercourse. But now it was used on all occasions and by all officials. As to official residences, he saw no reason to grant them, except to the Minister President and the Minister of State for Foreign Affairs. The splendid houses and luxurious manner of living now characteristic of the official classes, had led to a perfunctory manner of discharging duty and were calculated to impair the general standard of morality. The Diet, in its first session, had effected a reduction of 6½ millions in the Budget. But the consequences were scarcely perceptible. Now, once more, the Committee in the Lower House were said to be engaged in making retrenchments, and he believed that in the item of official salaries alone, a reduction of about four million *yen* would be effected. Doubtless the reform could be carried out without any difficulty. He himself, when serving as an official, had been very sensible of the extravagance of his salary, and he was persuaded that among his hearers there were many officials conscious of the same fact. He urged them to openly support the Representation, and acquire the honorable reputation of having led this patriotic reform.

Baron Ozawa moved that the Representation be entrusted to a Special Committee of 9, nominated by the President, for amendment, as the language used in some places seemed unduly harsh.

Mr. Mitsukuri Rinsho, speaking as an official and as a member of the House, opposed the Representation. He reminded the House that an official had to be a man of certain attainments, and that, to qualify for his position, he was obliged to obtain an expensive education. It seemed only right and wise that the State should remunerate its competent servants in a sufficient manner. Underpaid officials were a source of grave abuses. Faults of administration were due in a much greater degree to inadequate than to excessive salaries. His own

conviction was that the scale of official salaries instead of being too high, was too low at present.

Viscount Matsudaira approved of the spirit of the Representation but objected to its phraseology. He seconded Baron Ozawa's motion for a Committee of Amendment.

Mr. Watanabe Kyoshi opposed the Representation. If it were claimed that official salaries were too high, some proof of the fact ought to be offered. A mere assertion in that sense could not carry conviction. The State ought to pay its servants. Undue economy in this respect could only result in incompetent or corrupt service. He fully endorsed the language of the Representation where it referred to the abuse of favouritism, but he failed to see what that had to do with official salaries, or why salaries should be reduced because favouritism was practised. He noticed, too, that members who supported this Representation did not themselves always set the example of practising the virtues which they preached. Receiving the same pay as the rest of the members, they were frequently conspicuous by their absence from the House. Such lax habits were not permitted to officials, who had to work long, regularly, and hard, to earn their stipends.

Inspector-General Takagi said that he had never before addressed the House, and that he felt considerable diffidence about doing so. He was not altogether opposed to the Representation, but he could not believe in the possibility of putting its principle into practice. Serious discontent would at once be created throughout the whole body of officialdom. Already men were far from satisfied with their emoluments, and if sweeping reductions were now made, it seemed inevitable that the resulting discontent would beget neglect of duty, and that the injury to the public service would far outweigh the pecuniary advantage of the proposed economies. For this practical reason he felt compelled to oppose the Representation, though he endorsed the theory it embodied.

Baron Ozawa's motion was then put and lost.

The President said that in view of the important character of the Representation, it seemed advisable to take a closed ballot.

Objection being raised to this course, the opinion of the House was taken, when a majority voted for proceeding by the ordinary method of a show of hands.

The President called for a show of hands, and declared the Representation lost, but his decision being challenged, an open ballot was taken, when 68 voted in favour of the Representation and 65 against it.

The House rose at 2.30 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.10 p.m., the Order of the Day being:—

- 1.—Third Reading of the Barristers Bill.
- 2.—Report of the Special Committee on the Bill for amending the *Sake* Brewing Tax Regulations.
- 3.—Report of the Special Committee on the Bill for amending No. 24 of the second year of Meiji.
- 4.—Representation relating to the extension of Navigation.
- 5.—Representation relating to the opening of Matsugasaki Harbour.
- 6.—Bill (First Reading) for taxing Official Salaries.
- 7.—Representation relating to Reform of the Navy.
- 8.—Representation relating to the dispatch of Commissioners to examine into the state of Foreign Industries.

The President announced the receipt of the following:—

- A Bill for amending the Mining Regulations; presented by Mr. Takami Mineo.
- A Representation relating to the establishment of a Steel Foundry; presented by Mr. Kashiwada Moribumi and others.

Mr. Takata Sanaye, on behalf of the Petitions Committee, reported that 1,853 petitions had been received, and that the Committee had divided them into two classes, the first for submission to the House, and the second for rejection.

After some discussion the Third Reading of the Barristers Bill was passed.

Mr. Suzuki Shoji, on behalf of the Special Committee, reported against the Bill for increasing the Tax on *Sake* Brewing. The reason for the Committee's adverse decision was that the sole object of the Government in seeking to impose this increased tax, was to obtain funds for reassessing the taxable value of land. But the Committee believed that ample funds for that purpose could be obtained by cutting down administrative expenses in the Budget. They did not say that if occasion arose, an increase of the

Brewing Tax might not be advisable, but they considered that, from the point of view of equal incidence of taxation, this impost ought not to be the first to undergo augmentation. Another consideration which influenced them was the marked increase of late years in the importation of alcohol. Even with the *Sake* Brewing Tax as at present, foreign alcohol was rapidly taking the place of the domestic manufacture, and it was impossible to doubt that if further obstacles were placed in the way of *Sake* brewers, the importation of alcohol could not fail to receive a great impulse.

Mr. Awaya Shinazo, as a member of the Special Committee, asked permission to add a few words. He too opposed the Bill. They knew how he had hitherto supported all the Government's measures. They had called him the captain of the pro-official company, and had asserted that whatever emanated from the Government was sure of his support. That estimate was not correct. It was true that his attitude hitherto had been invariably favourable to those in power, but the reason was that he had approved their measures. It did not matter to him who supported or who opposed a Bill. If he believed in it, he voted for it. But he now found himself compelled to take part against the Cabinet. The object of this Bill and of the measures allied with it was to favour the farmer at the expense of the manufacturer. He did not for a moment believe in such a policy. Moreover, he was weary of attempting to discuss measures on their merits. No such method of discussion existed any longer in the House. Everything was subserved to party interests. They had a *Jiyu-to*, a *Katshin-to*, and a *Kokumin Kyokai*. The sympathies and antipathies of these decided the fate of every Bill. He abandoned all hope of harmony between the Administration and the Legislature until a coalition Cabinet were formed. Nothing short of the admission of Count Itagaki and Count Okuma to the Cabinet could possibly place matters on a harmonious basis. It was impossible for any Cabinet to be stable or to pursue a conscientious and resolute policy under existing circumstances. Henceforth, he must not be counted as the captain of the pro-official party. He abdicated the position definitely.

On a vote being taken to carry the Bill to a Second Reading, only one member, Mr. Suyematsu Kencho, stood up to support it.

Mr. Suzuki Shoji, on behalf of the Special Committee, reported adversely to the Bill for amending Law No. 24 (*i.e.* the Law relating to licenses for brewing *Sake*). His reasons were the same as in the case of the previous Bill.

On a vote being taken to carry the Bill to a Second Reading, it found no supporters.

The Representation relating to Navigation was then read.

REPRESENTATION RELATING TO THE EXTENSION OF NAVIGATION.

It is unnecessary to dwell upon the important relation that maritime communications bear to the welfare of the state. Especially is this true in an insular country like ours, the prosperity of whose inhabitants must largely depend on their communications by water. It is essential, therefore, to consider the subject profoundly. The public has already recognized that the extension of navigation is one of the most urgent needs of the nation, and that it ought not to be neglected even for a day. Nevertheless the maritime enterprise of our country has been but little extended abroad. The only regular services are to the coasts of China, Korea, and Manila. In order to develop such enterprise, it is absolutely necessary to make extensions to foreign countries, namely: Australia, Europe, America, and Vladivostok. With respect to these lines discretion must be used in determining which shall be first organized. We consider a line to Australia to be the most urgent, and that a line to Europe should follow next in order. As for the American line, it will not be too late to establish it after the Nicaraguan canal has been completed. The Vladivostok line should be opened before the completion of the Siberian Railway, but the Australian line and the European line should be established at once. There is at present no regular service between Australia and any Oriental nation, but a certain State has been attempting to organize such a service, and thus deprive Japan of the opportunity which, if she loses it, she will find it difficult to offer again. For that reason the

Australian line should be established first. There are regular services of foreign companies' steamers to Europe, and all Japanese are carried by them, eighty per cent. of the profits derived from freight being monopolized by those vessels, and only twenty per cent. remaining for Japanese steamers. In order to recover this profit now it is best to open a new line to Europe. The advantages will be very great when our steamers voyage to all the European harbours. For these reasons the European line ought to be opened in the second place.

To establish these two great lines and undertake such enterprises in consideration of appropriate subsidies, it is necessary to have a strong steamship company. At present there is no suitable company in existence except the Japan Steamship Company (*Nippon Yusen Kaisha*). Therefore that company must be ordered to undertake the enterprise. If, however, additional subsidies be granted to the Company for the above purpose, we seem it necessary to alter the system now pursued with regard to the company.

The nature of the subsidy granted to the Japan Steamship Company at present is very vague and we cannot consider it proper. It must be altered and brought into accord with the method commonly practised in other countries; that is to say, the amount of each subsidy must be determined separately with regard to the mileage of the line and its difficulties. Such we believe to be the most approved method.

Subsidies should be granted for navigation abroad only, and no such allowance should be made on account of the domestic coastwise trade. The responsibilities imposed on the Japan Steamship Company with respect to the domestic cabotage by the provisions of Art. VIII. of the Company's Charter, should be annulled; and subsidies should be granted on account of services in foreign waters only, namely: the Yokohama-Shanghai line, the Kobe-Vladivostok line, the Shanghai-Vladivostok line, the Kobe-Tientsin line, the Kobe-Newchwang line, and the Kobe-Manila line. Moreover, the amount of the present subsidies should be reduced. In the case, however, of any line, such as that to Hokkaido, which seems absolutely necessary for purposes of communication, the Government may investigate the matter, and prepare a Bill for submission to the Diet.

As the Government has rendered itself responsible by contract for the subsidies to the Japan Steamship Company, negotiations ought to be opened with the latter, in order to devise some means of changing the contract. When an agreement has been arrived at, the period of the new contract might be prolonged so as to cover that of the new lines. The sources of subsidies for the two new lines should be determined by the Government and a Bill on the subject should be submitted for the concurrence of the Diet. Provided always that the Government shall, as far as possible, seek such sources in economies of Administrative expenditure.

The gist of the above Representation may be summarized as follows:—

1.—The nature of the subsidies to the Japan Mail Steamship Company should be changed, the amount of each subsidy being determined separately on the basis of the mileage of the line and its difficulties.

2.—Subsidies should be for foreign navigation only, none being allowed for the domestic. By this system the actual amount of the subsidies now paid may be reduced.

3.—Regular lines to Australia and Europe should be established and subsidised.

4.—To effect the above changes the Government should negotiate with the Japan Mail Steamship Company.

5.—The sources of the subsidies should be determined by the Government and submitted for the consent of the Diet. Provided always that the Government, as far as possible, should seek such sources in economies of Administrative Expenditure.

Presented by { NISHIYAMA SHICHO.
SUZUKI SHIGETO,
and 70 others.
Supported by KONO HIROAKA, and
30 others.

Mr. Nishiyama Shicho made a long speech in support of the Representation. He dwelt upon the importance of maritime facilities to a country like Japan, and referred to the history of England showing how enormously the wealth of a country could be increased by means of a commercial navy. Japan resembled England geographically and in respect of her natural formation, and there could be no doubt that her best plan was to take a lesson from England's history. So soon as the Nicaraguan Canal and the Siberian Railway

were finished, this country would find herself most advantageously situated on one of the greatest routes of the World's Commerce, and she ought to prepare to take full advantage of the opportunity. But he did not urge the immediate opening of lines to America and Vladivostok. Such lines did indeed call for establishment, but they might be deferred for the present in favour of lines to Australia and Europe. Above all, a regular service of Japanese steamers to Australia was essential. It would probably suffice if a subsidy were granted at the rate of 2 yen per mile on the Australian route, and 1.70 yen or 1.80 yen on the European route. Looking round, however, at the shipping companies that now existed in Japan, only two of any size presented themselves—the Nippon Yusen Kaisha and the Osaka Shosen Kaisha. The latter, however, seemed scarcely available for the contemplated purposes, and they were consequently obliged to fall back on the Nippon Yusen Kaisha. That Company was now in receipt of a subsidy of 880,000 yen annually, in connection with the carrying trade in domestic waters. He considered that no occasion whatever existed for such a payment from the Treasury, and he proposed that, in view of establishing a line of steamers to Australia, the Company should receive a subsidy of 500,000 yen, and should be deprived altogether of the subsidy now paid to it on account of the domestic coastwise carrying service.

Mr. Wada Hikojiro asked whether it was intended that no subsidy whatever should be given for navigation in home waters, and that the Treasury should assist navigation abroad only.

Mr. Nishiyama answered in the affirmative. He admitted that some inconvenience might result from stopping the subsidy for service to such a place as the Goto Islands, but his belief was that maritime enterprise had now been sufficiently developed to need no State protection so far as home waters were concerned.

Mr. Ugai Ikujiro, in a speech of some length, urged the importance of immediately establishing a line of steamers between Niigata and Vladivostok, and moved an amendment in that sense.

The Representation was entrusted to a Committee of 9 nominated by the President.

Mr. Kuroda Tsunahiko asked permission to introduce an urgency motion with regard to an article which had appeared that day in the *Nichi Nichi Shimbun*.

Permission was granted.

Mr. Kuroda presumed that the members had read the article in the *Nichi Nichi Shimbun* of that day with reference to the House. Nevertheless it would be necessary to read it aloud:—

Alas for the empire! Once again we have to say so. Three hundred heads! They are not the heads of puppets. They have eyes to see; ears to hear; mouths to speak; feet and hands to move. Emaciated they may be, but do they not bear the burden of the nation's hopes? Coarse their brain tissue may be, but do they not constitute the legislative machine? What kind of responsibility devolves on them towards the Sovereign above; towards the people below? Do they discharge their duty when they idly become noisy frogs; become cicadas; become crows; become fish-hawks; become owls? In the morning they cry "aye;" at eve they shout "no;" on the right they applaud; on the left they denounce; their inconsistency has robbed them of the nation's confidence. The uprightness and virtue which they habitually profess constitute no real object of their vision. The interests of the country and the prosperity of the people have no abiding place in their intellect. Let them be stirred up, they become as oxen, become as horses. Collide with them, they become as wild boars, become as stags. Cajole them, they become as cats, become as *chin* dogs. Talented, brainless, they have no fixed point of view. By single sounds of censure or applause from those about them they are prostrated; are elevated; are enraged; are deprived of life; are moved to mirth; are melted in tears; are excited to cawing vehemence. The expectations which the people based on them are dissipated. There is no further use for them in the world. They are as boneless lampreys. Let them be boiled and eaten.

He bore no ill-will to the *Nichi Nichi Shimbun*, but he claimed that such an article was distinctly calculated to bring the House into con-

tempt, and that it could not possibly be passed over in silence. He moved that the President be instructed to take criminal proceedings against the *Nichi Nichi Shimbun* for slandering the House.

Mr. Yamada Taizo moved that the matter be entrusted to a Special Committee.

Mr. Ito Daihachi expressed surprise that any member could hesitate under the circumstances, and called upon the House to adopt the motion unanimously.

Mr. Suzuki Rinzo opposed the motion. He did not attempt to defend the language used by the *Nichi Nichi*, but he asserted that other journals were daily writing the same thing in different phraseology, and he urged that the manliest course for the House would be to overlook the incident.

Mr. Yamada Toji declared that the obnoxious article was not directed against individuals but against the Legislature. It was a direct insult to one of the most important branches of the Executive. Emphatic and prompt action should be taken.

Mr. Nakamura Yaroiku opposed the motion. He agreed entirely as to the objectionable character of the article, but he asked the House to consider the character of the defendant in the proposed suit. Was it not a mere *Go-yo Shimbun* (official organ). When a dog came looking around for food, human beings did not trouble themselves to drive it away. He was for letting the thing alone.

Mr. Tatekawa Umpei supported the motion. The *Nichi Nichi Shimbun* made a constant habit of attacking individual members. That might be passed over, but when the whole House was insulted, the case assumed a different aspect.

Mr. Tanaka Shozo not only supported the motion, but went a good deal further. He claimed that some one must have inspired the article in the *Nichi Nichi Shimbun*, and that its inspirer had been the Minister of State for Home Affairs. Why had not the Minister of State for Home Affairs suspended the newspaper? He affirmed that the writer had been Mr. Ito so-and-so, and that the article had been composed in the Cabinet.

Mr. Suyematsu Kencho said that no special occasion presented to speak on behalf of the Government in this matter, but he could not refrain from surprise at hearing a member of the House urge that a newspaper should be suspended.

Mr. Tanaka Shozo wanted to know how Mr. Suyematsu could sit in his place as a member at one moment, and appear in the seat of a Government Delegate the next. What did he know about the sentiments of the Minister of State for Home Affairs? He was not fit to be a Government Delegate. He (the speaker) was prepared to declare distinctly over and over again that the offensive article had been inspired by the Minister of State for Home Affairs.

Mr. Hasegawa Tai supported the motion and applauded Mr. Tanaka Shozo's remarks.

After some further discussion the motion was voted almost unanimously.

The Representation relating to Matsugasaki Harbour was then taken:—

REPRESENTATION RELATING TO THE OPENING OF MATSUGASAKI HARBOUR.

Matsugasaki Harbour in the Province of Ye-chigo in Niigata Prefecture, is one of the best anchorages in the country. But in consequence of a special agreement with Niigata Town, the harbour has never been opened to ships. It is not only contrary to nature to leave a fine natural harbour in the hands of a Local Division, thus depriving the public of a general benefit, but also the present time and circumstances, which call for the speedy development of communications, do not sanction the continued closure of such a good port. We therefore hope that the Government will adopt appropriate measures to open the said harbour, thus conferring much benefit and convenience on the public at large.

Presented by { TANGO NOBUHEI.
KATO KATSUYA.
Supported by SASAKI SHOHYO, and 75 others.

The Representation was entrusted to a Special Committee of 9 nominated by the President.

The House rose at 5.35 p.m.

SATURDAY, DECEMBER 17TH.

HOUSE OF PEERS.

The Standing and Special Committees alone met.

HOUSE OF REPRESENTATIVES.

The House met at 1.20 p.m., the Order of the Day being:—

- 1.—Report of Special Committee on the Law relating to capital for the purchase of articles for State Railways.
- 2.—Report of Special Committee on the Railway Bonds Bill.
- 3.—First Reading of the Bill for taxing Official Salaries.
- 4.—Representation relating to Reform of the Navy.
- 5.—Representation relating to Commissioners to inspect Foreign Industries.
- 6.—Report of the Special Committee on the Bill for amending Law 8th of the 33rd year of Meiji.
- 7.—Second Reading of the Bill to amend the Law of registration.

The President announced the receipt of Answers to various Questions, which were read as follow:—

1.—QUESTION RELATING TO AMERICAN POACHING VESSELS IN THE NEIGHBOURHOOD OF THE KURILE ISLANDS.

For several years it has been rumoured that American vessels visit the seas adjoining the Kurile Islands for the purpose of poaching. Further, it is now alleged that the number of such vessels has increased gradually, and that the profits earned by them are very great. If, despite these facts, the Government take no measure to restrain such proceedings, it is impossible to measure the injury that may be done hereafter to the nation's rights. The question therefore, appears to be of grave importance. We desire to know whether the Government has received intelligence of the above doings; whether it has ever seized any of the poaching vessels, and what measure it intends to adopt against them in future.

2.—QUESTION RELATING TO THE SALE OF LAND.

It is stated that certain persons who have bought or rented lands sold or let by the Hokkaido Administrative Board, in accordance with existing Regulations, are violating the conditions expressly provided in the Regulations, since they either fail to cultivate the lands at all, or cultivate small portions only of them, leaving the rest untouched. In short, they hold the land simply for purposes of speculation. Yet the Administrative Board has taken no measures against them. If such a state of affairs be suffered to continue, the land of Hokkaido will entirely fall into the hands of speculators, and no cultivation of it can take place. We desire to know why the Government does not compel these violators of the Regulations to return their lands.

3.—QUESTION RELATING TO THE PROCESS OF PAYING CONTRACTORS FOR PUBLIC WORKS.

It is reported to be the custom in Hokkaido that when the Administrative Board concludes a contract for a public work, should the latter not be completed at the end of the year, the officials connected with the work enter into collusion with the contractor, to send notice of the completion of the work, together with an application for payment of the amount of the contract to the Administrative Board. The money is thus obtained from the accountant, and kept in the hands of the officials until the completion of the work, when it is paid over to the contractor. In some cases it is alleged that the officials spend the money held by them, and the contractors do not receive the sum agreed upon for the work; are such rumours well founded?

4.—QUESTION RELATING TO THE TAX ON MARINE PRODUCTS.

A heavy tax was imposed on the Marine products of Hokkaido from the time when the island was governed by the Matsumaye clan till the 19th year of Meiji (1886). But in the latter year Count Yamagata and Count Inouye went round the island, and amended the old system of taxation by taking as a basis the average produce of the 16th to the 18th year of Meiji. By this amendment the tax was reduced to less than 220,000 yen. Thus the people were enabled to increase the number of nets, and the fisheries became more prosperous. Subsequently, the Government took the average produce from the 21st to the 23rd year of Meiji—the most prosperous time—as a basis of taxation, and the total tax was consequently increased to 310,000 yen. The people engaged in the fisheries thus had to pay an additional 90,000 yen. Moreover, a special system was adopted for collecting the tax; that is to say, a tax office was established, and a number of employes were engaged for the purpose of collection. The expenses of this office and its employes had to be paid by the people, so that they found themselves embarrassed, the number of nets decreased, and the fishing industry gradually deteriorated. Such are the statements made by the people. We desire to know whether they are true. We

also desire to know why the Administrative Board did not take the average produce for the 3 years commencing with the 18th year; and why the expenses of collecting the tax have to be paid by the people.

In accordance with Art. XLVIII. of the Law of the Houses, the above Questions are asked, and we hope that the Government will favour us with an immediate reply.

and 29 others.

THE GOVERNMENT'S ANSWERS.

ANSWER I.

It being reported that foreign poaching vessels visit the seas adjoining the Kurile Islands, the Government despatched the *Kaimon Kan*, a man-of-war, in the 24th year of Meiji (1891), and the *Iwaki Kan*, another man-of-war this year, to cruise about the Kurile Islands. But no poaching vessel was discovered or seized. Steps have been taken to investigate the number of schooners entering Yokohama and Hakodate harbours during the 24th year of Meiji, and it has been ascertained that there were 15 vessels—11 entered at Yokohama and 4 at Hakodate. Further, according to a report prepared by the *Iwaki Kan*, 6 American fishing vessels and 1 British entered Hakodate during January and June of the present year, and 5 vessels entered Atsukishiro and Kotan for provisions and water, but whether they were poaching vessels or not was not ascertained.

For the last 30 years or more some American salmon ships have been in the habit of sailing from San Francisco to the Sea of Okotsk via the Kurile Islands. The number of such vessels is increasing annually, nevertheless it is reported that their average catch is 7 or 8 thousand *koku* per annum. But whether they fish in the territorial waters of this Empire or not, has not yet been ascertained.

Henceforth, as in the past, the Government intends to despatch men-of-war in the fishing season, and to encourage Japanese subjects to fish in the above seas, so as to give no opportunity to any foreign vessel to poach in Japanese waters. For this purpose the Government included in the Budget an appropriation to conduct investigations in the marine products so as to ascertain the best fishing districts, and to improve the fishing interest generally.

(Signed) GOTO SHOJIRO, Count,
Minister of State for Agriculture
and Commerce.

ANSWER II.

Whenever land rented in accordance with the provisions of the existing Regulations is discovered to be neglected, the Administrative Board has always ordered its return, and land is never sold except to persons who cultivate it. No neglect is shown in punishing violators of the Regulations. Inasmuch, however, as the land rented has increased yearly in area and the labour and expense of superintendence increases proportionately, it is not possible at present to carry on thorough and active supervision. The Government, therefore, looks to adopt some appropriate means for making more thorough investigation.

ANSWER III.

There is no such custom as that stated in the Question with regard to the payment of contract sums for public works under the Hokkaido Administrative Board. It was found, however, that an official did resort to such a scheme, and that he spent the money received for the contractors. The Board, therefore, at once took appropriate measures to punish him. But no suit at law was brought against the Board by any contractor.

(Signed) INOUE KAORU, Count,
Minister of State for Home Affairs.

ANSWER IV.

The reason of taking the average rate of produce of the 21st to the 23rd year of Meiji, in determining the price of marine products, in accordance with the provisions of Art. XVI. of the Regulations relating to Taxes on Aquatic Products in Hokkaido, was that those years were the latest on record. The fact that the Tax-payers Committee were ordered to pay the expenses of collecting the tax from the members of the Association of Tax-payers, was because a provision to that effect is contained in Art. IX. of the same Regulations.

Finally, as the amended rate of taxation is enforced from the present year, its results cannot yet be ascertained. But the Government does not consider that it will cause the fishing industry to decline.

(Signed) WATANABE KUNITAKE,
Minister of State for Finance.

QUESTION RELATING TO OFFICIAL INTERFERENCE IN ELECTIONS.

(1) In the second month of this year, at the general elections of members of the House of Representatives, official interference took place, with reference to which the House of Peers presented a Representation and the House of Representatives passed a resolution. But the Government, in spite of these things, has not yet punished the officials who interfered. What is the reason?

(2) The misconduct and lawless procedure of the Prefectural and Police Officials of Kagoshima, Kumamoto, and Ishikawa Prefectures, is altogether to be regarded as an abuse surviving from official interference in elections. Why does the Government leave these things uninvestigated and unpunished?

(Presented by) TATEKAWA UMPEI and others.

THE GOVERNMENT'S REPLY.

The prime aim of the present Cabinet's domestic policy is to promote the improvement of the administrative machinery by bringing its working into strict accord with the provisions of the Constitution; and, on the one hand, to strengthen the foundations of the State in conformity with the great polity of the realm; on the other, to promote the welfare of the people by protecting their rights. In other words, to secure to the people of the Empire the exercise of the privileges granted to them by the Constitution and the Law of Election, is the prime duty of the present Cabinet. The Government is resolved to proceed to the limit of the powers vested in it for the purpose of eliminating all obstacles to the exercise of the right of election, whether such obstacles are due to an improper use of official authority or to the bad conduct of other persons. On the occasion of the general election of members of the House of Representatives in the second month of this year, the fact that officials misconducted themselves being established, some of them are to this day about to receive the judgment of Courts of Law, the injured parties having themselves sought the protection of the Courts, or having been urged to do so by the police, or having had suits instituted on their account by the police, and the Government is offering all facilities for the pursuit of such inquiries. But with regard to the superintendence of administrative conduct, the present Cabinet sees no occasion to take retrospective action. The misbehaviour of policemen in Kagoshima Prefecture has already led to a judgment against them in a Court of Law, but they have appealed against the sentence and the appeal is now in process of hearing. The Governor, so soon as the judgment of the Court of First Instance was pronounced, deprived the men of their office. With regard to other Prefectures, in cases where the methods of officials have been contrary to law, or have violated the rights of the people, there has been no neglect on the part of the present Cabinet either to have them punished administratively in respect of administrative action, or to have the necessary steps taken for summoning them before Law Courts in other instances.

The President also announced the receipt of,

A Question relating to poaching Seals and Sea Otters in Hokkaido; presented by Mr. Kato Katsuya and others.

Mr. Wakabara Kanzin asked permission to introduce an urgency motion for conveying expressions of the House's sympathy with the relatives and friends of the officers and men who had lost their lives by the wreck of the *Chishima Kan*. As their obsequies were to be performed the following day, he ventured to bring forward the subject.

Several members urged that it would be more expedient to defer the consideration of this matter until the Government Bills had been disposed of, and the House, adopting that view, refused to grant urgency.

Mr. Katsuya, explaining his Question about poaching in Hokkaido, complained that the answers hitherto given by the Government to queries on this subject had been unsatisfactory. He claimed that a loss of fully three million yen annually was inflicted on Japan by the poaching operations of foreign ships in her northern waters. There could be no doubt that poaching was carried on constantly. He had collected information on the subject during his stay in America, and he submitted it to the House, expressing the hope that the Government would give a distinct and unequivocal answer to his Question.

Mr. Haseba Junko said that he had intended to press for an answer to his Question about official interference in elections, but the receipt

of the Government's Reply had anticipated his action. After due consideration of the Reply, he should have other questions to put. Meanwhile, he wished to say that the Reply was not satisfactory. The principles enunciated at the outset were beyond cavil, but the facts adduced were erroneous. Moreover, the Reply pointed out that a legal remedy always existed for persons who experienced unlawful treatment. That was true. But he claimed that if administrative measures were wisely conceived and properly carried out, the necessity for seeking legal remedies would not arise. The fault lay with the Administration.

The House proceeding to the Order of the Day,

Mr. Kanmochi Tomotsune, on behalf of the Special Committee, reported in favour of the Bill relating to the purchase of articles for State Railways, and in favour of the Bill relating to Railway Bonds.

Mr. Matsumoto, Government Delegate, in answer to questions from Mr. Ooka Ikuzo and others, said that commissions for railway material had hitherto been given chiefly to foreigners because the latter's tenders had been the cheapest and their goods the best. Occasionally, orders had been given to Japanese, but at the moment he could not state exact details. As to the suggestion that the Railway Bureau had reduced its rate of commission from 2½ to 1 per cent. in deference to public criticism, he said that public criticism did not enter into the question at all. When orders were few and small, high commission had naturally to be paid; when they were numerous and large the rate of commission might be lowered. He also explained fully the origin and subsequent treatment of the floating and fixed capital funds.

The House voted to carry the two Bills to a Second Reading.

The Bill for taxing Official Salaries was then read:—

BILL FOR IMPOSING A TAX ON OFFICIAL SALARIES.

Art. I.—The salary, allowance, or emolument of whatsoever designation, received by any person from the Treasury at fixed times, shall be liable to a salary tax at the following rates:—

	Per Cent.
Over yen 100 to yen 200 per annum	5
From yen 200 to yen 500 per annum	6
From yen 500 to yen 1,000 per annum	7
From yen 1,000 to yen 2,000 per annum	8
From yen 2,000 to yen 3,000 per annum	10
From yen 3,000	11

Art. II.—The proceeds of the tax shall be applied to purposes of military equipment.

Art. III.—The proceeds of the tax shall be included by the Treasury in the Budget, as a special account.

Art. IV.—The tax shall be levied from the 26th year of Meiji, and shall be abolished in the 45th year of Meiji.

Presented by { OOKA IKUZO,
ATSUCHI MASATOSHI,
YASHIMA HACHIRO,
KAWAHARA MOSUKE,
Supported by YUMOTO YOSHINORI, and
39 others.

Mr. Ooka Ikuzo spoke at length in support of the Bill. He said that the attention of the Diet in its first sessions had been directed entirely to cutting down administrative expenses in order to divert the money to reducing the tax on land. No thought seemed to be given to the vital questions of developing the industries and resources of the country or to strengthening its military equipment. On the contrary, proposals in this sense had been negatived. But now, happily, men began to talk of building railways, extending navigation, and strengthening the Navy. It was a most fortunate change of view, and ought to be encouraged in every possible way. Nevertheless, sufficient heed was not yet given to the vital problem of military armament. In France every unit of the population had to contribute 4.42 yen annually to the national defence; in Germany the figure was 2.23 yen, but in Japan it was only 32 sen. England had a Navy of 300 ships. Even Spain had 60 ships. But Japan had only 30. These comparisons showed the necessity for some effort to increase the funds available for military equipment. Hence the Bill which he now had the pleasure to introduce. The prin-

ciple embodied in it was fortified by precedents in other countries, and would doubtless meet with the House's approval.

Mr. Kurokawa Shuzo wished to know why the burden of increasing the military equipment should be imposed on one class of the nation only. Already rumour pointed to the Navy as a Satsuma institution. Did not this Bill mean that additional emphasis would be imparted to that view, and that, in the end, the Army would be called *Oidon no Rikugun* (*Oidon*=my, in Satsuma dialect), and the Navy, *Oidon no Kaigun*?

Mr. Ooka replied that his proposal was limited merely to one source of revenue for developing military equipment.

Mr. Inouye Kakugoro was disposed to support the Bill, but desired to know whether these taxes on official salaries were to be imposed in addition to the reductions recommended by the Committee.

After some debate, a proposition to submit the Bill to a Special Committee was negatived by 110 to 101, and the House refused to carry the Bill to a Second Reading.

The Representation relating to the Reform of the Navy was then read. After a brief discussion the House decided to defer the consideration of the Bill to a future date.

The President announced that, in accordance with the House's instructions, he had placed in the hands of the Public Procurator the commission to proceed criminally against the *Nichi Nichi Shimbun*, and had received the latter's assurance that steps would be immediately taken.

The House rose at 5.35 p.m.

MONDAY, DECEMBER 19TH.

HOUSE OF PEERS.

The House met at 10.45 a.m., the Order of the Day being:—

- 1.—Report of the Chairman of the Petitions Committee.
- 2.—Report of the Special Committee on the Bill for amending and putting into operation certain portions of the Commercial Code.
- 3.—First Reading of the Bill for amending the Press Regulations sent up from the Lower House.
- 4.—Appointment of a Special Committee to report upon the same.

Prince Nijo, Chairman of the Petitions Committee, reported that 2,217 petitions had been received, and that the Committee had examined them, the results of the examination being embodied in a printed report now in the hands of the members.

On the motion of Mr. Hayashi Soyemon, the House agreed to change the Order of the Day, for the purpose of at once discussing the Supplementary Budget for the current year, which had been sent up from the Lower House some days previously.

Mr. Hosokawa Junjiro, on behalf of the Budget Committee, reported that the Committee recommended the passing of the Budget as amended by the House of Representatives.

The Minister of State for Finance briefly explained the circumstances under which it had been found necessary to submit a Supplementary Budget.

The Budget was voted item by item as sent up from the Lower House, some questions being asked and some amendments unsuccessfully proposed. In the Department of Communications Mr. Kioura, Government Delegate referred at some length to the fact that the Lower House had increased one of the appropriations asked for by the Government in consideration of having greatly reduced another. Such a course was to be distinctly condemned as a trespass by the Legislature on the domain of the Administration. The function of compiling the Budget rested with the latter, and the former's legitimate part was limited to reducing or rejecting the various items. To diminish one and on that account increase another was a distinct usurpation of the function of compilation. Such a precedent was highly dangerous. The Government, in view of the pressing character of this Supplementary Budget, did not wish to raise any definite objection, but it seemed advisable to draw the attention of the House to the fact.

Viscount Tani reminded the House that he had raised precisely the same objection in the preceding session with regard to the Lower

House's treatment of the Railway appropriations. Unfortunately, the House had not endorsed his contention, but it now appeared, from Mr. Kioura's remarks, that the Government held the same view. He deemed it very regrettable that such precedents should be allowed to stand.

Mr. Kioura said that Viscount Tani had misapprehended his remarks. The Budget was finally passed.

Marquis Saionji, on behalf of the Special Committee, reported that the Committee had unanimously approved of the Bill for amending and putting into operation certain parts of the Commercial Code. A number of changes of phraseology had been made. Further, the Bill proposed that the portions in question should go into operation from the 1st of January, but as it seemed scarcely possible to carry out that programme, the Committee recommended that the date be postponed to July 1st, 1893.

Mr. Yokota, Government Delegate, expressed great satisfaction at the Committee's report. The Committee had devoted a whole fortnight, sitting for long hours every day, to the consideration of the Bill, and its decision, coming from such eminent experts, should carry much weight. With regard to the date of operation, there had been two views in the Committee; one favouring the 1st of April; the other the 1st of July. The Government thought that public advantage would be consulted by putting the proposed laws into operation at the earliest possible date, and therefore hoped that the House would decide in favour of April 1st.

The House voted to carry the Bill to a Second Reading, but declined to proceed with the Reading until the next day.

BILL RELATING TO THE AMENDMENT OF PORTIONS OF THE COMMERCIAL CODE AND THE REGULATIONS FOR PUTTING THE SAME INTO OPERATION.

Art. 1.—The portions of the Commercial Code and the Regulations for its operation shall be amended as in the following appendix.

Art. 2.—In the Commercial Code, Book I., Chapters VI. and XII., and Book III., as well as the Regulations relating to the Operation of the same, Arts 1 to 3; 5 to 27; 35 to 45; 47 to 51; and the 3rd clause of Art. 53, shall become operative from the 1st day of the 1st month of 26th year of Meiji (January 1st, 1893).

Art. 3.—In Book I., Chapters II. and IV. the regulation relating to commercial partnerships and companies only shall become operative at the above time.

APPENDIX.

(N.B.—Portions included in brackets have been excised, and italicised portions amended or added.)

Art. 67.—Partnerships and companies carrying on business contrary to public or good morals may be dissolved by order of the Court on the application of the Public Procurator [or of the police authorities] or by the Court of its own motion. Immediate complaint may be raised against such order.

Art. 73.—Every partnership and Company has its own separate property and independent rights and duties. It can [in particular, in its own name, acquire rights and incur liabilities, acquire property moveable and immovable,] sue and be sued in Court.

Art. 81.—No partnership may commence business operations until registration has taken place. Where a partnership fails to comply herewith, its operations are to be stayed by order of the Court. Immediate complaint may be raised against such order.

(NOTE.—Slight changes of phraseology have been made in this Article, but the meaning remains the same.)

Art. 82.—Where operations are not commenced within six months from the date of registration, the registration and publication become inoperative.

(NOTE.—Here again occur slight changes in the wording, but the meaning is unchanged.)

Art. 98.—[The heir or other successor of a partner can succeed to his place, unless it is expressly provided to the contrary in the contract; but he is only entitled to share in the management with the consent of all the partners.]

Art. 112.—The partnership property is, in the first place, liable for the obligations of the partnership, and thereafter every partner is [undividedly] jointly liable to the full extent of his property.

Art. 121.—The membership of a partner is terminated:—

1. By his expulsion;

Original from

2. By his death [unless his heir or other successor takes his place]. *But when by contract, or consent of the other partners, his heir or other successor takes the place of the deceased, the latter shall be exempt;*

3. By his bankruptcy;

4. By his loss of capacity, unless it is otherwise agreed upon.

Art. 155.—A joint-stock company [is to be deemed to be a commercial company] shall obey the provision of the present section as well as those of the following section, even if its object is not the carrying on of a commercial business.

Art. 176.—A certificate is to be issued in respect of each share, and such certificate is to bear the amount of the sum of money for which it is issued, the date of issue, its number, the firm name and seal of the company, the names and the seals of the directors, and the names of the shareholders.

Provided that, at the request of a shareholder, one certificate may be prepared for several shares together.

Art. 180.—The transfer of any share [upon which less than one-fourth of the amount thereof has been paid] before registration has taken place, is void.

Art. 182.—The transferor of a share on which less than [one half] the full amount has been paid up, continues liable to the company as a surety for the full amount unpaid thereon.

Art. 191.—Every company is in general meeting to elect from amongst the shareholders [at least three] not less than two inspectors to hold office for a period not exceeding two years, and who at the expiration of such period, are eligible for re-election.

Art. 192.—The duties of the inspectors are as follows:—

1. To see that the conduct by the directors of the affairs of the company is in conformity with the laws and ordinances, the regulations of the company, and the resolutions passed in general meeting [and, generally, to expose all mistakes and irregularities committed by the directors in the course of such conduct].

Art. 206.—A company may increase its capital by raising the amount of every share [or of bonds]. A company may reduce its capital by lowering the amount of every share, or reducing the number of shares; but its capital may not be reduced to less than one-fourth of the total amount thereof. [Every bond is to bear the name of its holder; with respect to its amount the provisions of Article 175 apply.]

Any company may issue bonds; and every such bond must bear the name of its holder, and the provisions of Art. 175 shall be applicable to its amount.

Art. 217.—Shares declared to be forfeited, or which have been assigned to or have devolved on the company in satisfaction of a debt or otherwise, are, within [one month] two months, to be publicly sold, and the amount realized deposited in the treasury of the company.

Art. 222.—Every company is bound to keep at its head office as well as at each branch office a list of its shareholders, and its prospectus, regulations, charter, resolutions passed in general meeting, statements of each business year, inventories, balance sheets, business reports, schemes for the distribution of dividends or interest, and a list of its mortgage creditors, and creditors having a pledge of immovables, and is on demand to allow [any person] any shareholder or creditor of the company to inspect such documents during ordinary business hours.

Art. 237.—After registration every disposition of property of the company, otherwise than for the purpose of liquidation, and all transfers of its shares are void [unless sanctioned by the Court for special reasons].

When the liquidators desire to continue the business for the purpose of liquidation they must obtain the sanction of the Court.

Art. 253.—Add the following clause:—

When the liquidators have handed over the affairs to the manager of the bankrupt's property their responsibility is considered to be terminated.

Art. 256, Section 2.—If they commence business operations before registration.

(Note.—A slight change in the wording has been made, but the meaning remains the same.)

Art. 268.—When a person participates in the commercial transactions or business of another by contributing property thereto, on the understanding that he is to share, in return for such transfer of ownership, the profits and losses without his name appearing in the firm name etc.

Art. 299.—Bills of exchange and promissory notes are instruments of credit running to order or to bearer and which provide for the [unconditional] payment of a certain sum of money and import, as of course, lawful consideration.

No condition shall be provided in Bills of Exchange.

Art. 710.—The possessor of a bill, note, or cheque, who has acquired it by lawful means and without gross negligence, cannot be required to deliver up such bill, note, or cheque, or the proceeds thereof, except in cases where (the demand so to do is based on such facts as would constitute a plea to a claim on his part for delivery up of the instrument to (him) the reason of his claim became void.

Art. 712.—Claims arising on a bill or note against the acceptor or maker, respectively, are prescribed after a period of three years, calculated (as beginning to run) from the day of maturity; the rights of recourse of the holder and of the indorsers, respectively, against the drawer and prior indorsers are prescribed after a period of three years running from the day of (protest or) notification of the claim.

Art. 717.—The drawer may draw the bill payable to his own order or (if payment is to be made at a place other than that where the bill is drawn), he may draw it upon himself.

Art. 723.—Each indorsement on the bill must contain the date and place, the signature and seal of the indorser and the names of the indorsee; a bill may, however, be indorsed (in blank) by signature and seal of the indorsee only.

Art. 730.—An indorsement for purposes of agency, where such object is indicated on the bill, entitles the indorsee to the exercise of the rights and duties of the indorser, (in particular, to the right of making a further regular indorsement, unless a prohibition to make a further regular indorsement is stated on the bill) *Provided that, unless a special condition is mentioned, no regular indorsement can be made.*

Art. 731.—In an indorsement for a guaranty [(Bill Pledge, Bill Deposit) is a regular indorsement, even where such object is not stated on the bill, with the exception that every party liable on the bill may raise against the indorser the plea of payment, or other charge of the debt which was thereby intended to be guaranteed] *if its object is stated, the indorsee can exercise the same rights and duties as the indorser. Provided that, such a regular indorsement can only be made in case no demand of repayment of debt is made.*

Art. 732.—An indorsement is only effective for the indorser where the series of indorsees up to himself is duly connected; a bill indorsed for purposes of agency or guaranty may be further indorsed by the indorser [as well as by the indorsee].

Art. 734.—The holder of a bill may, in the absence of anything therein to the contrary, present it before maturity to the drawee for acceptance, and in the event of non-acceptance [must] may protest the bill [on the day next following].

The drawer of a bill [payable elsewhere than at the place of residence of the drawee] may state therein that the same is to be presented for acceptance under pain of loss of the right of recourse. *In the event of non-acceptance he must protest the bill on the day next following.*

Art. 735.—If the drawer of such bill refuses to duly accept the bill, or to date the acceptance, the bill [must] may be protested [on the day next following]. In such case the day of protest is to be taken as the day of presentment. Failing protest, [the day of maturity is to be calculated from the last day of the period for presentment] *the last day of the period for presentment shall be regarded as the day for presentment. Provided that, when no protest is made on the day next following, the right of suing the drawer and indorsee shall become void.*

Art. 739.—Where the drawer has refused acceptance either in whole or in part, or where the acceptance is to be regarded, in accordance with the provisions of Arts. 737, and 738 as refused, the holder is forthwith to notify the drawer and the indorsers of the protest. [Failure to give such notice is attended with the loss of every right of recourse against those to whom it has not been given.]

Art. 790.—Every protest is to be made by an officer of the Court or by a notary, or where there are no such persons at the place [by the protesting party himself in the presence of two male witnesses, who have attained majority, and who should, when possible, be traders] *the Heads of Cho or Son shall make it.*

Art. 791.—In cases of necessity, protest may be made at the Court [or] at the office of a notary, or at the Office of Cho or Son.

Art. 793.—Protest may [not] be made [even with] when the consent of the party against whom it is to be made is obtained, at any place other than such as is appointed by law.

Art. 795.—(add the following clause after section 6):—

7.—In cases of Art. 793, a consent of the party against whom it was made.

Art. 798.—Officers of the Courts [and] notaries, and Heads of Cho or Son are bound to enter in full, day by day, in a register the protests drawn up by

them, and, on demand, to issue duplicates thereof to the persons protesting.

Art. 800.—Such rate of exchange must in no case, not even in the case of the successive drawing of two or more return bills, exceed the rate of exchange for a sight bill drawn at the place of payment of the original bill on the place of issue of the same. [Each of these rates of exchange must be certified by a broker.]

Art. 801.—The return bill is to be accompanied by the protest bill, and the protest [and the recourse account,] together with the two certificates of the rate of exchange.

Art. 818.—A cheque is transferable by indorsement, and [where it is indorsed in blank] by the name and seal of the indorser only, or drawn payable to bearer, by delivery.

Art. 819.—A cheque requires neither acceptance nor protest. Claims on a cheque are prescribed after the expiration of three years from its date. [In the event of a cheque not being presented or forwarded for payment within three days of the day of its issue, the holder bears the consequence of the delay.]

A cheque must be presented for payment if the place of payment is within the locality of issue within three days; if it is elsewhere, within seven days.

Art. 820.—When, on presentment in the same locality, as that of issue, payment of a cheque is not made, the holder and every indorser has, during a period of ten days, or fifteen days in case of a different locality from the date of the cheque, a right of recourse; the holder against all indorsers and the drawer, and each indorser against the parties prior to himself and the drawer, even if the period has expired, payment of a cheque is made on the following day of its issue is valid. As against the drawer [however,] such right of recourse continues even after such period has elapsed if he had no credit open, or had exhausted the same, or had countermanded payment.

In the event of litigation the drawer is bound to produce his cheque-book and pass-book in Court.

Art. 979.—The person trading who suspends payment or, in the case of a [commercial] partnership or company, the managing partners, directors or liquidators are within five days of the suspension inclusive of the day on which it took place, to notify such suspension with a statement of the causes therefore to the Court of the place of the seat of business or domicile in writing or for entry in a protocol.

Art. 910.—The adjudication rule is to contain:—
1. The date of suspension of payment. *Provided that the date shall be determined by the decision of the Court or it may be altered.*

Add clause 7:—The date of judgment of bankruptcy.

Art. 990.—Every act, otherwise legal of the bankrupt, subsequent to suspension of payment or within ten days immediately previous thereto, by which he procures out of his property [a gratuitous advantage for another is, as of course, null and void as against the estate; such are in particular, donations, burdensome contracts incurring obligations gratuitously or with disproportionate consideration], *donation, gratuitous act, or contract with disproportionate consideration, payment of debts not due and the irregular payment of debts due, as well as the giving of guarantees for obligations previously incurred.*

Art. 1002.—Together with the adjudication of bankruptcy, the Court shall order seals to be placed upon the movable property of the bankrupt [and his immediate detention or official surveillance].

[The above measures may be ordered prior to the bankruptcy adjudication by the local police authority on the application of one or more of the creditors, if the debtor has absconded, or is about to abscond, or if he secretes any portion of his property.]

In the case of [commercial] partnership or companies the [persons and] property of all members whose liability is joint and several and unlimited are subject to these measures.

Art. 1003.—[If the debtor has complied with the provisions laid down in Article 979 and there is otherwise no ground for his detention or surveillance, the same may be omitted; the Court can, however, later on at any time, and of its own motion order the same.]

When there is a fear of the bankrupt absconding, or secreting any portion of his property, the Court may order his immediate detention or official surveillance.

In the case of partnerships or companies the foregoing measures shall be enforced against responsible members or directors.

The [debtor] bankrupt may not quit the place of his residence without the permission of the Court; and the Court has power at any time to order the compulsory production of the [debtor] bankrupt.

Art. 1019.—For the following acts of the admini-

strator, so far as they relate to a subject-matter [of the value of at least one hundred yen], the hearing of the bankrupt and the sanction of the commissioner are first necessary; etc.

Art. 1034.—A wife can only enforce against her husband's [rights of property] estate such rights of claim as she is entitled to in respect of property which is exclusively her own either by law, under express agreement, or by undisputed custom.

Art. 1051, clause 5.—Not fulfilled the obligations prescribed in Articles 32, 979, and the [second] third paragraph of Article 1003.

Art. 1052.—The penal provision in the last two Articles contained, apply also to managing partners and directors and liquidators of [commercial] partnerships and companies respectively; and those contained in Article 1050 to bankruptcy administrators and to all those who have assisted the perpetrator in the commission of the publishable act or have committed it in the interest of a bankrupt.

Art. 1054.—A debtor who is adjudged bankrupt or a member with unlimited liability or [director] of a bankrupt [commercial] partnership or company respectively is disqualified, until he has obtained rehabilitation, from attending Exchanges, from trading as a broker, or as a member of an ordinary or of a limited partnership or as a director of a joint-stock company, from exercising the functions of a liquidators, bankruptcy administrator, or representative in commercial matters, from membership of a chamber of commerce, and from other mercantile posts of honour.

Art. 1055.—In the event of a composition, however, the attending Exchanges and, where it relates to a [commercial] partnership or company, the continuance of the same by members who are unlimitedly liable or [by directors] is permitted without the necessity of proving that which is in the first paragraph of this article prescribed.

Mr. Suyematsu Kencho, Government Delegate, said that the Bill for amending the Press Regulations, as sent up from the House of Representatives, contained much to which the Government could not possibly consent, but, it would perhaps be more convenient if he entered into detailed explanations before the Special Committee.

The Bill was entrusted to a Committee of 9 nominated by the President.

The House rose at 2.40 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.20 p.m., the Order of the Day being:—

- 1.—The Budget for 1893-94. (Discussion to terminate at 3 p.m.)
- 2.—Report of the Special Committee on the Bill for amending the Tobacco Tax Regulations.
- 3.—Report of the Petitions Committee on a Petition for amending the Land Tax Regulations.
- 4.—Report of the Petitions Committee on a Petition for rescinding the Confectionary Tax Regulations.
- 5.—Representation for the Reform of the Navy.
- 6.—Representation for the Despatch of Commissioners to examine into the State of Foreign Industries.
- 7.—Report of the Special Committee on the Bill for amending Law No. 84 of the 23rd year of Meiji.
- 8.—Second Reading of the Bill for amending the Law of Registration.

The President announced the receipt of the following:—

- A Government Bill relating to Exchanges.
- A Private Bill relating to the control of State Property; Presented by Mr. Inouye Hikozayemon.
- A Private Bill for abolishing Export Duties; Presented by Mr. Tsunoda Shimpai.

Mr. Kono Hironaka, on behalf of the Budget Committee, explained that the object kept in view by the Committee in amending the Budget had been to meet the wishes of the nation. The people looked earnestly for reductions of official expenditure, and the Committee believed that such reductions could be made without in any degree impairing the efficiency of the Administrative machinery. Their principal retrenchment had been in the matter of official salaries, where they had effected an economy of 2,140,000 yen. He strenuously denied that this diminution of salaries would interfere with the public service, or deprive officials of emoluments adequate to the functions discharged by them. In the revenue side, he directed attention to the fact that the item for game licenses had been eliminated. That was because of the House's decision that the Game Regulations, being unconstitutional, had no effect *ab initio*. The appropriations for building men-of-war had also been expunged, but the Committee wished it to be distinctly understood that its consent would not be withheld from these appropriations if the reforms desired by the majority of the House were carried out by the Naval Department. It might be imagined that

the reductions recommended by the Committee were too sweeping. But the Committee had been guided by the consideration that a reform of this nature had better be made boldly once and for all. Nothing was more to be deprecated than a system of perpetual paring of the Budget year after year. The Committee thought that the full reductions should be made at once, so that henceforth a firm basis for compiling future Budgets would be established. He sincerely trusted that the Government would courageously accept the suggested amendments. The Minister of State for Finance had agreed to the reductions made in the Supplementary Budget for the coming year, though they aggregated more than 14 per cent. of the total. It was to be hoped that the frank step taken in that instance would be followed by similar courage and resolution in the case of the General Budget.

BUDGET COMMITTEE'S REPORT.

The Minister of State for Finance said:—

GENTLEMEN,—The reasons which call for the appropriations in the various items of the Budget of General Revenue and Expenditure for the 26th year of *Meiji*, and the financial policy underlying the whole, are fully set forth in the explanatory appendix and in the documentary demands of the various Departments, I presume, therefore, that you are in the main acquainted with them. But in looking at the amendments proposed by the Budget Committee, I find that very large reductions are made in certain items. The object of these reductions, as I understand from the explanation just offered by the Chairman of the Committee, is to economise Administrative expenditures. I need scarcely say that the Government is not opposed to the principle of economizing Administrative expenditures. Not only is it not opposed, but in the past it has endeavoured to effect such economies; it may now justly be said to be endeavouring to effect them; and it does not hesitate to declare emphatically that it will endeavour to effect them in the future, provided that too sudden or violent means be not adopted. But I am unable to think that reductions such as have been proposed by your Committee would be consistent with the harmonious working of the Administrative machinery, or would promote the welfare of the nation. The several Ministers of State and the Government Delegates will lay before you in detail the essential reasons with regard to each section of the Budget, so that it will be sufficient if I invite your attention to the general question. I presume that with reference to items falling within the purview of the 67th Article of the Constitution, you will seek the Government's consent at the proper time, in accordance with precedent. I beg you therefore to understand that I refrain from entering into detailed explanations except at the necessary time.

After a brief discussion the House went into Committee of the Whole.

A great number of questions were asked by the members and answered either by the Government Delegates or the Heads of Sections of the Committee. At 4 p.m. the House resumed its regular sitting.

Mr. Tsunoda Shimpei, on behalf of the Special Committee, reported unfavourably to the Bill for amending the Tobacco Tax Regulations. The purpose of the Bill, as declared by the Government, was to increase the revenue with the object of providing funds for the re-assessment of the taxable value of land, but the Committee saw no reason to increase the revenue by such means, inasmuch as the required funds could be obtained by reductions of the Administrative expenditure. Further, the import of foreign tobacco showed signs of increasing, and would be encouraged by adding to the burden on the home-grown leaf.

The House, without any discussion and by a

unanimous vote, threw out the Second Reading of the Bill.

Mr. Takata Sanaye, on behalf of the Petitions Committee, said the House was now asked for the first time to pronounce a special decision with regard to the propriety of accepting a petition, namely, the petition for amending the Land Tax Regulations.

Mr. Kato Katsuya strongly opposed the acceptance and forwarding of such a petition. It would be, in effect, a surrender of the legislative power vested in the House, since to present a petition to the Government would be tantamount to asking the Government to frame and introduce a Bill in the desired sense, whereas the House was competent to do so itself.

The House decided not to accept the petition. Mr. Suzuki Manjiro, on behalf of the Petitions Committee, explained that since the Confectionary Tax had been transferred from the Local Taxes to the National Taxes, its burden had increased so greatly that the number of confectioners had decreased by 30,000 or more, and the number of offenders against the Regulations had augmented correspondingly. Either the tax ought to be retransferred to the Local Taxes or adequately reduced. Hence the Committee recommended that the petition be accepted and forwarded.

After some discussion, the House agreed to accept and forward the Petition.

The House rose at 5.40 p.m.

TUESDAY, DECEMBER 20TH.

HOUSE OF PEERS.

The House met at 10.55 a.m., the Order of the Day being:—

- 1.—Application for leave of absence.
- 2.—First Reading of the Bill, sent up from the Lower House.
- 3.—Appointment of a Special Committee to report upon the same.
- 4.—Second Reading of the Bill for amending and putting into operation certain portions of the Commercial Code.

The President announced the receipt of

- A Bill relating to Game Regulations; presented by Mr. Tsurudono Tadayoshi and others.
- A Question relating to Official Interference in Elections; presented by Viscount Nabeshima Naoyoshi and others.

Mr. Kioura Keigo, Government Delegate, said that as full explanations of the Barristers Bill had been given in the preceding session by the then Minister of State for Justice and others, and were, moreover, contained in the documents accompanying the Bill, he need not enter into details. But as considerable amendments had been made in the Lower House, information should be furnished to the Special Committee with regard to each article.

The Bill was entrusted to a Special Committee of 9 nominated by the President.

The Bill relating to the Commercial Code was then taken.

Mr. Yamawaki Gen moved that the portions of the Code referred to in the Bill go into operation from April 1st, 1893.

Some discussion ensued, Mr. Murata Tamotsu contending that, in view of commercial custom, the 1st of July would be a more convenient date than the 1st of April.

The House rejected Mr. Yamawaki's amendment by 67 to 64, and voted in favour of July 1st 1893.

The Committee's amendments of the various articles were then discussed and voted in detail.

After the mid-day recess, Viscount Mutsudaira Nobumasa moved that the Special Committee be instructed to report by the 16th of January upon the Bills for amending the Press Regulations and the Public Meeting and Political Association Regulations.

The President said that the opportunity for making such a motion had been lost.

Viscount Soga and Prince Konoye objected to this ruling, and urged that such a motion should be possible whenever the necessity for it occurred to the members.

Mr. Murata Tamotsu did not consider that the Bills were of sufficient importance to warrant a special instruction to the Committee.

Viscount Soga said that these Bills had hitherto been killed by neglect whenever they came to the House of Peers. He considered such a result creditable. Let the Bills be passed or thrown out, it would be better and more straight-

forward that the House should pronounce its verdict about them.

Viscount Ogasawara supported the motion. He thought Mr. Murata's attitude towards the Bills exceedingly strange.

Mr. Komatsu Yukimasa observed that the Bills had failed to come up for discussion last session owing to the shortness of the Session. But on this occasion there was ample time to deliberate. He saw no reason to hasten the Committee.

Viscount Mutsudaira's motion was put and lost.

The discussion of the Commercial Code was then resumed, the Committee's amendments being voted in every case.

On the motion of Mr. Miura Yasu, the Third Reading was taken at once and the Bill passed without opposition.

The House rose at 2.25 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m., the Order of the Day being:—

- 1.—Supplementary Budget for the 25th year of *Meiji*.
- 2.—Report of the Special Committee on the Bill for making additions to the Capital of the Central Famine Relief Fund.
- 3.—Second Reading of the Bill relating to the Capital for the material of State Railways.
- 4.—Second Reading of the Bill relating to Railway Bonds.
- 5.—Representation for the Reform of the Navy.
- 6.—Representation for Despatching a Commission to inquire into the state of foreign industries.
- 7.—Bill (First Reading) for abolishing Banks of Deposit, presented by Mr. Kozaka Zennosuke.
- 8.—Bill (First Reading) relating to Taxation of the Bank of Japan; presented by Mr. Ishida Kannoosuke.
- 9.—Bill (First Reading) for amending the Regulations of the Bank of Japan; presented by Mr. Ishida Kannoosuke.

The President announced the receipt of, A Bill for readjusting certain portions of Law No. 28, of the 2nd year of *Meiji*, introduced by Mr. Konishi Jinnoosuke.

Mr. Kono Hironaka, on behalf of the Budget Committee, reported in favour of the Supplementary Budget for the current year.

ADDITION TO THE SUPPLEMENTARY

BUDGET FOR 1893.

EXTRAORDINARY EXPENDITURE.

DEPARTMENT OF HOME AFFAIRS.

3. Subsidies towards Expenses of Public Works	3,811,755.940	—
17. Inundation Fund for Hyogo Prefecture	824,956.544	—
18. Inundation Fund for Okayama Prefecture	1,729,325.410	—
19. Inundation Fund for Tokushima Prefecture	1,123,497.924	—
20. Inundation Fund for Yamanashi Prefecture	52,225.517	—
21. Inundation Fund for Kochi Prefecture	81,750.545	—

A number of questions were asked and answered. On coming to discuss the Supplementary Budget,

Mr. Maruyama Meisei commented in very strong terms on the absence of both the Minister and Vice-Minister of State for Home Affairs. He did not oppose the granting of these sums in aid, but he considered that a distinct undertaking should be furnished by the Central Government of its intention to adopt ample measures of supervision. They had before them the example of Aichi and Gifu. No less than 3½ million *yen* of public money had been paid out of the Treasury to relieve the distress caused in those Prefectures by the great earthquake, but inquiries conducted on the spot showed that only half the money had been actually applied to purposes of relief, the rest having gone into the pockets of *goyo shonin* (officially patronized merchants), Prefects, and members of Standing Committees. Large works had been undertaken, but in no instance had the Local Assemblies been called upon to consider the method of procedure. It had been a case of robbery on a gigantic scale. In making the present grants, he thought that the House should obtain from Government explicit assurances of full supervision being exercised, and he deemed it most perfunctory on the part of the Minister and Vice-Minister of Home Affairs to be absent on the occasion of the appropriations coming up for discussion. Were they to regard this as

typical of the conduct of a Cabinet acknowledging no responsibility to the Diet?

Mr. Tanaka Shozo said that as these fellows (*i.e.* the official merchants, Prefects, and members of Standing Committees) had perpetrated murder and arson in the days of Viscount Shinagawa and Mr. Shirane, there was no reason to suppose that they would have stopped at robbery. But was the last speaker unable to trust the present Cabinet also?

Mr. Maruyama replied that what he wished was to have no recurrence of the doings which had taken place under the last Cabinet.

Mr. Fujita Magohai moved to excise the grant to Yamanashi Prefecture, as furnishing a bad precedent, the people of the Prefecture not having borne their due share of the loss.

The motion was rejected, and the whole Supplementary Budget was voted as submitted by the Government.

Mr. Ito Sukekata, on behalf of the Special Committee, reported adversely to the Bill for making Additions to the Central Famine Relief Fund. The Committee considered such additions unnecessary, being of the opinion that, in the event of any calamity calling for exceptionally large relief from the Treasury, the money could be obtained by convening a special session of the Diet. Moreover, the sum still remaining was sufficient, judging from past experience, for the needs of the next eight years.

The Second Reading of the Bill was rejected by a large majority.

The Second Reading of the Bill relating to Capital for the Purchase of State Railway Material was then taken, and voted clause by clause, the amendments of the Committee being accepted. The House voted to dispense with the Third Reading.

BILL RELATING TO CAPITAL FOR THE PURCHASE OF ARTICLES FOR PUBLIC RAILWAYS.

Art. I.—There shall be a Capital Fund for the purpose of purchasing articles required on state Railways for defraying the various expenses incurred in establishing traffic and for constructing new lines of state Railways. A special account shall be made to include these items.

Art. II.—The capital for the purchase of Articles for State Railways shall be 1,800,000 *yen* which shall be taken from the current capital of State Railways.

Art. III.—The expenses of manufacturing, remodelling, or repairing Articles purchased with the above fund shall be disbursed from the same fund.

Art. IV.—The selling price of articles purchased with the Capital for the purchase of Articles for State Railways shall be determined with due regard to ordinary wear and tear, to cost of manufacture, of remodelling and of repairing, as well as with regard to other sundry expenses incurred in purchasing such articles.

Art. V.—When there is any surplus of the Capital for the Purchase of Articles for State Railways, after the accounts are made up, such surplus shall be included in the ordinary revenue of that year.

Art. VI.—The Government shall prepare a special Budget of Revenue and Expenditure of Capital for the Purchase of Articles for State Railways annually, and shall present it with the Budget to the Imperial Diet.

Art. VII.—Regulations relating to accounts of receipts and disbursements of Capital for the Purchase of Articles for State Railways shall be specially determined by Imperial Ordinance.

Art. VIII.—The present law shall become operative from the 27th year of *Meiji*.

The Bill relating to Railway Bonds was then carried through its Second Reading, and the Third Reading was dispensed with.

BILL RELATING TO ACCOUNTS OF RAILWAY BONDS.

Art. I.—The revenue and expenditure relating to Railway Bonds issued under the provisions of the Law for the Railway Extension, promulgated as Law No. 4 in the 25th year of *Meiji*, shall be separated from the Ordinary Revenue and Expenditure, and entered in a special account.

Art. II.—It shall be lawful to pay in advance the price of articles purchased for the extension of State Railways constructed with the proceeds of Railway Bonds, such articles being purchased out of the Capital for the Purchase of Articles for State Railways.

Art. III.—The second article of the present Law shall become operative from the 27th year of *Meiji* (1894).

The Representation for the Reform of the Navy was then read.

REPRESENTATION ON REFORMS IN THE NAVY.

The Army and the Navy are equally essential in the system of national defence. The Army is nearly complete in its equipment, and there being no absolute necessity to increase it, attention must now be paid chiefly to its improvement and efficiency. Much, however, remains to be done in the improvement of arms and in the construction of forts. According to a plan evolved by the Authorities some time ago, the construction of seven forts and the mounting of guns on them were calculated to involve an outlay of nearly thirty million *yen* from the 25th fiscal year of *Meiji*. The erection of above twenty forts will, therefore, require an immense sum of money—a sum for the disbursement of which no resources are now visible. The construction of forts, consequently, can hardly be expected to be carried to completion in any short space of time. But even supposing that the work were completed at an enormous cost, the coast defence of the empire could not yet be considered satisfactory. Ours being a maritime country, Naval equipment is absolutely necessary for its safety. The strength of our Navy, however, scarcely exceeds fifty thousand tons in all. Seventy thousand tons have yet to be added even to bring up its strength to the Government standard which is a hundred and twenty thousand tons. It is stated that this deficiency cannot be supplied for less than 58½ million *yen*. Thus the simultaneous construction of both forts and war vessels requires an outlay entirely beyond the resources of the country. Moreover, their construction, as planned by the Government, will be far from completing the defence of the country. Indeed, we fail to perceive any fixity of purpose in the Government's proposed method of carrying out these works. The Government adopted the hand-to-mouth method of replacing old and decrepit war-ships by new, and sought the consent of the Diet. But the Diet, for weighty reasons, refused to give its consent. Now once more, in the Budget for the 26th fiscal year, the Government has asked the Diet to consent to a "continuing expenditure fund" of about 19,550,000 *yen* for the construction of new war-vessels aggregating 26,500 tons. This scheme, too, is open to be called temporizing. In completing the Naval armament, it is necessary to fix a permanent plan in conformity with a fundamental policy which shall be pursued in perfecting the general defence of the country. The Government, however, has hitherto repeatedly changed its policy with regard to the augmentation of the Navy, and there has been no fixity of purpose in its plans for the construction of war-vessels. Such vacillating conduct is the natural result of a generally unstable policy. Unless a policy is fixed once and for all, the mere construction of war-vessels will be of little avail for purposes of national defence. The general policy to be pursued by any country in the completion of its armament has to be determined with respect to its geographical position, its general condition, and its financial resources. When a general policy of national defence has been once decided upon, it will be easy to fix a permanent plan for the increase of the Navy. Now, in our opinion, the first requisite for completing the Empire's defence is neither to surround the country with a line of innumerable forts nor to construct a large number of war-vessels. Such undertakings are more than the national resources can bear. What is most urgently needed is not a large number of small and weak ships, but a few large and powerful ironclads. Let us consider the state of things in foreign countries. Occidental Powers vie with each other in increasing their naval armament, extending their commerce and navigation, and promoting emigration and colonization. Powers which have an interest in the Eastern Question are especially active in the increase of their naval forces, and the day is not far distant when the situation in this part of the world will be completely changed and when the safety of our own shores will be affected by the altered state of affairs. It is a matter of the most urgent importance for Japan to maintain equilibrium with foreign Powers by increasing her naval forces according to a plan which will be in harmony with her general condition and within the limits of her resources. If we increase our war-vessels to the aggregate strength of 150,000 tons, our Navy will be able to maintain its ground in the East. The present strength of our Navy being about 50,000 tons, it is necessary to add 100,000 tons. The effective strength of a Navy depends, however, not upon mere tonnage, but upon the nature and dimensions of the vessels composing it. The authorities ought to elaborate a plan for the construction of war-ships by taking the above mentioned circumstance into consideration, and ought to seek the Diet's consent by forming a mature project as to the sources from which the required funds may be obtained. The Diet has hitherto repeatedly withheld its consent from the

Government's appropriations for the construction of war-vessels, because the naval policy of the Government has had no fixity of purpose; because the Navy is a hot-bed of abuses; because the organization of the Navy is defective, and because the method of its administration is not worthy of confidence. If, however, the Government decides upon a definite and permanent policy; if it sweeps away all abuses from the Navy; if it economizes the expenditures in that Department; and if, in short, its Naval administration becomes worthy of confidence, the Diet will not refuse to give its consent to all necessary appropriations for the increase of the Navy. It is to be deeply regretted that the Government's failure to eradicate accumulated abuses in the Naval Department prevents the consummation of the much desired increase of the Navy. Reform of the Navy is thus one of the most important concerns for Japan. Hence the necessity for the present Representation. The principal points of reform are as follow:—

I.—THE NECESSITY OF SEPARATING THE COMMANDING AND THE ADMINISTRATIVE BRANCHES.

The commanding and the administrative branches of the Navy are in their nature entirely distinct. The former being invested with power of moving the Navy, ought to consist of combatant officers. The Naval Administration, on the other hand, has to do with the management of business. Any person though not a combatant officer can easily conduct the administration if he only possesses the required talent for business. Consequently, in most countries the Minister and Vice-Minister of the Navy are not necessarily trained sailors. These posts are mostly filled by civilians who are responsible to Parliament and who assume office or resign it together with the rest of the Ministry. The Minister of the Navy being charged with the management of the general political business of the Department, and with exercising control over the commissariat, accounts, and personal sections, it is not at all necessary that he should be an officer of naval or military training. The control and direction of Naval squadrons, on the other hand, must be assigned to officers of proper qualifications. The mixing of command and administration is the source of all evils. In order to separate the two from each other, it is necessary to establish in the Navy a Central Naval Command Office charged with matters relating to warfare, preparations for war, maritime defence, and so forth. The present Council of Admiralty must be replaced by a High Council of the Navy, composed of the Minister of the Navy, the Vice-Minister of the Navy, the Head of the Central Naval Command Office, and so forth. This Council should be charged with deliberating on matters that fall within the scope of both the Naval command and the Naval administration, such, for instance, as the construction of war-vessels. By this arrangement, the conflict between the various sections of the Navy will be avoided. There is at present a Central Staff Office in the Navy, but as it is under the authority of the Minister of the Navy, it has no independent power of command. It is, therefore, important to establish a Central Naval Command Office, which shall be placed under the direct control of His Majesty the Emperor, and which shall be presided over by an officer of proper qualifications. The backward condition of our Navy is to be principally ascribed to the abuses resulting from mixing up the Naval command and the Naval administration. It is essential that the one be separated from the other.

II.—NECESSITY OF DISCONTINUING THE PRACTICE OF APPOINTING NAVAL OFFICERS TO CIVIL POSTS IN THE DEPARTMENT PROPER.

According to the present organization of the Naval Department, civil posts are filled by naval officers. These officers being unaccustomed to civil affairs, their appointment to civil posts has caused delay in the despatch of business and has led to an increase of officials, for, being unfamiliar with the conduct of ordinary business, these officers are unable to discharge their duties without employing as their assistants a large number of civil clerks. Moreover, in proportion as these officers become accustomed to the transaction of business on shore, they inevitably lose their efficiency for duties at sea. Devotion to civil affairs has a tendency to injure the martial spirit of an officer, and the time spent by him among official documents would have been better employed in improving himself in the science of war. Again, naval officers have certain duties to perform at sea, and cannot long remain on shore to conduct civil business. The result is that frequent changes of personnel are necessary, and this circumstance seriously interferes with the despatch of business. Consequently, the civil posts in the Department proper must be opened to other persons than naval officers, and all administrative

business must be entrusted to civil functionaries. For instance, although it is proper that on board war-vessels accountant's business should be attended to by Paymasters possessing the same status as Lieutenants, it is not at all necessary that such officers should be appointed to take charge of account business on shore. In the latter case civil officials ought to be employed. According to the existing organization, the accounts in the Department proper are taken charge of by *Shukei Sōkan*, *Shukei Taikan*, *Shukei Shokan*, and so forth, who have the status of Rear-Admirals, Captains, Commanders, and so forth. Thus the Naval Department being entirely composed of officers, it has become a hot-bed of abuses which are not easily to be swept away. Hence the necessity of discontinuing the practice of appointing officers to civil posts in the Naval Department proper.

III.—LIMITING THE NUMBER OF OFFICERS ABOVE THE RANK OF LIEUTENANT.

In every country there are certain general rules as to the term of service for naval officers, in order to prevent their indiscriminate promotion and to secure their professional efficiency. In this country, too, there are terms of service for officers below the rank of Rear-Admiral. But when compared with the corresponding terms of service in England, our terms are too short. For instance, a second Lieutenant in England has to serve for about 39 years to become a Rear-Admiral, while in this country a space of only 23 years separates these two ranks. It is an unavoidable consequence of such a state of affairs that our officers are deficient in professional efficiency. Another result of the shortness of terms of service in our Navy, is that there will soon be a superfluity of high officers as Vice-Admirals, Rear-Admirals, and Captains. There is not much difference between our practice and that of England as to the age at which naval officers have to retire from the service, but, as already stated, there is a wide difference in the length of terms of service for officers of a particular rank. Moreover, there is in our country no limit as to the number of naval officers; and promotion being made by special selection, there are cases of officers promoted regardless of the specified term of service. These promotions are obtained in most cases, not by professional aptitude, but by clan interest. It is, therefore, important that, besides fixing terms of service, the number of officers in each rank should also be limited. In the case of great Naval Powers like England and France, the number of naval officers is proportionately large, but no comparison is possible between their circumstances and those of Japan. Examining the figures relating to the number of war-vessels and officers in some of the small Naval Powers, we find that in Holland there are 2 Vice-Admirals, 4 Rear-Admirals, and 26 Captains for 117 men-of-war; and in Germany 2 Vice-Admirals, 7 Rear-Admirals, and 31 Captains for 91 war vessels. Similar proportions between the numbers of war-vessels and officers are maintained in every other country. The number of war-vessels in Japan is 35, and nearly the same figure applies to the case of Sweden. But while there are in Sweden only 1 Vice-Admiral, 1 Rear-Admiral and 20 Captains, there are in this country 5 Vice-Admirals, 8 Rear-Admirals, and 45 Captains. Even when the number of our war vessels shall have been increased to sixty, it ought not to be necessary to provide more than 1 or 2 Vice-Admirals, 3 or 4 Rear-Admirals, and 20 or 25 Captains. As Japan aspires to become the greatest Naval Power in the East, it would not be proper to take for our models the smaller maritime Powers of Europe. But in order to attain our object of increasing the Navy, it is of paramount importance to reduce the number of officials and to curtail unnecessary expenditures. That in respect of the number of officers our Navy may be compared with the great Naval Powers of the West, may perhaps be ascribed to the circumstance that naval officers have been freely promoted for the purpose of maintaining equilibrium with the promotion of officers in the Army and of civil functionaries in the other Departments of State. But Naval officers are in their nature entirely different from, and cannot be compared with, the Government officials in other Departments. In short the present abnormal increase of Naval officers is the result of the abusive system of promotion from personal considerations. The increase of our Navy in the future will involve a proportionately large number of officers. Few only of the higher officers of the present day possess professional training, being surpassed in this respect by their younger and junior comrades in the service. Now in order to promote the younger and abler officers so as to increase the effective strength of the Navy, it will be necessary to dismiss the older and the less efficient, which measure will also tend to correct indiscriminate increase of the number of

officers. These considerations point to the necessity of limiting the number of officers above the rank of Lieutenant.

IV.—EDUCATION OF OFFICERS.

The two requisites in the education of naval officers are scientific knowledge and practical training. With regard to scientific knowledge, the system of optional attendance now pursued at the Naval University will have to be abandoned in favour of a system requiring every officer in the rank of First Lieutenant and Commander to pass a term in the Naval University during the intervals of their official duties. Encouragement should be given to those who have satisfactorily passed their course in the University, while those failing to do so ought to be denied promotion. The progress of naval science is so rapid that an officer who has exclusively devoted himself to the discharge of the practical duties of his office for seven or eight years, is sure to find himself very much behind the time in point of scientific equipment. Consequently it is highly important for officers in the ranks of First Lieutenant and Commander to enter the Naval University and supply their deficiencies in scientific attainments. With regard to those of the rank of Captain, it may be left optional with them whether or not to attend the University, but those of inferior rank must be compelled to do so, except in the case of 2nd Lieutenants, who, having just finished their course in the Naval College, ought to be well versed in the latest developments of naval science, and are consequently under the necessity of devoting themselves to the acquirement of practical training rather than to attending the courses in the University. As to practical training, it is important to cause the officers to make voyages on the high seas. Such voyages must, however, be limited to the sphere within which our Navy is likely to be called upon to test its strength. Our naval officers can reap great benefit in matters of practical training by making voyages to Vladivostok, Korean ports, Newchwang, Tientsin, Shanghai, Hongkong, French Annam, Singapore, the South Sea Islands, and Australian ports, and by taking observations of the geographical situation and general circumstances of these places. The effective strength of the Navy does not depend upon the number of war-vessels alone: it depends also in a large measure upon the professional training of the officers. Hence the necessity of educating Naval officers.

V.—AMENDMENT OF THE PRESENT SYSTEM OF NAVAL STATIONS.

In completing the Naval armament, consideration must be given, as already stated, to the country's geographical position as well as to its financial resources. The establishment of five Naval Stations (*Chinju-fu*) in Japan is probably in imitation of the French system. But it is a great mistake. In the case of France, her squadrons in the Mediterranean and in the British Channel are in time of war in danger of being separated by the British fleets stationed under the strong forts of Gibraltar. Moreover, French seamen are recruited for each fleet from particular districts. Owing these circumstances, France is divided into five naval districts, each under the jurisdiction of a particular Naval Station. In Germany's case, too, her fleets in the North Sea and the Baltic are separated from each other, and it is difficult to maintain communications between them in times of emergency. Germany, therefore, maintains two independent Naval Stations, one in the Baltic and the other in the North Sea. Thus, in the case of these countries, the system of Naval Stations has been determined by the necessities of their respective geographical situation. Japan is circumstanced very differently from the above mentioned countries. She is surrounded on all sides by sea, and communication between the different parts of the coast is quite free and unobstructed. Consequently, there is no necessity for parceling out the country into different Naval districts under different Naval Stations. Such a system only tends to divide and weaken the strength of our Navy. For in case of war each of these stations will have to be defended and the forces required for that task would be so much deducted from the aggressive strength of the Navy. Naval Stations are institutions charged with making preparations for war, defending Naval ports, keeping watch on the sea, and enlisting and training mariners. Another important function of Naval Stations is to construct and repair war vessels. It must be pronounced uneconomical to establish so many Naval Stations in Japan, where at present there are so few occasions for the construction and repair of war-vessels. A Naval Station's functions are not confined, indeed, to the construction and repair of war-ships: it has also to minister to preparations for war and so forth. But even taking this circumstance

into consideration, it must be acknowledged that the present number of our war-ships does not warrant the maintenance of so many Naval Stations. France possesses about three hundred men-of-war, and in her case it is necessary to distribute them among five Naval Stations. In our country, on the other hand, there are only a little over thirty war-vessels, and consequently it is a grievous mistake to imitate France and go to the great expense of establishing five Naval Stations. Any increase of the number of naval stations ought to go hand-in-hand with the growth of requirements for them as a consequence of augmenting the fleet and the marine establishment. Leaving the two Stations at Yokosuka and Kure, the one at Sasebo should be abolished, though the naval stores at the latter place may be left as heretofore. In the case of the Yokosuka and Kure Naval stations (*Chinju-fu*), their names should be changed into the 1st Naval Station and the 2nd Naval Station respectively. At the Kure and Sasebo Naval Stations, there is very little business to be transacted. Nevertheless, a large number of officers are kept there. In some instance functionaries are maintained who have no business to attend to. This is a result of indiscriminate adherence to the provisions of the Official Organization. In such cases, several bureaux and sections ought to be combined, or the same officers may be made to transact the business of different bureaux and sections. In the case of the Yokosuka Naval Station, the Commander of the Port may be at the same time appointed to the office of Commander-in-Chief of the Naval Stations. In the case of the Kure Naval Station, things may be simplified to a still greater extent by amalgamating sections and bureaux and by appointing the several offices at the same time. A special bureaux of stores ought to be established in the Naval Department proper, with a branch offices at each of the Naval Stations. Provisions and other commodities, which these branch offices are to supply to war-vessels, should be previously sent to them from the Central Bureau of Stores. Such a system will have the effect of unifying and expediting the conduct of financial business. In order to increase our Navy, it will be necessary, in the first place, to alter the system of the Naval Stations, so that the money saved by curtailing superfluous expenditures may be devoted to the construction of war-vessels. It is contrary to the due order of things and exceedingly injurious to the national economy to establish a large number of Naval Stations without first providing for the increase of the fleet. The object of the Naval Loan, amounting to 17 million yen, must have been the construction of war-vessels, but the money realized by this loan has been mostly consumed in the erection of buildings for Naval Stations and so forth. The money spent during the four years from 1886 to 1889, inclusive of the cost of building offices at the Kure and Sasebo Naval Stations, amounted to 2,405,000 yen; while the sums appropriated for continuing expenditures are as follow:—2,164,000 yen for the construction of a dock at Kure; 1,622,000 yen for the construction of a dock at Sasebo; 2,331,000 yen for the construction of arsenals at Kure. These different items aggregate 8,723,000 yen. Besides this total, a sum of 1,963,000 yen is to be appropriated from the 26th fiscal year as continuing expenditure for the docks at Kure and Sasebo. If the docks at Kure are to be capable of undertaking the construction and repair of war-vessels above 10,000 tons the works now going on there may be continued, provided a definite plan be adopted for the increase of the Navy. If, on the other hand, the docks are designed for the construction and repair of vessels of only a few thousand tons capacity, the works had better be suspended. As to the docks at Sasebo, the works should be entirely abandoned, since they have not yet been carried towards completion. The present number of war-vessels is only thirty-five, and there being three docks at Yokosuka, it would be possible, at the rate of one vessel per month, to repair thirty-six vessels during the year at that place alone. Should, however, the docks there prove insufficient, repairs may be made at the Naval docks of Onolima and Ishikawajima, or at the Nagasaki private dock. Besides these, one of the docks at Kure having been already completed, there will be no inconvenience in matters of repair, even if twenty or thirty war-vessels be added to the Navy. We are informed that the arsenal at Kure has been established for the purpose of manufacturing 24 centimetre guns for the Navy. But the Artillery Arsenal at Osaka is capable of turning out 24 centimetre guns for forts, and the Naval guns in question may be manufactured there if a sum of about 70,000 yen be spent for the purchase of machines and the erection of buildings. In the face of such facts, a great sum of 2,330,000 yen is wasted by establishing a special arsenal at

Kure. The amount actually spent up to the 25th fiscal year does not exceed 290,000 *yen*, but the remaining sum of 2,240,000 *yen* is to be spent from the 26th fiscal year. The works thus far completed at the arsenal at Kure, are confined to the preparation of the ground, and nothing has yet been done towards the erection of superstructures. We, therefore, consider it advisable to stop these works. Thus the money appropriated for the establishment of the Naval Stations has been in too many cases spent on unnecessary works. Not only have funds required for the construction of war-vessels been largely applied to the establishment of Naval Stations, but even the portion employed for the original purpose of building war-vessels has been disbursed in a manner far from economical. Our Naval appropriations have hitherto been employed, not for the increase of the effective strength of the Navy, but for the purpose of mere show and ornament, the consequence being general unthriftiness of financial management. Such has been the case most conspicuously with regard to the establishment of Naval Stations. Hence the necessity of modifying the system for Naval Stations,

V.—CREATION OF RESERVE SQUADRONS.

It is the general practice of maritime countries to create reserve squadrons for the purpose of prolonging the effective life of war-vessels and at the same time economizing ordinary expenditures. In England, out of 444 war-vessels, 225, that is to say, more than one-half, constitute the reserve squadrons. In France, 185 out of 295 war-vessels, namely almost two-thirds of the whole, are on the reserve. There are only 35 war-vessels in this country, but as there is little to be done in time of peace, 18 of them should be selected for the duties of active service, while the remaining 17 should be set apart as reserves. Not only has the system of reserve squadrons not been adopted in this country, but the maintenance of war-ships has been generally too costly. If more attention is paid to economy, it will be possible to introduce large reductions in the expenses required for the maintenance of ships on active service. By putting one-half of the present war-ships on the reserve, it will be possible to save about 500,000 *yen* annually out of the ordinary expenditures. Hence the necessity for creating reserve squadrons.

VII.—NECESSITY FOR EXERCISING MORE STRICT SUPERVISION OVER THE PURCHASE OF ARTICLES REQUIRED BY WAR-VESSELS.

The bulk of the expenses required by each squadron is devoted to the purchase of various commodities. Consequently the manner in which these purchases are supervised by proper functionaries seriously affects the naval economy. The commissariat functionaries in the Naval Department proper ought to examine the manner in which the ships of war are supplied with necessities, and the promotion of such officers as may have been guilty of waste should be stopped, rewards being given such as may have distinguished themselves by economy. In this way, it is believed possible to effect no inconsiderable amount of saving. There is no denying that the method at present pursued in supplying ships with necessities is very wasteful, through the negligence of the authorities who ought to exercise strict supervision. If the duty of supervision is properly conducted, it will go far to introduce economy. Hence the necessity for more strict supervision over the purchase of commodities for war-ships.

VIII.—ABOLITION OF THE MEDICAL AND THE PAYMASTERS' COLLEGES.

The Navy is provided with a special College for the education of medical officers. But a large number of students graduate in the Medical College of the Imperial University, and the medical staff of the Navy may be very easily recruited from these graduates. There is, therefore, no occasion to educate special students for service in the Navy. It may be urged that, failing a special Medical College for the Navy, there is danger of medical officers falling behind the scientific progress of the day. But the graduates of the Imperial University will have ample means of keeping touch with the progress of science by preserving their connection with their *alma mater*. The danger in question is greater in the case of officers educated in a special Medical College under the Naval Department. There is also a Special College for the education of Paymasters, but this institution is equally unnecessary, for Paymasters may be appointed from the graduates of schools where book-keeping is taught. There is no reason why the principles of mathematics or medicine should not be the same in the Naval Department as they are elsewhere. What is necessary is that candidates for the Naval posts under consideration should be accustomed to the rules and practices prevailing in the Navy. It is the height of economical shortsightedness to establish such educational institutions in the Navy. If the candidates

are at first employed as probationers under the supervision of proper officers, there will be no occasion to maintain special institutions for their training. Hence the necessity for abolishing the Medical and the Paymasters' Colleges in the Navy.

IX.—REDUCTION OF THE EXPENDITURES FOR THE NAVAL UNIVERSITY.

One of the steps most vital to the increase of the Navy is to elevate the standard of scientific attainments among naval officers. As many officers as possible should be made to attend the Naval University. But, in 1891, the number of such officers was only 28, while the expenditure of the University amounted in all to 54,944 *yen*. At the end of the same year, the number of instructors, business officials, and employes connected with the Naval University was almost ninety. Is it not astonishing that so many unnecessary functionaries should be employed at the University? If improvement has since been effected, it is, highly desirable that all superfluous officers should be dismissed and all unnecessary expenses curtailed, so that the funds may be truly devoted to the advancement of the professional attainments of naval officers. The scope of the institution should be enlarged and its expenses increased in proportion to the increasing number of officers attending its course. Moreover, the Presidentship of the Naval University need not be filled by a Vice-Admiral or a Rear-Admiral. A Captain or a Commander will be sufficient for the post, the corresponding position in the Military College being occupied by a Colonel. At present the Naval College is conducted on too large a scale, and its maintenance is too expensive. Hence the necessity for the reduction of its expenditure.

The points thus far enumerated represent only the general features of the reforms which ought to be introduced in the Navy. As to other defects in the administration of naval affairs, they are too numerous to be specified here. To sum up, the principal points dealt with in the present Representation may be reduced to the following:—

- 1.—The fixing of a definite policy for the defence of the country;
- 2.—The reform of the organization of the Navy; and
- 3.—The improvement of the financial system of the Navy.

If the authorities will only determine a fixed and permanent policy for the defence of the country, and adopt a proper scheme for the construction of war-vessels, there ought to be no difficulty in attaining the desired object. It will also be easy to inaugurate a new epoch in the history of our Navy, if the authorities only alter the organization of the Navy so as to correct the mistake of appointing combatant officers to civil posts and so as to extend due recognition to men of talent by sweeping away the abuses of personal preferment. If, again, improvements be applied in the financial system of the Navy and strict economy be introduced, it will be possible to effect a reduction of more than 1,000,000 *yen* in the field of ordinary expenditures, and a further reduction of over 4,000,000 *yen* in the continuing expenditures. The amounts thus saved may be applied to very useful purposes for the future increase of the Navy. If the Government will take decisive steps for the reform of the Navy along the lines indicated in the present Representation, if it will fix a definite policy for the Navy, and if it will elaborate a proper scheme for the increase of the Navy by finding due sources to supply the required funds, the Diet will not refuse to give its consent. It is matter for sincere regret that the increase of the Navy cannot be undertaken for the reason that reforms have not yet been introduced. The Government should at once approve the Representation and submit a fresh scheme of Naval development for the consent of the Diet before the end of the present session. The Diet has already twice rejected the appropriations for the construction of war-vessels, because the Government has failed to effect the reform of the Navy and to fix a definite and permanent policy for that branch. But the Government has again asked for a grant of more than 19 million *yen*, utterly regardless of the clearly expressed opinion of the Diet. It is simply a temporizing measure to increase the number of war-vessels, without either fixing the fundamental policy of the country's defences or carrying out the reforms of the Navy. Such a measure is ill calculated to promote the object of Naval augmentation.

Mr. Sugita Teiichi said that the reason why the House had been obliged to refuse the appropriations demanded by the Government for purposes of ship-building, ever since the second session, was that the organization of the Navy demanded reform and no fixed plan seemed to have been formed as to its development. If

the Government expected the House to grant money for such a purpose, it ought to take steps in the direction of placing the organization on a satisfactory footing and formulating some fixed policy. To come before them again with proposals for ship-building while the Navy remained just as it had always been, was to betray singular indifference to the views of the House. The Acting Minister President had told them, in the beginning of the Session, that the Navy ought to be increased. Everybody was agreed upon that point. But to make a mere general statement of the necessity without indicating the extent to which the proposed increase ought to be carried, though it might do very well for the speech of a student at a graduation ceremony, did not at all become a Minister of State's declaration of policy. They must assume that if the Government was not more explicit, the reason was to be sought in the uncertainty of the Cabinet's views. Since the 15th year of *Meiji*, the naval policy of the Government had changed four times, and since the opening of the Diet, it had undergone many more alterations. In the first session, the plan had been to devote a sum of over fifty million *yen* spread over a space of seven years in the form of continuing expenditure. In the second session, the idea had been a period of nine years; and in the fourth session, there had been yet another change, the tonnage spoken of being 87,800 tons. Doubtless naval schemes must alter more or less with the growth of scientific discovery, but so many changes in that short space of two years, reminded them of a turkey-cock's plumage or water-weeds tossed by the current. It was wholly out of the question to grant money for any ship-building scheme which formed part of such an unstable policy. Japan was a sea-girt country. If fortresses were to be trusted for purposes of national defence, their construction must be undertaken on a scale quite beyond the resources of the empire. A strong fleet was therefore essential. He believed that a fleet of 150,000 tons would be sufficient, as compared with the naval strength of other States. Unless the officials concerned arrived at some definite estimate and received the approval of the House, appropriations for ship-building must be withheld. He then summarized the principal reforms desired in the Navy, as set forth in the Representation. It must not be supposed that because they lacked confidence in the Government they opposed themselves to measures for national defence. There was no question of confidence or lack of confidence. Their belief was simply that to build ships before a proper system existed for utilizing them would be like putting a Masamune blade into the hands of a tyro. He did not pretend to have set forth all the abuses existing in the Naval Department, but for the moment he refrained from entering into details of a more or less secret character. If the occasion demanded it, he would not hesitate to speak. The head and front of all the reforms needed was to free the Navy from the dominating influence of the Satsuma Clan. If the Government would act upon the suggestions made, he and his Party were ready to grant ample funds for ship-building. The reform of the Navy had now become the question of the day, and he called upon the House to adopt the Representation by an overwhelming majority.

Vice-Admiral Ito, Vice-Minister of State for the Navy, said that, though he did not desire to intrude upon the debate, it seemed advisable to say a few words about the reforms now actually in progress, and the course which the Government intended to pursue thenceforth. It went without saying that every effort should be made to increase the technical skill of officers and men. The efforts of the Admiralty were already directed towards that object. As for the accusation that the Government had frequently changed its naval policy, he did not claim that consistency had been possible. But, as pointed out by Viscount Kabayama on previous occasions, the Government had been constrained by the financial circumstances of the nation and

Original from

by the progress of the times. Such modifications of procedure were unavoidable, and would be necessary, however definite the basis of the policy adopted. The Representation dwelt on the advisability of keeping the combative and non-combative branches separate, but in point of fact they were already divided, the officers and officials belonging to each branch being, as far as possible, assigned functions appropriate to their qualifications. The Navy actually consisted of three branches; the *personnel*, the store, and the financial. The first constituted the fighting force; the second had to do with machinery and stores; the third with the monetary business. It was erroneous to state that the organization was purely military. Equally mistaken was the assertion that no fixed establishment existed. A glance at the Navy List would dispel such a misconception. The advisability of promotion by regular routine of service was urged by the Representation, but to follow such a method explicitly was possible only in the lowest ranks. In the upper grades consideration must of necessity be given to merit. Promotion by merit, so far from facilitating favouritism, was in truth an obstacle to any exercise of partiality, especially as such questions had always to be decided by the Consultative Promotion Board (*Shinku Kaigi*) and were entirely beyond the sphere of the Minister of Marine's control. As to the education of officers, there was nothing to be said. He noticed that the case of the *Chishima Kan* had been adduced as evidence that the officers of the Navy were deficient in navigating skill. Nothing could be more unfair. The *Chishima Kan* was a small vessel of 750 tons, not designed for such a long voyage as that from France to Japan. She had, nevertheless, been successfully navigated over thousands of miles of ocean, and had, despite of many difficulties, arrived without accident to her crew in the Inland Sea of Japan when a misfortune occurred against which, if they might judge from the experience of other countries, no amount of skill could completely guard. To construe that misfortune into a proof of want of navigating skill was most extravagant criticism. Again, the Representation urged the abandonment of all Naval Stations except two. But the Station at Sasebo was absolutely indispensable for the defence of the Western part of the Empire. Its abandonment would be a grave and perilous error. Neither could they endorse the policy of entrusting the construction of the naval armament to the Osaka Arsenal only. The Osaka Arsenal could not undertake the work, even if it could be deemed a rational policy to rely entirely upon one place for the supply of the whole Navy's vital needs. He refrained from occupying the House by entering into further details.

Mr. Tanaka Shozo inquired how it happened that the experience of the Navy ought to be developing, losses of ships seemed to be growing more frequent.

The Vice-Minister answered that casualties at sea were beyond ordinary calculation. They depended upon causes which defied analysis. Assuredly no hard and fast inference as to the competence of the Navy's *personnel* could be drawn from such happenings.

Various questions were asked. Mr. Inouye Kakugoro, referring to the statement of Mr. Sugita that he and his Party regarded 150,000 tons as the proper tonnage of the Navy, inquired what time and what expense would be involved in reaching that figure.

Mr. Sugita confessed that he had only spoken in round numbers. It would be for the Naval Authorities to prepare and submit the necessary estimates.

Mr. Inouye asked whether the House was to conclude that, while declaring the Naval Department to be under the sole control of the Satsuma clan, and while calling for its wholesale reform, the proposers of the Representation were nevertheless willing to entrust the duty of planning and carrying out the details of their programme to this same Department?

Mr. Sugita said that they should trust those whom they deemed worthy of trust. In answer to another member, he said that the construc-

tion of large powerful ships in preference to small was recommended in the Representation because that appeared to be the policy of all the great Western States. The figure of 150,000 tons as a total had been founded on comparison with the effective strength of other countries. Being asked whether he supposed it possible that the large changes recommended by the Representation could be planned in detail and embodied in a Bill for submission during the present session of the Diet, especially by officials who were supposed to be having been treading a different groove for so many years, he said that if the Representation were adopted, he saw no particular difficulty.

Mr. Ushiba Takuzo agreed with the Representation in same respects, but must vote against it for several reasons. Above all, he found a grave inconsistency between the professions of its proposers and the practice advocated by them. They urged the importance of increasing the Navy, but they obstructed all progress in that direction for the sake of pushing a programme which was, in effect, impossible. The Representation fixed 150,000 tons as the total to which the Navy must be raised. He presumed that if this increase were to be of any practical use, it must be effected within the course of ten or twelve years. Silver, however, the metal in which Japan reckoned her revenue, was steadily declining in its gold price, with the inevitable result that ships and guns purchased from gold-using countries must call for larger and larger outlays of silver. It was a fair estimate that to obtain the hundred thousand tons of shipping needed to bring the Navy to such a strength, they must be prepared to spend seventy or eighty million *yen*. In other words, they must provide for an outlay of about seven million *yen* annually during the next ten years. On the other hand, they were determined to have the Land Tax reduced and the Taxable Value of land reassessed; they talked of extending maritime facilities and protecting sericulture; and they had voted for the building of a number of railways. In brief, their various schemes, unless they were to be regarded as empty words, involved an expenditure of about twenty million *yen* annually. Where was the money to come from? He did not oppose, but on the contrary advocated, administrative economy. There were limits, however, to that source of saving. No one supposed that it could afford more than a small fraction of twenty million *yen*. Hence, they would find themselves confronted by the necessity of imposing new taxes or increasing the old. But their powers in either direction were limited so long as the Treaties remained unrevised, and moreover, he did not suppose that the House would apply itself to augmenting taxation in one direction for the sake of reducing it in another. This, then, was the issue: For the sake of ventilating an airy scheme which they had no ability to carry out, the growth of the Navy, on behalf of which they professed to be working, would be suspended altogether, and programmes which at any rate had the merit of being practical and practicable, would be rejected. He could never consent to vote for such a contradictory Representation. Further, the terms of the Representation seemed in excess of the proper functions of the House. It was the business of the Administration to determine a general line of policy, and submit to the Diet whatever schemes seemed necessary for carrying out that policy. The Diet, on its side, was competent to traverse the policy of the Administration and to make Representations advising modifications of its schemes. But the Representation now before them went far beyond anything of that kind. It dictated a new policy and a new scheme for carrying out that policy, and it called upon the Administration to adopt the former and elaborate the latter. Finally, the Representation required that these sweeping changes should be embodied in a Bill and submitted to the House during the present session. If the introducers and supporters of the document considered that grave affairs of State could be dealt with in that light-hearted and summary fashion he confessed

himself unable to agree with them. That reforms were needed, he did not deny. On the contrary, he strongly advocated reform, and since he regarded the country's Navy as the chief bulwark of her safety, he wished to have its organization and the management of its affairs as perfect as possible. But even if the Government, accepting the theories of reform now submitted to it, were to make them the basis of a practical programme and embody the latter in a Bill for submission to the House in the brief space of a couple of months, he should hold the Government plainly guilty of treating the vital interests of the State with unpardonable levity.

Mr. Kawashima Jun moved that the Representation be entrusted to a Committee of 9 nominated by the President.

Mr. Tatekawa Umpei moved that the discussion be continued, and that a decision be taken without reference to a Committee.

The House voted in favour of submitting the Representation to a Committee.

The President said that he desired to decline the duty of nominating the Committee. His reason was that the Committee nominated by him for the purposes of the Press Regulations Bill had been discredited. Were he assured that nothing of the kind need be apprehended hereafter, he would make the nomination.

The House vigorously signified its resolve to endorse the President's choice, and rose at 6.35 p.m.

WEDNESDAY, DECEMBER 21ST.

HOUSE OF PEERS.

The House met at 10.45 a.m., the Order of the Day being:—

- 1.—Report of the Special Committee on the Bill for rescinding the Peace Preservation Regulations.
- 2.—Representation relating to the establishment of a Steel Foundry.
- 3.—Petition relating to a change in Districts.
- 4.—Petition for abolishing the export Duty on Silk.
- 5.—Petition for laying a submarine cable to the Okinawa (Riukiu) Islands.
- 6.—Petition relating to the amalgamation of Districts.
- 7.—Petition relating to the control of the Shinano River.

The Order of the Day was changed for the purpose of immediately discussing the Supplementary Budget sent up from the Lower House. Mr. Hosokawa Junjiro, President of the Budget Committee, undertook to present the Committee's report on the Supplementary Budget by the following noon. The House endorsed his proposal, and proceeded to the Order of the Day.

Viscount Okabe, Chairman of the Special Committee, reported that the Committee recommended the rejection of the Bill for totally abolishing the Peace Preservation Regulations, as unfortunately the state of the times necessitated the existence of such a law.

Viscount Soga inquired whether the Committee thought that parts of the Regulations might be rescinded and parts preserved.

Viscount Okabe replied that the Bill related to their total abolition, and that the Committee saw no course save to recommend its rejection. In answer to Mr. Ando Sokumei, who asked whether the Committee had considered the conflict between the Peace Preservation Regulations and the spirit of the Constitution as well as of existing laws, Viscount Watanabe repeated that in the Committee's opinion the times did not permit the abolition of the Regulations. The Committee had not come to any conclusion as to a conflict between the Regulations and the laws of the land.

Mr. Ando pressed his question, and referred it to the Government Delegate, adding an inquiry as to the reasons for enacting regulations on the disquieting basis of providing against insurrection, and the reasons for including a provision with regard to a radius of 3 *ri* from the Imperial Palace.

Mr. Suyematsu Kencho replied that the Regulations were, in fact, designed to prevent disorder, and that the limit of 3 *ri* had been dictated by considerations of police convenience.

Prince Konoye failed to understand what had occupied the attention of the Special Committee during the week devoted by them to the compilation of their report. He moved that the Bill be referred to a new Committee.

Viscount Tani seconded the motion, as did also Viscount Seki and Mr. Ando Sokumei. The House rejected the motion.

Viscount Tani regretted that the motion had been lost. The replies given by the Chairman of the Committee had convinced him that the Bill did not receive due attention from that body. From the moment that the Constitution went into force, it had seemed to him that a body of regulations conflicting so flagrantly with its provisions — did the Peace Preservation Regulations, must of necessity and spontaneously cease to have binding force. Such did not appear to be the case, however. A Bill had therefore been introduced, and he extended to it his hearty support. He invited the House to examine Articles 24 and 76 of the Constitution. The former provided that no Japanese subject should be deprived of his right of being tried by the judges determined by law, the latter ordained that all legal enactments, of whatsoever kind, should continue in operation after the enforcement of the Constitution in so far as they did not conflict with its provisions. The Peace Preservation Regulations did indisputably deprive Japanese subjects of the right of being tried by lawful judges. Therefore they conflicted with the Constitution, and therefore their continuance in force was constructively denounced by the 76th Article. If the House voted to continue them in force, it would be distinctly voting to violate the Constitution. He reminded them of the disturbances that had taken place at the last general elections, and asked whether it was not possible to prevent such lamentable occurrences by some better means than the Peace Preservation Regulations.

Mr. Hosokawa Junjiro did not defend the Peace Preservation Regulations on general principles. He was as anxious as anyone to see them rescinded. But he held that the state of the times did not permit such a step. Viscount Tani, referring to a state of affairs which had certainly called for exceptional control, suggested that better means of preserving order might be found. Nothing was more desirable. Were such means forthcoming, he would at once vote to rescind these Regulations. But the House of Representatives had simply sent them a Bill for abolishing the Regulations *in toto*, without furnishing any substitute. That plan of procedure could not be approved. The carrying out of the Regulations was entrusted to the police. If the police did their duty judiciously in applying the Regulations, excellent results would certainly be achieved. If the police abused their authority, then indeed the Regulations might become an instrument of tyranny. But that there was need of some means to preserve order in the peculiar circumstances of the time, seemed beyond dispute. What means were proposed by way of alternative? Viscount Tani had vaguely alluded to some means, but had left them entirely in the dark. The House of Representatives had voted to dispense with the only means offering, and had provided nothing in their stead. For his part, so long as the conditions of the era called for exceptional measures, he should vote to maintain the measures actually available until, at any rate, some efficient and preferable substitute was forthcoming.

Mr. Ando Sokumei had been one of the small minority opposed to these Regulations ever since the day, five years ago, when they were submitted to the Senate. Their supporters asserted that the present state of political excitement and party agitation rendered it necessary to expel riotous characters from the capital. There were said to be some three hundred of such characters. What were three hundred unruly spirits, and what would be effected by their expulsion? It was like brushing away flies from a bowl of rice or throwing a stone among a school of fish. The insects and minnows might disperse for a moment, but would reassemble immediately afterwards. If there were question of expulsion, then the men to be expelled were the ringleaders and instigators of the disturbers of the peace. As for these Regulations, they should never stand on the

statute book under a constitutional government and representative institutions. They violated the Constitution. They conflicted with the laws of the land. They contained a provision providing, in so many words, for the security of the Imperial Palace and the Imperial Places of Sojourn. But there was not in the whole of Japan a single person who would think of raising his hand against the Emperor. The *Japan Mail* of Yokohama had criticised this provision as a national disgrace, and he could not but regret that a foreign journal had found it necessary to use such language. Was it possible that the House could reconcile itself to preserve Regulations containing such a clause. There had been flagrant examples of the abuses possible under the Regulations if they were carelessly enforced by the police.

Viscount Sakai asked whether Mr. Ando could give any details as to abuses caused by carelessness on the part of the police.

Mr. Ando replied that, on the occasion of the first enforcement of the Regulations in 1887, many innocent persons had been expelled from the capital by the police, but at this distance of time he was unable to give details.

Mr. Miura Yasu supported the Bill. The Ito Cabinet had declared that one of the chief objects was to bring the working of the Administrative machine into harmony with the Constitution. The Peace Preservation Regulations were in frank conflict with the Constitution. No one attempted to reconcile them with it. Therefore their continued operation under the Ito Cabinet was obviously inconsistent with the principles enunciated by that Cabinet. Even the supporters of the Regulations admitted that the results of their operation were good or evil according to the conduct of the officials applying them. Laws that depended for efficacy upon the volition of the agents carrying them out could not be tolerated under representative institutions. He made an eloquent appeal to the House to vindicate the supremacy of the constitution by sweeping from the statute book these humiliating Regulations.

The closure was put and carried, and the House, by a vote of 110 to 40, rejected the Second Reading of the Bill.

The House rose at 2 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m., the Order of the Day being:—

- 1.—The Budget.
- 2.—Project of Law (First Reading) for the establishment of a Bourse; presented by the Government.
- 3.—Appointment of a Special Committee to report upon the same.
- 4.—Representation relating to the despatch of Commissioners to examine into the state of industries abroad.
- 5.—Bill (First Reading) for abolishing Banks of Deposit.
- 6.—Bill (First Reading) for taxing the Bank of Japan.
- 7.—Bill (First Reading) for amending the Regulations of the Bank of Japan.

The President announced the receipt of the following:—

- A Question relating to Works of Repair on the Kiso River.
- A Question relating to the Government's Policy in Hokkaido.
- A Bill relating to the Domestic Brewing of Sake.
- A Bill for establishing a Silk Conditioning Warehouse.
- A Representation relating to the Bank of Japan.
- A Bill for abolishing the Export Duty on Edible Seaweed.

The House voted against going into Committee of the Whole for the purpose of continuing the questions on the Budget.

Mr. Konishi-Jinnosuke asked permission to have the Order of the Day changed, for the purpose of bringing in an urgency motion to re-submit the Budget to the Committee. In the Committee's Report it was explained that the fees for shooting licenses, to be levied under the recently promulgated Game Regulations, had been excised, inasmuch as they were entered in the Revenue under the title of Administrative Fees and the Committee decided that they ought to come into the first section of the Revenue under the heading of taxes. But such a decision seemed to distinctly conflict with the Resolution passed by the House on the subject of the Game Regulations. The House had resolved that the Regulations, being unconstitutional, were without binding force from the outset. Yet the House was now invited to say that fees levied under the provisions of these invalid Regulations could be included in the Revenue columns of the Budget. Such procedure was obviously contradictory. If the Regulations

were inoperative, no fees could be levied under them, nor could they in any way become a source of State revenue. Hence he wished to move, as a point of urgency, that the Budget be re-committed to the Committee for more mature examination.

The motion failing to obtain the prescribed number of supporters, did not become a subject of debate.

Mr. Maki Bokushin asked why no declaration had been made by the Government Delegates with regard to the trespass of competence recommended by the Budget Committee's Report. There could be no question as to the fact of the trespass. The Report advised alterations of official salaries and reductions of the Administrative establishment. In short, it was compiled on lines precisely analogous to those adopted by the first Budget Committee in the first session of the Diet, and on that occasion very explicit declarations as to an excess of power had been made by the Government Delegates. What was to be understood by their silence on this occasion?

Mr. Tajiri, Vice-Minister of Finance, said that when the time came for the House to seek the Government's consent to reductions or rejections falling under the provisions of the 67th Article of the Constitution, the Government would not fail to announce its views. Meanwhile, the declaration officially made in the first session held good.

Mr. Maki Bokushin opposed the Committee's Report. He maintained that reductions of official salaries and of the Administrative establishment could not properly be made by means of the Budget. If the House advocated such reductions, it should present an Address to the Throne or a Representation to the Government. To proceed by means of the Budget was manifestly unconstitutional. He moved that the Budget be re-submitted to the Committee, with instructions not to disturb the salaries or establishment of officials.

Mr. Iwasaki Manjiro was surprised that the last speaker should endeavour to pledge the present Cabinet to the error enunciated by its predecessor. There was nothing whatever unconstitutional in the course proposed by the Committee. The House was not invited to pass any vote interfering with official salaries or the Administrative establishment. It merely formulated an opinion on these subjects and then sought the Government's leave to embody that opinion in a resolution relating to the Budget. If the Government's consent were withheld, the action of the House must be suspended. Whether the Government introduced reforms in deference to a Representation or an Address, or whether it agreed that reforms suggested by the House be rendered operative by means of the Budget, the Constitution's provisions were equally complied with. The present Cabinet had indeed declared its inability to agree to the sweeping alterations proposed by the Committee, but had not said one word as to the unconstitutionality of the course contemplated. Turning to the general question of official salaries, he thought it must be universally agreed that the rates in Japan were too high. Whence the standard had been obtained he could not tell, but assuredly it was a standard quite out of proportion to the general scale of living in Japan. That scale might be reasonably assessed at about 5 *yen* per month, whereas in England, France and other Western countries, the scale was three or four times as high. Yet in Japan, a Minister of State drew a salary of 6,000 *yen* annually, against seven or eight thousand paid to Ministers. That reductions were called for needed no demonstration. The majority in the House of Representatives thought so, and the House of Peers had embodied the same view in a Representation. The Committee's Report contemplated a total reduction of 2,140,000 *yen* in salaries; the Peers spoke of four millions as a reasonable figure. The same considerations applied to travelling expenses and other allowances. For his own part, he was inclined to criticize the smallness rather than the excess of the projected retrenchment. The Government, indeed, called it too drastic, but he wished to

Original from

remind the House that the total reduction proposed in the Ordinary Budget exceeded by only 610,000 *yen* the reduction agreed to by the Government itself in the first session. The present Cabinet had declared its intention of working on constitutional lines, and had laid much stress on the importance of establishing harmony between rulers and ruled. The opportunity had now come to put these excellent principles to the test. The country unquestionably desired retrenchment. Would not the Government frankly accept and give effect to the country's verdict in accordance with the true spirit of representative institutions? It did not redound to the credit of either the House or the Government that the Budget should fail to come into existence. But the representatives of the people were bound to abide by the mandate of their constituencies. If they failed once to assert the people's wishes, they must only try again and again. There could be no abandonment of their plain duty. He ventured to hope that the Government would see its way to a harmonious and happy agreement with the House's wishes.

Mr. Tajiri, Government Delegate, pointed out that no inference must be drawn as to the Government's future attitude from its silence up to the present. It was entitled to choose its own occasion for speaking. He also reminded the House that to base estimates of official salaries on the precedents of foreign countries might prove embarrassing. The President of America, who represented the head of the Government, received sixty-three thousand dollars annually.

Mr. Sasaki Shozo, though not opposed to all the Committee's amendments, was unable to vote for the Report in view of the fact that it recommended a course obviously in excess of the House's lawful competence. He moved that the Budget be re-submitted to the Committee with instructions not to disturb the portions which the Constitution excluded from the direct action of the House. In this way only could they avoid the difficulty as to the Government's refusing to grant its consent.

Several members supported Mr. Sasaki's motion.

Mr. Saito Keiji opposed the motion. He denied that the Constitution contained anything to bind the hands of the House, and thought that there was more necessity for Mr. Sasaki to re-consider his allegations than for the Committee to re-examine the Budget.

Mr. Motoda Hajime strongly supported the motion. There would be no such things as Imperial Prerogatives were the Budget employed as a means of trespassing upon domains expressly reserved by the Constitution for the control of the Sovereign. The claim that the salaries of officials could be reduced by the instrumentality of the Budget meant that the Courts of Law might be abolished by the same means. It was impossible to reconcile such procedure with the Constitution. Whatever subtleties of argument were employed, the plain fact was that the Constitution reserved to the Emperor the power of fixing official emoluments, whereas the House was now endeavouring to fix them according to its own views. No hesitation was shown. They had even dealt with the Privy Council, cutting down by nearly one half the salaries of officials who discharged the high duty of advising the Sovereign. Mr. Iwasaki had quoted the procedure of the House of Peers by way of justification. But if any deduction were to be drawn from that procedure, it was that the Peers had acted constitutionally while the Representatives were violating the Constitution; for whereas the former had limited themselves to embodying their views in a Representation, the latter were seeking to enforce their opinion through the instrumentality of the Budget.

The motion was rejected by the House. Mr. Nakano Buyei supported the Committee's Report. He pointed out that the reductions recommended were as follow, namely, in the section of salaries, 2,225,000 *yen* in round numbers; in that of office expenses, 477,500 *yen*; in that of travelling expenses, 85,500 *yen*; in that of miscellaneous salaries, 188,000 *yen*; and in that of expenses for repairs, 45,000 *yen*. It

could not be honestly asserted that these were excessive reductions, and if the Government declined to endorse them, its professions of a desire to restore harmony between rulers and ruled must count for nothing.

Mr. Inouye Kakugoro was much disappointed by the speech of Mr. Nakano Buyei. Among the many able and brilliant exponents of the Popular Party's policy, he had found no tougher or more inveterate opponent since the opening of the Diet than this same Mr. Nakano. Yet now, when he had hoped to hear a string of powerful arguments, there had been nothing forthcoming except an arithmetical catalogue of the various reductions made by the Committee, and a plea for their acceptance because they were so small. Comparing the reductions made this year by the Budget Committee with the reductions made in the first and second sessions, the spirit shown on this occasion had certainly been one of moderation. On the other hand, the Government also had made plain efforts to reduce Administrative expenditures. Thus both sides showed a disposition to come together, which was matter for sincere rejoicing. The House had just discussed the question of the propriety of making the Budget an instrument for interfering with official salaries. He should not go over that ground again. But he reminded them emphatically that it would have to be traversed once more. For, as the Minister of State for Finance had told them, they would have to seek the Government's consent at the appointed moment, and then their competence to follow such lines would again become the problem of the hour. The total reduction proposed, which would come under the provisions of Article 67 of the Constitution, was 2,764,000 *yen*. They knew very well that the Government would never agree to this. It could only agree to it by utterly abandoning its administrative policy. Mr. Nakano claimed that the object of these reductions was to lighten the people's burdens and to develop their resources. Everybody endorsed these excellent objects. But the Committee recommended the excision of 3½ million *yen* demanded for purposes of Naval augmentation. Most assuredly that step was not in accord with the nation's wishes. Their own Representation, now under consideration, placed that point beyond all reach of doubt. They talked much of the people's burdens and resources, but they had the monopoly of purpose in such matters. The Matsukata Cabinet had proposed the transfer of prison expenditures to the charge of the Treasury. The Ito Cabinet had proposed reassessment of the taxable value of land. These measures, plainly directed to relieve the burdens and develop the resources of the people, showed what the Government's sentiments were. As for the so-called Popular Party, its members put up Mr. Sugita Teichi to propose a Representation which should serve as an excuse for refusing to grant any appropriations for the increase of the Navy. It was mere lip service to talk of consulting the people's welfare, and at the same time to run counter to the people's wishes. As for the reductions proposed, Mr. Iwasaki claimed that the method of striking off a percentage had not been followed. But Mr. Nakano had told them what percentage of salaries, what percentage of office expenses, and so forth had been reduced. Mr. Kono Hironaka, also, when introducing the Committee's Report, had explained that since the Government had consented to a reduction of 13 per cent. in the Supplementary Budget for 1892, it might be expected to make no difficulty about a reduction of 7 per cent. in the General Budget for 1893. It was perfectly plain that a system of percentages had been followed without any regard to the merits of each case. He could never accept such a method of retrenchment. They, however, proceeded stoutly with their reductions, crying out that they wished to diminish the Land Tax and reassess the Taxable Value of Land, which things were mere pretexts for throwing dust into the eyes of silly folks. He did not oppose all the recommendations of the Committee; on the contrary, many of them seemed worthy of support.

But the general system followed was indefensible. They claimed to be desirous of harmony between the Legislature and the Administration. The Government declared itself desirous of harmony. But their present procedure meant that they would abandon to the Government the credit of having sought to compass harmony, and would saddle themselves with the responsibility of have conspired to prevent it. He did not urge them to enter into negotiations with the Government, or to re-examine the Budget. But he reminded them that while the Government's avowed policy was one of harmony they, on their side, made a fixed habit of perpetually maintaining an attitude of hostility. For his own part he found much more to applaud in the policy of the Government than in the practice of the Opposition. The Ito Cabinet had been in office only some three months. Yet the Opposition asserted that it should already have removed the abuse of clan influence; should already have settled all questions connected with official interference in elections; should already have introduced radical reforms into the Navy. Such demands were contrary to all reason, and could never be endorsed by rational men.

The President announced that the general discussion of the Committee's Report was now concluded, and that the sections should be taken in detail the following day.

Count Goto briefly explained the general necessity for establishing a Bourse, and said that the Bill submitted to the House had been framed in accordance with the views of the various Chambers of Commerce throughout the Empire.

Several questions were asked by Mr. Nakamura Yaroku and answered by Count Goto.

The Bill was finally entrusted to a special Committee chosen by the Sections.

The House rose at 6 p.m.

THURSDAY, DECEMBER 22ND.

HOUSE OF PEERS.

The House met at 11 a.m., the Order of the Day being:—

- 1.—Representation relating to the establishment of an Iron Foundry.
- 2.—Petition to a Change of District in Tochigi Prefecture.
- 3.—Petition for the Abolition of Export Duty upon Cotton Yarns.
- 4.—Petition for laying a Submarine Cable to the Okinawa Islands.
- 5.—Petition relating to Amalgamation and Division of Districts in Kagoshima Prefecture.
- 6.—Petition relating to the control of the Shinano River.
- 7.—Supplementary Budget for the 25th year of Meiji.

The Representation relating to the establishment of an Iron Foundry was read as follows:—

REPRESENTATION RELATING TO THE ESTABLISHMENT OF AN IRON FOUNDRY.

This House recognized the necessity of establishing a Steel Foundry for military and industrial purposes, but inasmuch as the Government's investigations into the subject were not thorough, we, last session, presented a Representation requesting the authorities to appoint a number of commissioners to inquire into the accessibility of raw material and into the best method of establishing a steel-foundry. The Government adopted the Representation, and a number of Commissioners having been appointed in the Department of Agriculture and Commerce, investigations were undertaken and completed. Our inquiries into the result of these investigations have elicited the information that 15,600,000 tons of iron can be obtained from the mines at Kamaishi, Sennin, and Akadami alone, and that there are numerous other iron mines in the empire. Further, the ores of the above mentioned mines having been treated and steel manufactured from them, it was found to be of excellent quality, not inferior to the imported article. Notwithstanding such a satisfactory result, the Government has not sought any appropriation from the Diet for the establishment of a steel foundry, but has simply demanded a sum of 24,000 *yen* for continuing the investigation. The reasons assigned for this course do not establish any necessity for further inquiry prior to establishing the foundry. We therefore deem it more advisable to determine first that the foundry shall be established, and subsequently to vote any expenditure that may be required for farther investigation. At present, railways are about to be extended and domestic industries are developing rapidly. These will create a great demand for manufactured iron and steel. At such a time, if the establishment of an iron foundry be unnecessarily delayed, great disadvantages must result both to the defences and to the economy of the nation. In the absence of any valid reason, we must consider it a mistake that the Govern-

ment has not included an appropriation for the establishment of an Iron Foundry in the Budget. We therefore trust that the Government will apply for such an appropriation in a Supplementary Budget during the present session.

Presented by Viscount NAITO MASATOMO
Supported by Prince NIJO MOTOMIRO and 102 others.

Viscount Naito explained that he had been a member of the Committee originally appointed to investigate the question of a Steel Foundry, and that the Committee had actually assured itself of the existence of a supply of iron aggregating 15,600,000 tons at Kamaishi, Sennin, and Akatani alone, not to speak of other places. He spoke at considerable length, the gist of his argument being that there was now ample evidence of the feasibility of manufacturing steel in Japan from material obtained in the country, and that instead of delaying the establishment of a Foundry until fuller investigations could be made, the plan best adapted to the interests of the State was to establish the Foundry at once, and proceed subsequently with whatever further investigations might be required.

Mr. Ando Sokumei supported the Representation. He dwelt upon the unwisdom of depending, in these troublous times, on foreign countries for supplies of steel to build men-of-war, he pointed also to the case of the Tokyo Water Works, in connection with which so much commotion had been excited because means of manufacturing the pipes did not exist in Japan.

The House adopted the Resolution.

The Supplementary Budget for the 25th year of Meiji was next taken. Mr. Hosokawa Junjiro, Chairman of the Budget Committee, reported in favour of the appropriations, and said that the Committee had assured themselves of the incapacity of the Prefectures in question to make head, without State aid, against the disastrous inundations that had visited them. The total sum asked for was 3,811,750.94 yen, and the Committee recommended that it be granted in its entirety as voted by the House of Representatives.

Count Inouye, Minister of State for Home Affairs, recommended the Budget for favourable consideration, and entered into details, similar to those given in the Lower House, as to the aggregate losses of life and property caused by the inundations.

The House passed the Budget without any comment or question.

The Petition relating to a change of District in Tochigi Prefecture was then adopted, after a brief explanation from the acting chairman of the Petitions Committee.

Mr. Matsuoka Koki, on behalf of the Petitions Committee, explained that numerous petitions had been received on the subject of abolishing the export duty on Cotton Yarns, but the Committee had decided to present to the House this petition from Mr. Tamura Rihichi, of Kitakogamachi, Surugadai, in the Kanda District of Tokyo, and others, as containing the clearest exposition of the arguments on the side of the petitioners. The manufacture of cotton yarns was making great strides in Japan. During the latter half of 1888, the total manufacture had been only 20,680 bales, but in 1891 it rose to 151,215 bales. Taking the price of a bale at 70 yen, the present export duty of 5 per cent. meant an impost of 3.50 yen per bale. There could be no doubt that the removal of this duty would greatly facilitate the access of the yarns to foreign markets.

The House accepted the Petition.

The remaining Petitions were also accepted, and the House rose at 2.25 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m., the Order of the Day being:—

- 1.—The Budget for 1893-94.
- 2.—Bill (First Reading) for postponing the operation of the Bank and the Deposit Bank Regulation.
- 3.—Representation for the despatch of a Commission to inquire into the State of Foreign Industries.
- 4.—Bill (First Reading) for abolishing the Deposit Bank Regulations.
- 5.—Bill (First Reading) for taxing the Bank of Japan.
- 6.—Bill (First Reading) for amending the Regulations of the Bank of Japan.
- 7.—Bill (First Reading) for amending the Mining Regulations.
- 8.—Report of the Special Committee on the Bill for amending Law No. 4 of the 22nd year of Meiji.
- 9.—Second Reading of the Bill for amending the Law of Registration.

The President announced the receipt of the following:—

- A Question relating to the continuance in office of police officials who had been guilty of lawlessly killing and wounding Japanese subjects; presented by Mr. Tanaka Shuzo and others.
- Representations relating to the amendment of the Regulations for Middle Schools, and the Regulations for Upper Middle Schools.
- A Bill for amending the Mining Regulations.

The House then proceeded to discuss the Budget, the section of the Department of Foreign Affairs being taken first.

Mr. Hayashi, Vice-Minister of State for Foreign Affairs, said that as the Minister of State for Finance would, in due time, address the House with reference to the items falling within the purview of the 67th Article of the Constitution, he should refrain from commenting on that part of the Expenditures of the Foreign Department. It was necessary, however, to say a word on the subject of Travelling Expenses and Salaries. The former item referred in part to the cost of travelling in Europe, and America, but it referred also to journeying in China and Korea, where the circumstances were not open to any question. The proposed reduction under this heading would therefore cause much practical inconvenience. As to Miscellaneous Salaries, they included the pay of printers and compositors whose services were absolutely essential to the work of the Department. The figures of the Committee, in this case also, would entail great difficulty if adopted.

Mr. Ozaki Yukio, representing the section of the Budget Committee charged with reporting on the Foreign Department, said that the House would observe that considerable reductions were recommended in the first part of the Foreign Office section, namely, the Department Proper. The reason of the recommendation was that the work accomplished by the Department was not proportionate to the money spent. For example, twenty years had been devoted to Treaty Revision, but it was not yet accomplished, and Japanese jurisdiction was still unexercisable within the Foreign Settlements. Again, the power of taxing foreigners was not restricted by Treaty, yet the Foreign Office did not exercise it. With the exception of a small impost upon foreign patent medicines and the tax now proposed on alcohol, the power might as well be non-existent. Similar instances might be adduced without number. The Foreign Office had yielded one point after another, until Japan's rights could scarcely be asserted at all. To such a Foreign Office it was out of the question to allot a sum so much in excess of the work accomplished as 131,000 yen would be, and the Committee, influenced by these considerations, had reduced the appropriation to 101,000 yen, in round numbers. Had the Committee been desirous of embarrassing the Foreign Office, they might have effected much larger reductions, but as their object was only to spur the officials of the Department to a keener sense of their duties, reductions had been very moderate. As for the item of travelling expenses it had been reduced by the amount demanded for sending persons to Korea. The Committee saw no reason to send any one thither. There were plenty of Japanese in Korea who could do everything required. The fact was that these journeys were undertaken simply as pleasant summer trips and because money for them was forthcoming. No one was sent to China or Hawaii. Under the heading of Miscellaneous Salaries they had cut out the item for wages of printers to print secret documents. The only documents in question were the *Gai-koku Iho* (Foreign Reports), and these might just as well be public. In fact, it was proposed to ask the House to rule that they should be public. The secrecy observed was quite excessive, and did not at all conduce to the development of Japanese intelligence in matters of foreign intercourse. In the Section of Legations and Consulates, very trifling reductions had been made. The salaries of Ministers and Consuls not actually serving had been excised, as also had the pay of such officials in places where they were not wanted. The travelling expenses of the wives of diplomats and Consuls had also been eliminated, except in the

cases of Consuls-General and Ministers. It seemed as though the Foreign Office exercised no discrimination whatever in its choice of Ministers and Consuls. The men sent abroad were, in many instances, disgraces to Japan. The Foreign Office had often chosen men who had been convicted of treason, as though the object was to rehabilitate their reputations; for example, Messrs. Mutsu, Otori, and Venomoto. Such procedure was distinctly objectionable. They had reduced the Secret Service Allowance, because it seemed excessive, and they had eliminated the item of Consulates in Korea because they did not consider Consuls necessary in a country to which a Minister was accredited.

Mr. Hayashi, Vice-Minister of State for Foreign Affairs, said that apparently Mr. Ozaki had made the Budget an opportunity for attacking the Foreign Office. His remarks in that sense did not call for reply. With regard, however, to the choice of diplomats and Consuls, the Department selected the men who seemed best fitted for their various posts. Mr. Ozaki, referring to travelling expenses, had asked why persons were not sent to China and Hawaii as well as to Korea. The answer was simple. They were sent.

Mr. Sasaki Zemyemon was entirely opposed to the Budget Committee's Report. Mr. Ozaki had stated that the Foreign Office had effected nothing in 20 years. That was simply because Mr. Ozaki did not know what the Foreign Office had done. He might mention, for example, the recent fact that foreigners had been placed on the same footing as Japanese with regard to the pursuit of game. Mr. Ozaki objected to the Foreign Office's choice of diplomatic officials. The Foreign Office had chosen the late President of their own House. Did Mr. Ozaki object to that? He was totally opposed to the Committee's amendments.

The House voted the Committee's amendments in the whole of the first chapter of the Foreign Office.

On coming to the second chapter, Mr. Iwakawa Saburobei made inquiries about the Consul *de carrière* in Lyons and the Honorary Consul in Milan. He wished to know whether these officials received allowances for postage and telegrams, and whether heavy losses had not been caused by their negligence with regard to the silk trade.

Mr. Hayashi said that they received such allowances, but that as to their efficiency or otherwise, he could not immediately reply. The Foreign Department considered them efficient.

Mr. Otsubo Rishin said that these amendments of the Committee having been prompted by the *Fiyu-to* and the *Kaishin-to*, their adoption from first to last was a foregone conclusion. There was consequently no occasion to call for show after show of hands, item after item. Better vote *en bloc* and be done with it.

The President declined to treat the Budget in such a manner unless the House instructed him to do so.

The second chapter was passed, item by item, in the form recommended by the Budget Committee.

Mr. Watanabe, Vice-Minister of Home Affairs, explained in detail that the reduction recommended in that Department would entail very great difficulty and embarrassment.

Mr. Saito Keiji observed that the item for Repairs had been reduced by only 36 yen. Yet the Government Delegate spoke of this as a large reduction. How much embarrassment would it cause?

Mr. Watanabe:—"Very great embarrassment."

The House voted the 1st, 2nd, and 3rd chapters as amended by the Committee.

On coming to the 4th chapter (Superintendence of Public Works), Mr. Furuichi Kintake, Government Delegate, protested strongly against the proposed reductions. The Committee claimed to have treated the salaries of technical experts with liberality, yet while reducing the appropriations for salaries in the Department proper by 26.7 per cent., it had reduced the

salaries in the section of Superintendence of Public Works by 31.3 per cent. He pointed out the great practical inconvenience of these and other reductions recommended, and reminded the House that whereas the appropriations for this office had been 200,000 yen six years ago, they were now only 124,000 yen. The Government, in fact, was doing everything possible to reduce them, yet the House was not satisfied.

After a brief discussion, the items in this chapter also were voted as amended by the Committee.

On coming to the item "Metropolitan Police Bureau," Mr. Haseba Tanko complained of the conduct of the Police. He alleged that a close friend of his, Mr. Abe Mitsugi, who was employed in the office of the *Kokumin Shimbu*, who behaved in a perfectly correct manner and had never sought pecuniary aid from any one, had been driven out of Tokyo under the provisions of the Premonition Law, enforced the day previously. He wished to know why this step had been taken.

The Government Delegate considered that such a question should be put according to the prescribed forms and not in connection with the discussion of the Budget. An excited controversy ensued, Mr. Haseba moving that the debate of the Budget be postponed until his question was answered. Mr. Inonye Kakugoro reminded the House that the Premonition Law had been put into operation on the responsibility of a Minister of State. Yet they were now insisting on having their questions about it answered by a Vice-Minister. A few days ago they had objected to a Vice-Minister's replying to a question about the *Chishima Kan*, and to-day they were taking precisely the opposite course.

The House rejected Mr. Haseba's motion.

The President trusted that the Government Delegates would thenceforth make every effort to give full and speedy answers, so as to expedite the business of the House.

Mr. Kitagaki, Chief of the Hokkaido Administration, spoke at length against the Committee's amendments in the Hokkaido Section.

Mr. Kurata Jungoro claimed that the appropriations in this section had been treated with exceptional leniency.

The whole of the items in the Department of Home Affairs were voted as amended by the Committee.

The Bill for postponing the operation of the Bank Regulations and the Deposit Bank Regulation, issued as Laws No. 72 and 73 respectively, in the 23rd year of Meiji, until the portions of the Commercial Code connected with those Regulations should go into force, was then read, and at the request of the Government Delegate, the House agreed to dispense with a Special Committee, and to dispose of the Bill in one reading, inasmuch as the date (1st January, 1892), originally fixed for the operation of the Regulations, was close at hand.

Mr. Kozaka Zennosuke moved an amendment that the Deposit Bank Regulations be rescinded, on the ground that the existence of such Banks, while affording no special facilities, would have the injurious effect of concentrating the people's money in the three great cities only.

Mr. Tajiri, Government Delegate, urged the inconvenience of raising this question now. It could be discussed afterwards. The urgent business of the moment was to postpone the operation of the Regulations.

The House passed the Bill.

The Representation for a commission to Foreign Countries was then read:—

REPRESENTATION RELATING TO THE DESPATCH OF COMMISSIONERS TO INQUIRE INTO THE STATE OF FOREIGN INDUSTRIES.

Believing that, if a certain number of industrial experts be selected and sent to the Great Columbian Exhibition which is to be opened next year, for the purpose of examining the actual condition of foreign industries, results of great benefit will accrue to the industries of the empire, while the expense incurred would be small, this House hopes that the Government will agree with the above proposition, and will, without loss of time, present

to the Imperial Diet a Supplementary Budget providing for the necessary expenditure.

Presented by
TAKECHI YASUKANE.
SHIMADA SABURO.
NAKAMURA YAKOKU.
WATANABE KOKI.
KANMRAU TOMOTUNE.

Supported by
FUJITA TAKAYUKI, and 22 others.

Mr. Shimada Saburo spoke at length in support of the Representation, urging that such an opportunity as the Chicago Exhibition was not likely to offer again for many years. He considered that the Commission should consist of 12 or 13 persons, including an interpreter, and that its expenses should not be more than 300,000 yen.

Various trivial questions were asked and answered.

After a brief discussion the Representation was rejected.

The House rose at 5.50 p.m.

CORRESPONDENCE.

THE RECENT "KIRMISS."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Thanks to the Press and a generous public, the result of the "Mother Goose Kirmiss" held at the Public Hall, on the 14th inst., enabled the King's Daughters to add \$225 to the fund for a free bed for women and children at the Foreign Hospital, besides reserving a small sum as working capital.

Yours faithfully,

THE KING'S DAUGHTERS.

December 19th, 1892.

THE GORMAN FUND.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Having met with so much kindness from the gentlemen of the press, excuse me for trespassing still farther by asking you to insert in your paper, on behalf of my children, a few words of heart-felt thanks to the whole community of Yokohama for the great kindness and generosity to us. I read in your journal an account of the meeting held at the Chamber of Commerce, and have been told indirectly of what has been done, and in my children's name I most deeply thank every one for their great, great kindness. I also thank most sincerely the warm-hearted ladies of the community who have individually helped in so many kindly ways, and whose kindness it is impossible to repay by thanks.

From a widow's and mother's most grateful heart, I thank everyone in Yokohama.

Believe me, yours sincerely,

SOPHY GORMAN.

61, Settlement, Yokohama,
December 20th, 1892.

"LITTLE TODDLEKINS" AT THE PUBLIC HALL.

A combination of the musical and dramatic talent of the Settlement gave on Tuesday one of the best entertainments that has taken place within the walls of the Public Hall for a considerable period. The programme consisted of six numbers of vocal and instrumental music, and after an interval of ten minutes, wound up with the well-known farce "Little Toddlekins." The first item of Part I. was the overture to "Der Freischütz," by Mesdames Klobukowski and Bayne, and Misses Orth and Meier, very nicely rendered on two capital grand pianos kindly lent by Messrs. Montrie, Robinson & Co., and deservedly applauded. Two *morceaux* by Terschak for flute and piano, followed, and being executed with much taste by Mrs. Bayne and Mr. de Michaux, were heartily acknowledged. No. 3 brought on Mons. Launay, who sang "Le Pardon de Pignerol" (Meyerbeer), and "Il fait bien noir, Mademoiselle" (Maquis). The latter being eminently suited to Mr. Launay's powers and style, went very well, and the audience tried hard to bring him on again, but he only returned to acknowledge the encore. No. 4 was a pretty sonata of Handel's very tastefully played by Mr. Rausch, accompanied by Mr. Griffin, and No. 5, the gem of the programme, was sung by Miss Gibbens, who was in capital voice, in her most charming manner, the audience persisting in prolonged applause with a view to a repetition, but the lady only reappear-

ed to acknowledge the warm compliment. No. 6, a quartette of Mozart's in G minor for strings and piano, by Messrs. Rausch, Ramseger, Crane, and Griffin, which was warmly received, closed the first part.

"Little Toddlekins," as was fully expected, went briskly from beginning to end, Mr. Bayne, as *Brownsmith*, being a host in himself, *Baynaby Babbicome* was capitally suited to Mr. Read, and Mr. Showler was fully equal to the part of *Captain Littlepop*. The acting and make-up of Mrs. Martin as *Amanthis*, was extremely good, Mrs. Stone was an acceptable *Annie Babbicome*, and Mrs. Read a charming *Susan*. The house was well filled.

EXHIBITION OF WATER COLOURS.

A private view was given on Thursday at the Public Hall of a fine collection of water-colours—and a few oils—by Mr. Smedley. With two or three exceptions the pictures are Japanese subjects, most of which are readily recognised and many of them are familiar scenes. With such delightful subjects as the scenery and blossoms of Japan the true artist can scarcely fail to score, and Mr. Smedley is to be congratulated alike upon the extended variety of his selections as well as the execution of his pictures. Many of the scenes depicted were sketched from nature when the maple and lotus, the cherry and wistaria, were at the height of their splendour, and there are two studies, No. 60 (Peonies), and No. 27 (Chrysanthemums), in which the colours glow with a living reality. Fuji, of course is a prominent figure, and appears partly clad in a variety of atmospheric characteristics—in mist and cloud, sunshine and snow—delicately treated from Dzushi, from Gotemba, from Otome-togé, and various other points of vantage, and always with delightful effect. Japanese temple architecture is largely drawn upon, and forms the subject of many of the best sketches in the collection, the neutral tints in several instances being delightfully delicate and restful. The sea has furnished one or two excellent examples both of drawing and colour, conspicuous among which are "Fishing Boats—Mississippi Bay" (27), and "Fisherman's Huts—Dzushi" (35). Of figure subjects there are several, and though these do not generally lend themselves so readily to the fine effect of colours as do landscape and blossoms, there is one (No. 10) "Japanese Girl serving Saké," in which the colouring is deliciously dainty and out of the common, while the pose of the figure is exceedingly graceful. Of strong colouring, No. 7, "Maples at Taki-no-gawa, Oji," is a brilliant example, as are also No. 2, "Wistaria—Kameido," No. 24, "Cherry Blossoms at Ikegami," and No. 8, "Cherry Tree and Tea-house near Miyanosita." Two highly finished and striking pictures are Nos. 15 and 17, "Bush Scenes in Australia." These were sent by Mr. Smedley to the exhibition of the Society of Arts of New South Wales, on the Council of which he served for several years.

The collection, which will be open to the public to-day and to-morrow, should be visited as early as possible, as the room in which the pictures are hung is not entirely satisfactory as regards the matter of light, especially at this time of the year. The community owe a debt of gratitude to Mr. Smedley for the opportunity afforded of viewing so choice a collection of sketches, a pleasure which, we trust, will be repeated by the exhibition of the work of the Yokohama Sketching Club in the Spring. Following is a catalogue of the pictures, which are on view from ten till six o'clock:—

1. The Tomb of Iyeyasu, Nikko, the founder of the Tokugawa dynasty.
2. Wistaria, Temple of Temmangu, Kameido, Tokyo.
3. The Shrine Wakamiya dedicated to the son of the God of War, Kamakura.
4. Fuji from Gotemba (winter evening).
5. Fuji from Dzushi (winter evening).
6. The Lotus pond at the Temple of Hachiman, Kamakura.
7. Maples at the Taki-no-gawa, Oji, Autumn.
8. Cherry Tree and Tea House near Miyanosita.
9. Village of Dogashima near Miyanosita.
10. Japanese girl serving Saké.
11. The great Buddhist Temple Tensoji, Asakusa Kwanon, Tokyo, dedicated to the Goddess of Mercy.
12. Japanese Flower Seller.
13. Mausoleum Temple of Iemitsu, 3rd Shogun of the Tokugawa régime.
14. River Scene near Yokohama.
15. Bush Scenery, Illawarra, N. S. Wales, Australia.
16. The Golden Temple, Uyeno, Tokyo.
17. An Australian Settler's Clearing, Illawarra, N. S. Wales, Australia.
18. Temple and Ground, Nikko. Courtyard of the Temple of Iyeyasu, the founder of the Tokugawa dynasty.

62. Stream and Bridge, Miyashita.
63. The Shrine, Shira-tata-juya, dedicated to Yoritomo Kamakura.
64. Interior of the great Temple of Hommonji, celebrated as the place where the Buddhist Saint Nichiren, died A.D. 1282, Ikegami.
65. Old street, Enoshima.
66. The Monastery, Honmoku.
67. Mississippi Bay.

SERIOUS FIRES IN OSAKA.

Osaka, Tuesday, 8 p.m.

A terrible disaster, which recalls the catastrophe caused by the earthquake of last year to the Naniwa Mill at Densho, has occurred to the Osaka Boseki Kaisha's mills at Sangenya, Osaka, which were destroyed by fire early this morning with a terrible loss of human life. The Osaka Boseki Kaisha has three mills at Sangenya, two of which have been completely gutted, while the third, erected comparatively recently, has escaped injury with the exception of some slight damage by fire and water to the engine-house.

Of the two mills destroyed, one was a building of three stories and the other of one storey, and between them they had about 26,600 mule-spindles and preparation supplied by Messrs. Platt Brothers. As is well known, Japanese cotton mills work continuously, there being two shifts, one for night and the other for day. About a quarter-past four this morning fire broke out in the top floor of the three-storied building, caused, it is believed, by friction engendered by a mule tin roller, which set fire to some woodwork near by, and spread with alarming rapidity. A stampede was at once made to the door, and it is said that in the mad rush for life the stair-cases became jammed and many of the unfortunate people were crushed to death before the flames reached them. So quickly did the fire spread that the walls began to collapse before those working in the lower stories knew what had happened, and many of these were killed by falling beams and bricks while endeavouring to escape.

Fire brigades were promptly on the scene, but were wholly unable to cope with a fire of such magnitude. In an incredibly short time the first building was a heap of ruins, and the adjoining mill, a one-storied building, was next attacked by the flames and completely gutted in its turn. The efforts of the firemen were successful, however, in saving the remaining building, with the exception of the engine-house, which, as already stated, is slightly damaged.

The dwellings of the workmen were not so

fortunate. These are separated from the mill by a small stream, and though they were distant about sixty yards from the building where the fire broke out, the devouring element, fanned by a strong wind, swept across the intervening space and destroyed thirty-five houses before the brigades could get control over it.

It is estimated that between one hundred and one hundred and twenty persons lost their lives in this conflagration, while many others have been injured. The fire was extinguished between eight and nine this morning, and all day long the search for the bodies has proceeded. Up to six o'clock this evening some eighty bodies had been recovered from the ruins, and it is believed that the bodies of the twenty or thirty others who are missing have been calcined by the fierce heat of the flames and will not be discovered.

The Osaka Boseki Kaisha, of which Mr. Matsumoto is president, is the largest cotton-spinning company in Osaka, having in its three mills at Sangenya some 60,000 spindles. How the disaster is likely to affect the company is not known, or whether the building is insured, but we hear that projects of rebuilding are already being discussed, and that before many months are over work is likely to be again in full swing, under, it is to be hoped, improved conditions regarding the safety of the work people.

Osaka, like Kobe, seems to be suffering from a serious number of fires. Besides the destruction of the Sangenya mill yesterday morning, a serious fire is reported to have occurred on the previous day which resulted in the loss of five lives. It broke out in the house of Takimoto Usaburo, a dealer in baskets, at No. 51, Satsumabari, Minami-dori, and, fanned by the strong wind blowing at the time, spread with alarming rapidity, destroying eleven dwelling-houses before it could be extinguished. So quickly did the fire take hold of the building where it originated that a man and four children who were in the second storey of the house had no time to escape and were burnt to death before assistance could reach them.—*Kobe Chronicle*.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, December 17th.

Admiral Fairfax will be tried by Court-martial for the loss of Her Majesty's ship *Howe*.

In the Panama Canal prosecutions, no warrant for or against M. Ferdinand de Lesseps will be issued, owing to his age and the weak state of his health.

London, December 19th.

The Cabinet is discussing the draft of the Home Rule Bill.

The Court of Queen's Bench has dismissed the petition for the compulsory winding up of the affairs of the New Oriental Bank Corporation.

London, December 21st.

M. Guichard, Vice-President, has replaced M. Ferdinand de Lesseps in the Presidency of the Suez Canal. It has been agreed to prosecute all the Senators and Deputies proved to have been connected with the Panama Canal scandal.

[“SPECIAL” TELEGRAM TO “JAPAN MAIL.”]

Kobe, December 20th.

Fire broke out this morning at 4 a.m. in the Sangenya Cotton Mill, and two out of the three buildings of the factory have been destroyed. It is stated that a hundred persons have been killed and wounded.

(FROM THE “SINGAPORE FREE PRESS.”)

London, 1st December.

Major-General Sir George S. White, K.C.B., V.C., has been appointed Commander-in-Chief in India.

The British Government are despatching a special Commissary with an escort to Uganda to report upon the present position of the country.

London, December 3rd.

The report of the approaching betrothal of H.R.H. the Duke of York with Princess May of Teck is again revived and remains undenied.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets on Monday and Thursday evenings at the Club Rooms, No. 86, Main Street.

SOLUTION OF PROBLEM No. 48.

WHITE.	BLACK.
1—P to B 4	1—B x P
2—Kt to K 4 mate	if Kt x P
2—Kt to Kt 3 mate	if Kt x P at Q 4.
2—R x Kt mate	if Kt to Q 3
2—R to Q B 7 mate	if Kt to Q 5
2—B to K 7 mate	if B to Kt 5
2—Q to B 7 mate	if P x P
2—Q x P mate	if P to Kt 3
2—Q x B mate	if any other move.
2—P to Kt 6 dis. ch. mate	

Correct solutions received from W.H.S., J.D., Scacchi, O. Balk, Ed. B., Omega, J.W.E., and G.S.

Correct solutions of No. 47 also received from Ed. B., and J.W.E.

J.W.E. will oblige by sending his solutions of the President's Competition Problems direct to the President.

PROBLEM No. 50. BY W. T. PIERCE. BLACK.

White to play and mate in two moves.

The Tournament in the Yokohama Chess Club seems to drag a little, some of the tardy players not having completed their heats in the first round, while the more earnest members are ready for the third round. It is to be hoped that, when the Christmas feasting is over, all will settle down to work in good earnest.

The recent journals do not give much news about Chess matters in England. The many Clubs there were all actively opening their winter sessions and Blackburne *move suo* was delighting his many admirers by numerous examples of his unrivalled skill as a player *sans voir*.

The "Sicilian defence" which used to be the great stand-by of our fathers (Staunton speaks of it as the very best answer to the first move of P to K 4) seems to be falling into disrepute in these latter days. The veteran Bird is said to be the only player of any note who now believes in its invincibility. We append a game in the late Belfast Tourney (with notes from the *Illustrated London News*) showing how he handled this defence in a contest with James Mason:—

GAME PLAYED IN THE MASTERS' TOURNAMENT BETWEEN MESSRS. MASON AND BIRD.

SICILIAN DEFENCE.

White (Mr. Mason)	Black (Mr. Bird)
1—P to K 4th	1—P to Q B 4th
2—Kt to Q B 3rd	2—Kt to Q B 3rd
3—P to Q 4th	3—P takes P
4—Kt takes P	4—P to Q 3rd
5—Kt to Q B 3rd	5—B to Q 2nd
6—Kt takes Kt	

Black's Bishop now comes to a very strong position, which proved fatal in the end to White.

7—B to Q 3rd	6—B takes Kt
8—Castles	7—P to K 3rd
9—P to B 4th	8—P to K Kt 3rd
10—P to B 5th	9—P to K R 4th
	10—Kt P takes P

White's attack seemed promising, but Black, who plays the whole game with excellent judgment, goes only so far in response as to open the K Kt file for his own attacking purposes.

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

- 11—P takes P
12—K to R sq.
13—P takes P
14—Q to K 2nd
15—B to K 4th
16—B to K 5th
17—B takes Kt
18—B to B 5th (ch.)
19—P to Q Kt 3rd
- 11—Q to Kt 3rd (ch.)
12—Castles
13—P takes P
14—P to K 4th
15—Kt to K 2nd
16—P to Q 4th
17—B takes K
18—K to Kt sq.
19—P to Q Kt 3rd

Apparently fearing the loss of this Pawn, and also the attack Black would obtain by B to Q 3rd if Q takes P (ch.)

- 20—Kt to R 4th
21—P to B 4th
22—P takes P
23—P to Kt 3rd
24—Q R to B sq.
25—K to Kt sq.
- 19—P to K 5th
20—Q to K 2nd
21—Q to K 4th
22—B to Q 3rd
23—B takes P
24—P to K 6th (dis. ch.)
25—Q R to Kt sq.

Obviously intending R takes P (ch.) which would win at once.

- 26—R to K B 3rd
27—Q takes B
- 26—B takes R
27—R to K K sq.

This is one of the few important tourney games in which the Sicilian Defence has recently proved successful. Mr. Bird's play is as accurate and vigorous as ever, Mr. Mason being scarcely at his best. We may point out that Mr. Mason only lost one game to Mr. Bird in this contest.

SOLUTION OF PROBLEM NO. 2 (BY J. P. TAYLOR) IN PRESIDENT'S PROBLEM COMPETITION.

- White.
1—Q to B 8
2—Kt mates at B 2.
- Black.
1—K to Q 8
2—Kt to K 7
3—P on Q 7 "Queens" (ch.)
4—P on Kt 7 "Queens"
5—Same P becomes a K
6—Any move of Kt or B
- 2—Kt to B 3 (double ch. and mate).
2—Kt to Q 3 (double ch. and mate).
2—Kt to B 2 (dis. ch. and mate).
2—Q mates at K sq.
2—Kt to K 3 (dis. ch. and mate).

Correct solutions received from G.S., Shogi, Ed. Batavus, O. Balk, W.H.S., Omega, J.D., H. L. Faidel, and Omicron.

What the solvers say:—"Very good problem, but key-move somewhat obvious;" "difficult as well as beautiful;" "elegant but obvious;" "excellent;" "good enough, but not so neat as No. 1;" "difficult and very pretty;" "less difficult than No. 1, but more brilliant."

J.W.E. is credited with a correct solution of No. 1.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Takasago Maru*, from Yokkaichi—15 passengers in steerage.

Per American steamer *City of Peking*, from San Francisco:—Mr. F. W. Hopps, Jun., Mr. Leonard Elger, Rev. Warren Hastings, Miss Edna Saunders, Mr. F. F. Chretien, Mr. C. H. Hinton, Mr. H. E. Grepe, and Miss M. Snodgrass in cabin. For Hongkong: Mrs. M. A. Wheeler, Miss A. Ashley, and Miss W. Moore in cabin; 406 Chinese in steerage.

Per Japanese steamer *Sendai Maru*, from Kobe:—3 passengers in cabin; 22 passengers in steerage.

Per British steamer *Malwa*, from London via ports:—Miss Mair, Miss Casati, Miss Vikers and maid, Miss Scobell, Assistant-Surgeon Geo. Rothganger, Mr. R. de B. Layard, Captain Browne, Messrs. E. W. Brown, E. G. Potts, W. Throckmorton, P. Manton, and D. A. S. Duncan in cabin; Miss Willing (Miss Scobell's maid), Messrs. Roxburgh, Abdool Cader, J. Lime, W. Bown, W. H. Thomas, B. Allihon, A. Gee, and Silva in second class, and Messrs. W. Ashworth, M. Clancy, J. Stevenson, H. Paddick, and 3 Lascars in steerage.

Per Japanese steamer *Nagato Maru*, from Kobe:—Messrs. S. Wada, K. Uyemura, and M. Yamaguchi in cabin; 10 passengers in steerage.

Per Japanese steamer *Yamashiro Maru*, from

Honolulu:—Consul and Mrs. T. Masaki and 2 daughters, Messrs. T. Nukuni, S. Hayakawa, M. Kawata, and N. Akisu in cabin; Messrs. G. Turner, T. G. Eylon-Walker, K. Furukawa, and Miss Kobayashi in second class, and 231 passengers in steerage.

Per Japanese steamer *Hiogo Maru*, from Kobe;—Mr. M. Yamada in second class and 26 passengers in steerage.

Per British steamer *China*, from San Francisco via Honolulu:—Mrs. Feann and 2 children, Mrs. M. C. Perkins, Mr. and Mrs. Raymond, Messrs. J. E. Raymond, E. F. Leeds, C. C. Paine, Percival Lowell, Fred. Maugel, J. W. Stockbridge, and Mrs. H. E. Breons and daughter in cabin. For Hongkong: Miss A. B. Hartwell, Miss Zet Burn, Rev. and Mrs. C. W. Prewitt and 3 children, Mr. Chan Pak Kwi, and Mr. J. B. Paylor in cabin.

DEPARTED.

Per French steamer *Yarra*, for Shanghai via Kobe:—Mr. Oppenheimer, Mr. Von der Steyer, Mr. and Mrs. H. Sarsteiner, Mr. and Mrs. D. L. Bliss, Mr. Ch. E. Bliss, Miss Hone Bliss, Miss Ada Tobey, Mr. and Mrs. Boalt, Mr. Hardy Inniss, and Mr. Jourdiere in cabin.

Per American steamer *City of Rio de Janeiro*, for San Francisco, via Honolulu:—Mrs. F. L. Coombs, Miss Coombs and governess, Mr. E. H. Barnes, Master Beal, Mr. R. Becker, Mr. and Mrs. C. M. Belshaw, Mrs. F. A. Cassidy and 3 children, Mr. W. A. Dibble, Mr. Frederick Freinestein, Miss Funk, Mr. I. Gee, Mr. F. Grunwald, Rev. and Mrs. C. S. Medhurst and 2 children, Mrs. W. L. Meriman and 2 children, Mrs. M. M. Miller, Mr. W. W. Miller, Mrs. J. P. Parker and infant, Mr. and Mrs. C. Parsons, Mr. M. Perolafsky, Dr. Rothganger, U.S.N., Rev. and Mrs. J. W. Saunby and 2 children, Mr. T. J. Stewart, Surgeon-Major-General and Mrs. Thompson, Mr. and Mrs. J. H. Wigmore, Mr. Yone Inouye, and Mr. Yozo Nomura in cabin.

Per Japanese steamer *Yokohama Maru*, for Shanghai and ports:—Miss M. A. Snodgrass, Miss D. Fitzgerald, Miss E. A. Bender, Admiral K. Inouye, Mr. A. Maslenikoff, Mr. J. B. Davison, Mr. K. Oyagi, and Master Curtis in cabin; Mr. R. Shinachi, and Mr. K. Mitsumi in second class, and 47 passengers in steerage.

CARGOES.

Per French steamer *Yarra*, for Shanghai via Kobe:—Raw Silk for France, 1,139 bales; for England, 61 bales. Waste Silk for France, 631 bales. Treasure for Shanghai, \$150,000.

Per American steamer *City of Rio de Janeiro*, for San Francisco:—

REPORTS.

The Japanese steamer *Takasago Maru*, Captain Nirei, reports:—Left Yokohachi the 16th December at 5:40 p.m.; had light to fresh north and north-easterly breeze and light overcast weather and smooth sea, right way throughout the passage; passed Rock Island at 4:30 a.m. on the 17th. Arrived at Yokohama at 11:30 a.m.

The American steamer *City of Peking*, Captain Searle, reports:—Encountered a succession of westerly gales with rough sea and very heavy swell throughout the passage, with the exception of the first night out from San Francisco when we experienced a S.E. gale; crossed 180 meridian in lat. 34.43 N. 12 days out. Time, 20 days and 7 hours.

The Japanese steamer *Sendai Maru*, Captain Tiptle, reports:—Left Kobe the 17th December at 10 a.m. Arrived at Shiohatsi at 1:8 p.m. and left at 5:08 p.m.; abeam of Oshima Lighthouse at 11:16 p.m.; had strong northerly breeze and fine, clear weather; thence strong north-westerly breeze with high sea up to Rock Island, and moderate northerly breeze up to port. Arrived at Yokohama the 18th December at 10:10 a.m.

The Japanese steamer *Nagato Maru*, Captain Ekstrand, reports:—Left Kobe the 19th December at noon; had moderate westerly winds and fine, clear weather; experienced moderate-light northerly winds and fine, clear weather during the voyage. Arrived at Yokohama the 20th December at 3:30 p.m.

The Japanese steamer *Tokio Maru*, Captain Kenderdine, reports:—Left Kobe the 16th Decem-

ber at 10:15 a.m.; had gentle breeze and fine weather till midnight; thence to Hakodate, thick with light snow, where we arrived the 17th at 7:30 a.m. Left Hakodate the 18th at 8:15 a.m.; had fresh breeze and dense snow squalls; off Shiriya-saki wind freshened to a moderate gale with high sea; at 8 p.m. weather moderated and had gentle breeze and fine weather to Oginohama, which was reached the 19th at 8:10 a.m. Left again the same day at 4:15 p.m.; had light winds from N.E., overcast and drizzling rain to Inuboye; thence to port fresh breezes and fine, clear weather. Arrived at Yokohama the 20th December at 8 p.m.

The Japanese steamer *Yamashiro Maru*, Captain Young, reports:—Left Honolulu the 6th December at 3:50 p.m.; crossed the meridian of 180 on the 11th in lat. 24.26 N.; had fine weather with smooth sea till approaching the Japan coast, where northerly gales with heavy rain and head sea was met with continuing wind to Noshima; passed same at 2:25 p.m. on the 20th. Arrived at Yokohama the 21st December at 6:35 a.m.

The Japanese steamer *Fushiki Maru*, Captain Barstow, reports:—Left Kobe the 20th December at 4:10 p.m.; Oshima abeam the 21st at 3:25 a.m.; at 8:24 the same morning saw junk flying signal of distress, bore down upon her, her mast and rudder gone, and took her crew on board, consisting of three men and a boy; then proceeded to take her in tow, but owing to fresh wind and choppy sea, junk broke adrift, settled down and sank; gentle to moderate wind all the way. Arrived at Yokohama the 22nd December at 7:30 a.m.

The Japanese steamer *Hiogo Maru*, Captain M. Matsumoto, reports:—Left Kobe the 21st December at 12:15 p.m.; had gentle northerly breeze and fine weather till Omai-saki which was reached on the 22nd at 10:2 a.m.; thence moderate westerly breeze and fine weather. Arrived at Yokohama the 22nd December at 7:25 p.m.

The British steamer *China*, Captain Seabury, reports:—Left San Francisco the 6th December at 4:2 p.m., to Honolulu, 5 days, 17 hours, and 52 minutes detained Honolulu, 10 hours and 40 minutes; Honolulu to Yokohama, 10 days, 7 hours, and 27 minutes; San Francisco to Yokohama, 16 days, 11 hours, and 59 minutes. Had fine weather up to 20th inst., since then heavy westerly gales and high seas.

Leander (10), cruiser, Captain Castle, 14th December, Kobe.

LATEST COMMERCIAL.

IMPORTS.

Grey Shirts are firm at quotations, but with few sales to note. Quite a strong inquiry for Turkey Reds set in, and sales have been made at the advance noted below. Woollens have been slow of sale, but prices have not given away. In Cotton Yarns buyers willing to go on at quotations, but importers are very firm (asking from 50 cents to \$1 over quotations given) and trade is therefore restricted—little or nothing having been done.

EXPORTS.

RAW SILK.

Our last was dated the 16th instant. Since then, settlements on this market amount to 2,810 piculs, divided thus:—*Hanks*, 92 piculs; *Filatures*, 1,814 piculs; *Re-reels*, 760 piculs; *Kakada*, 143 piculs; *Oshu*, 1 picul. Direct shipments have been 229 bales, making the total export trade for the week 3,050 piculs.

The large business reported in our last issue has continued, with a very active market and heavy settlements. Still more business would have been done, but shippers complain that they cannot readily find the silk which their customers require. Arrivals are small; stocks are diminishing rapidly, and among the 7,350 piculs to which our stock is reduced there are not many desirable parcels.

As before noted, the mainspring of the trade seems to be in Lyons; at the same time, buyers for the United States have protected themselves to a certain extent, buying suitable parcels both in *Filatures* and *Re-reels*, at advancing prices.

Supplies from the interior are now very scanty the arrivals for the week not being more than 400 piculs. From the statistics given at foot it will be noticed that our present stock is less than half what it was on the same date last year and that the visible supply to date is more than 4,000 piculs less than it was at Christmas, 1901.

Exchange has still further declined in sympathy with other bullion, and stands at the lowest rate ever known in Japan. There was a temporary

firmness yesterday and further decline seems to be checked for the moment.

There have been two shipping opportunities since we last wrote, the American and French mails both leaving port on the 20th instant. The former, *City of Rio*, carried 833 bales for the New York trade; the latter, *Yarra*, had 1,200 bales for Europe. These departures bring the present export figures up to 33,099 piculs against 29,731 piculs last year and 11,637 piculs at the same date in 1890.

Hanks.—These have been enquired for. Fine qualities are very scarce, and it is reported that a small lot of prime *Shinshu Shibon* brought the extreme figure of \$680. Considerable business also done in Low *Hachioji* at from \$500 to \$520.

Filatures.—In this class we have had a huge business principally for Europe, although the United States have taken a fair share. Prices have to be again advanced, and there seem to be eager buyers at present quotations.

Reveils.—Considerable business in these, buyers making up their minds to accept such quality as now exists. Among the most recent sales are *Five Girl* at \$810; *Tortoise*, \$800; *Tengusha*, \$807½, with others in proportion. Medium grades, *Shorusha*, *Ichimurashu*, *Sanetsu* and similar silks have brought \$740 to \$765. Common *Bushu* have been dealt in to a considerable extent at \$650, *Akita* bringing \$590.

Kakeda.—Considerable business herein, best qualities being very scarce. No. 1 *Horsehead* are now held for \$760, \$745 having been freely paid in the early part of the week. Other grades in proportion, but with the stock list reduced to 400 piculs, mostly of the lower grades, holders are very firm, feeling sure that they will get their price by waiting.

In *Oshu* and *Taysam* kinds no business has been done beyond a solitary sample bale.

Export Raw Silk Tables to 23rd Dec., 1892:—	
Season 1892-93.	1891-92.
Europe	11,506
America	20,988
Total	32,494
Settlements and Direct	35,950
Stock, 23rd December	7,350
Available supplies to date	43,300

WASTE SILK.
Business in this branch has also been very active, settlements amounting to 3,416 piculs, distributed thus:—*Cocoons*, 54 piculs; *Noshi*, 2,634 piculs; *Kibiso*, 728 piculs. No direct shipments this week.

The great run has been again upon *Noshi*, which buyers take in large quantities at present quotations, which are practically the same as those of last week. *Kibiso* has also drawn considerable attention, and stocks all round show a large reduction upon those of a week ago.

The French mail steamer, which left port on the 20th instant, took 109 bales *Cocoons* and 522 bales *Waste* for Europe. These shipments make the present export figures 21,347 piculs, against 16,391 piculs last year and 16,210 piculs at the same date in 1890.

Pierced Cocoons.—Nothing to add to our last. The only business done has been in Common *Najiko* at \$16 per picul.

Noshi.—Very heavy dealings in all kinds. *Oshu*, \$130; *Filatures*, \$100 to \$130; *Foshu*, \$60 to \$75; *Fine Hachioji*, \$135; *Yonesawa Tegara*, \$120. The stock is much reduced and shippers will soon be complaining that desirable parcels are scarce.

Kibiso.—A good business in *Filatures* at from \$90 to \$102; *Shinshu*, \$72½; *Zaguri*, \$60. In Low *Curles* nothing has been done.

Sundries.—No transactions this week either in *Tama-ito* or *Neri*.

THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Coopers, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890.

STEAM LAUNCHES & YACHTS

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 40 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. We are also sole makers of the

KINGDON PATENT LIGHT PORTABLE ENGINE

Stock sizes, 1½ to 6 H.P. Burns less fuel, and gives three times the power, weight for weight, of any other engine. Awarded First Prize by Royal Agricultural Society England, 1890, in competition open to all makers.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, DEC. 31ST, 1892.

SUMMARY OF NEWS.

ELECTRIC light is about to be installed in the Naval Department.

H.I.H. PRINCE ARISUGAWA TAKEMITO proceeded to Dzushi on Tuesday last.

H.I.M. THE EMPRESS visited the Aoyama Palace on the 26th instant at 2 p.m.

GOVERNOR Yamada, of Osaka, has arrived in the capital on official business.

THE Minister of State for Home Affairs dissolved the Niigata Prefectural Assembly on the 23rd inst.

A KOBE telegram reports that five ships of the Russian Asiatic squadron arrived there on the 24th inst.

JUDGE KAWABARA GITARO, of the Nagasaki District Court, has been removed to the Yokohama Local Court.

THE departure of Mr. Oishi, Japanese Minister Resident in Korea, for his post, is fixed for the 15th of January.

THE Emperor's New Year's Review of the Army will take place on the 7th prox. at the Aoyama Parade Ground.

THE dividend of the Tokyo Electric Light Company for the past half-year is estimated at the rate of 5 per cent. per annum.

THE election of the President of the Traders' Guild of Yokohama took place on the 25th inst., and Mr. Iijima Yuzo was successful.

IT is stated that the Cabinet has decided to appoint Mr. Onoda, Secretary of the Hyogo

Prefectural Government, as successor to Mr. Gimbayashi, late Secretary of the Tokyo City Government.

THE buildings of the Chofu Town Office in North Tama District of Kanagawa Prefecture were burnt down during the night of the 21st inst.

THE *Zambes-Hokumon* collision case occupied a Court of Inquiry in the British Court yesterday and to-day. The decision will be given on Monday next.

THE total number of members of the Japan Agricultural Society is at present 5,151, of whom 86 are honorary, 524 special, and 4,541 ordinary members.

THE election to reorganize the Kawagawa Prefectural Assembly, which was dissolved by the Home Minister the other day, will take place on the 1st of February next.

AN outbreak of fire took place on the afternoon of the 24th inst. at Shibuya-mura in the Koza District of Kanagawa Prefecture, destroying 31 houses and 1 temple.

THE Premonition Law has been put into force in Tokyo against five persons since the evening of the 22nd inst. up to the Friday noon. This brings the numbers up to seventy-nine.

A MEETING of the Privy Council was held on Friday last, and was attended by Counts Higashi-Kuze and Sasaki, Viscounts Fukuoka, Tanaka, Sano, and Enomoto, and Mr. Ozaki.

THE dividends of the Dogashima Rice Exchange and the Electric Light Company, Osaka, for the past half-year are estimated at the rate of 36 per cent. and 12 per cent. respectively per annum.

MR. K. KATAOKA, Chamberlain, was despatched by the Emperor on the 24th inst. to the family of the late Marquis Date. His Majesty was also graciously pleased to grant *yen* 1,000 towards the funeral expenses.

LIEUTENANT-GENERAL YAMAJI, Commandant of the First Army Division, has been appointed Commander-in-Chief of the New Year's Review of the Army, which is to take place at Aoyama on the 7th of January next.

THE Kanagawa Local Authorities have received an order from the Hawaiian Government to despatch a company of Japanese emigrants, consisting of 585 men and 146 women, to the Islands in February next.

MR. OTTO E. EHLERS, the famous German explorer, and Dr. Oscar Kellner, German Instructor in the Agricultural College in the Imperial University, were received in audience by the Emperor on the 27th inst. at 10 a.m.

THE total quantity of kerosene that arrived at Yokohama from Russia and America during this year, amounted to 1,760,000 cases, the number of cases forwarded to the interior being 2,100,000. Some 239,000 cases remain in stock.

MRSRS. TAKEDA SHOICHIRO, Yamamoto Shinzaburo, Miyamoto Katsu, and Kotaka Junichi, of Tokyo, propose to establish a labourers' assurance company to be called the Nippon Rodo Hoken Kaisha with a capital of *yen* 100,000.

DURING a severe storm on 10th inst. 10 fishermen belonging to Awami District of Yamagata Prefecture, who were at work off Tobishima-mura, were caught in the tempest, and are still missing. A junk was wrecked the same day

off Kamo in the West Tagawa District of the Prefecture, and 5 men belonging to Akita Prefecture were drowned.

THE officials of the Patents Bureau in the Agricultural and Commercial Department have presented three silver cups to Mr. Okuda in recognition of services rendered by him while acting as Chief Commissioner of the Bureau.

A TELEGRAPHIC message from Shidzuoka reports that during the night of the 24th inst. a destructive fire occurred at Shimada-jiku on the Tokaido, and before the firemen could get control of it, one hundred and forty-five buildings were burnt down.

A FATAL accident, by which a youth named Sagara Kenjiro, 19 years of age, shot a lad Suyeikichi, by name, aged 10 years, with a rifle, took place at Sakuragawacho, Tokyo, on the 25th inst. The incident was a pure accident.

A DESPATCH from Korea says that the father of the Emperor of Korea, who has been very ill for some time, is now determined to proceed to China for the benefit of his health. The journey is said to have been advised by the Chinese Representative.

A TELEGRAM has been received from Nagano Prefecture stating that a spinning mill in the factory of Mr. Ogushii Zenji at Suwa fell in on the morning of the 26th inst. Four persons were killed, seven being more or less severely injured, and the buildings were considerably damaged.

TELEGRAPHIC intelligence from Kagoshima reports that Police Constable Nagata Kichinosuke was sentenced by the Local Court on the 24th inst. to four months' major confinement for having ill-treated a wounded *Min-to* partisan during the election disturbances in the Prefecture.

GENERAL LE GENDRE, Foreign Adviser of the Korean Government, who has been staying in Tokyo for some time on official business, left the capital on the 25th inst. for Kobe, whence he sails for Korea on the 27th inst. by the *Genkai Maru*. The General will return to Japan in a few months.

As usual, close to the end of the year, the Import trade has declined, and very little will be done for the next week or ten days. Deliveries of goods and the closing up of contracts has occupied most of the buyers, spot purchases having been few and far between, though prices continue to be well maintained both for Yarns and Piece-goods. Metals are dull, and nothing extensive is likely to be done in this market till after the holidays are over. The arrival of the *Harewood* with a cargo of Russian Kerosene made a further addition to the stock, though 25,000 cases of it will go to Kobe, where stocks have run very low and high figures have been paid. Quotations on this market are unaltered, and holders are exceedingly firm. The Sugar market is quiet, and dealers appear to be fully satisfied for the time. The Silk trade still continues active, and orders are on hand which cannot be filled, as the quality demanded is not forthcoming, nor will it be this season. The stock is now nearly 10,000 piculs less than at same date last year, and all the best Silks have been already exported. A large business has been done in Waste Silk at full rates, and the heavy stock of two months ago has been very much reduced. Tea has been bought on a very small scale, just sufficient to fill a few small orders that come in. Exchange has been fairly steady during the week and a slight improvement in rates is reported with firmness at the close.

EDITORIAL NOTES.

COUNT OKUMA AGAIN.

COUNT OKUMA monopolizes public attention at present. A member of the staff of the *Kokumin Shimbun* visited him on the 20th instant and asked him about his reported meeting with Count Yamagata. Count Okuma assured his visitor that the meeting had no political significance whatsoever. "Count Yamagata's recent visit," said the Progressionist leader, "was meant as an acknowledgment of the condolences which I had offered to him through my wife for the loss of his beloved son. I sympathise sincerely with him, for the anxiety and pain caused by his bereavement have made him a different man from the stout Yamagata of former days." When our contemporary's representative alluded to the possibility of the formation of a coalition Cabinet between a section of the present Ministry and a section of the Popular party, Count Okuma shook his head and regretted to observe that it was not in the nature of human beings to entirely forget and forgive each other's wrongs and shake hands as if the past had been a mere dream. Neither Count Ito nor Count Inouye, he feared, would have the courage to make such a daring attempt. To the suggestion that Count Inouye, at least, may have such courage, the Progressionist leader replied that the present Minister of Home Affairs is a man of straightforward nature, and that, though he has little learning, he possesses the faculty of forming rapid decision at momentous conjunctures. For all that men said against him, he was one of the foremost statesmen in the Government. His only defect was proneness to be deceived by others. The man who possesses the qualities of a true statesman, according to Count Okuma's view, is the present Minister President of State. Though sometimes accused of shirking his responsibilities, Count Ito can never turn his back on politics, for he possesses definite political opinions as well as ability and position to give them force. Even if he wished to assume indifference to the state of things in the political world, it is out of his power to do so. Count Okuma then delivered his opinions about each of the Cabinet Ministers, declaring this man antiquated, that unfit for constitutional Government, and so forth. Coming to Mr. Mutsu and Mr. Watanabe, he observed that they were men of considerable ability, especially Mr. Mutsu, whom he described as a shrewd man, whose interest counselled that he should make an independent position for himself, instead of consenting to be a mere assistant to Count Ito and Count Inouye. Unless a man had great independence of character, he could hardly hope to make his influence felt in a Cabinet governed by clan considerations. The *Kaishin-to* leader is then represented as leaving his seat and, with his back to the fire, proceeding to discuss the subject of the Land Tax. He thought that the Government ought to settle this vexed problem by adopting the views of the Popular Party. If the Land Tax question were satisfactorily disposed of and Administrative expenses cut down to the lowest feasible figures, it would then and then only be possible to enter upon a new epoch of progress in the constitutional history of the country. Supposing that such a new epoch had been inaugurated, the first problem presenting itself for solution would be Revision of the Treaties. Generally in Occidental countries, customs duties formed the most important part of the State revenue, and in the case of Japan, too, the revision of the existing treaties would supply her with an addition of income more than sufficient to cover the deficiency occasioned by reducing the Land Tax. He therefore thought that Treaty Revision was one of the most important questions of the day. The Diet had made a Representation on the subject, but a representation was not likely to produce much effect. The Diet ought to press the Government to explain the reasons why this question has been left unattended to during the past three years.

In another place, the *Kokumin*, on the authority of a certain member of the Progressionist

party who happened to be at Count Okuma's when Count Yamagata called there, notices that the Minister of Justice told his host, in the course of conversation, that the National Unionists were not to be relied upon. He further explained the reasons why they would actively oppose the Cabinet, should the latter try to adopt the programme of the Popular party. He even asked, in a casual way, whether the Popular party would give proper support to the Cabinet if the latter could see its way to adopt the former's views. Such is the gist of the information said to have been elicited from the Progressionist in question. But we observe that even the paper publishing the statement refrains from guaranteeing its accuracy.

Our contemporary also mentions that on the 17th instant, the same day on which Count Yamagata visited Count Okuma, the latter received a short note from Mr. Kono, Minister of State for Education. The *Kokumin* does not profess to know the contents of the note, but tells us that Count Okuma instructed his secretary to reply that he would be at leisure on the 22nd and 23rd instant. We reproduce these items for what they are worth.

THE LARGE MURDER.

THE *Hochi Shimbun* publishes a statement that the police of the Kuragi District in Kanagawa Prefecture have arrested a man who now lies under suspicion of being the murderer of Mr. Large. His name is said to be Horimoto Tei, and he is the seventh son of one Yoshiakira, who resides at No. 32 Miyashita-cho, in the Azabu District of Tokyo. Of late, however, he has been calling himself Ikenohata Horimoto-ura, and lodging with a haberdasher named Kaneko in the Shitaya district. The attention of the police was drawn to him by his lavish use of money, and by his pawning articles which seemed over-good for his circumstances. The point that connects him with the Azabu murder is said to be that among the articles pawned by him some are undoubtedly the property of Mr. Large. But to us this statement appears to have precisely an opposite significance, for the simple reason that no articles at all were carried off by Mr. Large's murderers. Had the men stolen anything, there might have been better hope of tracing them. But the solitary clue to their identity was a pipe case and tobacco-pouch which one of the dropped in his flight. We fear that this will turn out to be another of the many spurious murderers who have temporarily figured during the past two years as the perpetrators of the Azabu crime.

Vernacular newspapers persist in considering that the man Horimoto, of whose arrest we spoke in a recent issue, is connected with the Large murder. His identification as the Azabu miscreant was originally spoken of by the *Hochi Shimbun*, which mentioned vaguely that some of the articles pawned by Horimoto had been the property of Mr. Large. The *Yomiuri Shimbun* is now more explicit, for it says that one of the articles in question is a ring which belonged to the murdered missionary. This is the first we have heard of a ring. Considering that the struggle between Mr. Large and his assailants commenced from the moment they entered his room and terminated only when he fell dead, it is scarcely possible that they could have taken a ring from him. At all events, since there was no question of anything of the kind at the inquest or in subsequent references to the affair, we are strongly disposed to think that the present story is altogether a *canard*.

THE SAPPORO TROUBLE.

We referred briefly in a previous issue to the raiding of the office of the *Hokumon Shimpō* in Sapporo by a party of firemen. Further particulars now published show that the unfortunate newspaper had provoked the enmity of these roughs by publishing with blunt accuracy a report of the deliberations of the Ward Headmen of the town. These officials made some unpleasant comments on the behaviour of the firemen, and charged them with extorting money

from the citizens. The habit of the firemen is to visit the houses of well-to-do folks, and perform various gymnastics on fire-ladders, after which they secure for themselves substantial "recognition" by free recourse to abusive and violent language towards any householder who declines to appreciate their doings. Such, at any rate, was the procedure attributed to them by the ward officials, and the *Hokumon Shimpō* published the charges without any circumlocution. Evidently they were true charges, for the firemen lost no time in confirming them. At 2 p.m. on the 18th instant, they went in a body to the office of the newspaper and asked to see the editor. He was absent in Tokyo, and the sub-editor, fortunately for himself, happened to be out. So the visitors, *faute de mieux*, fell upon Mr. Ureshino Tsusho, the only responsible person on the premises, and having with fists and clubs pummelled him into insensibility, they carried him out and buried him in the snow, believing him to be dead. Fire was then thrown about the office, the mats were torn up, and the alarm bell was rung, the scheme of the roughs being to create the impression that they had assembled for the purpose of quenching a conflagration. The police have arrested the ringleaders.

THE LATE MARQUIS DATE.

In the person of the late Marquis Date Muneaki, who died on the 20th instant, Japan loses one of the greatest of the ex-Daimyo who figured most conspicuously in Restoration days. His friends and co-workers, Shimazu Nariakira (elder brother of Shimazu Hisamitsu), of Satsuma, Tokugawa Reikō of Mito, Matsudaira Shungaku of Echizen, Yamanouchi Yōdō of Tosa—these personages long since passed away. In truth Date was the only remnant of the princely reformers whose noble devotion to public interests contributed so much to the success of the Revolution planned by men like Saigō, Iwakura, Kido, and Okubo. He was born at Yedo on September 1, 1818, and was the second son of Sagami-no-kami Yamaguchi Naokatsu, one of the principal immediate vassals of the Shogun. Adopted, at the age of 11, into the family as scion of the Daimyo of Uwajima in Iyo, he was named, in the following year (1829) heir to that Daimiate. It is stated that from his boyhood he showed signs of uncommon intelligence and aptitude for learning. He studied the Chinese classics under the famous scholars Kōga Doan and Sato Issai. One of his prominent traits was great fondness for collecting information about the condition of things in European countries, and unquenchable thirst for scientific knowledge. When Takano Chōei, one of the most heroic pioneers of the introduction of Western learning in Japan, effected his escape from the prison in which he had been confined by the Shogunate Government for publishing a tract on a foreign subject, he was welcomed into the territory of the late Marquis Date, where he remained several years as a sort of tutor to his generous protector. Similar protection was readily accorded to Omura Masujiro who had fled from the pursuit of the detectives of the Shogunate. The clan of Uwajima took the lead in introducing the Western mode of military tactics and in constructing ships after European models. It is also on record that Date Muneaki caused his sister to be vaccinated so as to dispel the prejudices at first entertained by the people of his territory against the introduction of this custom. Many of the improved industries to day prospering in his former fief, are said to be due to his inception and encouragement. After the Restoration, he held the portfolio of Foreign Affairs for some time, and subsequently served as Minister of the Home Department, and Minister of Finance. In 1871 he went to China as Ambassador to negotiate a treaty with that country. Shortly after his return, he retired from the Cabinet and became an Attendant in the Musk Chamber (*Takō-no-ma*). Thenceforth he led a quiet uneventful life, respected and admired by all who came into contact with him. Only when, on rare occasions, he appeared before the public in the congenial rôle of

receiving distinguished foreign visitors, did his numerous friends have an opportunity of greeting the courteous and genial nobleman, who had contributed so materially to inaugurate the new order of things, and whose declining years were spent in quiet contemplation of the progress with which his name will always be associated. The Marquis was buried on the 25th instant. His funeral was attended by a large assemblage of notables of the Civil, Military, and Naval Services, by two Princes of the Blood, by nearly all the Cabinet Ministers, by a number of his fellow-nobles and by several foreigners, the Foreign Corps Diplomatique being represented by H. E. the Chevalier de Martino, Italian Minister, and by the French Chargé d'Affaires. The burial place was the Ueno Cemetery, and the immense cortège that followed the bier constituted one of the most imposing ceremonies of the kind ever seen in Tokyo.

THE BUDGET AND THE PARTIES.

It is reported that the Cabinet has decided to reject the amendments proposed in the Budget Committee's Report. There is nothing singular in this, although the metropolitan papers allude to it as if it were something wonderful. From the first there have been plain indications that the Cabinet could not consent to the sweeping reductions proposed by the Popular party. Possibly some journals think that this newly rumoured resolve on the part of the Cabinet implies the rejection of all compromise. But that is a delicate question to decide. For our own part, we deem it too early to attempt any forecast of the final action of the Cabinet with regard to the Budget, inasmuch as that action must depend to a large extent on the attitude of the Popular Party itself.

The above report has elicited an interesting article from the Radical organ, the *Yiyu*,—interesting as serving to throw light upon the relations between the Radicals and the Progressionists. Hitherto it has been the fashion of the latter to ridicule the moderate and conciliatory tendency of the former. But the position has been reversed, and the Radicals are now returning the compliment to the Progressionists. The Radical organ, for example, expresses a fear that, should the Cabinet be disposed to approach the Opposition in a conciliatory spirit, the latter may be weak enough to agree to a compromise, "for there is now a party endeavouring to please the Government by resuscitating the expenses for the three Higher Middle Schools erased by the Budget Committee." It is scarcely necessary to add that the allusion is to the *Kaishin-to*.

It is natural enough that the *Yiyu-to* should now distrust the *Kaishin-to*, and vice versa. The split between the two parties seems to be complete. It is said that each has pledged itself to oppose any measure introduced by the other. But whether the Government can profit materially by their dissensions is another question. The *Yiyu-to*, the *Kaishin-to*, and the *Kokumin Kyokai* are apparently incapable of fusion at present. To enter the camp of any one of the three would be to inevitably antagonize the other two.

THE "KOKKAI" AND THE BARRISTERS' EXAMINATION.

THESE are hard times with the *Kokkai Shim-bun*. On the 26th instant it was suspended for publishing the speeches delivered at a secret political meeting, and on the following day the libel suit instituted against it was decided in favour of the plaintiff. The suit arose out of some statements made by the *Kokkai* in connection with the Barristers' Examination. They were exceedingly rash statements, and the event has proved them to have been absolutely without justification. The injured persons were Mr. Koga, Public Prosecutor, with respect to whom the article was held to constitute the crime *Kanri bukyoku*, or bringing officials into contempt, and Messrs. Naoye Morinosuke and Okawa Kinjiro, who complained that they had

been slandered. The Court gave judgment against the defendants, Messrs. Ota Kintaro and Shimoi Kakutaro, editor and publisher respectively, and sentenced them to two months' imprisonment with hard labour and a fine of 10 yen. The judgment has been appealed against.

CUSTOMS RETURNS.

THE following is a summary of the customs Returns for November, showing the foreign trade of the empire for the month:—

	1891.	1891.
	SILVER YEN.	SILVER YEN.
Exports	7,096,454.570	8,513,690.690

NOTICE TO MARINERS.

THE following notice to Mariners, relating to the Buoyage of Hainan Strait, in the Kiangchow District of the China Sea has been issued from the Coast Inspector's Office of the Chinese Imperial Maritime Customs:—Notice is hereby given that the under-mentioned Buoy has been laid down in Hainan Strait. Middle Channel.—Middle Channel Buoy.—A ten-foot conical Buoy, painted in red and black horizontal bands and surmounted by a black spherical cage, moored in 13 fathoms. Approximate position:—Latitude 20° 17' 35" N., Longitude 110° 58' 20" E. This Buoy marks the fairway of the eastern entrance to the Middle Channel. South Channel.—Maggie Rock Buoy.—A six-foot conical black Buoy, surmounted by a black triangular cage, moored in 8 fathoms about 2 cables to the eastward of the rock and about 1½ miles to the south-eastward of Hainan Point. This Buoy must be left on the port hand by vessels entering the Strait from the eastward. Hainan Head Bank Buoy.—A six-foot conical red Buoy, surmounted by a black inverted frustum cage, moored in 4½ fathoms about 9 cables N. 65° E. from Hainan Point. This Buoy must be left on the starboard hand by vessels entering the Strait from the eastward. Hainan Reef Buoy.—A six-foot conical black

Buoy, surmounted by a black spherical cage, moored in 12 fathoms about 2½ cables to the northward of the outer rock of Hainan Reef, which is marked on the British Admiralty Chart No. 876, "dries 4 feet." This Buoy must be left on the port hand by vessels entering the Strait from the eastward. The bearings given are magnetic and the depths are for low water of spring tides. Directions.—With the Buoys in the positions above described, the best track for vessels to follow when using the South Channel is to pass 3 cables eastward of the Maggie Rock Buoy and then steer to pass the Hainan Head Bank Buoy at about the same distance, taking care to guard against being set towards the shore, and remembering that it is safe to borrow towards the banks on the starboard hand, of which the lead, which should be kept going, will give warning, while on the other side the bottom is rocky and uneven and the lead gives no warning. The Hainan Reef Buoy may be rounded at a distance of 1 cable or more at discretion.

THE SHOEMAKERS' DEMONSTRATION.

THE shoemakers who assembled recently, to the number of 150, at the House of Representatives to emphasize their protest against the Government's intention of teaching the Army how to make its own foot-gear, have had to pay for their demonstration. The law forbids such gatherings unless due notice be given and permission obtained from the police. The shoemakers doubtless understood that their action was unlawful. But they also understood that to follow the procedure prescribed by the Regulations would have involved abandoning the demonstration, for assuredly the police would not have given them leave to march in force to the House of Representatives. At all events they have suffered for their act. Summoned before the Tokyo Local Court, two of them were sentenced, on the 27th instant, to pay fines of 12.50 yen each, eleven mulcted in sums of 10 yen each, and the rest were acquitted. Whether the demonstration was intrinsically worth 135 yen, is a doubtful question. If the Authorities have made up their minds, after due investigation, that the interests of the country will be best served by organizing boot and shoe manufacturing entirely under military control and with soldier operatives, the apparition of 150 protesting shoemakers at the doors of the House of Representatives is not likely to deter them.

COUNT ITAGAKI AND THE HOUSE OF PEERS.

ON the 23rd instant, delegates of the Radicals not having seats in the Diet held a secret meeting, at which Count Itagaki is said to have delivered his opinions on some important subjects. The proceedings being kept strictly confidential, none of the enterprising papers of the capital have been able to obtain trustworthy information on the matter. But the *Kokkai*, by instituting enquiries in various quarters, professes to have been able to procure some fragmentary facts which, being pieced together, read something to the following effect. The Radical leader, in the first place, drew the attention of his hearers to the importance of interviewing those Radical members of the Diet who are inclined to sacrifice everything for the sake of the consummation of their cherished object of re-assessment. The Count strongly condemned the proposed exchange between the appropriations for the construction of war vessels and the re-assessment of the taxable value of land. On some questions, he would not object to a compromise with the Cabinet; but on the question of Naval reform, no compromise could be accepted by the Radical Party. The Navy is the hot-bed of clan influence, and a strong lever is required to effect reforms in it. Such a lever has been found in the appropriations for the construction of war vessels. Consequently, Count Itagaki thought it extremely unwise to grant those appropriations in exchange for the re-assessment of the taxable value of land, much as he desires to carry out the latter reform. He requested his followers to use their endeavours to dissuade such Radicals as might be disposed to act contrary to the policy of their party. In the next place,

he called upon his followers to bring strong pressure to bear upon the members of the Upper House. The object of the establishment of the Upper House was, he is believed to have said, to secure stability and moderation in the action of the Diet. But he regretted to observe that the House of Peers had gone too far in checking the wishes of the people as expressed through the House of Representatives. Almost all the popular measures introduced by the Lower House had been either positively rejected or indifferently shelved by the Upper House. Judging from their past conduct, Count Itagaki was constrained to believe that the Peers had the interests of the Cabinet more in mind than those of the people. The obstructive propensity of the Peers had of late become stronger than ever, and if they were left unrestrained, they would prove a great embarrassment to the State. The Radicals were charged by their leader with the grave duty of giving timely admonition to the Peers. Should the latter disregard the warning and persist in their mischievous career, it would be necessary to have recourse to the final measure of presenting an Address to the Throne praying for the abolition of the House of Peers. Such a step was of course to be adopted only in the last resort. Still, the Radicals were advised to bear it always in view when they went to interview the members of the Upper House.

It is reported that in pursuance of their leader's advice, the Radical politicians not having seats in the Diet are now considering the plan of action to be followed "for teaching the Peers their proper duties." There is a strong probability that the result of their agitations may be renewed enforcement of the Premonition Law or the Peace Preservation Regulations, for the rank and file of the Radical Party have never showed themselves very circumspect in their methods of urging their views upon opposing politicians. Count Itagaki may discover, one of these days, that his responsibilities are beyond his strength. Nothing appears to check him in his career of radicalism. Should it ever be his lot to exchange the functions of an agitator for those of an administrator, the public will probably be shocked by the contrast between his necessary conservatism in office and his sweeping liberalism in opposition. Nothing could more forcibly illustrate the rash precipitancy of his disposition than to find him talking gravely of the abolition of the House of Peers as a proper subject for popular agitation within two years of the date when the Constitution first went into force. But it is possible that the *Kokkai's* report misrepresents him in this particular respect. The general accuracy of the report is challenged by the *Jiyu*, which ought to be well posted in everything relating to the Radicals.

SHANGHAI.

By last advices the weather at Shanghai was intensely cold. Much disquietude was being felt about the prevalence of small-pox, many foreign residents having been attacked; and vaccination was being largely resorted to. The death is reported of Mrs. R. W. Mansfield, wife of the British Vice-Consul. The funeral service, which was attended by large numbers of sympathisers and friends, took place at the parish church of St. Joseph, being conducted by the Rev. Father Colombelle. The departure of the *Saikio Maru* was postponed no fewer than four times before she finally got away. The Chartered Bank of India, Australia, and China has purchased the O.B.C. premises upon the Bund for £16,000, which is certainly an extremely low price. On the 4th January (the first issue in 1893), the *North-China Daily News* is to be permanently enlarged, to make room for its advertisement matter, with which the editor seems to be somewhat hampered.

A FEVER STRICKEN SHIP.

THE German steamer *Nanyang* (Capt. Magleby), which arrived here on Sunday last from Java, says the *Hongkong Daily Press* of the 14th inst., appears to have had a terrible experience on her voyage to Hongkong. It is difficult to obtain any very detailed information,

but from what we gather no less than eighteen of the crew after leaving Batavia were prostrated by Java fever, which is of a peculiarly unalloyed type. The captain himself was incapacitated from duty the whole of the voyage, and is only at the present moment recovering slowly from the effects of the attack. Shortly after the commencement of the voyage two men, probably while in the delirium of the fever, jumped overboard during a heavy N.E. gale and were seen no more. One was a Manila man and the other was a German seaman. Both men deliberately leapt over the bulwarks in broad daylight and such spontaneous acts of suicide could only have been committed, under the circumstances, by men whose minds were temporarily unhinged. We believe that all the men who were stricken with the fever have now recovered, or at any rate are convalescent.

COUNT ITO AND THE DIET.

EVERYBODY is now looking forward with impatience to the day when the Minister President of State will be able to attend the Diet in person. It is generally believed that the uncertainty of the present situation will be cleared up one way or the other by his appearance on the scene. The *Nippon*, which can never be accused of partiality to the Government, seems to be disposed to think that things will be all right so soon as Count Ito is able to resume active control. Our contemporary's information is to the effect that the original plan of the Government was that Count Ito should assume in person the duty of confronting the Diet on all important questions, while the rest of his colleagues should confine their energies to carrying out reforms in their respective Departments. But the unfortunate accident that befell the premier dislocated the programme, and has led to the present unsatisfactory state of affairs. If, therefore, Count Ito recovers sufficiently to resume personal control when the Diet meets again in January, and to carry out the original scheme of action, the *Nippon* doubts not that he will be able to obtain the support of all intelligent observers.

The *Kokumin Shimbum* also believes that the situation will change when Count Ito attends the Diet in person, but refrains from predicting what direction the alteration is to take.

Meanwhile, Count Ito is progressing most favorably. We explained in a recent issue that, owing to somewhat obstinate inflammation of the gum, the physicians deemed it necessary to extract the four front teeth, which, though loosened by the accident, were not removed at first, a hope being entertained that possibly they might be saved. Relief was not immediately secured by this operation, owing to the presence of splinters of bone, which had not been anticipated. Two of these were removed, and two have since come away, so that complete recovery may now be looked for soon. Meanwhile, the Count is able to move about; his spirits and appetite are excellent and he converses without difficulty. The interval of a fortnight remaining before the Diet re-assembles will probably suffice for his complete recovery.

COUNT ITAGAKI.

THE lightning, real or fictitious, that flashes at present on the political horizon, is beginning to concentrate about Counts Inouye and Itagaki. It is very extensively rumoured that a meeting between these two statesmen is being arranged through the medium of Mr. Furusawa Shigeru, Director of the Bureau of Posts in the Communications Department, who was formerly a trusted assistant of the Radical leader. The Chu-o Dempo News Agency tries to explain the rumour away by alleging that it owes its origin to a visit which Count Itagaki recently received from Messrs. Masuda Ku, Oye Taku, and Isono Koyemon, who desired to learn the Count's views on the question of the Bourse. The relations which Mr. Masuda maintains with Count Inouye, as well as the name of Mr. Oye, naturally led some people to attach political significance to the visit; and thus by degrees talk arose of a meeting between the Radical

leader and the acting Minister President of State. Such is the explanation offered by the News Agency. But people do not seem inclined to be content with it. The *Kokumin Shimbum* at least emphatically declines to accept such a hypothesis. How, our contemporary asks, could a visit of Messrs. Masuda, Oye and Isono, suggest a story that Mr. Furusawa, who had nothing whatever to do with that visit, is exerting himself to arrange a conference between Count Inouye and Count Itagaki? According to the *Kokumin's* information, the general belief is that some person, whoever he may be, is very much interested in bringing Count Inouye and Count Itagaki together and is doing his best to effect an arrangement for their meeting. Our contemporary, however, judiciously refrains from alleging that the interview is desired by the two Counts themselves. Mr. Takenouchi Tsuna's sudden return to the capital seems to be connected with the affair some how or other. What germs of truth, if any, these rumours contain, we do not profess to say, but they indicate, at all events, the nature of the contingencies which people consider probable.

THE "KOKKAI" AND THE "JIYU."

THE *Kokkai* has been suspended for publishing matters prejudicial to the public place—the authorities do not point out the particular article incriminated, but there is little doubt that the offence consisted in publishing a speech alleged to have been delivered by Count Itagaki at a recent secret meeting of the Radicals not having seats in the Diet. The Radical organ, the *Jiyu*, alluding to the subject, complains of the incorrectness of the report published by its contemporary, but does not pronounce it absolutely false. Indeed the *Jiyu's* indignation seems to have been excited rather by the fact that the secret was divulged than by the alleged inaccuracy of the manner of divulging it. Naturally, the *Jiyu* is prevented from pointing out in what respects the *Kokkai's* report is inaccurate, because to do so would involve unpermitted revelations. The speech itself, as reported by the *Kokkai*, is incomparably stronger than any utterances hitherto attributed to the Radical leader. If it truly reflects the advice given in private by Count Itagaki to his followers, the attitude of the *Jiyu* towards the Government is emphatically implacable. The Count, almost in so many words, recommends his Party to employ the Naval appropriations as a means of embarrassing the Cabinet and accomplishing the Opposition's much desired consummation, government by party. We imagine, however, that the gravamen of the offence consists, not in the strength of the language employed, but in the fact that the prohibition has been violated which forbids the publication of speeches delivered at political meetings not duly authorized. The law imposes a simple veto in such matters, and the law, whether good or bad, must of course be respected. We trust, however, the ban of suspension will soon be removed from the *Kokkai*, for the independence of its tone and the general acumen of its judgments are characteristics too rare to be conveniently dispensed with.

THE SITUATION AT ICHANG.

No fresh riots had occurred at this port up to last advices, but the air was thick with rumours. The students have taken up a threatening attitude; and one afternoon a small knot of evilly disposed persons gathered at the entrance of the residence of the Rev. G. Cockburn, head of the Church of Scotland Presbyterian Mission, shouting "Kill! Kill!" Now Mr. Cockburn, having a sick wife and five little children on his hands, was indisposed to stand any nonsense; as the correspondent whom we quote very aptly says, "there is small wonder that the saint should have given way and the man asserted himself. After bearing with it for some time, the nozzle of a revolver is said to have peeped over the verandah, and a voice behind it assured the aggressors that killing was a double-handed game, and depended for success upon more than empty words. The new argument seems to have been convincing to most of the little crowd, though their leader did not immediately follow his

retreating rabble. The frowning nozzle of the revolver, however, eventually persuaded even him that it contained a very stinging retort or reply to a battering-ram, and he decamped, leaving the mission unmolested for the remainder of the day." Our Shanghai morning contemporary, in commenting upon these outrages, uses the following very moderate and most appropriate expressions:—"This late rioting," it says, "shows what a grave mistake Sir John Walsham made in not insisting on some punishment on last year's rioters. Not a soul has been punished for that riot; a money indemnity has been secured, but that does not touch the people who did the damage. The old General, who was so overcomer last year by the rudeness of his own men that all he could do was to sit on the British Consul's sofa and be revived with champagne, is dead; and the arrival of his successor has been made the occasion for the new rioting. Our Hankow correspondent shows, how energetic the Chinese officials can be if they have to deal with a riot in which injury is done to another official's *yamen*. They sent troops from two capitals to put down what was only a village quarrel, dignified the affair by the name of a rebellion, and cut off any number of heads. "Contrast with the above," says our correspondent, "the way things are managed at Ichang. There we have a great city on a river open to steam navigation, furnished with a strong native garrison and telegraphic communication. A riot breaks out and damage is done compared with which the destruction at the Liling *yamen* was but a flea-bite. Yet no one is punished, no official is censured, but rioting is allowed to become chronic. Why this great difference?"

MR. MINAYE'S ASSAILANT.

JUDGMENT was delivered in the Tokyo Local Court on the 27th instant in the case of Susa Kakitsu, a *Soshi* of the association called the *Chuo Dantai*, who, on the 24th of November, attacked and wounded Mr. Minaye, a member of the Diet, as the latter was leaving his house to attend the opening of the Diet. The *Soshi* was found guilty and sentenced to 6 months imprisonment with hard labour. Considering that he showed so much persistence in pursuing his victim, and that he used a lethal weapon obviously carried for the purpose, his punishment of six months' imprisonment contrasts strangely with the sentence of twelve months imprisonment pronounced, a few days previously, by the same Court—the judges of course being different—against the editor and publisher of one of the best journals in Japan for inserting an article which certainly brought the House of Representatives into some ridicule, but which could not possibly be counted malicious or criminal in intention.

JAPANESE PRISONS.

AMERICA has conceived an interest in Japanese prisons. One of the great magazines which spare no expense to provide new sensations for their readers sent out to the East Mr. C. Long, with a commission to "write up" this little-explored ground. Arrangements were at the same time made for the publication of Mr. Long's researches simultaneously in France and Germany. The organizers of the enterprise were evidently under the impression that they were about to procure a real live sensation for the public. Their ideas of Japanese prisons were based on the stories circulated thirty years ago, when the lively imagination of enterprising travellers added not a little to the genuine horrors of Japanese judicial processes. They thought that Mr. Long would be able to recount histories such as those which a leading Lisbon journal published a few months ago. Especially with regard to the treatment of female prisoners his observations, if he succeeded in making any, were expected to be startling. Most persons predicted, indeed, that access to the female prisons would be absolutely denied to him, the cruelties practised there being such as must never see the light of day. Undoubtedly it is difficult to obtain entry to the female prisons in Japan, because a general rule of privacy is strictly observed there. From this

fact persons ready to be suspicious have probably been able to draw welcome inferences. Mr. Long, of course, had no difficulty. He had been preceded by Mr. Norman who gave to the world the first substantial account of Japanese prisons. But Mr. Norman merely took the prisons *en passant*, whereas Mr. Long made them the sole object of his visit to Japan, and since his researches into prison management and methods in Europe and America have been extensive, we look forward with much interest to his accounts. They will of course be very disappointing to persons who anticipate "sensations." The only sensation experienced by Mr. Long seems to have been one of astonishment at finding things so very different from what he had been led to expect. An interesting episode of his visits to the prisons was the difficulty of photographing the female prisoners. The Authorities had no objection whatever to the taking of pictures, but the women did emphatically object to being permanently recorded in prison garb, and their decidedly feminine but very respectable sentiment was so far respected that Mr. Long, or rather Mr. Ogawa who assisted him, could only obtain instantaneous pictures taken *sub rosa*. A number of prisons, both in the capital cities and in provincial centres, were placed under contribution for the purposes of the essay which Mr. Long is preparing, so that it will not be possible to read him as an exponent of the "show" penitentiaries only. Before he left Japan, a member of the staff of this journal, curious to learn the general impression made on him by what he had seen, asked him a few questions, with following result:—

What do you think of Japanese criminal laws?

Like everything else Japanese, so far as I have seen, there has been a vast improvement in the laws during the past 20 years, but of course I have not had time as yet to go thoroughly into them or to make comparisons as to the increase or decrease in crime.

How about Japanese prisons?

That is a most difficult question to answer. From a Japanese standpoint I should say that in most instances they are very good. Certainly with few exceptions they are kept clean, not too much crowded, well aired, and the work required of prisoners is not too heavy. But the system which places the different prisons under different managements I should say is bad. Then, from the foreign view, the food, while excellent for Japanese who are accustomed to it, is not suitable. The most serious objection I have, however, to the prisons from a foreigner's standpoint is non-provision of any heating during the winter months. Europeans would suffer greatly from the cold.

Are the prisoners well treated?

Too well, I should say. It is all moonshine for foreigners to tell harrowing tales about Japanese cruelty to prisoners. I don't know what was done in days gone by, but certainly to-day the prisoners are much better treated than in either Europe or America.

Their work is not too heavy, the hours for work are not too many, and, best of all, they are allowed a certain percentage of the sales of their work. This provides them with means at the expiration of their sentence and enables them to lead honest lives.

Have you been afforded every facility to inspect the prisons?

The Government has been very kind to me. They evidently had no desire to hide anything and gave me every facility to execute my work, for which I am most grateful. They were, however, somewhat tardy in granting permission to take photographs of the prisoners, from a fear I believe that the prisoners' feelings might be injured. However, I have obtained a full set of photographs of male and female prisoners and the buildings, all of which will appear next year in magazine form.

THE LATE CAPTAIN DUNN.

WE take the following notice of the late Captain of the Hongkong team, who perished in the wreck of the *Bokhara*, from the *Field* of Nov. 12:—"Cricketers will have seen the announcement of the melancholy fate which overtook the Hongkong Team travelling home from Shanghai in the *Bokhara* which was lost off the Pescadores on the night of Oct. 10. Among them was Captain J. Dunn, of the King's Liverpool Regiment, whose unusual excellence had placed him, not only in the front rank of army players, but also among the leading ranks of English cricketers. In 1879 and 1880 he was in the Harrow Eleven, and his correct but vigorous style gave great promise for the future. At Sandhurst his performances were excellent, and when he went to Ireland in 1882 his reputation

was already great. His best year was 1889 in which he compiled the altogether remarkable total of sixteen centuries, having twice topped the 200. In 1888 he went out with the team of Irish cricketers to America, where he favourably impressed all who saw him play; his best score was 126 against Fifteen of New York. The year 1889 saw him quartered at York, and he then played at the Scarborough Festival, and made fifty-five for England v. Middlesex. A distinguished career in first-class cricket would probably have been his. But circumstances led to his sailing for Hongkong in the winter of 1889, where he soon became known as the 'W. G. Grace of the Far East.' His average for the 1890-91 season was 107, with a top score of 208 not out. "Johnny Dunn" was deservedly popular among all cricketers and all his brother officers. Few who have met him or played with him will forget the cheerful keenness and activity which he displayed in all his occupations, but especially in cricket. His style was free and attractive, and his hitting often terrific; he exhibited great dash in the field, and had a very sure pair of hands. His loss will be mourned, not only by his most intimate friends at Hongkong and here at home, but also by all those who have ever met him, or can remember his unflagging zeal, constant good temper, and, above all, his modest unpretentious character.

A PLEA FOR THE SEA-SERPENT.

The contemptuous incredulity with which people are in the habit of meeting all stories of alleged glimpses of "the sea-serpent" has always appeared to us a little unscientific. When we realise the wonderful world which lies hidden from us at the bottom of the great seas,—its mountains and valleys, its strange scenery, its delicate and amazing vegetation, its rare colouring, and the infinite variety and number of its inhabitants—there is surely nothing very outrageous in the belief that there may be snake-like or dragon-like monsters there, larger and more formidable than any that mariners are known to be familiar with. It is at any rate a curious fact that scarcely a year passes in which credible and respectable witnesses do not seriously aver that they have seen something answering to the required description. Here is the latest instance. The whole of the officers, passengers, and crew of the mail-steamer *Angola*, says the *St. James's Gazette*, which arrived the other day at Liverpool, have signed a statement that they saw a gigantic marine monster in the neighbourhood of Lagos on the West African coast. One of the officers has even sketched it for the *Daily Graphic*. It is apparently as long as Oxford Street, with a head and neck which look like a cross between a giraffe and a boa-constrictor. In this head were two great green eyes, which occasionally glared at the ship. "Only the most sceptical," observes the *St. James's*, "will contest that the creature is beginning to grow tangible." We wonder it never occurred to the late Mr. Phineas T. Barnum to fit out an expedition in search of a specimen. It would have been worth a colossal fortune to him.

FIZZLE NEAR NEWCHANG.

A CERTAIN Emperor of China is dead. Not, be it understood, His Imperial Majesty Kuang Hsu, but some infatuated young villager who, through the folly of his grandfather, a member of one of those curious sects with which China is honeycombed, had been proclaimed Son of Heaven to his own exceeding disadvantage. The following notice of it, which we take from the *N.-C. Daily News*, will be found of interest. The writer, who dates from Newchang, says:—

We have just had a sort of rebellion in a teacup about twenty miles from here. A villager belonging to some unknown sect proclaimed his grandson Emperor, and with half a dozen friends, whom he declared like himself to be invulnerable, marched upon the district city some fifteen miles away. As his following did not increase, he returned home, when he had got within a mile or two of the town. In the night the *Hpaos* secretly carried information to the magistrate, who sent a *patte* of constables to arrest these madmen, as I think we may call them. The constables went to the village, but alarmed by the story about invulnerability, made no attempt to seize any one, and came back empty-handed. Next day the magistrate sent

for troops, and despatched a force of a couple of hundred men to the village. When the soldiers approached, the rebels set fire to their houses—there were only eight families of them—and marched out boldly to the fray, men and women, about twenty in all, armed with fowling pieces, pikes, and cudgels. The soldiers opened fire upon them from a discreet distance, but failing to hit any one, began to believe in their invulnerability and to feel that perhaps discretion was the better part of valour. At last, however, one of them bowled over a man, and then they made short work of the rest. A dozen or more were killed and the rest escaped into the hills.

Another Correspondent of our contemporary appears to have actually come across the dead body of the *soi-disant* Emperor. The writer was out shooting, and this is what he saw:—

The next morning, taking it rather easy, we were surprised about 10 o'clock, to see many persons running towards the brow of the hill, on the right of our road near the village of Hwaichuan-tun. As our carter and servants seemed desirous of ascertaining what was the cause of excitement, we rode across the ploughed and now deserted cotton fields, till we arrived near the object of attraction—a dead Chinaman, but from all accounts the remains of a very distinguished individual, indeed some say that he was the Emperor of China; others have it that he was only the leader of an incipient rebellion, which had just been nipped in the bud. For some time meetings had taken place, at the instigation of a Buddhist priest Li Ting-hou, and a young fellow named Li Shing-wun was proclaimed Emperor. The priest made the people believe that he possessed a medicine which rendered the body impervious to bullet or sword thrust. Well, in the evening of 28th November, a number of soldiers sent to arrest the rebels suddenly surrounded the latter, and took twenty prisoners. Li Shing-wun, who had imbued the wonderful antidote, was fired at in front without effect, but the Captain of the military, for a change, shot him in the back, which caused him to run five li, when, the effect of the medicine having, I suppose, passed away with the bullet, another Emperor of China went the way of all flesh, and his remains were found by us, as described above. We now learn that the whole family of Li, six persons, are dead, several heads being hung in baskets as customary, some on the high road, and the head-piece of the Emperor, false or not, is ornamenting a part of the city wall of Kaichow, 30 miles to the south of this.

FEMALE DETECTIVES.

THE complaint of women that there are few careers of usefulness open to them will soon become an anachronism. Steadily and surely they are corkscrewing their way into any number of professions which for millenniums have been a monopoly of the other sex. Their latest achievement appears to have been in the private-detective line. Now a "female detective" does not strike one, on a first hearing, as a particularly happy, or even pleasant, idea. It is improbable that any man would care to marry a female detective, or to know that his mother was one. And yet, if we may believe a writer in *Cassell's Saturday Journal*, women are doing really good work in this direction, and some of them appear to be by no means the repulsive creatures that one would naturally suppose. "The employment of the sex in this capacity," says the writer, "is increasing largely, for it has been amply proved that a resourceful woman is frequently far more successful in solving unusual situations and mysteries than a man would be." A female detective must of course be a bit of an actress, one day masquerading as a Hallelujah lass, and another as a noisy burlesque chorus-girl. No doubt there are many women to whom all this would be attractive enough, and who would thoroughly enjoy the adventurous element in their strange calling. That women of good principle might, however, do really very beneficial work as detectives may be gathered from the two following stories, the authenticity of which is vouched for:—

Objections have been raised to women's undertaking private inquiry upon the ground that there is something sneaking and underhand about it. But against that may surely be set the opportunities they have for helping one another in grievous wrong. "I was glad," said one of the cleverest young women now engaged in the work, "to help one poor girl who came to my firm for assistance." It appeared that the girl had answered an advertisement in a weekly paper, and had been most cruelly deceived. Under promise of marriage and getting the furniture for the home, she had been induced to let the rascal have her little fund of savings, with which he promptly disappeared, leaving her absolutely destitute in her direst need, and without leaving the smallest clue by which he could be traced. It seemed hopeless, but it

struck the detective herself that from the cool deliberateness with which he had evidently acted he habitually practised this heartless form of fraud. She therefore thought she would try the effect of an advertisement in the same paper for a husband, announcing herself as good-looking, young, and possessed of a little ready money. The trap was well laid; and the very first answer she opened happened to be from the black-guard wanted. With confederates within call, if necessity arose, she had one or two meetings with him, until his intentions became quite plain enough to justify the theory she had formed; and in the end he was convicted at the Woolwich Police Court of obtaining money under false pretences.

A part often taken by the female detective is that of a servant, and it is generally in this capacity that she has some of her most tragic experiences. In the late General Election only a detective could have told the true story of why a popular county member did not seek re-election. For a long time he had been missing sums of money. The only person he could suspect was his secretary, though it was impossible to produce any evidence against him. His solicitors advised the employment of a woman as detective, and she, when consulted, stipulated that no one—not even his wife—should know her true mission. It was not long before she discovered that the real culprit was the wife herself, and that the reason of her theft was to supply a former lover with money. The detective waited until she had overwhelming evidence of both facts, and then simply put the question to the husband: "Do you know a Mr.—?" He only thought for an instant, and then the whole situation flashed upon him. He generously forebore to take any public action, but he shut up his country seat, and has left England—a disappointed, heartbroken man. On the subject of the election, too, it may be mentioned that a number of women were employed in various constituencies by both parties to trace and establish alleged offences under the Corrupt Practices Act.

THE HUANG-FU RIVER.

THE changes that are going on the bed of the Huang-pu between Shanghai and its estuary seem to be very rapid, and the consequences will probably be such as no one can accurately foretell. At the point where the river Woosung, commonly called the Soochow Creek, falls into the Huang-pu, the change has been so great as to cause a serious subsidence of the Garden Bridge, which will have to be repaired forthwith. But a far more serious event is approaching further down—nothing less, indeed, than the swallowing-up of the great island Tsung-ming. A Shanghai resident who lately visited Tsung-ming island informs our morning contemporary that the current is washing away the land in front of the principal city on the south side of the island. In the space of seven years, at least one li has been encroached upon and the occupants of the land have had to remove their houses further inland. The natives state that if the water eats away the land at the same rate that it has done, in less than three years the city walls will be in danger. A short distance from the city, there is a tract of land at least four miles square which was dry ground a year ago, but is now entirely submerged. The authorities of the island some years ago, consulted foreign experts as to the possibility of constructing a breakwater to resist the current, but the price was considered too high, the negotiations fell through. At the same time that the water is encroaching upon Tsung-ming, it is depositing accretions on Tashing Island further to the east, but the N.W. end of Bush Island is washing away.

CHRISTMAS IN TOKYO.

CHRISTMAS exercises in Japanese Churches are being observed with an enthusiasm and Christian ardour akin to the spirit of western congregations. During Friday, Saturday, and Sunday, the several chapels in the city were nicely and neatly decorated, and, from reports to hand, the exercises by the children gave great credit to their ability to learn, and to their teachers for their untiring efforts in teaching them. One noticeable feature of the recent exercises is the absence of foreign labour in a greater degree than in the past, and the ability of Japanese Christians to arrange, prepare, and conduct an entertainment on strictly Christian customs and principles.

THE RADICALS AND OFFICIAL INTERFERENCE IN ELECTIONS.

THE Radicals are apparently determined not to suffer the old question of official interference in elections to die in any semblance of peace.

Two of their most inveterate agitators, Messrs. Tatekawa and Haseba, have identified themselves with this particular onslaught upon the Government, and are not unlikely to rally their Party for another charge. A meeting of the Second Heads (*Bucho*) of the *Fiyu-to* was held on the 23rd instant for the purpose of discussing the propriety of renewing the programme of last session by making the subject the text of a fresh Address to the Throne. No definite decision was come to, the time intervening before the New Year's recess not being deemed sufficient to discuss the matter thoroughly. But renewed consideration will be given to it next month. Meanwhile, rumour says that a majority of the Sectional Heads are in favour of re-opening the question in the Diet.

THE SUSPENSION OF THE OSAKA LOCAL ASSEMBLY.

THE Local Assembly Osaka was suspended on the 26th instant. According to information received by the metropolitan press, the meeting of the *Fu-kwai* on that day was marked by a scene of extraordinary disorder and confusion. The subject of debate was the second reading of the clause in the Estimates relating to expenditures on account of police *dis mœurs*. All other business of the session had purposely been given precedence over this clause. The total amount of expenditure in question was originally 12,000 yen, but had been cut down to 8,000 yen by the Standing Committee. When the day's proceedings were opened, several members of the extreme party, such as Messrs. Takaoka Yataro, Mori Sakutarō and others, put several questions to the delegates of the Governor with regard to the conduct of the latter and of the police at the time of the last general parliamentary elections. The propounders of these questions alleged that when Mr. Oi Kentaro's lecture meeting at Ikeuchi in the Province of Kawachi was invaded and disturbed by 80 or 90 ruffians, the police constables in attendance left the intruders to work their own sweet will; that the same locality was vigorously canvassed by Mr. Nagaya Akikage, a clerk of the Osaka City Government, in the interest of an official candidate; that Mr. Nakahara Shobei and another individual at Imabashi, in Osaka, were forced by the chief of the police station of the District to sign a written declaration that they would not vote for Mr. Joyoda Bunzaburo, a Popular candidate; and that roughs in the employ of the official candidates were fed and entertained out of the secret service fund of the police. Mr. Yamashita, Chief of Police, in reply, declared that no interference was attempted in elections, but refused to take notice of the above questions as they did not lie within the scope of the subject then under the Assembly's consideration. One of the propounders of the questions thereupon introduced a motion for making a representation to the Minister of Home Affairs for the removal of the Governor and the Chief of Police. This proposal was the signal for a tumultuous outburst of applause, not only from the members' seats but also from the strangers' gallery. When the President, Mr. Kitada, rose to put the motion to the vote, several of the moderate members, who had by this time recovered their courage, attempted to prevent the voting by striking the table and shaking the *soroban* (abacus) which forms part of the usual paraphernalia of the members of a Local Assembly. Despite these obstructions, the voting took place, and the motion obtained the support of a majority. But the members of the Moderate party, apparently rendered desperate by the situation, challenged the President's decision. Some of them went so far as to throw at him the blocks on which their numbers are written, while a few rushed towards the platform where the President's table stood, for the purpose of dragging him down from his place. These truculent gentlemen were, however, met in front of the President's seats by several members of the Extreme Party, and a fight ensued. The noise being heard by the police constables stationed before the Assembly building, they at once hastened into the Hall. An apparition so unusual as this invasion of blue-coated officials had the effect of stopping the unsightly struggle between the members

and directing the indignation of both sides against the constables who had dared to violate the sanctity of the Assembly Hall. Appeals were addressed to the President to take strong measures against the police, and he in turn complained to the Chief of Police, who promised to investigate the matter. Order having been at last re-established, the President formally gave notice to the Secretary of the City Government, who was in the Hall, that the Representation having been duly voted by the Assembly, would be forwarded to the Minister of Home Affairs. Mr. Oura, the Secretary, then warned the Assembly, that the voting of a resolution in direct violation of the 33rd Article of the Local Assemblies Regulations would involve suspension, which warning was shortly afterwards followed by a notice from the Governor, ordering the suspension of the Assembly and informing the members that during the time of suspension they need not stay in Osaka.

Mr. Oura, the Secretary, was at once despatched to Tokyo to report the affair to the Home Minister. It is believed that the sentence of suspension will be followed by one of dissolution. A rumour is already circulated to the effect that the present Governor, Mr. Yamada, will be succeeded by Mr. Nakaye Kozo, a member of the Upper House and lately Governor of Shiga Prefecture.

THE "KOKKAI" AND THE FOREIGN EMPLOYÉS OF THE GOVERNMENT.

THE *Kokkai*, just before its suspension, returned to the subject of the foreign employés of the Japanese Government. Before answering to the criticisms which its first article elicited from this journal and others, the Tokyo newspaper again makes some general observations on the position and influence of the foreign servants of the Government. In early history there are many instances of Koreans and Chinese rising high in the Imperial service, but they were invariably naturalized as Japanese subjects before being admitted into the service. Moreover, even in the case of naturalized Koreans and Chinese, there were always certain limits beyond which they could not hope for promotion. In pursuance of this national custom—continues the *Kokkai*—Japan excludes foreigners from her civil as well as military services. But the high trust reposed in men like General Capron, Mr. Morley, Mr. Boissonade, Colonel Mecker, and so forth, and the treatment given to them, far exceed anything within the reach of Japanese officials of corresponding rank and position. These gentlemen were all men of uncommon ability and rendered signal services to this country. But in the case of other foreign employés of the Government, there have been some who have positively disgraced the branches of service to which they belonged. To mention a few cases, a Professor of chemistry in the *Kaisei Gakko* was so addicted to hard drinking that he was one day seen sleeping on the stone steps in front of the shrine of Shimezu at Shiba, while another professor in the same institution turned out to have been a book-keeper in a small mercantile house in his own country. Even these persons received handsome salaries, and were well treated by their employers. Indeed, everybody coming out to Japan expects to receive a high salary, and consequently Japan has been unable to obtain the services of men of real ability and accomplishments, on account of their costliness. With a few exceptions, all the foreigners hitherto engaged by the Japanese Government have been men unworthy of notice. "Thus their services," says our contemporary, "have been not only uneconomical but injurious to the reputation of our country." The *Kokkai* next asserts that foreign employés of the Government have been the means of divulging State secrets to the outside world. "Through whom did Count Okuma's Treaty Revision scheme leak out? And who again disclosed Japanese military secrets to Berlin society?" The *Kokkai* then goes on to speak of the vast influence which foreign employés are capable of exercising over the minds of the Japanese. It cites the case of Mr. Boissonade, whose Lec-

tures on Jurisprudence form the basis of the legal education of the majority of Judges and lawyers in this country. In his case, however, our contemporary confesses that his influence has been beneficial to Japan, but its purpose in alluding to the extent of the good done by him is evidently to point to the possibility of an exactly opposite instance. It applauds European Universities which, though they open professorships in pure science to foreigners, never extend similar privileges to the latter in the case of studies calculated to exercise great influence over the character of the students as Sociology, Political Economy, Politics, Science, History, and Philosophy.

The *Kokkai* questions the accuracy of a Yohohama journal's remark that life in Japan is more expensive than in Europe. That the reverse is true is amply borne out, say the *Kokkai*, by the testimony of Japanese returning from Europe as well as of European travellers in Japan. It also refers to the luxurious mode of life among missionaries in this country, and to the savings effected by the Professors and instructors engaged by the Japanese Government. These facts all point to the inexpensiveness of life in Japan, and should any doubt be still entertained on the subject, readers are referred to the London *Economist* of October 1, 1892. With regard to another assertion, namely, that the result of dispensing with the services of Englishmen in Provincial schools, has been to lower the standard of proficiency in the use of the English language among the pupils in those institutions, the *Kokkai* replies that, in its opinion, what is needed by Japanese youths is not proficiency in speaking or writing English, but ability to read books written in that language. This is an important educational question, and the *Kokkai* refrains from dwelling upon it at any length.

Replying to our own criticisms, the *Kokkai* regrets that we mentioned only cases of professors in the Imperial University, and did not allude to men like Dr. Roesler and others, who receive more than a thousand yen per month. Yet the *Kokkai* itself confesses that these employés are entitled to receive large salaries. Even in the case of the University Professors, it is to be borne in mind that, though their salaries range between 300 and 400 yen, they are allowed to occupy furnished houses free of rent. We need scarcely say that in this statement the *Kokkai* is greatly misinformed. Moreover, our contemporary asserts that the salaries offered by the Imperial University are by no means despicable in the eyes of some of even the best scholars in Europe, — is proved by the willingness of a man of a certain Doctor's standing to accept the offer of a chair. With regard to our comparison between the prospects of a foreign employé in Japan and those to be hoped for in a similar walk of life at home, the *Kokkai* remarks that men who could not easily make a successful start in life in their own countries, have been enabled to obtain good positions at home on their return from Japan by the work which they had accomplished and the position they had occupied in the latter country. In this catalogue are included Dr. Griffin, Prof. Morse, Prof. Fenollosa, Prof. Chamberlain, Dr. Cutter, and Dr. Brown. Our contemporary also mentions that the Japanese Government increases the salaries of its foreign employés. As to honours and recognition, it refers to the cases of General Capron, Prof. Lyman, Mr. Morley, Colonel Crawford, and others, who were granted Imperial audiences, were decorated with superior orders of merit, and were rewarded with other marks of honour and respect. Indeed, the *Kokkai* maintains that the foreign employés of the Government are actually enjoying respect and honour which they could never receive at home. In short, our contemporary is convinced that the majority of foreign employés in Japan establish a title to a reputation at home by their stay in this country, that they are capable of saving money while here, and that they enjoy in Japan profound respect and honour.

We shall not pursue this subject. The *Kok-*

hai's errors of fact might be cited to discredit its general argument. But to what purpose? If Japan thinks herself competent to dispense with foreign aid in educational, scientific, legal, medical, and commercial fields, let her by all means make the experiment. Nothing that we can say would materially affect a belief based on sentiment rather than on logical conviction. We do not quarrel with the sentiment. It is legitimate and natural. But we do most distinctly quarrel with the tone of complaint underlying the *Kokkai's* article. Did that journal frankly say that foreigners have served Japan faithfully and zealously, but that the time has come when the nation thinks itself capable of walking independently, we should have nothing to object. It is not for foreigners themselves to assert their own indispensability.

Looking back over the history of the past 25 years, we can recall, and do not hesitate to acknowledge cases of foreign employés who did neither credit to themselves nor useful service to Japan. But such instances were altogether exceptional, and serve only to give greater prominence to the generally zealous and efficient character of the work done by Japan's foreign assistants. It is noticeable that the good positions obtained by so many foreigners on their return to their countries, is attributed by the *Kokkai* itself to the work which they accomplished in Japan. Such an assertion is difficult to reconcile with the depreciatory tone underlying our contemporary's article. There has always been a disposition—and of late it has distinctly increased in strength—among Japanese of the junior generation to belittle the capacities and deny the usefulness of the foreign employé. He eclipses their efforts and stands more or less in their path of promotion. A sentiment so obviously dictated by self-interest is explicable enough and can easily be discounted. But we did not expect to find it echoed in the columns of the *Kokkai*, a journal whose mental horizon had not previously been limited by the jealousies of personal ambition or the envies of premature aspiration. It is not for us to appraise what Japan owes to her foreign employés. The task would be ungracious and unbecoming, and moreover, despite the utterances of the *Kokkai*, we have too much faith in the judgment of the Japanese nation to believe that it will arrive at a false or an unfair estimate. It has been shown by actual figures published in our correspondence columns, that the salaries paid by Japan to her foreign employes, so far from being, as the *Kokkai* claims, in excess of the emoluments attaching to similar positions in the Occident, are greatly inferior. But that is a point which we should not have thought of raising had not the *Kokkai's* remarks been addressed to it in such a misleading manner. We should not have thought of raising it for the simple reason that to gird at a salary voluntarily accepted does not become a man of common sense. The foreign employé serves Japan because he finds his account in doing so. Japan employs him because she finds his services worth paying for. It is a question of mutual convenience and benefit. But no one must imagine that the foreign employé lives by the banks of any Pactolus or sees before him the bays of any Parnassus when he devotes his abilities and energies to Japan's service. He is kindly and courteously treated; he receives his salary with unvarying regularity; he is even honoured, in some cases, with marks of valued distinction. But he has no career, no future. The kindest advice, the advice that we have never failed to offer to any fellow-countryman who showed a disposition to devote himself for a lengthy period to Japan's service, is to make all haste homeward, before anchors are cast which cannot easily be raised, and before the chances of winning distinction and a competence elsewhere become as slender as they have always been for foreigners in this country. We beg the *Kokkai* to note that these words are not written in any spirit of complaint. Service in Japan, as has been said above, is not compulsory; if a foreigner chooses to serve here, he has no business to blame others because his choice proves less happy than he

anticipated. Let each side be just, however. Japan has not overpaid her foreign employes, neither have they served her ill. If she thinks that she can dispense with their aid, let her try. We wish her success, and are ready to congratulate her if she wins it. All that we object to is an attempt to place the question on the false bases of excessive emoluments and inefficient services. There has been nothing of the kind in a general rule.

THE PROGRESSIONISTS AGAINST THE RADICALS.

THE *Choya Shimbun* reports that the principal members of the Progressionist Party recently held repeated conferences in the residence of their leader at Waseda. These meetings having been kept strictly secret, the particulars of what took place there are not known. But our contemporary professes to have been able to obtain trustworthy information about the attitude of the Progressionists towards the Radicals. So long as Mr. Hoshi Toru, President of the House of Representatives, continues to exercise such vast influence over his Party, the Progressionists have no hope of maintaining friendly relations with the Radicals. For the present, the *Kaishin-to* will refrain from coming into collision with the *Jiyu-to*, but will try to co-operate with the latter on minor questions. But so soon as a favourable occasion offers, they will not hesitate to declare war against the Radicals and will spare no pains to attack and humiliate them. When that moment arrives, the *Kyushu* section of the Radical party will go over to the *Kaishin-to* camp. Such is the information supplied to the *Choya*. We reproduce it for what it is worth, noting, however, that it is confirmed by the New's Agency's intelligence, which interprets the outcome of the above meetings to have been a strong determination on the part of the *Kaishin-to* to attack the Radical fortress with the utmost vigour. The conclusion supposed to have been arrived at by the Progressionists is that the *Jiyu-to* alone constitute a strong political association. As for the National Unionists, they are regarded simply as an assemblage of conservatives out of touch with the time, and of business men who have their own interests chiefly at heart. But the Radicals, rising on the crest of a tide of popularity, are foemen worthy of *Kaishin-to* steel. From a romantic point of view that may be a good reason for assailing the *Jiyu-to* stronghold, but in other respects it does not appear very intelligible.

THE "RE-ASSESSMENT PARTY."

THE so-called Re-assessment party is a temporary combination of members of the Lower House pledged to the consummation of this long cherished object at whatever cost. All sorts of rumours are spread about their doings, and it is not easy to distinguish truth from falsehood in the mass of talk. The latest story is that certain members of this combination begin to show signs of alarm lest summary treatment be accorded to them by their respective parties should they support the appropriations for the construction of war-vessels. But by way of set-off to this story, it is reported that one of the Radical members of the combination, Mr. Higashiro Heitaro, has had a secret conference with the Minister of Home Affairs, Mr. Furusawa Shigeru being represented as the means of bringing about the meeting.

INTERVIEW WITH GENERAL HARRISON.

THE following account sent by Mr. Sydney Gedge to *The Times* of his interview at the White House with General Harrison, gives, says the *Daily News*, an idea of the U.S. President's calibre as a statesman:—

The President began with the question, "How do your constituents (at Stockport) like the McKinley tariff?" "Not at all," was my reply. "But I doubt whether you, Sir, will keep their manufactured goods out of America, for you have corn of the value of £100,000,000 to sell to us, and certainly won't be paid for it in gold." "Why not?" asked the President. "Because," I replied, "we cannot spare it. It's doubtful whether we have so much gold in the country." "Then," said he, "I shall drive you into bimetalism, which I want to do." "But, if we do pay you in gold," I asked, "of what use will the gold be to you unless you spend it in productions or manufactures which you don't possess?" Mr. Harrison replied

that he considered it the chief commercial object of every country to hoard up as large a store of gold as possible in the national treasury. Respect for the President's position stopped the retort which rose to my lips—that in England old women like to do the same in a stocking.

The President then asked me how, in my opinion, their corn would be paid for, and was evidently annoyed at the confident tone of my reply, "With our goods," and challenged me to prove it. I said, "Well, Sir, wishing to take to my people at home some choice presents from the United States, I have been to your best shops in New York and Washington, and could find nothing suitable for the purpose except things made in England or France, and the storekeepers told me that they had no high-class article of American manufacture. 'The English goods are best,' said they; 'our rich people will have them, whatever they have to pay, and they certainly have to pay half as much again as we do.' 'Well,' said Mr. Harrison, 'free trade may be best for England, but protection is best for America.' 'I'm glad you think so, Sir,' was my reply, 'because, although if the United States were to abandon protection the trade between you and us would largely increase, yet you, with our enormous advantages, would soon undersell us in the neutral markets and drive us from them, whereas now we keep them to ourselves.' 'Neutral markets,' said he, scoffingly, 'half-savage places!' And so we parted.

THE JAPAN SOCIETY.

THE Japan Society of London now numbers 315 members. It has certainly had a most successful career up to the present. The Society's programme for the next few months contains an interesting series of papers. The next is to be read by Mrs. Salway on the subject of "Japanese Fans," and the following are promised:—

"Certain Instances of the Adaptation of European Designs to the Decoration of Japanese Swords," by Mr. M. B. Huish, LL.B., Member of Council.
 "The Family Relations in Japan," by Mr. D. Goh, Hon. Secretary.
 "Japanese Shipping, Ancient and Modern," by Dr. F. Elgar, LL.D., F.R.S.E., (late Director of Dockyards at the Admiralty, &c.) Member of Council.
 "Some Difficulties encountered by beginners in the Study of the Japanese Spoken Language," by Mr. A. Diósy, Hon. Secretary.
 "The Popular School of Japanese Pictorial Art," by Professor Wm. Anderson, F.R.C.S., Chairman of Council.
 "Ancient Japanese Lacquer Work and Artists in Lac," by Mr. Ernest Hart, Member of Council.
 "Wood and its Application to Japanese Artistic and Industrial Design," by Mr. George Cawley, M.I.M.E., M.J.S., &c. (late Imperial Engineering College, Tokyo).

FIRE.

A NARROW escape from a conflagration of considerable dimensions occurred on Saturday evening at No. 58, the business premises and residence of Mr. Jno. W. Hall, between six and seven o'clock. A suspicious smell of smoke led to a search, and fire was discovered in a room on the north side of the building. Here the mantelpiece was found burning, the body of the fire being at the back of it, and the portion already consumed being fully a foot above the mirror. By tearing down the mantelpiece and mirror the interior was got at, and a liberal application of water extinguished the flames. Two or three minutes later, however, the fire would have reached the roof, and been entirely beyond control. The room was heated by a stove, the pipe of which was led through a large stone, and notwithstanding that the ironwork in the stone was originally a quarter of an inch thick, rust and heat had caused holes through which apparently sparks or ignited soot had dropped between the walls and raised a fire. The lesson taught by this is that no matter how well and strongly fitted originally, all such affairs should be occasionally overhauled.

MRS. BROWN POTTER.

Wx (*N.-C. Daily News*) hear from Mrs. Brown Potter and Mr. Kyrle Bellew that the hope to visit Shanghai again before long. They have been playing Zola's realistic drama *Therese* with great success in the States, and the *Washington Post* says of them:—Mrs. Potter's *Therese* is quiet, contained, but weirdly effectively. She is an impressionist rather than an elocutionist now, and her every pose and expression carries a thought more swiftly and surely than speech. She was best in the quieter scenes, although in the third act she rose to the occasion with power, if not to entire satisfaction. Mr. Bellew's admirable methods are too well known to need additional commendation, and his *Laurent* is a perfect counterpart of *Therese*.

WOOSUNG BAR AGAIN.

THE U.S.S. *Marion* arrived at Woosung from Nagasaki having on board some of the officers

and men and stores belonging to the *Palos*. As the *Marion* could not cross the bar to land these, the U.S.S. *Monocacy* was sent down to Woosung to take the men and stores from her. The *Ngankin* was detained outside Woosung owing to want of water on the Bar. She met H.M.S. *Porpoise* bound up at 6.30 a.m. on the 13th instant off Huangchow, the German gunboat *Wolf* bound up off the Little Orphan at 5.30 p.m. the same day, and the French gunboat *Viper* bound down off Dove Point two hours later. The *Saikio Maru*, after being detained outside Woosung from the 14th inst., managed to cross the Bar yesterday (18th).

THE EASTERN WHALING CO., LIMITED.

A MEETING of the shareholders of this company was held at No. 75, Yokohama, on the evening of the 22nd to discuss as to the advisability of carrying on the company or winding it up forthwith. Mr. John Milne proposed that the company be carried on, and this proposition was seconded by Mr. H. J. Snow. Mr. Jno. W. Hall stated that the greater part of the capital had been lost, but if the affair was now wound up the company could pay its debts, and the shareholders get back a small portion of the money invested, and as an amendment to Mr. Milne's proposition, proposed that the company be wound up forthwith. The amendment was seconded by Mr. T. Abbey, but on being put to the meeting was lost.

THE PHOTOGRAPHIC SOCIETY OF JAPAN.

THERE will be no ordinary meeting of the Society in January of 1893, but the Committee are trying to arrange for a lantern meeting, to be held in Yokohama, about the middle of the month. The next ordinary meeting of the Society will be held on Friday, February 3rd, 1893, at the rooms of the Geographical Society (Chigaku-Kiokai). Nishikonyacho, Kibashi, Tokyo, beginning at 5 p.m. On the same day, and at the same place, there will be a special meeting at 4 p.m. to consider the resignation of the Japanese Treasurer, and the appointment of a new Treasurer, also to consider the appointment of two new members of Committee.

DECORATIONS.

WE mentioned some time ago that His Majesty the Emperor had been pleased to confer on Captain J. Ingles, R.N., Adviser to the Imperial Naval Department, the Second class of the Order of the Sacred Mirror. The fact is now announced in the *Official Gazette*. From the same source we learn that Major Baron A. J. von Grutschreiber, of the Prussian General Staff, has been honoured with the Third class of the same Order, as has also been the distinguished Italian artilleryist, Major Braccialini. Lieut. Baron G. de Labry has received the Fifth class of the Sacred Mirror.

THE BANKING REGULATIONS.

THE Bill for postponing the operation of the Banking Regulations, as well as the Deposit Bank Regulations, having passed both Houses of the Diet, has received Imperial Sanction and been published in the *Official Gazette*. The necessity for deferring the operation of these Regulations arises from the fact that their provisions are closely connected with those of the Civil and Commercial Codes, and since the latter are not to be enforced for some years, the former, of course, cannot be put into immediate operation.

COLLISION OFF WADA POINT.

A COLLISION took place, says the *Kobe Chronicle* of the 22nd inst., between the Osaka Shosen Kaisha steamer *Ajikawa Maru* and a junk named the *Minato Maru*, on her way to Kobe from Moji, off Wada Point, on Monday afternoon. Both vessels were slightly damaged, but were able to proceed on their respective ways without assistance.

THE HINDOO APPRECIATION.

A CORRESPONDENT writing on the silver question in the *Times of India* says:—The prudent Hindu originally believes that gold has touched

its highest point, that the tide is on the turn, for he has for the first time in the last fifty years, begun to sell largely of his stores. In 1891 we see the imports of gold valued at 580 lakhs of rupees; the exports at 71 lakhs of rupees. In 1892 for the first six months the figures are 54 and 210 respectively. I think the Indian holders may be trusted to have rightly gauged the financial condition of gold.

RADICALS IN CHIBA PREFECTURE.

THE Prefecture of Chiba is one of the principal strongholds of the Radical party. Out of the 9 Representatives returned to the Diet from that locality, 7 belong to the *Jiyu-to*. The local Radicals held a general meeting on the 25th instant at the Kano-ro, Chiba. The meeting was attended by more than a hundred persons, including the Radical members of the Diet from the locality as well as Mr. Kanamori who appeared as a representative of the *Jiyu* newspaper. Mr. Ito Tokutaro occupied the chair. The first business of the day was the election of the local delegates of the party, but the election was postponed to the 15th of January next, when votes are to be sent to the office of the *Tokai Shimpō*, a Radical organ at Chiba. Mr. Nishimura Jinyemon then introduced a motion for the establishment of a Radical club at Chiba, and produced draft regulations. The motion was duly seconded and passed, and the regulations were entrusted to a committee, the members of which were named on the spot by the Chairman of the meeting. This committee was also entrusted with the duty of fixing the amount to be contributed by the local Radicals towards the general expenses of the Party. This completed the business of the day, and the company sat down to a supper which was very plain, we read, but satisfactory to all present. A special feature of the entertainment was the absence of *gaiha*, which circumstance is highly praised by the *Jiyu*, our source of information. Before the company dispersed, the Committee reported that, with regard to the burden to be borne by the locality for Party expenses, the amount had been fixed at 100 yen per annum distributed in varying proportions among the different rural divisions (*gun*).

Chiba Prefecture seems to be one of the few localities in which the relations between the inhabitants and the local officials are not strained. While, in many other places, attention is distracted by serious collisions between the local assemblies and the Governor, the *Ken Kwai* of Chiba completed its session on the 24th instant in peace and harmony. On the same evening, at the instance of the President of the Local Assembly, a *réunion* was organized. It was attended by both the local officials and the principal citizens of the place.

LORD GEORGE BENTINCK AS A STARTER.

A LATE resident in Japan writes from home:—"I find in a recent issue of a sporting paper a sketch of the late Lord George Bentinck as a sportsman, and I could not help being struck by the writer's description of his lordship's style of starting a large field of horses, seeing that precisely the same tactics were adopted at a couple of meetings in Yokohama with excellent results. It is fair to assume that the Yokohama starter had not heard of Lord George Bentinck's method of getting a field off well together without delay, seeing that his lordship died in 1848, but the systems adopted are so precisely similar that I attach the cutting as showing a strange coincidence which I think is worth reproduction. Notwithstanding the good results achieved at the Yokohama meetings referred to—the almost invariable level starts, and the avoidance of false starts and delays—I distinctly remember that there were not wanting persons who found fault—not with the results, but with the method—simply because their ideas of starting were not followed out. Here is the reference to Sir George Bentinck:—

"A starting-flag in his hand, and followed by eight-and-twenty racehorses, stepping like a troop of old Frenchmen, bearing a tulip-bed aloft—so brilliantly shone the silken jackets of the riders in the sun—the

observed of a hundred thousand eyes. Lord George Bentinck, as steward of the races, undertook to start the immense field for the Great Yorkshire Handicap on a plan of his own invention.

"Hitherto the functionary who had performed the office of starter, after doing his best, or rather his worst, to get the horses in line, simply ordered the jockeys to 'go!' as frequently having to recall them by a distant signal, after they had galloped over three parts of the distance, by reason of some obstinate brute—man or horse—refusing to obey the order and remaining fresh for the next essay. Lord George rectified this very inefficient plan by an equestrian trigger of his own invention, viz., the posting a man with an advance flag directly in view of all the jocks—on whom they were to fix their undivided attention and to 'go!' without fail, on pain of a pecuniary fine on seeing the colour dropped in front.

"The main duty rested with the noble starter in getting the horses in line, a manoeuvre he accomplished by great patience, and occasionally walking them backwards and forwards, till assured on his part that they were so, when he, standing on their flank—unseen by horse or rider—suddenly lowered his flag in signal to the man ahead to do the same; when, if the jockeys were disposed to act fairly, or a horse was not especially restive, a false start was next to impossible.

"On this occasion the immense field bounded off at the first signal, notwithstanding it was Lord George's first essay, and the countless throng cheered the gallant starter with deafening shouts of delight and admiration.

The foregoing sketch, it will be observed, presents Lord George also in his character of turf reformer, which constitutes his strongest claim upon the gratitude of racing men.

THE RADICALS.

It is reported that the Radical members of the Diet held a meeting on the 25th instant, and considered their policy towards other political bodies. They confessed that in some instances they had been too confiding in their attitude, and that to this circumstances they owed a part of the humiliating defeats suffered by their measures. They consequently resolved that, with the exception of questions absolutely demanding communication with other parties, no correspondence whatever should be opened, and that they should vote independently of all other political associations.

The Radicals who do not possess seats in the Diet recently elected a committee of administration. The members of the committee, Messrs. Matsuda Kichisaburo, Kadowaki Shigeo, Yamada Itaro, Nakajima Matagoro, and Sato Sadamoto, held a conference on the 27th instant, and voted the following resolutions: First, the names of all Radical members of the Diet absenting themselves from the House shall be published in the papers of the following morning. Secondly, the names of persons attending the conferences of the Radical members of the Diet shall be similarly published. Thirdly, Radicals who do not possess seats in the Diet, shall hold a *réunion* on the 11th of January next. Fourthly, a meeting of the Committee of Administration shall be held on the 3rd of January next. It will be noticed from the above that the Radicals not having seats in the Diet are bent upon exercising strict supervision over the conduct of their Representatives in the Lower House.

THIEVES IN TOKYO.

THE foreign residents in Tokyo have recently been unpleasantly reminded of the fact that there are such things as thieves in Tokyo. Outside Tsukiji, where a burglary embarrassing to its victims marked the commencement of the cold weather, there have been three crimes of robbery within as many weeks. The first occurred at the residence of Major-General Palmer, in Azabu. In this case the thieves, baffled by iron bars protecting the sitting-room window which they had chosen as their place of operations, were only able to appropriate a purse lying on a table within arm's reach of the window. But their plan of operations nearly involved a conflagration, for the taper which they thrust through the bars to direct their proceedings, set fire to a muslin curtain, and by what happy chance the flame failed to spread, it is difficult to say. The second attempt was at the house of Lieut. T. H. James, in the same neighbourhood. Here the thief was content with an over-

coat, which, being new, probably seemed a desirable acquisition in the cold weather. The third took place at the residence of Mr. Y. Duer, in Shiba Park. The burglars in this instance carried off quite a number of articles of apparel and jewelry, happily not of great value. Watch-dogs will become valuable if this kind of campaign continues.

The closing days of the year in Tokyo are usually distinguished by a marked increase in the number of burglars. It is recorded, however, that this year is an exception, so far as the Japanese residents are concerned, whatever may be the experience of the foreign. The happy result is attributed to police vigilance. It is stated that the Metropolitan Police Bureau recently instructed the Chiefs of Police Stations throughout the city to be more than usually vigilant in preventing pilfering and burglary, and that, in consequence of this instruction, about 400 detectives have been placed on watch, in addition to 350 constables on regular duty at out stations, and 353 constantly on patrol. This large force has had the desired effect. The maximum number of burglaries and petty larcenies reported on any one day this fall has not exceeded seventy, which shows a marked decrease as compared with the record of former years.

YOKOHAMA LITERARY SOCIETY.

A MOST enjoyable entertainment was given by the Literary Society last evening in the Van Schaick Hall, the spacious room being crowded. The programme was exceptionally long, but its numbers comprised some sparkling gems. Among them were the violin selections of Mr. Ramseger—one of which, a Menuetto in E, was of his own composing. It was a dainty piece of writing and found full expression at its author's hand. Miss Proctor's songs were very charmingly given; while the March from "Athalia" went with vigour and good execution. The programme, which had to be altered here and there on account of indisposition on the part of some of the advertised performers, was as follows:—

Overture	"Il Barbiere di Siviglia"	Rossini.
Original Paper	"Christmas in the Olden Time"	Meacham.
P.F. and Violin	Menuetto in E	Mozart.
Songs	(a) "Good Night"	Frantz.
	(b) "The Maiden's Wish"	Chopin.
P.F. Solo	"Mazurka"	Mason.
Song	"Non è ver"	Mattel.
Quator	"March in 'Athalia'"	Mendelssohn.
P.F. Duo	"Invitation à la Valse"	Weber.
Song	"Auld Robin Gray"	Lindley.
Violin Solo	"Elegie in E flat"	Ersat.
Song	"In a Gondola"	Sullivan.
Recitation	"The Convict's Christmas"	Carleton.
P.F. Solo	"Polonaise in C Minor"	Chopin.
Song	"The Chord of Love"	Behrend.
P.F. Solo	"Tam o' Shanter's ride"	Warren.
Song	"The Chief Mate's Story"	Postel.
Song	"Rock me to sleep, Mother"	O'Donnell.
Song	"Jerusalem"	Parker.
Song	"The Children of the City"	Adams.
P.F. and Organ	Chorus from 42nd Psalm	Mendelssohn.

THE PROPRIETORSHIP OF THE "PALL MALL GAZETTE."

ACCORDING to the November number of the *Review of Reviews*, the statement we reproduced the other day to the effect that Sir Charles Dilke was the purchaser of the *Pall Mall Gazette*, is untrue; the paper in question having passed into the hands of the Unionists. Mr. Stead moans and shrieks about the transference as though he had lost his head. One would think a Derby winner had been taken straight from the paddock to finish its days between the shafts of an omnibus, or some beautiful and virtuous maiden sold against her will into disreputable slavery. Listen to this:—"They"—its jealous contemporaries—"were not even able to raise a chorling chorus of satisfaction when the news came that the *Pall Mall* had been sold to a company-promoter, who was reported to be the agent of a son of Israel, who, after cooling the fever of speculation by libations of Kops's ale, desired to complete his experience by owning a paper. Here was Samson sold as bond-slave to the Philistines in good sooth, and yet the lords of the Philistines had not even the heart to laugh aloud when the purchaser proceeded to put out the eyes of his thrall."—This is surely a curious subject for complaint. Fancy a man being aggrieved because no one gloried at his expense!—"Yet a sense of fraternity

might well have evoked an expression of sympathy, if not of protest, at so sorry a spectacle as the sale of an organ of public opinion in the open market-place. Mr. Thompson had, of course, a perfect legal right to do as he liked with his own. But if the Czar were to sell St. Isaac's Cathedral to the Mohammedans, he might still be within his legal rights, but his action would probably cost him his crown. There has seldom been a more cynical and unashamed exercise of the money power in journalism, and in the interest of the profession it is sincerely to be hoped that it will prove an unprofitable investment." But after all said and done, whatever the *Pail Mail* may have been in years gone by, it has now long ceased to have much political power. When a paper goes in heavily for illustrations, and a "Children's Page," it ceases to be the organ of serious politicians.

APPALLING DISASTER NEAR CANTON.

A CANTON correspondent sends us (*China Mail*) the following particulars of a terrible catastrophe which occurred at a place about 50 miles west of Canton, some two weeks ago:—"At Kam Li in Shiu Hing district a temple had been visited by a band of robbers who demanded a sum of several thousand taels which was refused by those in charge of the temple. An immense mat-shed in front of the temple was crowded with people who were witnessing a theatrical performance then in progress. This shed the robbers set fire to, and the people rushed panic-stricken into the temple, the main entrance of which caught fire, and the result was that over fourteen hundred (1,400) people were either burned to death or smothered; most of the deaths were caused by suffocation, the wind having driven the smoke into the temple. A careful register just taken by the Magistrate results at present in 1,940 missing. On December 4th the native hospital (Oi Yuk Tong) sent over 700 coffins to the scene of the disaster, besides many that were taken from the shops. Fatsan also sent hundreds of coffins. I have never seen the Chinese so awe-struck over anything as over this disaster which has resulted in such fearful loss of life."

THE SILVER QUESTION.

We learn from the *N.C. Daily News* that

A protest signed by fourteen merchants and brokers, and the agents of the Hongkong and Shanghai Banking Corporation, and the Bank of China, Japan and the Straits, in Calcutta, has been lodged with the Bengal Chamber of Commerce against the memorial of the Indian Currency Association. They declare that "the memorial is based upon a highly incorrect representation of facts, and its prayer to Parliament to empower the Government of India to deal with the Currency as it may deem fit, is one which, in our opinion, should on no account be granted." In regard to this protest the *Englishman* says:—"It is curious that signatories have apparently been unequal to the task of meeting the arguments of the memorialists, or of submitting reasons why their prayer should not be granted. Of the two banks with appear among the signatories, one was only established in Calcutta during the present year, while the other is the only Exchange Bank that is worked entirely on a silver capital, and is therefore vitally interested in preventing the fall in the metal which must follow the declaration of a gold standard for India. As a contribution to the currency controversy the protest is insignificant. The number of its signatories makes a poor show as compared with the sixty-six members of the Bengal Chamber of Commerce who signed the original memorial."

DOG STEALING.

The *N. C. Daily News* says:—"The stealing of dogs and shipping them away from the port seems to have become an organised business, and residents at the outposts are requested to note the advertisement on our front page, in which the matter is referred to." When a valuable dog is missed in Yokohama, the first thing the owner does is to communicate with friends in Shanghai with a view to its recovery.

THE PACIFIC MAIL AND O. AND O. ROUTES.

It is announced that during the winter months on the trips from Yokohama to San Francisco, the steamers of these companies will not go North of Latitude 40, thereby avoiding the cold and disagreeable weather so often experienced on the Great Circle Track, which on the route to San Francisco reaches Latitude 48 North.

THE KEROSENE OIL CASE.

It will be remembered that the appellants, Messrs. Mourilyan, Heinman & Co., carried

this case to the Supreme Court of Judicature after the decision in the appeal case which was in favour of the respondent, the Governor of Kanagawa Ken. We now learn that the former Court confirmed the judgment of the Tokyo Appeal Court and dismissed the appeal on the 22nd instant.

SERVICES DURING THE WEEK OF PRAYER.

SUNDAY, Jan. 1.—Sermon on the Saviour's Gifts for Men. The Rev. G. M. MEACHAM.
MONDAY, Jan. 2.—Humiliation and Thanksgiving. The Rev. H. LOOMIS.
TUESDAY, Jan. 3.—The Church Universal. The Rev. W. T. AUSTEN.
WEDNESDAY, Jan. 4.—Nations and their Rulers. Mr. A. J. WILKIN.
THURSDAY, Jan. 5.—Foreign Missions. The Rev. G. F. DRAPER.
FRIDAY, Jan. 6.—Home Missions and the Jews. The Rev. E. S. BOOTH.
SATURDAY, Jan. 7.—Families and Schools. Mr. W. D. S. EDWARDS.
SUNDAY, Jan. 8.—Sermon on the Promised Outpouring. The Rev. A. A. BENNETT.
The sermons on the 1st and the 8th will be preached at 11 o'clock in the Union Church. The other services will be conducted in Van Schaik Hall at 5 o'clock p.m., except on Wednesday, when it will be at 8 o'clock.

HEALTH RETURNS.

DYSENTERY has made great ravages this year throughout Japan. According to official investigations, the total number of cases up to the 21st inst., was 69,231, of which 15,811 ended fatally. The rate of mortality was thus 22½ per cent.

Small-pox is prevalent in many places, especially in the Prefectures of Gumma, Yama-guchi, and Hyogo. The total number, of cases reported from these places are 75, 19, and 121 respectively. The disease has also invaded Hokkaido, where the number of cases has reached 2,469, of which 859 have resulted in death.

CHINESE GALLANTRY.

A CUSTOM House officer, while on duty at the C.N. Co.'s wharf, Shanghai, accidentally walked over one of the pontoons into the water, where he remained for a considerable time till he was rescued by a quarter-master on one of the steamers. Several Chinamen came and looked at him as he was holding on to the pontoon, but did not render him any assistance. It was a bitterly cold night, but the officer has not suffered any ill effect from his involuntary bath.

FUNERAL OBSEQUIES FOR THE OFFICERS AND MEN OF THE "CHISHIMA KAN."

A FUNERAL service on an imposing scale was conducted yesterday on account of the officers and men of the Imperial Japanese Navy who lost their lives by the sinking of the *Chishima Kan*. Her Britannic Majesty's Chargé d'Affaires, the French Chargé d'Affaires, Captain Ingles, R.N., and a Lieutenant and a party of Seamen from H.B.M.'s *Leander* were among those present. The Captain of the *Leander* was unfortunately prevented by illness from attending.

ICE ON THE PRIMO.

A CORRESPONDENT gravely informs the *N.C. Daily News* that the steamer *Fu Ping*, on her way down the river from Tientsin, had to blow her whistle to warn carts to get out of her way. "This, I believe," says the writer, "is not a yarn, but it does not happen every day that land and water traffic impede one another. I suppose three inches of ice will bear carts and will yield to a steamer under way."

A TREATY WITH KOREA.

THE *Ostasiatische Lloyd* states that the heir presumptive to the Austrian Throne, who is to leave Pola on the 15th inst., will proceed from Yokohama to Seoul, to ratify the Treaty between Austria-Hungary and Korea.

SIR CECIL CLEMENTI SMITH.

A LONDON telegram in the Sydney *Morning Herald* states that failing the appointment of

Viscount Gormanstone, Governor of British Guiana, it is thought probable that Sir Cecil Clementi Smith, Governor of the Strait Settlements, may succeed Sir Robert Hamilton at Hobart, Tasmania.

DISMasted.

THE British barque *Strathmore* put into Singapore on the 13th inst. for repairs, having been dismasted while on her way from the Philippines. It appears, says the *Straits Times*, that she left Iloilo on the 17th November, bound for St. John's, Newfoundland, with a cargo of sugar and hemp. She encountered various winds up till the 30th November, when she got into a regular whirlwind in lat. 4°22' N. long. 110°30' E. Both her fore and main topmasts were carried away, and the mizenmast went by the board. Jurmasts were rigged up, with which she sailed into Singapore.

THE CHINA ASSOCIATION.

THE *N.C. Daily News* is informed that Mr. W. H. Talbot has consented to act, on invitation, as Hon. Sec. and Treas., *pro tem.*, to the provisional local committee of the China Association; and that the committee propose to call a meeting of resident members early in 1893, at which they will submit a report and resign their offices, in order that a committee may be then elected for the year, the members hereafter electing their committee annually.

SHORT CROP.

THE Foochow *Echo* says the orange crop is very deficient this year. As compared with last year, the crop will be at least 50 per cent. short, and the price in consequence is at present \$1½ dearer than last year. At this increase of price shippers who had contracted in good time are doing but little.

HYOGO ELECTION.

ATELEGRAM from Hyogo announces that the election of a member of the House of Representatives for the Second District of that Prefecture, has resulted in the return of Mr. Okuno Koshiro, the *Jiyu-to* candidate, who obtained 993 votes, against 939 polled by his opponent, Mr. Fujii Tomojiro, the *Kaishin-to* nominee.

BISHOP BICKERSTETH.

THE Right Rev. Bishop Bickersteth left on Sunday morning by the P. & O. steamer *Malua*, on a visit home. He intends staying a while at Delhi, his old mission station, and hopes to return to Japan by November.

SHANGHAI SHIPPING.

DURING November 241 vessels entered at the Shanghai Customs and 17 Chinese lorchas as follows:—British 143; Chinese 53; German 19; Japanese 16; French 4; Austrian 4; and Norwegian 2.

ECCENTRIC—IF TRUE.

THE *N.C. Daily News* learns that the U.S. Consul at Amoy has officially notified that his post will be filled during his absence from the port by his Chinese interpreter.

THE BRITISH MINISTER TO CHINA.

MR. NICHOLAS O'CONOR has been received in audience by the Emperor. The audience took place in a pavilion situated in the Palace grounds, but not in the Palace itself.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The situation remains unchanged and uncertain. The *Fiji Shimp*, which last week advised the Government either to retrace its path and pursue an independent policy or to take further steps in the direction of party Government, now positively recommends it to adopt the latter course and organize a coalition Cabinet. So far as the present struggle between the Cabinet and the Opposition over the Budget is concerned, that, in our contemporary's opinion, is a comparatively insignificant affair, for there will be some means of arranging a compromise between the con-

tending parties. But the repetition of these harassing struggles years after year is highly prejudicial to the true interests of the country. Therefore, the *Yiji* is very anxious to find some method of settling the dispute once for all. It is convinced that mere compromise on the question of the Budget can contribute little to the solution of the problem. For the true motive actuating the Popular party in its opposition to the Cabinet, is not a desire to cut down public expenses but unquenchable thirst for a share in the conduct of the Administration. No arrangement will answer the purpose which does not satisfy this engrossing desire for political power on the part of the Popular party. But our contemporary does not seem to think it practicable to introduce at once a system of party Government. Its advice is that some provisional arrangement be effected between Clan Government and Government by Party. Such an arrangement may be contrived by organizing a Coalition Cabinet; in other words, by inducing men like Count Itagaki and Count Okuma to join the present Ministry. Our contemporary fears that the members of the present Cabinet and the leaders of the Opposition may feel equally disinclined to take the initiative in this matter, but thinks that, as the necessity is urgent, the elder statesmen in the Government as well as in the Opposition ought to put aside the awkwardness of the situation and join once more for the sake of the country. The *Yiji* observes that, should such a coalition Ministry be formed, it would serve as an effective respite from the present distracting struggle between the Government and the Opposition and thus lead to the smooth introduction of a system of Government by Party. Such is the gist of the *Yiji*'s opinion. It appears to be shared by no small section of the public.

Many doubts are entertained, however, as to whether such an arrangement would produce the desired effect. It is feared by some that, even if both Count Itagaki and Count Okuma should consent to join the Cabinet, the majority of their adherents would refuse to follow their leaders into the official camp. That such a *dénouement* is probable may be seen from what the *Yomiuri Shimbun* says on the subject. Our contemporary declares that the final triumph of the Popular Party is already in sight, and that the best policy for that Party to pursue is to stick to its original programme. The people at large, it says, are discontented with the Government, and are looking about for a saviour. Such a saviour, in our contemporary's opinion, will appear among the members of the Popular Party. Hence, nothing could be more unwise for the Popular Party than to conclude an ignoble peace with the Government. The *Yomiuri*, however, notices with regret that the leaders of the two parties constituting the Opposition are now inclined to moderate views. It then alludes to Count Itagaki's speech on the subject of the Newspaper Regulations, and to Count Okuma's conversation on the situation. From the former, it discovers that the Radical leader is ready to make large concessions to the Government on the questions which have figured most conspicuously in the Opposition programme, while from Count Okuma's conversation it learns that the Progressionist leader is not disinclined to join a hybrid Cabinet, composed of clan and party elements. Our contemporary wonders what had made these statesmen change their political creed so radically. A plain hint is given them that, if they mean to join the Government under such conditions, they must be prepared to part company with their present followers.

With regard to the question of the Budget, it is generally believed that some form of compromise will be effected between the Cabinet and the Opposition. Rumour goes so far as to say that Count Ito is inclined to agree to the reductions recommended by the Budget Committee. But people do not believe that. The Progressionist organs exhort the Popular Party to stand to their guns, and make no compromise with the Cabinet. A compromise would

be a virtual surrender on the part of the Popular Party, while, on the contrary, in the opinion of these papers, there would be no such humiliation on the part of the Ito Cabinet in agreeing to the Budget Committee's report, since reduction of public expenditure is the avowed object of Counts Ito and Inouye. The *Hochi Shimbun* places special emphasis on this point. It strongly recommends Count Ito to adopt the Budget Committee's report and thus fulfill one of the cherished objects of his political career. There is nothing strange in our contemporary's views, but we are disposed to think that their tone is significant. It appears to be the tone not of an enemy merely desirous of embarrassing the Cabinet, but rather of a writer anxious to find out an honourable pretext for those in power to agree to the proposed reductions in the Budget. Such inferences may, of course, be erroneous, but the impression produced by the *Hochi*'s articles is distinct. Read in this light, the Progressionist organ's recommendation to the Cabinet must be taken as an indication of a change in the attitude of its party toward those in power.

The *Nichi Nichi Shimbun* is not opposed to a compromise between the Government and the Opposition on the question of the Budget, but does not hesitate to pronounce the Budget Committee's reductions so entirely impracticable that the Cabinet can never consent to them. They have been proposed, not because they are possible, but because they provide funds for cutting down the land tax and re-assessing the taxable value of land. Reductions proposed for such ends can never be agreed to, especially when they are very unequal in different branches of the Administration. Should the Cabinet be weak enough to yield to these unreasonable changes, the *Nichi Nichi* is convinced that the whole nation, with the exception of party politicians, will strongly condemn the Government.

The Opposition journals continue to use persuasion and intimidation to prevent the House of Representatives from approving the resuscitation of the appropriations for the construction of war-vessels. The *Kokumin Shimbun* begs opposition members of the Diet who are disposed to support these appropriations in exchange for the re-assessment of the taxable value of land, to bear in mind that, although Mr. Inouye Kakugoro and others pretend that the Government will agree to re-assessment if the Naval appropriations be granted, serious credit is not to be placed in the prediction. They further assert that Count Inouye himself was unable to give a definite answer, when recently questioned by a certain Popular member of the Diet, as to whether the Government would carry out re-assessment, if the Diet consented to the construction of war-vessels; and that, even if the Government were disposed to make an exchange between the Naval appropriations and re-assessment, the House of Peers might not consent to the Re-assessment Bill.

The *Yomiuri Shimbun* advises Opposition members of the Diet who are pledged to support the Re-assessment Bill, to go down to their constituencies while the Diet stands adjourned and ask the electors whether they would like to have their land values reassessed in exchange for the construction of war-vessels. Should the electors be inclined to accept re-assessment at that cost, their representatives should expound the objections to such a course. Our contemporary understands very well the difficult situation in which these members of the Diet find themselves, but sees no reason why they should not be able to convince their electors of the absolute necessity of rejecting the Naval appropriations in order to compel the reform of the Navy. On the other hand, the *Yomiuri* recommends the Government to withdraw the Re-assessment Bill. Both Count Inouye and Mr. Watanabe insisted that the fate of the Re-assessment Bill must depend on that of the Bills for increasing the tax on *sake*, tobacco, and incomes. The latter Bills having been already rejected

ed by the Lower House, there is no hope, according to the Government's view, of realizing the funds for Re-assessment. Consequently, the *Yomiuri* requests the Cabinet to withdraw the Re-assessment Bill. Moreover, such withdrawal must be effected before the appropriations for the construction of war-vessels come up for discussion. For should the Bill be withdrawn, after the appropriations have been rejected by the House of Representatives, the Government will be open to the charge of sacrificing to political considerations a question of such importance as the re-assessment of the taxable value of land.

Much journalistic indignation is vented against the members of the Upper House, on account of their having rejected all the measures initiated by the Lower House, those measures being in accordance with the well expressed wishes of the people. It is reported that the politicians pledged to the reduction of the land tax have under consideration a plan for organizing a demonstration on a large scale against the House of Peers, and that a manifesto to be addressed to all the landowners throughout the country has nearly been completed. The *Kokumin Shimbun* observes that there is no truth in the remark that the Japanese are a radical and excitable people, for had such been their disposition, they would not have tolerated the existence of a House of Peers bent upon thwarting their wishes. The House of Peers during the past three years has steadily opposed the extension of liberty of speech and publication, the reduction of the land tax, and the re-assessment of the taxable value of land. But the people have never raised their voice against such unreasonable conduct, neither have the press questioned the right of the hereditary branch of the Legislature to exist. Nevertheless, our contemporary does not think that the House of Peers can continue permanently in such a route with safety. "How long," says the *Kokumin* in conclusion, "are our countrymen going to bear patiently with such a House of Peers; and how long is the House of Peers going to cling to such large privileges?"

Even a paper of the *Yiji Shimpō*'s standing is inclined to believe that the House of Peers is too subservient to the Government, and recommends its members to show their independence by taking prompt and impartial measures to dispose of the question of re-assessment of the taxable value of land.

The Peers find a strong friend in the *Choya Shimbun*. That journal has no sympathy with the present agitation against the Upper House. It fails to see any reason why men of independent opinions should have acted otherwise than the Peers have acted. Their opposition to the removal of restrictions upon liberty of speech and publication, is approved by every intelligent observer outside the sphere of party politics; while their rejection of the land tax and other Bills, is based on the indisputable ground that in the present condition of things it is impossible to obtain the funds for carrying out such reforms. Thus their conduct being approved by all impartial observers, the Peers are exhorted to stand firm and do their duty fearlessly.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

The press of the month just passed, gives an instructive view of the tendency of present religious thought and life in Japan. The prevailing tone among Christian writers is that of encouraged faith and hope. Among Buddhists the confidence of the Christians is markedly supported, negatively, by a general lament over the degenerate condition of the official guardians of established Buddhism, and, directly, by an explicit recognition of the persistent strength of Christianity elsewhere in the world, and the maturing among the Japanese people of the conditions which at length will favour

the spread in the empire of the great religion of the West. Closely allied with this recognition of the power and progress of Christianity, is the increasing momentum of a newly aroused ethical sense, which of late has enlisted the services of a number of earnest thinkers, and is now formulating in definite plans for influencing the general public. Several writers are urging the rebuilding of the memorable Yedo shrine dedicated to Confucius, and the re-establishment of the festival once celebrated in memory of the Chinese sage. In no direction, however, is there any clearly expressed conviction that the religious institutions of the past in Japan are able to meet the needs of the people, in their present social and political changes. The advocates of Shinto seem to feel that they are part of a forlorn hope. The leaders among the Buddhists are alternately rebuking the members of the priesthood, and appealing to the pure teachings of the saints of ancient times in aid of their cause. Even the movers of the project for reviving and magnifying the influence of Confucius, admit that the new age needs new methods and a new interpretation of the ancient maxims. The general impression made by the current literature is, in a word, that religious thought and life show a decided tendency to express in some way the progressive forces operative among the people, and, indeed, to admit that the religious influences which have come from the West, are, sooner or later, to direct the development of religion and ethics in Japan. During the month there have been no notable religious assemblies. Last month's great failure, the meeting of the Shingon sects, still evokes considerable unfavourable comment from Buddhist writers. The proposed International Conference of Religions at the World's Columbian Exposition, has been the subject of extended discussion, especially in the Buddhist periodicals.

The most noteworthy article coming from among Christians is one by that prolific and intelligent writer, Rev. J. T. Yokoi, in four successive issues of the *Kirisutokyo Shimbun* (Congregational), entitled "Japan's Ethico-Religious Regeneration." Mr. Yokoi first clears his way by a critical review of the religions prevalent in Japan in the past. Shintoism, he says, is inferior in its philosophy to Buddhism, and in its general ethics is surpassed by Confucianism, but, as a system of national ethics, in its teachings concerning loyalty and filial piety, it has taught the people a glorious national ideal. Buddhism, although negative in morals and pessimistic in motive, brought the arts of civilization in ancient times to uncivilized Japan; it set forth life as having possibilities beyond and above worldly pleasure; its ceremonies are living poems; it softened the harshness of a wild people; it inculcated honesty and obedience; it had a positive beneficial effect upon general morality. Confucianism, whose Classics were the bible of the middle and upper classes, taught loyalty, filial piety, love, and uprightness. It was largely the source of the forces which brought about the last great reformation of the government. But, as living powers, these religions are things of the past. The people, deprived of their guidance, became rapidly degenerate and the nation was confronted with the serious problem of how to bring about a necessary moral regeneration. By the recent importation of material civilization from the West, the people were blinded. Various attempts have been made to remedy the evil. Christianity has been proposed as a cure. Many books upon ethics have been written and circulated. Confucianism has been recommended anew; so, also, Buddhism. But the advocates of Confucianism do not understand the new conditions and needs of society. They cannot sympathize with the minds of the young men who read Mill, Comte, Spencer, and Hegel. The servile students of the Chinese Classics thirty years ago, do not resemble at all the students of the same Classics to-day. To-day, Confucius is read critically. The Classics do not settle ethical questions by rational pro-

cesses. Nor can the sayings of Confucius be applied to the changed society of to-day. For self-culture, family and state government, they have still many excellences, but for the social status of woman, for the new relations of the aged and young, they have no authoritative voice now. Again, Confucianism has not now any great men among its exponents. It is powerless to remedy the present evil. Buddhism, too, is powerless. It is not really philosophic, however much this character be claimed for it. It is like one whose support has been cut away. In fact, continues Mr. Yokoi, the Japan of to-day is in many respects like the Rome of two thousand years ago. And as then, no religion but Christianity could meet the needs of the Roman empire, so now in Japan, Christianity only can solve the nation's problem. True, it is said that the Christian principle of individualism is not in harmony with the social organization of this people. But the Japan of thirty years ago is no more. By acceptance of the new civilization in recent times, the old relations in society are radically changed. Men and even women are no longer held by the old bonds. The principle of individualism has become dominant. Religion henceforth must become individualistic. Christianity, which has in it all that was excellent in Buddhism and Confucianism, and which can hold together society, organized as modern society is, under the principle of individualism, is the religion which is needed for the new Japan. In a Sermon on the "Creed of Christ," in the same periodical, Mr. Yokoi gives his ideal of the Christianity he advocates for the new Japan. Christ's creed was "Love to God and Love to Man." This creed should be made our own, not by external ceremony, nor by obedience to a Church, but by earnest, inward faithfulness. This subject is further illuminated in the *Kirisutokyo Shimbun* by Mr. S. Sugiyama in an article on "The Mission of Christianity in Japan." The article is offered by way of protest to the declaration of the Rev. J. Barnet, of Toynbee Hall, London, that the Japanese people having become insincere and untrustworthy, should be brought under the teaching of the Old Testament and the Ten Commandments, which humble and awe men, rather than under the Gospel of the New Testament which proclaims human dignity. Against all this Mr. Sugiyama enters an earnest protest. He admits that the Japanese people now are self-conscious and critical, but that an appeal to the Old Testament will not humble and convert them. They must be met by a proclamation of the love of God, as a God of love. They must have placed before them the great message of the Fatherhood of God and the Brotherhood of Man. This is the mission of Christianity to Japan, and only in fulfilling this mission is there real hope for the welfare of the people. In the *Fukuin Shimpō* (Presbyterian) Mr. Hyōdai Shimanuki writes as though there were now no longer any question as to the right of Christians to consider Japan as not only certain to be a part of Christendom in the near future, but as appointed to be the herald of Christianity and of Christian civilization to the whole Orient. His theme is "Two Great Missions of Japanese Christians." He is convinced, first, that God has given to the Christians of this land the task of solving the social problems of the people. He quotes largely from Henry George's "Social Problems" and from General Booth's "Darkest England," and urges Christians here, to forward the work of social regeneration. He is also enthusiastic under the conviction that Japan is the head of the countries of the East in the arts, the sciences, law, commerce, politics, and in religion. His plea is, that as Japan has received, so should she also give. Referring to the question raised in the late Osaka Conference about sending a missionary to Korea, Mr. Shimanuki says that the Japanese Christians are in duty bound to send heralds of the gospel and of the new social life into all surrounding lands, to Saghalien, Kamtschatka, Siberia, Manchuria, China, Formosa, Siam and Burmah. This should be done, not under the impulse of emotion, but seriously, and

under a clear sense of duty. In the *Fukuin Shimpō* also, Mr. S. Yuya seeks to mediate between the Conservative and Liberal Christianities, in the interests of one Christianity for Japan. He is described by the editor as a poet among Christians. His article may be taken as one among many signs that the sharp antagonisms which divide the various Christian denominations of Europe and America, are not of radical importance to the Christian bodies in Japan who bear the names of the Western Churches. Mr. Yuya declares that it is not wise to act an old drama in a new theatre. This is attempted here not only by Confucianists and Buddhists, but by Christians also. When Liberal Christianity was first brought to Japan, it was considered to be Satan by the Christians already here. When the Pentateuch was criticized, many thought that violence was done to the memory of Moses, whom God had caused to write by his own right hand. When miracles were criticized, it was to many Christians as though a castle were being besieged. Conservatives among Christians had taken the ideas received thirty years ago, and had established them as final for Christianity. But theology is a progressive science, and the true orthodoxy should be received and upheld by both Conservatives and Liberals, who should be united in their common work. Thus far Mr. Yuya. We should be glad to set forth Mr. Yuya's exposition of this true and harmonizing orthodoxy, but the writer closes his article with the mediating exhortation only. At any rate, the article is a good illustration of the larger sympathies by which Japanese Christians are moved.

As for the remaining orthodox Christian periodicals, the issues of the month do not give any especially noticeable articles. They are devoted chiefly to the "things which edify," and to ecclesiastical news. Considerable notice is made of the visit to Japan of Father Endeavour Clarke, the organizer of the first "Young People's Christian Endeavour Society," which in a few years has been followed by the organization of fellow societies more than twenty thousand in number, having a membership of more than one million workers. Christmas and the New Year festivals are brightened by many hymns, sermons, and notes which occupy a good deal of the December space.

Among the Liberal Christian magazines we notice an article in the *Fyū Kirisutokyo Zasshi* on the "Aim of Liberal Christianity," which is an exposition, especially of the purpose of the Universalist mission to Japan. The aim is practical, to cultivate man's mental and moral character by placing before him a perfect moral ideal. To this end, we should bring men into personal contact with Christ's mind. Our aim is to make men, men. The *Shiuri* (German Evangelical) contains this month very few articles by native writers. Dr. Christlieb, a new member of the mission, makes two valuable contributions in religious history and philosophy, and there is a reprint of Mr. Spinner's paper of a few years ago, on India. The *Shukyo* (Unitarian) has a large number of articles, all by native writers, some of them of considerable note, such as Ruskabe Sannosuke, who contributes a paper on the "Relation between Common School Education and the Right of Freedom of Belief," referring to the late Kumamoto school trouble. Masataro Sawayanagi, writes on "Moral Conduct;" Rev. J. T. Yokoi's English address at the farewell banquet to Mr. Schmiedel appears in Japanese form, and Jitsunen Saji begins a series of papers on the "One Divine Being." Denshichiro Tajiro continues his articles on "Why Educators are indifferent to Religion." In the Buddhist magazine *Dento*, the Editor takes the professors and officers of the Koya San school severely to task for the sympathy shown by some students there for the doctrines of the Unitarians. Some letters from several Koya San students were published in last month's *Shukyo*, expressing great admiration for the rational religion taught in the Unitarian magazine, and advancing the hope that ten thousand priests might be converted to such doctrines.

Original from

The editor of *Dento* sees great danger ahead for an institution with such students.

* * *

In the Buddhist press we meet with a number of unusually interesting essays. Among articles of exceptional value to those who are studying the religious developments of the times, is one in the *Keiui Hakugi* by Mr. Masahiro Iwao, under the rather startling title, "A Christian Reaction is Coming." The writer says; Christianity has great power. This power lies not in its piety, in its offer of pardon through Christ, or in Church Governments. Christianity is to be feared. If royal power could suppress it, it would have been suppressed long ago by Rome. If philosophy could destroy it, it would have been destroyed by the Greeks. If Barbarism could ruin it, it would have gone down before the Northern Barbarians. If other religions could annihilate it, it would have disappeared under Mohanmedanism. If Civilization could obliterate it, it would have been blotted out by Modern Civilization. If it depended upon a nationality, it would have failed in the Middle Ages. Christianity has irresistible power. Where is this power? When Christianity came to Japan it started upon a career of rapid growth, but at the issue of the Imperial Rescript not long ago, its career was suddenly checked. It was discovered that Christianity conflicts with the fundamental principles of Oriental Society,—loyalty and filial obedience. True, Christians have a principle of loyalty and filial obedience, but it differs from that of Japan. In the East loyalty involves personal love with service; in Christianity loyalty is simply service in a political sense. It is true that in the Ten Commandments it is written, "Honour thy father and thy mother," but Christ widened this principle and placed humanity before parents. Remember how Christ behaved towards his own mother. Christianity makes God and Christ the centre of devotion. In the East devotion centres on the Sovereign as in Christianity it centres on God. Can the career of Christianity in Japan be renewed? Oriental morality depends upon the glory of the Imperial House. If that fade, there is no obstacle to the spread of Christianity in this empire. Buddhism has not the historical merits of Christianity, but in doctrine it is much deeper and nobler. Yet, Buddhists are relying upon the power of the national ideal to resist the encroachments of the foreign faith. Apparently this reliance is in vain. Christianity can be defeated only by the truth in Buddhism itself. Buddhists seek protection in the wrong direction. Events are opening the way for the dominion of Christianity. We see many evidences of the coming revival of Christianity. The spirit of nationalism is growing weak and cold. This is Christianity's opportunity. The New Buddhists, who sent for Mr. Olcott, are disappearing. This gives an advantage to Christianity. The wings for the Christian flight are already forming. Witness the many young men who have been educated in Christian schools, and the myriad changes in the political and industrial realms, under Western influence. And note too, the general weakening of antipathy to Christianity itself. Mr. Iwao thus closes his significant warning. It is a remarkable expression of the *shikata ga nai* mood into which more than Mr. Iwao have fallen, concerning the religious future of this country. Somewhat in the same vein the editor of the *Bukkyo Koron* writes in view of the near completion of the great Amida Temple of the Higashi Hongwanji. Many think, says the writer, that Buddhism is flourishing, but really Buddhism is relying for its support upon old men and women, while Christianity is finding its reliance in hopeful young men and in men of social influence. Look at the Doshisha. See its flourishing nine departments, especially its school of science. We must not content ourselves with crying, "Long live Buddhism." When we look at the Buddhist priesthood we fear for the future of our faith. Our enemy is near and our soldiers are weak. Hongwanji should not be satisfied with its achievements; all our sects should be earnestly at work. In the *Hansei Zasshi*, under the heading, "Formalism among Buddhists," the writer bewails the evident decline of Buddhism. He says, the priests have become like mere *hanashika* (story tellers), and are only servants of the cemeteries. Many of them eat meat and drink wine. Buddhism is nominally universal in Japan, but its spirit has fled; there remain only customs and ceremonies. The empire of the faith has already disappeared. The *Dento* summons believers to brave courage concerning their beliefs, since great men among Buddhists are not to be found, and there is no great hope to be placed on the young men of the day. Further, in "Some Words on the Condition of Society," the editor of the *Bukkyo Koron* is greatly distressed at the present social state. The common people could be directed into the path of truth, but those who have all the luxuries of life at command care little for their own honour and uprightness. Politics cannot unite the people. Present education cannot be trusted with young men. Law cannot declare what is just and unjust. We are in the dark age of truth. There is a mighty call for men who shall save society. Those who are now entangled in present society, cannot save it. Only superior men, living above society, can deliver society. Real religious men and true Buddhists are the demand of the hour.

* * *

Per contra, however, some Buddhist writers are unwilling to admit that their cause is failing. In the *Gokoku*, Mr. Mokurai Shimaji sees now a great "Opportunity for Spreading Buddhism in the West." Already the *Shojo* (the Smaller Vehicle) has found many adherents in Europe and America. It has been taken there, not by priests of the faith, but by foreigners themselves. The Westerns, proud of their own civilization, are thus becoming enlightened. Religion is the only force in which the Western people know that they are inferior to the nations of the East. Buddhism in all its forms is deep in doctrine and life. But the *Shojo* is far inferior to the *Daijo* (the Great Vehicle). If, then, the *Shojo* is meeting with such wide acceptance abroad, what will be the effect if the *Daijo* can be proclaimed there? The conflict between materialism and spiritualism can be settled only by the *Daijo*. Let us wed the *Daijo* and Western Thought. Heaven has now given us the opportunity to do this. At Chicago next year the fitting time will come. Here is a gleam of light for our truth. Let us not ignore it. With the bloom of Buddhism in the West, here it will flourish but the more. In the *Hansei Zasshi*, Mr. Saishi Nakajima writes from Peking of the "Missionary in China," admiring the work of the Christian missionaries there and advising the Japanese Buddhists to send their own representatives to that country. The field is ready, and Buddhists will fail in their duty if this field is not occupied by them. The *Dento* is opposed to any stimulation of an anti-foreign feeling in Japan. What relics of this feeling there are now constitute a just reason why Japan is not great, and why Buddhism is not more prosperous. Under the heading "Influence of Civilization upon Religion," a writer in the *Bukkyo Koron* thinks he has discovered distress among Christians, conscious of the destruction of the basis of their faith by the forces at work in civilization. Here is hope for Buddhism. In the same magazine, the editors notes an interesting movement among Japanese Buddhists for the restoration of the ancient Indian home shrine of Sakya Muni, which has long been occupied by Brahmins. An office of the organization for this purpose has been opened in the Shiba Koen. Several other articles which relieve the almost universal pessimistic tone of the Buddhist periodicals of the month, might be noted were space at command.

* * *

The commotion caused by the disturbed Conference of the Shingon sects at Toji, Kyoto, last month has not yet subsided. Its seceding members are compared in the *Dento* to *soshi* and disobedient children. The *Dogaku* characterizes the discussions as like the fight of an ape and a dog. The Conference effected nothing but a widening of the gap between the old and new

sects, when such great questions as education and the many other social reforms of the day should have received earnest treatment.

* * *

Several Buddhist writers devote considerable space to the coming International Conference of Religions at Chicago. In the *Bukkyo*, Mr. Soen Shaku encourages his fellow believers to take part in the Conference. The Chicago manifesto proclaims among its fundamental principles both theism and immortality, and seeks to strengthen opposition to materialism. Yet Buddhists should not ignore the Conference on this account. They should freely present their own opinions. Materialism may be considered the assistant, rather than the enemy, of spiritualism. The object of Buddhism is to make spiritual light bright without destroying matter. Of course we are in conflict with theism, but immortality is a problem in which all religions are concerned. The other articles of the Manifesto are of great importance to Buddhists. The fear that the Conference is to be a Christian movement against other religions should not affect us. We are not to be mere toys there. The Conference is one of our great opportunities. The aim proposed may not be reached, but the event is one of the significant things of history. No rocky mountain should come between us and it. Through it, we can send Buddhism to the West. Somewhat more generously the editor of the *Hansei Zasshi* writes on the same subject. The Conference is a light spot in the present age, through its opening of sympathy among believers. If we can not unite in theology, we can consider such subjects as temperance, labour, and the differences between rich and poor. By going to Chicago, our minds will be opened, and America will be hospitable to us all. The United States are called the heavenly kingdom of freedom, and we may look for the coming of a Washington of the spirit. And here is the opportunity to make Buddhism known to the world.

* * *

Last, but not least, among the topics of the month is the essay of Mr. Seiran Ouchi in the *Gokoku*, on the "Revival of the Confucius Festival." This festival was established more than one thousand years ago. It flourished until the Restoration. Its chief place of celebration was at the Shohai-ko in Hongo. But with the Restoration, although in many respects the country was improved, the moral forces among the people weakened; the public morality fell away; reverence for Confucius disappeared, and the memorable festival became extinct. Although a Buddhist, Mr. Ouchi says he is seriously troubled over the impotence of the memory of the Chinese teacher in the life of Japan. He would revive that memory if possible. He would take away from the Uyeno Hakubutsukan the old statue of Confucius, now only the object of the careless sight of curiosity seekers and would reënsrine it in a worthy temple and establish anew the neglected festival. By this means he would seek to stimulate the weakened ethical sense of the people. There is now but one Confucian temple in Japan, that of the Shizutani School, in Bizen. To the shame of Tokyo, the seat of Government and the resort of scholars and educators, the old shrine of Confucius exists no longer. Let us build again this holy place, establish anew the ancient festival, and inspire the people with the morality of the sage of the East.

* * *

Among minor notes we observe that Mr. Mokurai Shimaji, whose opinions are summarized above, has been unanimously elected by Hongwanji as its representative to the Universal Religious Conference at Chicago, and that Mr. Junjiro Takahashi has received a scholarship from the University of Oxford, the first Japanese student so honoured. It has been voted by the Hongwanji to have a Summer School next year, probably at Hakone. Mr. Nakanishi, whose remarkable concessions concerning Christianity we have several times noticed during the year past, has become editor of the *Osaka Maicho Shimbun*.

THE HOUSE OF REPRESENTATIVES AND ITS LANGUAGE.

THE President of the House of Representatives delivered a very singular ruling on the 23rd instant. The House is disgraced by the presence of some three or four members who appear to think violence of language an efficient substitute for solid argument, and who do not hesitate to pervert into gross license the liberty of speech secured to them by the Constitution. These members make themselves particularly prominent where there is question of any radical change in existing laws, as, for example, when the Opposition trots out its pet hobbies, removal of the restrictions upon newspapers and public meetings, abolition of the Peace Preservation Regulations, and so forth. Yet, if the plain truth be told, the most sanguine believer in Japan's moral balance and rapidity of assimilation must be staggered when he hears the excesses to which these clamorous champions of freedom are betrayed in the House of Representatives. Crying loudly for liberty, they offer in their own practice a conspicuous example of the perils of premature freedom. That the general sentiment of the House is opposed to such displays, there can be no question, and the President has more than once shown a strong disposition to check them. But on the 23rd instant, he made a ruling strangely at variance with his usual tendency. Mr. HASEGAWA TAI, explaining a series of Questions addressed by himself and others to the Government, used language of the most unbridled character. "I do not hesitate," he said, "to declare positively that the officials of the Department of Education are criminal violators of Imperial commands and criminal violators of the Imperial Ordinances (*ichoku no zainin chorei ihan no zainin to dantei suru ni habakaranu de arimasu*). * * * Why does not the Government bring such a den of ogres into subjection (*nase seifu ga kaku no gotoki bake-mono-yashiki no taiji wo shinau no de arimasu*)?" At the conclusion of the long speech in the course of which these words were used, the Government Delegate rose and inquired whether such expressions were in order, whereupon the President ruled that they were. Upon what grounds this remarkable ruling was based we are unable to understand clearly. Mr. HOSHI TORU is usually very explicit and distinct in his utterances from the chair, but on this occasion he was so vague that it remains still uncertain whether he intended to say that the phrases in question were permissible as being after a fashion, interrogative, or whether he held them in order as mere expressions of individual opinion. At all events, he allowed them to go unrebuked, and we believe that a ruling so singular must stand as the chief of the very rare mistakes he has made since his elevation to the difficult position of President of the

House of Representatives. If such language as Mr. HASEGAWA used be in order, it is obvious that no limits exist to the license exercisable within the House. Happily there is a limit, however, namely, the good sense of the members themselves. It must be recorded to the credit of the Japanese House of Representatives that with the exception of a very small coterie of professional agitators, numbering not more than five at the utmost, the members are invariably circumspect and decorous in both language and demeanour. They show no sympathy with men like Messrs. HASEGAWA TAI, TANAKA SHOZO, and so forth. But, on the other hand, they have certainly shown too much indulgence towards them, and it is a very happy episode in the history of Japanese representative institutions that arrangements are now at last made for the purpose of putting an end to this disgrace of unparliamentary language. After the wild charges preferred by Messrs. MARUYAMA MEISEI and TANAKA SHOZO, against central and local officials in connection with the disbursement of the Earthquake Relief Funds, and especially after the performance of Mr. HASEGAWA TAI on the 23rd instant, the various Parties in the House came to the conclusion that the time had arrived for decisive measures. Accordingly, on the evening of the 24th, when the Order of the Day had been concluded, the House went into secret session to consider what course would best conduce to purge its debates from this disgraceful element. The proceedings having been closed to the public, we are unable to report exactly what occurred, but there can be no doubt that a decision was reached which will greatly strengthen the hands of the President, and enable him to remove an abuse that now constitutes the only blot upon the procedure of the Japanese House of Representatives. There is no cause why the language used in the Lower House should not be just as well balanced and circumspect as that used in the Upper. When that desirable consummation is achieved, there will be one reason less for doubting the administrative capacity of the men who now set themselves up as administrative reformers.

DR. FLORENZ'S "NIHONGI"

IF it was an achievement to give to the public for the first time the *Kojiki* in a Western language, it is an achievement equally notable and perhaps of more general interest to have translated the chronicle known as *Nihongi*. Nothing can take away the honour of having laid the true foundations of Western knowledge of early Japanese mythology; and that honour is Professor CHAMBERLAIN'S. The *Nihongi*, however, has two qualities which for some time to come will add a special interest to it for Western students of Japanese institutions; it contains some of

the earliest records which can be accepted as true history; and it covers a period in Japanese annals second in interest only to the present,—the period when Chinese influences remodelled in large part the national polity. The *Nihongi* is practically our only authority for the 6th and 7th centuries A.D. Of its fifteen volumes (containing thirty Books), two deal with the purely mythological period, seven with the time from JIMMU TENNO till the end of the 6th century; and the remaining six with the seventh century. The *Kojiki* comes down nominally to 628 A.D., but for the years after 500 A.D. is given almost nothing more than the names of the EMPERORS, their residences, children, and burial places. Thus we must go to the *Nihongi* for the wants of the 6th and 7th centuries.

We have already become greatly indebted to Dr. FLORENZ for his essay on "Early Japanese Civilization," which must be considered as the *vade mecum* in the hands of the reader of the *Nihongi*; the chief value of the *Nihongi* will, for most persons, consist in the light it throws on the institutions of the earliest historical period. It would be impossible for us to generalize as yet on these results; for the portion of the work now issued covers Books 22-24 only, or from 593 to 645 A.D. But we may note some of the more interesting passages, and the conclusions which they suggest.

One of the most interesting sections is that relating to the first recorded systematic legislation in Japan—the so-called Seventeen Laws of SHOTOKU TAISHI, who was Crown-Prince and Regent in the reign of the Empress SUIKO. The translation here given is, we believe, the first ever made. These Seventeen Laws (issued in 604 A.D.) are, to be sure, largely moral precepts only, and in this respect may be compared with the Hundred Laws of IVEYASU, the feudal constitution of one thousand years later. But they are to be considered nevertheless as a genuine constitution (without attempting to anachronize the meaning of their title, *Kempo*, which now means strictly constitution), in that they aim at a delineation of the fundamental principles of State policy. They reveal some interesting phases of the times. One is, as Dr. FLORENZ points out, that the Chinese learning was then beginning to bear fruit in theories of State unity which were being applied by the chief feudal family to strengthen its political position. In his essay already alluded to, Dr. FLORENZ has shown that the dominant people at this time and earlier were divided into a number of *uji* or clans, and that the *Tenno* (a later name) was merely the head of the chief *uji*, and that his actual power over others was seen chiefly in military operations and in external relations and very little in internal matters. In these Seventeen Laws we now find no mention of the *uji*, but in their place appear "the people."

Phrases borrowed from the Chinese Classics, exalting the ruler and embodying the new theory of State, are frequently interspersed. Heaven covers all, and the Earth sustains." "In a single State there cannot be two rulers, and the people cannot have two masters." The noticeable point, however, is that the facts of government did not as yet correspond to this theory, and that it here appears as the forerunner of a condition which was not fulfilled for another century.

Another thing to be noted is the distinctness of the records pointing to systematic judicial administration. The judicial history of Japan had already begun. Japan belongs to those peoples whose law has been developed purely by judges,—ranking in this respect with England and the Germanic peoples, and differing from Arabia, India, and Ireland, where the law was developed by a priestly caste, and Rome, where, after the earliest period, it fell into the hands of the juriconsults. The Seventeen Laws devote many passages to expounding the spirit in which justice should be administered: "In litigation render impartial judgments. In one day the disputes among the people bring up a thousand matters; if then there are so many in one day, how much greater the number in many years? If the judges make it their habit to obtain material profit for themselves, and if they render judgment after accepting bribes, the suit of the rich man will be like a stone thrown into the water, and the suit of the poor man will be [as vain] as if one dashed water against a rock." (Art. V.). "Decisions should not be reached by a single person only, but consultation should be had with others. * * Yet only in case the matter is a weighty one and there is fear that one might err, must he consult with others and thus reach a clear understanding of the case." (Art. XVII.) Here we see the germ of the idea so ingrained in this people, that compromise and conciliation should ever be the path to satisfactory results.

Another interesting feature of the *Nihongi* is the records it furnishes of the gradual progress of Buddhism. In the early 7th century it was still a foreign religion and had to win its way on its merits. Many of the priests were of Korean or Chinese birth, and one of them, in a letter, so much retains his nationality as to speak of the King of Kudara, in Korea, as "my King." The Japanese nobility had given Buddhism a welcome, and had shown great willingness to listen, like the Athenians, to all that the new religion could say for itself. But its position was still an unstable one. In the year 622 a Buddhist priest seized an axe and struck his grandfather; and such was the popular commotion over this impious crime that pressure seems to have been brought upon the EMPRESS to expel the new religion *in toto*. The punishment was finally allotted to the guilty party only;

but thenceforth two supervisory officers (*sojo* and *sosun*, Archbishop and Bishop) were appointed over priests and nuns, and there began to be a strict and regular censorship over religious persons. At this time the full strength of Buddhism amounted to only 46 temples, 816 priests, and 569 nuns.

The process of subduing the East and North-east, with its hordes of *Yemishi* or (as now called) *Ainu*, is also here to be traced. In 637, for instance, is an account of an uprising of the *Yemishi*, who, it is said, neglected to come as usual to the Court to pay their homage. A romantic story is told of how the wife of a Japanese warrior, when the rebels had the victory almost in their hands, brought about their complete defeat. This was in 637, and all the rebels were made prisoners. In 642 there is another record of a surrender by the *Yemishi*, to the number of several thousand. Shortly afterwards, one of the chief nobles invited the leading men of the conquered *Yemishi* to his mansion and consoled with them over their reverses. These passages are of peculiar interest and importance with reference to the ethnological problem of the constitution of the Japanese people. They point to the conclusion, first, that the conquered *Yemishi* were not exterminated but were brought into servitude by the victors; and, second, that they were not treated with extreme severity, but were to some extent conciliated and, presumably, allowed to maintain themselves in the conditions of tributaries rather than domestic slaves. Dr. FLORENZ affirms that the conquered communities probably came into a state of servitude; and if we remember rightly, he notes those in his essay above mentioned, as probably one of the important modes in which persons became slaves. Certainly it would seem that, if from time to time hundreds and thousands of *Yemishi* were brought into subjection and became a part, but the lowest part, of the Japanese people, there is some ground for supposing that the mass of the common people, whom in later times we find emerging from serf-like restrictions, may be traced back to the original conquered communities. If this be so, it will be an instance of what is found in the history of other countries—that where a community possesses a large serf population, the serfs represent the conquered, the masters the conquerors. This was the opinion of Dr. SIMMONS, as expressed in his "Notes on Land Tenure," and the *Nihongi* evidence goes to corroborate it. Of course the key question is, what proportion did the serf population of 600-700 A.D. bear to the dominant population? That question has yet to be answered.

Dr. FLORENZ gives (on the authority of a Japanese scholar, Mr. SHIRANO) a solution to that much-discussed problem, the origin of the term *Ainu*. The solution is new, we believe, to Western readers and carries

much plausibility. The words *Yemish* and *Yebi-su* are the Japanese pronunciation of characters pronounced *kai-i* in Sino-Japanese. The *i* is the familiar "barbarian"; *kai* is an abbreviation of *kainu*, an old equivalent of *ainu*. The ideograph pronounced *kai* and *yebi* or *yemi* signifies "crab"; and thus came to be applied to the phonetically identical *kai* as abbreviated from *kainu*. The plausibility of this theory rests on the fact that the word is still used among the northern people to designate the higher classes, *Ainu* being applied to the mass of the population. Moreover, *Ainu* has no better authority for its adoption than the reports of travellers and Buddhist missionaries who brought it back with them not more than about 50 years ago.

These records show also that the path of sovereignty was not always as we have believed. Japanese writers are apt to assert, with Dr. YOSHIDA, in his "Feudal System in Japan," that "the Imperial dynasty is the oldest in the world," and that "in our history no Stuart follows Tudor on the throne, no Carolingian drives out Merovingian." If this is meant to convey the idea that there were no dynastic dissensions, then it is contradicted by the facts of history; for the contests between SAT-CHO and TOKUGAWA, IYEFASU and HIDEYADA, MINAMOTO and TAIRA, were no different in essence from those between CROMWELL and CHARLES, YORK and LANCASTER, HAROLD and WILLIAM. But even in the earlier days, as far back as the period chronicled in the *Nihongi*, the succession was by no means settled invariably without bloodshed. The incidents attending the accession of JOMEI TENNO, in 629, can only be interpreted as a violent dynastic dissension. Another indication of the same sort is the story of IRUKA's assassination in 645 on the charge that he was conspiring against the Imperial line.

Of the intercourse of Japan with the Continent there are here many records. The kingdoms of Korea—Shiragi, Mimana Koma—are frequently mentioned, and the bringing of tribute and reception of ambassadors is chronicled from time to time. Whether the Koreans regarded their presents as tribute would be another question. What is worth noting, too, is that the naturalization of immigrants from Korea and elsewhere is not infrequently recorded. Perhaps it would be worth while for certain patriotic Japanese to remember that in the epoch of the past which most resembles the present era—an epoch of copious absorbence of foreign influences—the process of naturalization was apparently much easier for the foreigner than it is to-day.

We have now noted some of the topics which a hasty reading of this interesting volume suggests. The whole work, when completed, will be a notable monument of learning and a storehouse of institutional lore. The next volume promises to be even richer than the present, and we trust that Dr. FLORENZ's labours may attain rapid fulfilment.

A CURIOUS SUB-LITERARY TANGLE.

THE easy step from the sublime to the ridiculous was taken in October last by several London journals, in passing from a discussion of TENNYSON'S early manifestations of genius to an inquiry as to the authorship of an alleged burlesque of the youthful Cambridge poem, "Timbuctoo." Column after column was occupied by letters from various sources, offering suggestions and claiming accurate knowledge respecting the origin of the droll quatrain, which is familiar to most of the public in something like this form:—

If I were a cassowary
On the plains of Timbuctoo,
I would eat a missionary,
Skin and bones and hymn-book too.

The subject was opened in *The Times* by Mr. DE LA PRYME, who attributed the doggerel lines to THACKERAY; and within a week the leading journal announced that it had been "inundated" with correspondence on the matter to such an extent that only a minute proportion of the letters could possibly be published. Those allowed to appear, however, exhibited differences of opinion that promised to result in an animated controversy. Writers of such position as Professor HUXLEY, Sir GEORGE GROVE, and Mr. W. GREENWOOD, not to speak of a host of others less noted, joined in the debate and offered "reminiscences," but in no instance was there an identity between the versions given by each contributor. It is hardly worth while to set forth the several readings, the general sense, as well as the terminal rhymes, being the same in all cases; but we may mention that every one of them varied, in greater or less degree, from what we understand to be the commonly adopted form, as presented above. What is perhaps more noticeable is the fact that no two persons were able to agree upon the question of authorship. The whole range of literature appeared to have been searched in the endeavour to fix the responsibility to popular satisfaction. The stanza was ascribed, in the first place, to THACKERAY, and afterward to SYDNEY SMITH, THEODORE HOOK, TOM HOOD, Lord NEAVES, Bishop WLBERFORCE, PORSON, the Greek Scholar, CHARLES KINGSLEY, MARY BOYLE, Professor DE MORGAN, BARHAM, of the "Ingoldsby Legends," SAMUEL WARREN, EDGAR POE, Professor CONINGTON and—*mirabile dictu*—the PRINCE CONSORT. In the absence of direct evidence, there is nothing remarkable in the supposition that the lines may have been produced by any of the recognized humorists here cited, and it is not inconceivable that writers ordinarily addicted to serious composition might occasionally relieve themselves by "falling off" into comic verse. Even POE, in an exaggerated mood of inverted fantasy, might have tried an experimental flight of this sort, without thorough consciousness that he was wandering beyond

the "Ercles vein" of eccentric magniloquence. But to find the PRINCE CONSORT included in the probable list of perpetrators sends a shock through every nerve that sympathizes with the ideals of intense respectability. Never before, so far as we can recall, has imagination been strained to the extent of associating the PRINCE CONSORT with a frolicsome pleasantry. Negatives cannot be proved, and no one can say that anything jocular is impossible,—particularly when we remember that Dr. JOHNSON is on record as having once dictated a rollicking couplet terminating with an invitation to beer. But the intellect spontaneously rejects a suggestion of jingles emanating from the latter-day embodiment of courtly decorum, precisely as it would reject a picture of MACAULAY dancing a fandango, or the late Earl of SHAPTESBURY leading the refrain in a convivial chorus.

No actual proof of THACKERAY'S connection with this bit of word-twisting is submitted,—though a recollection of his "Little Billee" might serve as a foundation on which to build a reasonable hypothesis,—and it occurs to us that his authenticated parody of "Timbuctoo," first printed in the Cambridge *Snob*, may have set afloat the conjecture that he likewise created the familiar quatrain. But the verses known to be THACKERAY'S bear no resemblance to the subject of the recent disputation. The advocate of Professor CONINGTON'S claim asserts that this gentleman delivered the lines in a burst of impromptu inspiration, before a certain gathering in the Common Room of St. John's College, Oxford. If such were really the case, corroborative evidence ought not to be lacking, yet none has been vouchsafed. To Miss BOYLE the gift of extemporaneous recital is also accredited. Her witness affirms that the lady was once challenged to provide a rhyme for Timbuctoo, and that she thus showed herself instantly ready and equal to the occasion. If the power to discover difficult rhymes entitles a candidate to enrollment in the catalogue of presumable authors, it is a wonder that the writers of the "Rejected Addresses" were not classed among the suspected; for their facility in this direction was beyond rivalry, as was shown in their successful matching of exceptional words like "chimney." It does not seem probable that the investigation will be carried to a conclusive result, or that public appreciation will have the opportunity of concentrating itself upon any individual poet. The pretensions are too positive and peremptory. It may be remarked that no person has had the hardihood to attempt encircling his own brows with the disputed laurel, and from this it might on hasty consideration be inferred that the writer, whoever he or she may be, is no longer living. But reflection will show that the ground for such judgment is insufficient. A sensitive

lyrist, remembering the fierce contests for the still unawarded honours of "Beautiful Snow," might well shrink from provoking a similar warfare in the present case. There may be a score or more of claimants, all waiting for somebody to assert his title as the signal for a simultaneous rush to seize the prize. In such a scrimmage the rightful applicant would stand a poor chance of winning his own. COLERIDGE'S experience with his little *jeu d'esprit* upon "The Ancient Mariner" must not be forgotten. He had no sooner inserted it anonymously in the daily paper for which he was then writing political essays, than he was confronted by an army of *soi-disant* epigrammatists, all affecting apprehension lest the author of the "Rime" should resent the liberty they had ventured to take with his august reputation. After the first jar of astonishment, the poet clearly saw that he should make an enemy of every man he contradicted, and, hardening his heart to temptation, silently suffered himself to be eclipsed.

Like the *Saturday Review*, which elevates the controversy to the dignity of a leader in its largest type, we fear there will be no happy agreement on the question of authorship. Our own conviction is that the stanza belongs to the category of things supposed to be bright, if not indeed particularly bright, which many persons would have been pleased to originate, and which the same persons, by hasty repetition after the first hearing, manage to convince themselves, more or less innocently, that they did originate. An incident in the quick-witted career of Mr. WHISTLER, the artist, affords an illustration in point. Having executed an ingenious *mot* in the presence of Mr. OSCAR WILDE, he was rewarded by the admiring exclamation,—"*WHISTLER, I wish I had said that!*" To which the artist flashed back the repartee,—"*You will say it, OSCAR; you will say it.*" We quote without book, and the story, however *ben trovato*, may not be literally *vero*. But it exemplifies a certain process of the human mind which it might be harsh to call piratical, yet which cannot be reconciled with a rigid conception of honesty. It lets us into an explanation why most of the clever sayings current in society can never be traced to their proper sources, and gives abundant warrant for the expectation that the Timbuctoo trifle will eventually be assumed as private property by competitors without number, known and unknown, in all parts of the globe where English is spoken. And it will not in the least surprise us to receive from one or more correspondents the most solemn asseverations that the quaint rhyme is the invention of one or more residents in the Far East,—in Japan, not to be too expansive,—whose spirits woke to song on that one brilliant occasion long ago, and have slumbered in Oriental desuetude ever since.

THE "RAVENNA"-"CHISHIMA" COLLISION.

WE are precluded at present from commenting on the verdict of the Naval Court organized to investigate the circumstances of the collision between the P. & O. Co.'s steamship *Ravenna* and H.I.J.M.'s ship *Chishima Kan*. The question is still *sub judice* in the Japanese Naval Court-martial and in the criminal proceedings instituted at Nagasaki against the pilot of the *Ravenna*. Moreover, there is strong likelihood that a civil action will be instituted for damages. The finding of the Court of Inquiry, even assuming that it be accepted in the main, which is, of course, a doubtful hypothesis, will probably be thought to justify such an action, on the ground of the clause which refers to delay in stopping and reversing the *Ravenna's* engines. Under these circumstances, it is evidently the duty of the press to say nothing that might prejudice a fair trial. But a word should be written with regard to a phase of the case that has caused much pain and some anger on the part of Englishmen. Certain Japanese journals, with a degree of precipitancy that can not be too strongly condemned, did not hesitate to formulate conclusions about the navigation of the two vessels, before any inquiry had been held and while an official investigation was pending, and one of them, the *Mainichi Shimbun*, in terms that we can only describe as disgraceful, charged the people of the *Ravenna* with brutal carelessness of human life and callous indifference to the sufferings of Japanese officers and seaman rescued from the jaws of death. This question did not properly form any part of the subject to be investigated by the British Naval Court. The function of the Court was simply to determine how the collision occurred, and whether it was due in any degree to defective seamanship on the *Ravenna's* part. But the Court, doubtless impelled by a desire to clear up a matter so gravely affecting the reputation of British mariners, allowed great latitude to the counsel representing the owners of the *Ravenna*, and he took full advantage of the privilege to elicit a minute account of the conduct of the *Ravenna's* folk towards the rescued officers and men of the *Chishima*. We are disposed to think, indeed, that undue and not altogether prudent insistence was shown in pushing this matter into the foreground of the investigation. That dissatisfaction must necessarily exist, in greater or less degree, under such circumstances was inevitable, and it would perhaps have been better to rest the case for the *Ravenna's* people on general or even negative evidence instead of challenging individual opinion in every instance. However, we can fully sympathise with the wish of the Peninsular and Oriental Company to invite the fullest and

frankest inquiry, and if the result was not absolutely satisfactory, it at any rate demonstrates how unwarranted and unjust were the cruel accusations of the *Mainichi Shimbun*. Lieut.-Commander KABURAGI'S testimony alone was conclusive. "I was quite satisfied," he said, "with the treatment I received on board the *Ravenna*, and I heard no complaints from any of my men." It is true that he afterwards made a statement slightly qualifying this explicit admission, but it was a statement obviously prompted by considerations apart from the mere facts of the case, and it dealt entirely with points of etiquette which seemed farcically paltry by the side of the sweeping denunciations of the vernacular newspaper. Indeed, we are constrained to say that Lieut.-Commander KABURAGI would have served his own reputation much better had he refrained from giving publicity to the pettinesses detailed in his second statement. The main point is, however, that he himself was "quite satisfied" with the treatment he received, and that not one of his men attempted to make any complaint. Everyone sympathises sincerely with the grief and distress which the *Chishima's* survivors must have felt at the terribly sudden death of so many of their comrades and at the total loss of their ship, and everyone understands that some sentiment of umbrage or discontent was inevitable at the first moment under such circumstances. But we are persuaded that even the *Mainichi Shimbun*, after reading the evidence given by its own nationals before the Court of Inquiry, must acknowledge that anything more than the people of the *Ravenna* did for the survivors of the *Chishima* would have constituted exceptional kindness such as might, perhaps, have been exercised but certainly ought not to have been expected. Nothing remains but to bury beyond the reach of further reference this unhappy incident of a sad catastrophe. The disaster was bad enough in itself, without being suffered to inspire feelings which have no basis in truth or justice.

IMPERIAL PARLIAMENT.

FRIDAY, DECEMBER 23RD.
HOUSE OF PEERS.

The House met at 10.50 a.m., the Order of the Day being:—

- 1.—First Reading of the Bill relating to Accounts of Railway Bonds.
- 2.—Appointment of a Special Committee to report upon the same.
- 3.—First Reading of the Bill relating to Purchase of materials for State Railways.
- 4.—Appointment of a Special Committee to report upon the same.
- 5.—Report of the Special Committee on the Bill for amending the Land Tax Regulations.

The President announced the receipt, from the Lower House, of the Bill for postponing the operation of the Banking and Deposit Banks Regulations, and said that the Government desired the Bills to be discussed as soon as possible.

The House granted urgency, and after a short speech from the Minister of State for Finance, passed the Bill.

The two Railway Bills, having been briefly explained by the Minister of State for Finance and the Government Delegate for the Railway

Bureau, were entrusted to a Special Committee of 9 nominated by the President.

Prince Konoye, on behalf of the Special Committee, reported that, after careful investigation and deliberation, the whole Committee, with the exception of Mr. Wakao Ippel, were opposed to the Bill for amending the Land Tax Regulations. However desirable a thing reduction of the Land Tax might be, it was not permissible if the times did not permit it. That the Japanese Land Tax was high as compared with the same impost in England and France, could not be denied. But they must consider the circumstances and history of the nation. Already the Tax had undergone various reductions, and to cut it down still more at the present time, seemed out of the question. Especially impractical was the project when entertained simultaneously with Reassessment of Land Value, a Bill for which had been introduced by the Government and passed by the House of Representatives. These inroads upon the revenue must be met by some corresponding compensation, whereas the Lower House had thrown out the Government's Bills for increased taxes on *Saké* and Tobacco to make up the deficiency caused by Reassessment. People talked, indeed, of obtaining the necessary funds by economising Administrative expenditure. But that was mere formula. To put it into practice was an exceedingly difficult matter. Thus, on the whole, the Committee could not see their way to recommend a measure the consummation of which was financially impossible.

Mr. Miura Yasu thought it scarcely necessary to add anything to the lucid explanation given by Prince Konoye. He might point out, however, that the persons who clamoured for a reduction of the Land Tax before the inequalities of assessment were remedied, seemed to forget that the lower the tax, the more salient would the inequalities become. Undoubtedly, if any reform were essential in the realm of the Land Tax, it was reassessment. The circumstances of the era had imperatively necessitated great haste and corresponding inaccuracy in completing the surveys upon which the present tax was levied. To remove the injustice consequent upon those inaccuracies was the first duty of the Administration, so soon as it found itself financially competent to approach the problem. Hence the Government had introduced a reassessment Bill and the Lower House had passed it. But the Representatives had also introduced and passed a Bill for reducing the Land Tax, though it was manifestly impossible to carry out the two schemes simultaneously. To correct this precipitancy was a task well becoming the House of Peers. Reforms must be undertaken in proper order and with due regard to financial conditions. Plainly the reform demanding prior attention was to correct the injustices done by the present unequal assessment of land, and until that was achieved all talk of reducing the Land Tax must be abandoned.

No other members desiring to speak, the President called for a show of hands as to whether the Bill should be carried to a Second Reading, when Viscount Saiké alone was found to support it.

The House rose at 11.50, the President having announced that the New Year's recess would commence from the 25th instant and continue until January 9th.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m., the Order of the Day being:—

- 1.—The Budget.
- 2.—Bill (First Reading) for taxing the Bank of Japan.
- 3.—Bill (First Reading) for amending the Bank of Japan Regulations.
- 4.—Bill (First Reading) for amending the Mining Regulations.
- 5.—Report of the Special Committee on the Bill for amending Law No. 84 of the 33rd year of Meiji.
- 6.—Second Reading of the Bill for amending the Registration Law.

The President announced the receipt of the following:—

- A Question relating to Education.
- A Bill relating to Special Ports of Export.
- A Question relating to Money restored to Korea.
- A Reply from the Minister of State for Home Affairs to a Question with regard to the operation of the Fremontion Law.

QUESTION RELATING TO THE LAW OF PRE-MONITION.

Abe Michiye, a commoner of Kumamoto Prefecture, is a man of uniformly good behaviour employed on the editorial staff of the *Kokumin Shim-bun*. He has never instigated any one nor ever attempted to extort money. Yet, on the 21st instant, he was suddenly subjected to the operation of the Law of Premonition. What reason was there for this? Since the matter has an important bearing on the rights of the subject, we desire to receive as explicit an answer as possible.

(Presented) HASEGAWA JUNKO and others.

THE GOVERNMENT'S ANSWER.

The chief of Police, judging that the conduct of Abe Michiye, a Commoner of Kumamoto Prefecture, fell within the purview of the third clause of the first article of Law of Premonition, issued orders, in accordance with the duties of his office, on the 21st day of the 12th month of the 25th year of Meiji, that the provisions of the third clause of the second article of the said Law should be put in force against the said Abe Michiye, for the better preservation of public peace and good order.

The reference to "instigation" made in the Question, having no connection with the orders issued, calls for no explanation.

(Signed) INOUE KAORU,

Minister of State for Home Affairs.

Mr. Hasegawa Tai, explaining the Question relating to Education, charged the officials of the Educational Department with taking bribes from booksellers and violating the Imperial Rescript, the Government with pursuing a Napoleon-the-First policy in matters of Education; the authorities with providing education for the upper classes only; and the Department of Education with being a den of ogres (*bakemono-yashiki*).

Mr. Shimizu Bunjiro, explaining the Question relating to the restoration of money to Korea, declared himself dissatisfied with the answer given previously by the Government. That answer declared that the interest accumulated in the Specie Bank—namely the interest on a loan made by the Treasury to Korea—did not belong to the Treasury. But it must have been somebody's property. He wished to be informed clearly to whom it did belong?

Mr. Kubota, Government Delegate, said that Mr. Hasegawa Tai, in the speech just delivered by him, had referred to the officials of the Department of Education as "criminal violators of the Imperial Rescript (*ichoku no sainin*)", and to the Department of Education with being a den of ogres. He wished to know whether such expressions were permitted by the Law of the Houses?

The President did not consider the expressions out of order, inasmuch as they were used in a more or less interrogative form.

The Budget was then continued from the preceding day.

Mr. Watanabe, Minister of State for Finance, spoke briefly with reference to the reductions recommended by the Budget Committee on the Section of the Department of Finance. He recognised that the spirit dictating these reductions was one of economy, and therefore deserving of all applause. But he claimed that the Government did not yield to the House in its desire to cut down administrative expenses, and that it was, in fact, making every possible effort to reduce them. No officials knew better than those of the Finance Department what was signified by the burden of taxation, and none were more anxious to lighten it. But it was quite out of the question to agree to the sweeping reductions proposed by the Committee.

Mr. Tajiri, Government Delegate, followed in the same sense. He pointed out that the item of Salaries in the Finance Department had been reduced to the extent of over 120,000 *yen*, in 1891, and that it was again reduced in the present Budget by more than 50,000 *yen*. The further reductions proposed by the Committee were altogether excessive.

With very little debate the House passed the whole of the First Chapter in this section as amended by the Committee.

Mr. Ozaki Yukio asked why no efforts had been made to reduce the high rate of interest (7.5 per cent.) paid by the Treasury on its debt to the Fifteenth National Bank.

Mr. Tajiri, Government Delegate, said that the debt to the Bank had been contracted in 1867 at the time of the Satsuma Rebellion, when the Government, being in financial difficulties, was on the point of further increasing the volume of the fiat currency. The Bank, which had just then been established, had come to the aid of the State from patriotic motives, and had lent the Treasury a sum of fifteen million *yen*. Six years afterwards, when preparations for the redemption of the paper currency were in progress, the Bank had consented to receive back five millions of the loan on condition that the remainder was allowed to stand at 7.5 per cent. interest for a fixed term. Seven and a half per cent. was a high rate of interest in these days, but it was by no means high nine years ago. These considerations possessed such weight in the Government's eyes that no proposal had been formulated to pay back the loan or reduce the interest before the fixed time.

After some further questions, the whole of the Second chapter in this section, as amended by the Committee, was passed, as were also the Third and Fourth chapters.

On coming to the Fifth chapter, namely, the Privy Council, the appropriation for which had been cut down by the Committee from 122,000 *yen* to 46,000 *yen*.

Mr. Hirabayashi Kuhei strongly opposed the Committee's recommendations. He denounced as a flagrant excess of competence and as disrespectful to the Throne, this attempt on the part of the House to subject to sweeping reductions the salaries of the officials appointed by the Sovereign himself to be his advisers, and constituting the highest Council in the land.

The House voted the whole chapter as amended by the Committee.

Mr. Hatano Denzaburo opposed the Committee's amendments in the Chapter relating to the House of Peers. He proposed that the salary of the President of each House be reduced to 3,000 *yen* annually; the salary of the Vice-President to 1,500 *yen*; and that the salaries of the members be changed to a daily allowance of 5 *yen* from the day of the convening of the Diet.

Mr. Ooka Ikuzo denounced the proposal as a mere bid for popularity. If there were question of abolishing the allowance to members altogether, the matter might be considered. But even then, it must form the subject of a Bill duly introduced, for the Salaries of the President, Vice-President, and members were fixed by law and could not be altered except by due process of law.

Mr. Inoue Kakugoro supported the motion, though he found it no easy matter to persuade himself to do so when he remembered how the rest of the Budget had been treated by the proposer and his friends. He ridiculed Mr. Ooka's talk about bidding for popularity, and recommended that gentleman to review his own conduct.

The House rejected the motion and voted the chapter as amended by the Committee.

Mr. Hatano proposed the same amendment in the chapter relating to the House of Representatives, but the House rejected it, and voted the chapter as amended by the Committee.

The whole of the remaining chapters in the Department of Finance were similarly voted.

The Bill for taxing the Bank of Japan was then read:—

BILL RELATING TO THE TAXATION OF THE BANK OF JAPAN.

When the net profits of the Bank of Japan exceed six per cent. of the paid up capital, there shall be deducted from the said profit a sum of six per cent. of the paid up capital, together with sums for purposes of reserve, rewards to officers and other expenses, and of the remainder a sum of fifty per cent. shall be paid to the Government by way of tax; such payment to be made in two instalments, namely, on the 31st day of the 8th month for the first-half year, and on the 28th day of the 2nd month for second half-year.

The present law shall go into force on and after the 1st day of the 7th month of the 26th year of Meiji.

Presented by ISHIDA KANNOSUKE.

ITO TOKUTARO.

SUZUKI SHIGETO.

KATANO TOSHIRO.

Supported by KAGEYAMA HIDEKI,

and 30 others.

Mr. Ito Tokutaro supported the Bill in a speech of some length, but his arguments did not go beyond asserting that the profits of the Bank of Japan were excessive, and that to maintain the burden of taxation and to refrain from inaugurating many useful enterprises, owing to financial difficulties while the Bank was reaping such rewards at the expense of the nation, was indefensible.

Mr. Tajiri, Government Delegate, said that whereas the Bank of Japan discharged many important functions for the State of which the general public had no clear perception, it was only able to pay a dividend to its shareholders of 6.5 per cent. The Government could not approve the proposal to tax it.

Many questions of minor importance were asked.

Mr. Katano Toshio supported the Bill on the ground that the Bank of Japan alone among the business enterprises of the country was not taxed. The Bank had been founded, he understood, on the model of the Bank of Belgium, but the original had not been copied in the matter of taxation, and he attributed this omission to that old abuse of favouritism.

The Bill was finally entrusted to a Special Committee of 9 nominated by the President.

The Bill for amending the Regulations of the Bank of Japan, after a brief discussion, was entrusted to the same Committee.

AMENDMENT OF THE REGULATIONS OF THE BANK OF JAPAN.

Art. X.—The words "at least ten per cent. from the remaining sum," shall be changed to "not less than ten per cent. and not more than thirty per cent."

(Original article)—From the net profit the dividend shall be subtracted, and of the remaining sum at least ten per cent. shall be reserved for the following objects:—

1. To make up losses of capital.
2. To make up insufficiencies of dividend.

The above law shall become operative on and after the 1st day of the 7th month of the 26th year of Meiji.

and 30 others.

The House rose at 5.55 p.m.

SATURDAY, DECEMBER 24TH.

HOUSE OF PEERS.

The House met at 10.55 a.m., the Order of the Day being:—

- 1.—Report of the Chairman of the Petitions Committee.
- 2.—Petition relating to Local division in Hiroshima Prefecture.
- 3.—Petition relating to Pension Bonds.

Prince Nijo, chairman of the Petitions Committee, reported that 325 petitions had been received and examined since the date of his last Report, among which the Committee had selected several for submission to the House, the two most important being upon the Order of the present day.

The Petition from Hiroshima Prefecture was adopted by the House for transmission to the Government.

Prince Nijo, introducing the Petition relating to Pension Bonds, said that it came from 481 *shisoku* who had been deprived of their pensions at the time of the rebellion in the South. The petitioners belonged to the five Prefectures of Yamaguchi, Kumamoto, Saga, Fukuoka, and Nagasaki. They had been relieved from the ban of that time by the Imperial Amnesty granted in the year 1889, and they now prayed to have their pension Bonds restored to them. The Committee, deeming their case worthy of all pity, had decided to ask the House to accept and forward the Petition.

Viscounts Hayashi and Nabeshima spoke strongly in support of the Petition.

Mr. Miyamoto Koichi said that several petitions had already been forwarded by the House to the Government, but in no case had any favourable result been achieved. It was like shooting at a mark in the dark. He proposed that, since the Petition now before them had the approval of the whole House and referred to a

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

really pitiful case, the Government be invited to make a reply.

Viscount Soga opposed the petition on the ground that the Government would be embarrassed if a precedent were established on the proposed lines.

Viscount Itakura opposed it on the ground that amnesty ought not to extend to restoration of the emoluments previously enjoyed by persons guilty of a crime.

After some further discussion, the Petition was adopted.

The House rose at 12.09 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m., the Order of the Day being:—

- 1.—The Budget.
- 2.—First Reading of the Government Bill, sent down from the Peers, for amending and putting into operation certain portions of the Commercial Code.
- 3.—Appointment of a Special Committee to report upon the same.
- 4.—Bill for amending the Mining Regulations.
- 5.—Report of the Special Committee on the Bill for amending Law No. 84 of the 23rd year of Meiji.
- 6.—Second Reading of the Bill for amending the Law of Registration.

The President announced the receipt of,

- A Representation relating to a School of Sericulture.
- A Bill for amending the Conscription Regulations.
- A Representation relating to Technical Schools.

The following was read:—

QUESTION RELATING TO LOCAL GOVERNMENT.

We venture to ask the following questions on matters relating to Local Government:—

1. Measures to remove friction between the Local Authorities and the people.

The friction between the local officials and the people in various districts is becoming more and more serious daily; and in consequence Local Administration is much embarrassed. By what means does the Government intend to restore harmony?

2. The Government's Reply to the Petitions sent from local districts.

As the friction between the local officials and the people is so great and the local administration is thereby embarrassed, it is inevitable that the people should present petitions praying for the removal of such officials. But the Government alleges that the people are overstepping their rights. And thus it seems as though the Government intended to close its ears against the people's complaints. Does the Government consider that such a course is in accordance with its duties?

3. Delay in adopting measures to remove the friction between the local officials and the people.

The Government has delayed long in adopting measures to remove the above friction, the consequence being that the mischief has spread throughout the Empire. Does the Government think such tardiness appropriate to the occasion?

Presented by FUKUDA HISAMATSU.
Supported by HADANO DENZABURO
and 32 others.

THE GOVERNMENT'S ANSWER.

1. In some local districts harmony between officials and people is reported to be disturbed of late. The Government therefore has instituted a very strict system of supervision, and should any misgovernment occur on the part of the officials, or should the conduct of the people be considered unlawful, appropriate measures will be enforced. It is thus hoped that the Administrative foundations will be rendered firm as possible, and that local administration will become as smooth and peaceful as ever. As the Government intends to adopt suitable measures according to the circumstances of each case, it is not necessary to describe them beforehand.

2. When the people in local districts present petitions relating to local administration, the Government is always willing to hear their statements, and has never once attempted to close the doors against them. But the petitions and complaints are so numerous that the Government cannot satisfy them all in practice.

3. When any friction is found to exist between the local officials and the people, the Government investigates the question and adopts appropriate measures, either immediately or subsequently, according to the circumstances of the case. But no wanton delay has ever taken place in adopting such measures.

(Signed) Count INOUE KAORU,
Minister of State for Home Affairs.

Mr. Takata Sanaye, Chairman of the Petition Committee, reported the nature of the petitions which the Committee had decided to lay before the House, and of those which they had decided to reject.

The discussion of the Budget was then resumed.

Mr. Kato Masanosuke, Chairman of the War Office Section of the Budget Committee, explained that the Committee's amendments in this Section had been comparatively small, because the Department of War had, of its own motion, adopted approximately the amendments of the last Budget Committee and compiled the estimates accordingly. Nevertheless, the item of salaries had been reduced, in accordance with the general scheme of Budget Amendment adopted by the Committee. He then entered into a detailed explanation of the various items altered in this Section.

After several questions and explanations; and after the Government Delegate had given a long explanation about the Colonial Troops Bank in Hokkaido, the War Office Section was voted as amended by the Committee.

Mr. Noda, Government Delegate, spoke briefly with reference to the subject of foot-gear for the troops. He said that the War Office had long contemplated the establishment of a military boot-making factory, in order that the supply of foot-gear in war time might be assured. The experience of the rebellion in the south had been adduced as proving that straw sandals were better suited to Japanese soldiers than boots. But the Military Authorities did not endorse that view. Besides, it had to be remembered that the army was not intended merely to quell insurrections. Its prime function was to protect the country, and in the discharge of that duty, it might be required to fight beyond the sea. In that event, leather foot-gear would be essential. Hence the War Department adhered to the principle of supplying the troops with boots, and desired as far as possible to arrange that the army should be independent of outside aid in this important matter.

On coming to the Naval Department Section, Mr. Kato Masanosuke, on behalf of the Budget Committee, stated that the comparatively large reductions made in this section, were due to the defective manner in which the Naval estimates were compiled, and also, in some cases, to the excessively high allowances asked for.

Vice-Admiral Ito, Government Delegate, denied that there was the slightest difference between the methods of rendering accounts in the Army and Navy, and pointed out that the growth of the latter involved an inevitable increase in the item of salaries.

Mr. Hasegawa Tai asked several questions which were answered.

The House voted all the items in this Section as amended by the Budget Committee.

Mr. Kioura, Government Delegate, argued strongly against the reductions proposed by the Committee in the Department of Justice, and showed in detail that such a cutting down of the appropriations would seriously interfere with the efficiency of the Department, and impair the working of the Judiciary. In answer to Mr. Noda Shozaburo, he said that the Department would be very glad to elevate members of the Bar to the Bench, but unfortunately members of the Bar did not want to be thus elevated. On the contrary, occupants of the Bench showed a disposition to transfer themselves to the Bar.

The whole of the items in this Section were voted as amended by the Budget Committee.

The Bill relating to the amendment and operation of the Commercial Code was then taken.

After some questions had been asked and answered, Count Yamagata, Minister of State for Justice, said:—

GENTLEMEN,—The Bill submitted by the Government for the amendment and enforcement of certain portions of the Commercial Code, has received the approval of the House of Peers and now comes before you for deliberation. I venture therefore to trouble you with a brief explanation of the Government's views in submitting the Bill. Having regard to the state of affairs now existing in the country, we are persuaded that not a day should be lost in giving effect to the Law of Companies, the Law of Bankruptcy, and the Law of Bills of Exchange and Cheques. These three Laws form part of the Commercial Code, the operation of which has been postponed. To restore to a state of due order the present irregular conditions of commerce, to check and prevent the abuses brought about by fraudulent and corrupt persons who

engage in speculation for purposes of purely selfish aggrandisement, we believe that no better way offers than to enforce the two Laws of Companies and Bankruptcy, and we therefore regard the speedy operation of those laws as an urgent necessity of the time. Further, as the development of trade progresses and as the volume of transactions becomes larger, ready money is less and less used, its place being taken by cheques, promissory notes, and so forth. The marked tendency in this direction shown in the commercial business of our country is a subject of congratulation. It becomes, therefore, the duty of the country's legislators, under such circumstances, to provide a proper and sufficient Law of Promissory Notes and Cheques in lieu of the imperfect Law now in operation. I have no doubt, gentlemen, that you agree with us in thinking that a day's delay in putting these three Laws into force, means a day added to the life of the abuses I have mentioned. I feel that it would be superfluous to do more than to submit the Bill to your favourable consideration.

The Bill was entrusted to a Special Committee of 9 nominated by the President.

Mr. Nakamura Yaroku, introducing the Bill for amending the Mining Regulations, explained its principal points, and reminded the House that the Bill had been passed last session, but had failed to secure a favourable vote in the Upper House owing to the fact that when it came up for discussion by the Peers, only two days remained before the going into operation of the Regulations in question. The chief amendments proposed were; first, to abolish the offices for superintending mines, with the object of economizing expenditure; secondly, to abolish the system of experimental mining, which leads to many abuses; thirdly, to abolish the system of preparing estimates for works a year in advance, which entails needless labour upon officials and miners; fourthly, to entrust the police supervision of mines to ordinary instead of special police; fifthly, to eliminate all unnecessary official interference; sixthly, to amend the present method of collecting taxes; and seventhly, to bring the collection of mineral dust under the provisions of the ordinary Mining Regulations.

Mr. Nishimura, Government Delegate, said that the Government could not endorse the proposed amendments. The Regulations had been in operation only six months, and there had not yet been time to arrive at any practical conception of their defects or advantages. It was true that some complaints had been made. But careful investigations were now in progress, and if amendments were required, the Government would in due time introduce a Bill embodying them.

The Bill was entrusted to a Special Committee of 9 nominated by the President.

Mr. Ogasawara Sadanobu, on behalf of the Special Committee, reported that the Committee approved the Bill for amending Law No. 84 of the 23rd year of Meiji, but suggested a slight modification. The original Law fixed the limits of punishment for violation of Administrative Ordinances at a fine of 200 yen, or two years' imprisonment. The Bill proposed to amend these limits, reducing the maximum fine to 50 yen, and substituting "minor confinement" for "two years' imprisonment." But the Committee, considering it essential to limit the term of such minor confinement, proposed to fix the limit at 7 days. It had been argued that since the 23rd Article of the Constitution guarantees Japanese subjects against arrest, detention, trial or punishment, unless according to law, to punish under the authority of an Administrative Ordinance was contrary to the Constitution. But it appeared to the Committee that since the Constitution undoubtedly invests the Government with power to issue Administrative Ordinances, it assuredly intends that power to enforce such Ordinances should also exist. The only question related to limits of penalties, and the Committee believed that the requirements of the case would be met by a fine of 50 yen and 7 days minor confinement, ~~maxima~~. The Government Delegate, however, had insisted very strongly that the Law must be left in its original form.

The House voted to carry the Bill to a Second Reading but declined to proceed with it at once.

The President announced that the House would rise on the 25th instant, for the New Year's recess, and re-assemble on the 9th of January.

The House rose at 6 p.m.

THE RECENT FIRE IN OSAKA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The deplorable loss of life which occurred in consequence of the recent fire at the Osaka Cotton Mills points to the probability that certain simple but highly necessary precautions were either entirely wanting, or had been rendered inoperative by neglect or misuse.

(1.)—Every building of an inflammable nature, or filled with inflammable materials, where large numbers of operatives are employed in upper storeys, ought to be provided with external staircases open to the air, properly fitted and instantaneously available.

(2.)—The doors leading on to these staircases should open outwards.

(3.)—The doors should be secured inside with a single simple fastening or bolt fitted with a powerful lever handle, so that in no case can they get jammed or set fast.

(4.)—If it is necessary to lock them, to prevent improper use being made of them, the lock might consist of a lean rivet, clenched with a seal or stamp kept by the manager (as is sometimes done with safety lamps in mines) and so arranged as to be easily sheared by the action of a lever handle.

(5.)—The external staircases should be of iron, so as to be unflammable, and they should be kept clear of windows or other openings through which flames could play upon them or those using them.

(6.)—For the same reason, and also to avoid the converging rush of conflicting streams of fugitives, there should be at least one independent staircase for each story.

(7.)—The staircases must be strong enough to bear as many persons as can possibly be crowded upon them, with a continuous handrail easy to grasp on each side, absolutely straight without turns or zigzags (if this is impracticable, an easy spiral or a quadrilateral with central space is preferable to a zigzag) and of a gradient not steeper than 1 in 1½, or say with treads 10 inches wide and risers 6½ inches high, and they must be kept absolutely free from any obstruction or barrier, such as a pay-office, time-keeper's gateway, &c.

(8.)—The number of staircases to each floor, and their width, must of course depend on the size of the building, and the number of employes.

(9.)—Every few weeks, at irregular intervals and without previous warning, the ordinary exits should be barred, and the external staircases ordered to be used. If never brought into use, their very existence might be forgotten in a sudden alarm; and the practical knowledge that by their means the whole building could be cleared in a couple of minutes or so would go far to prevent a panic or a mad rush.

Some such regulations as the above ought to be made compulsory in the case of every factory of more than one storey high from the ground-floor where more than 20 persons are employed on any one upper floor, and should also be applicable under similar conditions to such buildings as theatres, schools, hospitals, &c.

In new buildings such external staircases might in many cases take the place of and supersede, internal staircases, which form a natural chimney for the updraught of flames and heated gases, and for the spread of a conflagration from one floor to another.

Of course I make no claim for originality in offering these suggestions, which are merely an outline, and not an exhaustive specification. On the other hand, I need offer no apology for calling attention to them at the present time.

Yours truly, W. SILVER HALL.
Tokyo, 22nd Dec. 1892.

A BRIEF GLANCE AT THE STATUS OF RELIGIOUS THOUGHT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It has not been long since what is known as the Higher Criticism sprang up in the religious field of thought to vex the righteous soul of many Christians. This vexation is largely unnecessary, for no fundamental doctrine of Christianity has

been seriously affected. These religious comets which so suddenly appear in the firmament need not awaken alarm. Such sudden appearances set people a thinking; and the discovery of truth is the usual outcome. No field of thought has been so productive in theory as the religious field. Theories on every phase of God's word have been sown and industriously nourished till the harvest of tares appeared; then they were cast away for something else. That famous Tübingen school which attempted to radically modify some of the fundamental tenets of Christianity is an illustration in point. Prof. Harnack says of this school:—

The possible picture it sketched was not the real, and the key with which it attempted to solve all problems did not suffice for the most simple. . . . They [the Tübingen views] have indeed been compelled to undergo very large modifications. But as regards the development of the second century, it may safely be said that the hypotheses of the Tübingen school have proved themselves everywhere inadequate, very erroneous, and are today held by only a very few scholars.

The above mentioned religious school, of which Christian Baur was the founder, now has a very scanty following at the university of Tübingen.

The weakness in the rationalistic method was, that the contents of the Bible must harmonize with a preconceived idea of what would seem natural in any given case. And where any event is recorded which would, in the least, challenge the ready belief of the reader, the record of that event must be taken as an interpolation, or the event be a superstition. Of course, this was simply to destroy all prophecy and miracle in the Bible. This extreme rationalistic school has had its day, and its sun is now beginning to decline. Nothing is now to be feared from it. To grant the existence of God, which the school did, was only to allow an element in the theory which destroyed its method of excluding miracles.

But now, in more recent years, a somewhat new tendency in the study of God's word has set in, inside what is known as the Higher Criticism. This tendency is not to attack any accepted beliefs of the gospel so much as a re-examination of the gospel facts from a historical standpoint. This kind of high criticism is, more properly speaking, an historical criticism. And, in fact, this method would seem to be about the only correct way to get at the meaning of God's word. Revelation is a history; and as history, it can best be studied. It is God's history, adapted to the intelligence of man, his most exalted creature. The springing up of this historical method of study has awakened intense interest in many of the important doctrines of scripture; for instance, inspiration, imagery, dates of the various books, authorship, etc. Upon all of these questions, many of the best minds have been engaged. And the interest at this time is especially lively. But still the Book of all ages remains the Book of God, and the opposing hosts of sceptical criticism have not been able to prevail against it.

It is feared by some of the extreme conservatives that even this free, but devout, study of God's word is fraught with evil tendencies which may lead away the younger members of the church into sceptical territory. But even this fear would seem not to be well grounded, if we hear in mind the words of Bishop Eliott in reference especially to the Old Testament. He says:—

I come myself very closely into contact with young men of earnestness and intelligence; and, as yet, I have certainly met with no examples of the class in whose interest we are urged to reconsider our current views of the character and composition of the Old Testament. Four times, each year as it passes, I have the opportunity of contact with young minds; and up to the present time, I do not remember to have met with a single instance in which any serious difficulty appears to have been felt in reference to the Old Testament; nor have I been led to infer from what has been told me that doubts and difficulties as to that portion of the Book of Life prevail among the general class of the students at our Universities, to anything like the extent which it is alleged, is now to be recognized.

So far, then, as Biblical criticism is concerned, there is, at this time, a good degree of lively discussion. The work of the extreme "higher critics" has been destructive, rather than constructive. The milder class of the same school has diligently studied; but nothing very new or valuable has been produced. Their method, which, however, is not altogether new, is valuable and commendable. Anyone could adopt it with profit.

So much for historical criticism.

When we turn to the more practical phases of the gospel, we find the general interest none the weaker. The great educational and philanthropic enterprises of Christians to-day are something wonderful. The question is, where will it all end? These good works, too, break through the denominational barriers, and call into union the strength of all sects. Whether this is a condition resulting from the growing spirit of union, or causal condition of that spirit, may be considered a question. But it is evident that in no field of religious life is there wider awakened interest than in the practical. Pure religion is beginning to be understood as it never was before.

And what effect, too, will all this have on the vital question of Christian union? Much. It has

already had much. It is clearly seen that God's church, divided as it is, cannot convert the world. Christians, mistaking the addition of a few converts yearly as an indication of prosperity in the spread of the kingdom, have been content to look abroad no further than to the confines of their own fold. Such a view is now seriously regarded as unworthy the Christian. The conversion of the world to Christ is now prayed for as never before. And when Christians earnestly pray, they will soon also earnestly act. They know what an irresistible power united Christendom would be. They realize also their responsibility in this matter. And reunion of the church will simply be a matter of time. It will come when Christians of the various sects satisfactorily readjust a few ancient and inexpedient customs to a more considerate and brother-loving conscience. When Christians come to look upon the question as the late Dr. Howard Crosby did, then will the readjustment process begin in earnest. He said:—

The Christian Church is divided. Paul Apollos, and Cephas are set up as heads, instead of Christ, and the curse of the Corinthian Church rests upon Christendom to-day. Apostolic utterance and that is the utterance of the Holy Spirit, against us and we are bound to take heed on every season of reverence and safety. There can be no millennium for a divided Church. It matters little that the names that divide us are expressive of important ideas. I presume the Corinthian Church could have said the same, and certainly the names of Paul and Cephas and Apollos were as good as those of Luther, Calvin, and Wesley. The fact remains, and the trouble lies in the fact, that we are divided, when no ideas, important or otherwise, ought to divide us. It is the oneness of believers that our Lord declares to be the mighty argument to the world, that the world may believe that the Father hath sent him.

Finally, there is one more important indication which I may mention, the way the church, the congregation, is beginning to be looked upon. It was recently that the subject of the diminishing authority of the church was before the congregationalists in America. That so many organizations, inside and outside the church, were springing up and exercising authority divinely belonging to the church, was looked upon as tending towards serious consequences. And even as radical a mind as that of Dr. Briggs was led to fear that even the very foundations of the church may be undermined by these innumerable organizations. Such prognostications only add impetus to that already marked returning towards Apostolic, or New Testament, Christianity, which returning has in it the purifying, unifying, and glorifying of the church of the living God.

Respectfully E. SNODGRASS.

No. 14, Tsukiji, Tokyo, Dec. 16th, 1892.

THE PROVINCES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In my last letter I referred briefly to the peculiarly difficult situation into which this prefecture had been plunged through the "patriotic efforts" of local politicians, and explained that the cause of this phenomenal occurrence was their endeavour to have the Chief of Police removed on the alleged ground that he had interfered in the last general election while discharging the duty of chief of police in Saga.

More than a month has elapsed since I wrote, but the agitation is as active as ever. Its fomenters are evidently emboldened by the recent success of the Saitama people in having their unpopular Governor removed. The enthusiasm of our politicians has resulted at last in the suspension of the Local Assembly and dissolution is not unlikely to follow.

Mr. Tanaka, the object of the crusade, is said to have remarked that he is greatly indebted to the people of Ise for bringing his name much before the public, and the Miye folks, in their turn, should be grateful to him for having supplied them with an opportunity of exercising their political ability and showing to the world that they are not so apathetic in public affairs as is generally supposed. At the same time, it is to be regretted for their sakes that the attitude they have assumed thus far toward the Chief of Police savours considerably of extravagance. The name Tanaka Konroku has become a veritable bugbear. On the occasion of the Emperor's birthday, for instance, when it is the yearly custom for local officials and people alike to hold conjointly a garden party in honour of the day, great were the difficulties experienced by the managers on account of the refusal of the citizens to join the feast so long as Mr. Tanaka participated in it. Even more comical was a sight witnessed shortly afterwards at a farewell banquet given by the leading officials and citizens to an official about to proceed to another post. Owing to some misunderstanding, just as the feasters were about to enjoy themselves, who should appear but the terrible Tanaka. At once a hush fell upon the room where much sound of merriment had been heard a moment before. The silence lasted a few seconds, until one citizen, who

Original from

seemed to have more pluck than the rest, rose and, taking with him his tray of edibles, stalked out of the room. This example alone was needed. One after another the convives followed the leader, and marched out, no one omitting to carry off his tray laden with *gochiso*. The result was a distinct division into two distinct camps, so that the guest of the evening had a somewhat onerous task, sitting half an hour in one room and half an hour in another quite apart.

My last letter gave the programme mapped out by the malcontents for the persecution of the Chief of Police, but I have now to report that most of it was very wisely omitted, the whole of the agitators' energy being reserved for the occasion of discussing the Police Expenditure Bill in the Local Assembly. The method chosen to approach this subject was highly characteristic. It showed at once the prudence and the timidity of the people of Ise. In every Local Assembly the Police Expenditure Bill has to be discussed at the outset. But the Miye Assembly reversed this order, and postponed the deliberation of the all-important subject to the last, the object evidently being to avoid losing the chance of voting the rest of the bills, thereby bringing about the undesired result of having the budget for the preceding year carried out once more; in the event—plainly anticipated—of the dissolution of the Assembly. This device was certainly astute, but it was also much less manly than the procedure of the Saitama politicians under similar circumstances, for the latter passed a vote of want of confidence in the Governor and Chief of Police at the very commencement of the session, and were thus relieved from the trouble of discussing the bills, sentence of suspension being pronounced at once and followed by dissolution. Previous to the Police Expenditure Bill being brought in, conference after conference was held secretly by the members, to determine their procedure on this vital question, and to persuade the doubters to join the "patriotic movement."

At last all was ripe and the Bill was introduced. The assembly-room was crowded with an eager audience. The Chairman of the Assembly had agreed to play the part of spokesman. Surrendering his chair temporarily to the Vice Chairman, he took a seat among the members. The moment the Bill had been read, the ex-chairman rose and said that he had an urgency motion to bring forward. He then delivered a short set speech, proposing a vote of want of confidence in Mr. Tanaka, and that application be made to the Home Minister in the name of the Miye Assembly, to have him removed from the Prefecture. This was at once seconded by several members as previously arranged. But before there had been time for much airing of sentiments, the Governor, who was sitting on one of the seats reserved for official deputies, rose and asked the Chairman whether he intended to allow the proposed discussion to proceed. The reply being in the affirmative, the Governor declared the Assembly suspended for exceeding the legitimate powers vested in it. Every member knew perfectly well that to discuss such a question in the Assembly was entirely unlawful. But they had made up their minds that the ship, once launched, must be brought into port no matter how, and that a loud noise was the best way to promote the voyage. So the Assembly was sacrificed. It has to be noted, however, that the project of passing a vote of confidence in the Chief of Police was not unanimous. Even after repeated conferences and the employment of various means to win over those who were against the step, there remained two members, out of forty-eight, who adhered firmly to their original opinion. They said that, ready as they were to cooperate in the movement provided legal means were resorted to, they could not conscientiously join in a proceeding which was simply tantamount to prostituting to uses at once rash and illegal the Assembly which ought to be the fountain head of local good order. When the Assembly was declared suspended, these two gentlemen sent in their resignations and went home. Their less scrupulous colleagues, however, were in high spirits, and proceeded from the Assembly-room in a grand parade of *finiriisha* to a certain restaurant, where a "friendly meeting" was organized and the evening passed in revelry. There they selected two deputies to represent the case to the Home Minister.

The next day they dispersed and started for their homes.

The Governor and the two deputies were at once despatched to the capital to interview the Home Minister.

Yours, &c.,

T. Y.

Tsu, Miye Prefecture, December 20th, 1892.

A QUESTION OF SELECTION AND FITNESS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the House of Representatives, on the 22nd instant, a prominent member of the Opposition expressed the opinion that the "procedine" of the Foreign Office, in sending abroad diplomats who in past years had been engaged in active hostility against the Government was "distinctly objectionable," and that representatives of this class were "disgraces to Japan." The author of this emphatic denunciation is understood to be well informed in contemporary history. If he were asked to name the particular acts of the United States Government, after the close of the Southern rebellion, which called forth the warmest acclamations of the civilized world, and were hailed as precedents which enlightened nations could not afford to disregard, he would naturally point to the almost unrestricted extension of clemency to the men who had endeavoured to destroy the Union, and the appointment of such among them as were deserving of trust to responsible positions in the public service. Is it, then, this gentleman's conviction that a course which when taken by America is universally applauded, must be considered disgraceful when followed by Japan? And is he willing to stand in the position of condemning his country on grounds which are recognized by mankind at large as constituting one of her strongest claims to approbation and respect?

The Vice-Minister of State for Foreign Affairs, in replying to Mr. Ozaki's complaint, remarked that the diplomatic agents of this Government had been chosen with a view to their fitness for the duties to be performed. Upon this principle, an example of peculiarly fortunate selection may be found in a certain Minister who successfully negotiated the most advantageous treaty ever secured by Japan—the only treaty in which the equal rights of the Empire are fully and explicitly maintained, and which is believed by the firmest defenders of the national dignity to be a model for all Conventions with foreign Powers. Yet this treaty, as everybody knows, was the work of an Envoy specified by the adverse critic as unworthy of the office to which he was assigned, and a disgrace to his native land.

Very truly yours,

Tokyo, December 23rd, 1892.

H.

THE RECENT NAVAL COURT OF INQUIRY INTO THE "RAVENNA"—"CHISHIMA-KAN" COLLISION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Now that the finding has been rendered in this Inquiry, I venture to elicit information on a point of procedure which has struck many persons as very singular and extraordinary.

The Court in the first place examined the British witnesses belonging to the *Ravenna*, each witness before being called being allowed to remain in the Court-room and hear what testimony the other witnesses were giving as well as the questions put to them.

The Court then began to take the depositions of the officers of the *Chishima Kan*, of her French engineer, and of two of her crew. It was at this period that the course adopted by the Court seems to have been most unusual and indeed unprecedented, for of its own motion it ordered all the witnesses of the *Chishima Kan* to leave the Court-room and not to be present there during the Inquiry until their turn to depose came.

I am well aware that it is a very common practice for Courts of Inquiry as well as Courts of Justice in England and in America, before commencing to hear evidence to order all witnesses out of Court so that no witness may hear the evidence given by the others. I am also well aware that witnesses during the course of the proceedings are sometimes ordered out of Court on the application of the Counsel of a party. But I am not aware that it is proper for the Court to do so at such a period of its own motion, although it no doubt has the power, unless the witnesses in reference to whom the order is made are *prima facie* unworthy of credit or unless the nature of their evidence is very peculiar and special and different in kind to that already adduced in the proceedings.

The impression left on the minds of the witnesses with regard to whom the order was made it is not difficult to appreciate, and the sooner this impression can be removed by a satisfactory explanation in your editorial or correspondence columns the better it will be in the interests of the friendly feeling that every one must desire to see existing between foreigners and the people of this country.

I am, Sir, faithfully yours,

LEX.

Yokohama, 29th December, 1892.

THE SMALL SALARIES PAID TO EUROPEAN PROFESSORS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In regard to the question of the enormous salaries paid to foreign teachers in Japan, permit me to cite the figures of salaries paid to various professors, not in the greatest, but in some of the lesser Universities of Great Britain:—

UNIVERSITY OF GLASGOW.	Professorships.	Salary.
Humanity	£541
Greek	538
Mathematics	578
English Literature	850
Chemistry	873
Natural Philosophy	1,441
Logic	1,418
Natural History	1,084
UNIVERSITY OF ABERDEEN.		
Humanity	887
Greek	801
Mathematics	799
UNIVERSITY OF EDINBURGH.	Professorships.	Salary.
Natural History	£1,187
Chemistry	1,015
Anatomy	1,039
Logic	704
Humanity	1,233
Greek	1,256
Mathematics	1,214
Logic	850
Natural Philosophy	923
Chemistry	3,450
Anatomy	3,000

This list might be enormously lengthened. I have cited only the Scotch Universities. Let the Japanese wiseacre who imagines foreign professors overpaid, consult for himself the figures of salaries paid in the higher universities and the amount of fees exacted. He will be able to discover for himself that the salaries of foreign professors in Japan are disgracefully low—something to blush for. Yet there is but one Imperial University.

Yours, &c.,

December 28th, 1892.

THE LATE JAY GOULD.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your article upon Jay Gould I read with more than interest, and with the concluding paragraph I heartily agree. But with many of the critical remarks I cannot. It appears to me that the article does some involuntary injustice to the largeness of the man. It suggests, firstly, that he was a speculator; and, although the word is susceptible of a signification much more extended than that of a financial gambler, it conveys to the general reader the idea of one who tempts chances. Secondly, it reiterates an exploded error—that one time universally credited—that Gould was assisted by men like Fiske and others, who are referred to as comparable with him,—as his equals or partners. And, thirdly, it seems to me to assume too decidedly that the career of the great operator was that of a destroyer rather than of a constructor. I may be wrong in certain points; still, I would like to express some views of my own about Gould, at variance with those of your interesting leader.

One of the happiest suggestions in that leader, I think, was that posterity may judge Gould otherwise than he has heretofore been generally judged. That such will be the case appears to me almost certain. He was far too large a character to be justly estimated during his lifetime;—moreover, the world saw little of him, and long felt his presence directly only as a dangerous force. In his case more particularly than in that of any other unpopular personage of his time, public hate was the result of public fear—a fear augmented by the long incomprehensibility of the methods and powers that made panics. For Gould worked always in the dark; and much of his wonderful career still remains mysterious, and will not be understood for years to come. The individual intellect that could master all opposition, defy all combinations, and affect the values of the world's markets as a solar disturbance affects magnetic needles,—was known of merely by the results of its will. At first, its existence was not even understood and its work was attributed to a number of common individualities, sensational characters, who were only its dupes and puppets. Gould had no real confidants, no real partners, no business friends. Those who imagined themselves, or were imagined by the public, to be his confidants, soon learned they were merely pawns in his game—pawns to be cast aside when the game had been played. Such was especially the case with Fiske; but Fiske was only one of a multitude. He was enriched by Gould, used by Gould, permitted to absorb public attention by Gould: he was a creation that crumbled down the same instant that the powerful hand which had lifted him out of obscurity was withdrawn. Hundreds of others were used likewise, like rooks! And even after they had been dropped out of public sight with a crash, the combination in which they had been utilized, remained to them as mysterious as ever. It is a total mistake to imagine that Gould was assisted to success by friendship or by patronage. He first entered New York, penniless,—as the inventor of a peculiar kind of mouse-trap. The success of the mouse trap supplied the means of making traps of a larger sort,—traps for financial gamblers; but these latter were mathematical. While the belief existed that Gould was only a silent partner of Fiske & Co., he was himself

considered only as an unscrupulous speculator. But when the amazing discovery came that all those known speculators were merely puppets;—that all the monstrous combinations and schemes by which railroads changed hands, by which vast corporations were suddenly bankrupted, by which the money-market was convulsed as by an earthquake, were the creations of one small, silent man,—then it first became known that Gould was a power to be universally feared. But even then that power was underrated. It was deemed of the moment only,—the chance of a corrupt era,—destined to vanish in bankruptcy and scorn. Nothing is more dangerous than to underrate one's enemy; and the incapacity to comprehend Gould caused utter ruin to thousands who deemed themselves able to cope with him. He was really so far beyond his time in those capacities for which he was dreaded, that it was only toward the latter years of his life that he was understood at all.

He was not in the common sense of the word, a speculator. If questioned on the subject I think he could have truthfully answered that he never trusted to chance in any single action of his life. He used speculators; he never risked an interest of his own. He was a consummate mathematician who played at finance precisely as Paul Morphy played at chess. The only occasion upon which he was obliged to disgorge—(when the English stockholders of Erie and others formed a combination to fight force with force, and scheme with scheme),—was like a game in which one champion plays blindfolded against any number of opponents. Justice should confess it was a drawn game, with all the advantage on Gould's side. He then took out of his pocket a small tin box, and threw it down upon the table;—the stockholders having bound themselves to attempt no prosecution, and to be satisfied with the return of certain values. The values were in the little tin box. They represented *seventy-five millions of dollars*. It was a large sum to toss back; yet in spite of this unloading, Gould remained a heavy winner. He never made a losing move,—a mistake in play. He felt, with the intuition of a genius, difficult for us even to understand, every weakness in a financial system, every defect in a monopoly,—and as it pleased him, instantly brought to bear upon such weaknesses an irresistible power that shattered the fabric like a wedge driven by a steam hammer. Sometimes, indeed, he assailed something too vast to break;—as on that evil day when he taught the United States that under certain conditions a "corner in gold" was possible, and something to be everlastingly provided against. But before the Government could come to the assistance of the country, the shock of that awful crash had been felt round the world. It was a horrible event for tens of thousands—but it was also a salutary financial warning; and it is quite safe to say that no other ordinary man of business would have hesitated to make a corner in gold, and reap every advantage of it, could he have found the same opportunities.

It has been customary to speak of Gould's career as a career of spoliation; it is impossible to call his methods moral; it is justifiable, from the religious point of view, to call them criminal. Yet there is much, I think, to be said in his favour. The methods used by him were the methods used by other men throughout the world of commerce and speculation—methods occasionally criticised by moralists, but for all that established by usage, and in the present industrial condition impossible to abolish. As used by other men, however, their effects are generally confined within small limits; and in regard to speculation, pure and simple, most operators are obliged to take risks, and the changes of fortune preserve a sort of even balance, which keeps the evil within endurable bounds. But Gould's genius suffered no limits; and Gould's foresight changed common speculation into absolute certainty. He not only mastered chance; he made chance. He did not seek opportunity. He created it. In the terrible fable of Swift, those deformities imperceptible in the Lilliputian, become insufferable in the Brobdingnagian;—and the common vices of speculative method appeared unendurable in Gould for no other reason than that they were enormously magnified by his genius, and were seen from the Lilliputian point of view. The methods of intimidation used by the Tweed ring and by other rings were utterly foreign to Gould's character; he would have scorned to use them; he fought his battles entirely with money,—and he used money as other men used it, but as a master-player, as a genius,—sometimes like a Machiavelli, sometimes like a Napoleon. That he had any knowledge of his own marvellous powers at first is not credible. He learned his strength only by measuring it with that of others. It was not long before he found that he could afford to despise not only any individual opposition, but even any combination. Railroad

after railroad, telegraph-line after telegraph-line, fell into his hands when he employed the ordinary means of "hearing" or "bulling" stocks to his own interest. Such work is thought clever,—(perhaps, because of the danger involved)—when confined within small limits,—such as the purely local value of a staple, the price of a manufacture in one particular market. But the same methods used by Gould were thought diabolical, because they had an instantaneous range of many thousand miles, and because they were applied to values deemed capable of resisting any pressure. Gould was denounced wholly because he was colossal—colossal beyond all precedent. He was to the ordinary speculator what a Molke or a Napoleon might be to the commonest country-recruit. He followed the systems of money-making sanctioned by custom if not by morality; but the results seemed contrary both to custom and morality because they were gigantic. He was thought cruel, because he followed the business-law that there is no friendship in business,—nor did it seem to him a reason for making any exception to that rule that his power reached from the Canadian frontier into Mexico City, and from New York to San Francisco,—and radiated through nearly every State.

It is true that at one time, people were afraid to invest in any undertaking with which his name was in any way connected. But of late years the reverse became the case; and wherever Gould was positively known to have complete control, large investments were made without hesitation. I might cite, for example, the value of stocks in the New York elevated railroads. Investments were only unsafe when Gould was not in control, and intended to get control. In any such collision, small shareholders had good reason to fear being ground to powder,—as they certainly were by thousands in various instances. But it is now, I think, justly acknowledged that every large system which fell under Gould's control was thereafter placed upon a better working basis than it had ever been before. The desire of the man does not appear to have been primarily money-making, but rather the control of all systems of communication.

Those who know much more of Gould than I, have assured me that with good health it would have been an easy matter for him in time to have obtained the control of every railroad and telegraph system in the United States. There was, however, a serious obstacle to any further strain of his powers,—feeble health. The most wonderful brain of its kind in the world, was carried upon one of the very smallest and feeblest of bodies imaginable. Failing strength made even the nervous strain of managing the enormities already in his hands, difficult to bear. One of the most sober of men in his habits, his comparatively early death was certainly due to the vast disproportion of his cerebral and physical capacity. He was so small, that no honest able-bodied man would have dreamed of striking him—not at least after seeing him face to face; and an enemy whom he had ruined, having once actually seized him, was contented, in spite of rage, with lifting him over a railing and dropping him into an area. After that, however, Gould was usually followed by professional athletes, who would have promptly checked any attempts to offer him violence.

Besides the task of managing so colossal a property, Gould had also the perpetual task of defending himself against combinations. Enormous combinations were repeatedly formed against him, with absolute certainty of success. If any combination of financial skill and capital could have ruined Gould, he would have been ruined twenty years ago. But after each battle, he left the field richer than ever; while his enemies were glad to beg for permission to bury their dead. Over and over again, week by week, month by month, year by year, such attempts were renewed, only to terminate in disaster for those who undertook them. That Gould's name became a name of white terror in Wall Street is perfectly true. Even the late Mr. Vanderbilt's gigantic investments in four-per-cents, are said to have been made solely with a view to protect himself against Gould. Doubtless no man was ever hated more in financial circles; but the hatred was the hatred of fear,—and no man had ever less reason to show mercy, than the object of that hate.

Yet he was certainly capable of generosity; and there will be many in mourning sincerely for him. He never forgot a kindness; and those who had the opportunity of doing him one, he made rich. If, however, they ventured their riches afterward in any speculation which he thought proper to break, it was vain to ask for pity. In finance he had no pity,—following the natural law. But outside of finance, he could do, and often did, gracious things. On one occasion he told a young man in whom he took an interest to buy certain stock. The man declared he could not; he lacked the means. Gould wrote him a cheque for a large amount,

which he used as directed. On the following day he found himself, after having repaid his benefactor, a rich man, and he followed the salutary advice which he then received: "*Never speculate again.*" If he had speculated afterwards and lost, I am quite sure Gould would not have helped him a second time. But in this Gould would have acted quite justly. He had no mercy on speculators,—however friendly they might have been previously, or whatever use they might have proved to him. This, however, is surely the law of business. If a merchant on the point of bankruptcy is spared by his creditors, is not the cause interest rather than kindness?

The statement about Gould's taking particular means of seizing the property of James Fiske, is, to the best of my belief, untrue. Fiske was ruined before his death; and it is said that he knelt down and wept, and begged Gould for mercy. No mercy was shown him. The friends of Fiske have accused Gould of cruelty in this refusal. Whether cruel or not, it was perfectly consistent with Gould's invariable policy. But that he ever condescended to go out of his way to seize one man's property, would seem totally inconsistent with his character. The property of twenty-thousand persons might pass into his hands as spoils of war; he thought no more of the individual sufferer than a general thinks of the late individual pangs of the enemy's dead. But as a rule, in everything that he did, whether it be called good or evil, Jay Gould was not simply large: he was colossal. The hundred caricatures of him reflected the popular impression of this fact: he was nearly always represented as Mephistopheles; and the character of Mephistopheles is not small.

That is should seem strange that Jay Gould could scoff at the obloquy which men tried to heap upon him, at the caricatures drawn of him, at the sermons preached against him, at public opinion generally, and at Society in particular, which pretended to despise him after having discovered that he could afford to despise it much better,—is because, I think, few fully understand the character of this extraordinary being. He was somewhat like Archimedes studying geometry during a siege: he paid no attention to anything which did not directly or indirectly affect his projects and plans. The good opinion of society could have been of no possible use to him; nor could its hatred hinder his course any more than a spider's web could check the progress of a railway express. Society may be useful to men needing opportunity, money, marriage—it is, to some extent, a mutual-help association; it trades upon certain conditions, which nearly all independent characters of ability have found themselves obliged to refuse at least once in a life time. Of Society Gould needed nothing: he created opportunity, and he could make Vanderbilt tremble for his wealth. Society also means to some degree sympathetic companionship, intellectual intercourse, &c. Gould was a sufficient companion to himself. He felt in his daily toil and his nightly plans the keen pleasure of a master-mathematician—he had no desire for contact with minds smaller than his own. What is not generally known about him is that he was also a scholar;—he was an adept in Greek, especially; and his library was rich in classical texts. I knew an instance of one who, stating from memory an observation of Herodotus in his study,—was confounded by the instant observation that the verb of the original sentence had a totally different meaning; and by Mr. Gould's taking down the volume and confirming his criticism by pointing to the Greek paragraph. He had a few friends belonging to the best of New York society, who visited him occasionally; but, as a rule, he had little inclination or time for visitors, and these were usually entertained by other members of his family. His various residences were museums of things beautiful: he possessed a collection of paintings worth a prodigious fortune; he had undoubted taste in art matters;—yet he had little leisure to enjoy these things. His steam yacht, the *Alalanta*—(yacht is a queer word for her, she is a beautiful ocean-steamer, as large as a Government cruiser)—made twenty-five knots an hour, normal speed; and he travelled prodigiously both in her and upon his railroads,—but his trips were always "lightning-trips," made only for business. His existence was absorbed by practical questions of the largest scope. Yet, when he spoke upon other topics, those who conversed with him were amazed by the profound penetration and immense grasp of facts which his pithy observations revealed. A man of great influence and talent in newspaper circles who had visited him more than once about financial problems then under discussion, told me this:—"No intelligent man can talk to Gould for five minutes without learning to respect him. It is true we denounce his morals in business, but it is also true that we all ad-

mere his brains." Gould's few famous public appearances in court confirmed this verdict. He puzzled and astonished judges and lawyers. On one occasion being asked whether he did not agree that a certain petty form of speculation was immoral and injurious to the business community, he replied that so far as the practical side of the question was concerned those methods were extremely beneficial. The audacity of this reply,—denying all precedent business-opinion,—proved less of a surprise, however, than his immediate and correct quotation from memory of monetary statistics illustrating the effect of the practices in question upon the volume of circulation, and totally confuting the views of those opposed to them. Whenever questioned upon his ideas of business morality, he was invariably able to confound his questioners by an appeal to solid and irrefutable fact.

Certainly his own conception of morality in business was different from accepted standards; but it was practical; and if some people imagine that Gould was troubled with remorse of conscience, it is because they have no conception of the character of the man. I feel assured he could have proved by figures and facts that his career was of incalculable value to the country of his birth—notwithstanding appearances to the contrary. I myself hold this opinion. I think of Gould as of a giant moving, and unable to move without breaking something because of his mere weight. Disasters were the dust of his steps. But he wrecked to build; and he built like a Titan and systematized like a Benham. He reached for ends out of common view, without counting the cost of the stride to what he trod upon; he thought only of the result, as justifying the means.

Such morality may certainly be questioned, although events show that there is often a blind natural morality in genius larger than that of churches. Gould did not live to accomplish all the ends of his labours; it would be hard to judge him only by his incomplete work. That he believed himself justified in all he did, is certain. In a world of financial trickery, his was the master-trickery;—and he followed the codes of that world to their utmost logical conclusion. If we judge his actions only by those of his fellow-men, we find him no worse in theory;—wherefore condemn him for being larger in practice? And if we are to judge his worst acts by their results, we must still acknowledge his usefulness, since the very evils of them were lessons which could in no other manner have been so lucidly taught. The vices of a system, vices commonly hidden, were suddenly magnified by his power as by a solar microscope: he was a great sociological revelation in himself,—a great expounder. He invented nothing; he merely utilized existing methods, and developed existing ideas, and pushed both to their logical extremes which startled the universe; yet those who most decry him, would assuredly have done likewise with the same powers and opportunities. It is a world of hypocrisy we live in, where those without ability to do what is called wrong, too often claim merit for obeying a moral code they dare not break. Gould, at least, was never a hypocrite. He bought papers, he bought judges, he bought legislatures,—because they were for sale to the highest bidder; and he frankly said so in public:—"When I want a Legislature, I always buy it!" What a colossal sarcasm! As for his politics he stated with equal plainness,—“In a Republican state I am a Republican, and in a Democratic state a Democrat; but I am always and everywhere, first a Gould-man.” People may have sneered when he gave \$30,000 to a church, to please his daughter,—who is a very pious and sweet little lady; but in so doing he certainly never thought or cared about the goodwill of the church, or about the criticisms upon his gift. He gave himself no concern at all about such matters; they neither interested nor annoyed him. He thought only about railroads and telegraphs and stocks and telephones and steamboat-lines, over the map of the world, printed upon his marvellous brain better than within any atlas. That he had no friends outside of his family, is, not surely, a blameworthy fact. The plain truth for every man who has had much experience of life is that outside the family, we have no sound reason to expect affection in the existing order of things,—that friendships are largely governed by interests which clash. We try to deceive ourselves about the common law of life with all manner of sophistries; we try to create a faith in man, like a religion. Just as keenly as he saw where to plant a railroad terminus or to stretch a telegraph line, did this man see where human sentiment and human interest lay. He made no mistakes; he was never the dupe of treachery or ingratitude. He saw life only as a great and wonderful battle of minds,—and he went into that battle single-handed, and made himself king,—able to command whatever he desired; and his

ghost can sneer at the vain imagination that he had less in his lifetime of goodwill or affection than he himself desired. And so long as the guerdon of success in this sublunary sphere is to force and cunning,—so long as we preach out of business what we do not practise in business,—so long as we applaud trivial success due to trifling with moral idealism,—we cannot, I think, judge Jay Gould with harshness. The necessity of life is to make money and to win position,—neither of which we acknowledge can be done without overcoming obstacles,—and this means in plain language, at somebody else's expense. We are all trying to do on a petty scale what Gould did upon a continental scale. There is only a difference of degree,—against which we can merely urge the question:—"Why should not a man content himself with a million or two, anyhow?" To this question, the answer is:—"Why should a man who knows himself capable of using a thousand millions, and only capable of fully exercising his talents with a thousand millions, confine himself to any lesser sum?" For one fact about Gould must not be overlooked. He used his wealth; he made millions only to employ them, and as a capitalist he was probably the greatest living force of his age.

Yours truly,

December 26th, 1892.

JUDGE MOWAT AT THE YOKOHAMA EIGO GAKKO.

His Honour Judge Mowat took the chair on Friday evening at the first prize giving of the Yokohama Eigo Gakko. The occasion was one of more than common interest, marking as it did the public recognition of a remarkable institution. There were also present Mr. James Walter, Mr. Carew, the Marquis Nembrint Gonzaga, Mr. Fardell and others. The pupils present must have aggregated more than one hundred.

After some speeches and a dialogue by the scholars, the Principal of the school submitted his report.

MR. KONDO said—Mr. Mowat, Ladies and Gentlemen: I—thought it better, before reporting on the working of this school for the past year, to give you a brief account of how this school came into existence. Perhaps it would surprise you to hear that this school (the Yokohama Eigo Gakko) has been working for one year only. I myself have been teaching English to Japanese students for nearly 7 years; but never attempted teaching on such a large scale as this, until the beginning of this year. The reason why I started this school and made it a night school only, was, because in my long experience of private teaching, I observed that a great number of parents found it really difficult to pay more than 50 cents a month; and, moreover, that their sons were unable to attend a day school as they were mostly employed in local Japanese and foreign firms; others having to attend to their Japanese studies during the day. To meet this great want, I was determined to open this night school. I need not tell you, ladies and gentlemen, that I had a great deal of trouble to contend with at first, as I had to carry on this school unaided, and entirely by the small fees paid by the students, and my own limited means, which I receive as an assistant in the Yokohama Water Works Office, and the fees obtained by out-door teaching and translations. But by degrees, the number of pupils increased, and after 3 months I found I had 104 pupils. This fact alone will show you how necessary the school was. Now, another and a greater difficulty occurred. I found that it was quite impossible to teach English conversation under Japanese teachers. The result of teaching the classes by Japanese teachers was that the students made great progress in understanding difficult words and phrases; but were very backward in speaking English and pronouncing words correctly. To overcome this difficulty there was only one way, and that was, to employ foreign teachers. Now, ladies and gentlemen, foreign teachers are very expensive articles, and to meet this extra expense I would have to sell a great many more school-tickets, as more tickets represent more scholars. To day I can proudly say that I have never received a single dollar for the support of my school, except by the teaching of students. My request has always been "please send me some students." The following gentlemen were kind enough to take tickets for students: Mr. Otani, Mr. Mogi, Mr. Asada, Mr. Watanabe, Mr. Kimura, Mr. Minoda, Mr. Takeda, Mr. Ohama, and others. The total number of tickets taken by these gentlemen amounted to 60. The sale of these extra 60 tickets enabled me to employ a foreign teacher. Three months after this I found the necessity of engaging another foreign teacher, and was for-

tunate enough to secure the services of Mr. Russell, who has been with me ever since. From this time, the students made great progress both in reading and conversation; and the attendance increased to nearly 200. I may here mention that to meet the extra expense of the second foreign teacher, I was reluctantly compelled to slightly raise the fees of the three highest classes by 20, 30, and 50 cents respectively; as the additional foreign teacher was more for the benefit of these three classes than for any other class in the school. The classes in this school run from "A" to "F"; that is, "A" being the first and lowest standard, and "F" being the sixth and highest standard, the same as in English Elementary Schools. Longman's English Readers with explanations being taught to all the classes with the exception of "F" class, where Arnold Forster's Citizen Reader is taught. A. & B. classes are taught Longman's 1st and 2nd Readers with spelling, meaning, and conversation. C. & D. classes are taught Longman's 3rd and 4th Readers with spelling, meaning, explanation, and dictation; conversation, grammar, and English history forming their other studies. E. class is taught Longman's fifth reader with explanation, paraphrasing and conversation. Swinton's World's History and Grammar, are also taught to this class; while for conversation lesson each student prepares a subject about which he converses with the foreign teacher. F. class is the highest class in the school, and as I said before, is taught the Citizen Reader, Macaulay's Lord Clive, and Newspaper Reading (extracts from which are kindly supplied weekly by the Japan Mail office free of charge). The Citizen Reader gives this class a good idea of the constitution of England, as well as that of their own country, and teaches them the duties owed by them to their country, their countrymen, and themselves. In addition to these studies they are taught letter writing and advanced conversation. The lessons set by the foreign teachers are explained to all the classes by two competent Japanese teachers, who have a sound knowledge of English. This system of Japanese explanation enables the students to thoroughly understand what they are learning, not only in English but in their mother tongue. These teachers also attend to the teaching of translation (Japanese into English and English into Japanese). Lastly, a new and very interesting feature has been introduced into the teaching of this school, in which I receive great and valuable support from my foreign teachers. It is the teaching of oratory. On the third Saturday of every month, instead of the usual night classes, a general meeting of all the scholars is held at 7 p.m. in the large class room. Two boys are previously selected by turn from each class by their fellow students to represent their class at the meeting. These boys prepare a lecture, or some short story or poem, which they deliver at the meeting before the whole school on lecture day. Of course, A. & B. classes only recite small, simple poems; but the other classes all endeavour to make a lecture, however short it is, and strive to say it as nicely as possible, so as to obtain the greatest applause for their class. This not only gives the boys practice in speaking English correctly, but by it, they acquire a great deal of self-possession and the manner of speaking in public. I feel proud of this new step, as it seems to me a successful attempt to fill a gap in the present educational system of the lower schools in Japan; and moreover, it is very necessary, as this class of students could never get an opportunity of learning to speak in public with any degree of confidence. At first the students showed little or no progress, but from the time foreign teachers were engaged great progress was made in all the classes; especially after Mr. Russell joined the school. Two examinations are held yearly, one in the spring and one in the autumn. The last examination was held in November, when about 110 boys competed. The result was that from A. class 63 per cent. of the boys passed, from B. class 59 per cent. from C. class 54 per cent. from D. class 70 per cent., from E. class 15 per cent., D. class showing the largest percentage and E. class the lowest. The small percentage in E. class was due to the fact that most of the students in this class were new boys who had only been in the school a few months. So you see, gentlemen, a total average of about 60 per cent. passed the examination. The examination papers are on the table for inspection. I would like to say a few words about the class of students who attend this night school. As I said at the beginning, many of the students are employed in foreign and Japanese firms. We have boys from Messrs. Kelly & Wash, Winckler & Co., Hall & Co., Averill & Co., Tuska & Co., Retz & Co., Cocking & Co., Bagnell & Hiller, Berrick Bros., E. T. Mason & Co., W. J. Shand & Co., Samuel Samuel & Co., and many other for-

reign firms. These boys have to go to work during the day, and so find a night-school a great help to them. I feel sure that if more of the foreign firms in Yokohama knew of the existence of this school, they would be only too willing to send their assistants, clerks, and boys, for improvement to the night lessons, as the fee is so small and the advantage so great. One year's hard study could give a boy of ordinary capacity a very good idea of English, that is, he would be able to converse in English; and to understand all that was said to him regarding his office work. He would be able to attend to customers or visitors, and talk to them in English; moreover, he would be well able to make fair copies of letters, and file the correspondence of the office in good order. If he continued longer in the school he would learn a great deal more. The teachers at present in the school are:—Mr. Russell, Mr. Hooper, Mr. Tanaka, Mr. Murai, Mr. Ishikawa, and myself. Mr. Russell is my head teacher, and to him my very best thanks are due for his excellent teaching, and the valuable assistance I have always received from him during the past six months. Mr. Tanaka is my head Japanese teacher, and has been with me from the commencement of this school: to him also, my best thanks are due for his work during the past year. My thanks are also due to Messrs. Perrie, Walker, Wells, Gomes, and Scott, for assistance rendered during the past year. To continue the school in the present manner and retain the present working staff, some 250 students would be necessary, this number representing nearly \$150. To this I can add my own official salary, and the amount I get for private out-door teaching and the translation of Japanese letters. But we have never had more than 200 students, so that, the school has never really paid, and has always been, more or less, in debt. Not in debt, gentlemen, in the usual sense of the word; but in debt to the Principal; that is, I have received nothing for the time, labour, and money I have devoted to this school. The school was held in July last in a building in Sumiyoshicho, but from the time of the engagement of foreign teachers the number of students increased so rapidly that larger accommodation became necessary, and the school was therefore removed to the present building, which was rented for three hours a night, i.e. 7 to 10 p.m. for \$10 per month. But we now find that even this building is too small for our requirements. We cannot use the lower portion of the building, as it is engaged at night by its proprietor, so I hope soon to be able to build a school, if I get the support I expect from the Japanese residents of Yokohama. I estimate that it will not cost more than 2,000 dollars. This is all I have to say about the school, but before I sit down I would like to say a few words about the boarding-school which is held in connection with this school. At the request of some of the students and the parents of boys in the suburbs of Yokohama, I came to the conclusion that it would be a great improvement if a boarding school were opened in conjunction with the night school, and the services of a foreign resident teacher engaged. Application was accordingly made to the foreign Minister in Tokyo, and a permit received, and the services of Mr. Russell engaged as resident teacher. He resides in the boarding-school, where a room in foreign style has been fitted up for him. This I find is a great benefit, as he is constantly with the pupils and always converses with them in English. Gentlemen, I thank you for your courteous attention.—(Applause.)

Mr. Mowat, who was warmly received, said—Ladies and Gentlemen, and pupils of the Eigo Gakko—I have been a good deal surprised at what I have heard and seen since entering this room to-night. I was surprised to discover that I was expected to say something—and that I need hardly say was not an agreeable surprise—(laughter)—and I am genuinely surprised, but very delighted, to find such a flourishing school. It is evident that it is flourishing from the looks on the faces of the scholars—they are all happy and expectant. But I am more surprised at the excellent report just read by your Principal. It speaks volumes for his industry; I will go further and say that it speaks more for his patriotism.—(Applause.) He not only gives his time, his ability, and his industry, but I gather from the report that he also gives to the school, out of his private means, a considerable amount of money. It is to his highest credit. I sincerely hope that in the time to come he will be rewarded—that he will receive that reward which he would desire most—a large accession of scholars. I hope he will be enabled to send out from his school many a good man, but to do this he must receive your cordial co-operation. You must be as diligent in your lessons as he has been diligent towards your interests. I am a man of few words, and not accustomed to

deliver addresses to children and elder lads, so I will ask Mr. Walter, who is sitting near me, to say a few words to you. But before resuming my seat I must say, once again, that I hope you will take advantage of every opportunity which this school offers to you. I hope that from the New Year the institution will receive a fresh impulse and obtain extended support from foreign firms, for it is of a character not conceived of by foreigners in Yokohama.—(Loud Applause.)

Mr. JAMES WALTER said—Pupils of the Eigo Gakko—I was very pleased to accept the invitation of Mr. Kondo to appear here this evening, and, like Mr. Mowat, I am surprised at the event. I fully agree with the objects Mr. Kondo has in teaching you the English language thoroughly and giving you a commercial education. Japanese lads and men are of great use to foreign firms in Yokohama as clerks and office boys, and their numbers are increasing daily. I think there is a very large opening for you boys in commercial life. Not in Yokohama only, for this is but a small place, but in Japan generally. Commercial matters are engaging the attention of everybody more or less now-a-days, and you boys in future life may find openings for yourselves in China, Korea, and even in America. In the United States you will find in every large centre of population some Japanese employed in the stores or offices. As I said just now, the field before you is very large; you must study hard, stick to your lessons and master the English tongue; for the English language will carry you everywhere, or almost everywhere, in the commercial world. You have a splendid opportunity afforded you in this school, and it is your own look-out if you do not take advantage of it in every way.—(Loud applause.)

Mr. Mowat then distributed the prizes and at the close was greeted with three hearty cheers in English fashion. The visitors then left and the school resolved itself into its various classes.

LETTERS FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, November 21st.

The Japanese residents of this city have organized themselves into a club for "mutual benefit and support;" and have chosen Dr. M. Ikuta, of the University of Chicago, as President; T. Sasaki, a clerk in the office of *The Horseman*, as Secretary; and K. Nakayama, who is about to open a Japanese store here, as Treasurer. They will meet monthly.

The other day I visited the World's Fair grounds, and by special permission was allowed to go on the wooded island when the Japanese are at work. Mr. Kuru, the architect, and Mr. Takeshima, superintendent of construction, both happened to be absent; but Mr. S. Ota, of the Nippon Doboku Kaisha, was there, and kindly gave me such information as I needed. An architectural draughtsman of the Exposition happened to be present when I was looking at the plans, and remarked that he had never, in an experience of several years, seen such fine and beautiful work. He was, however, so worried over the apparently loose foundation and frail character of the building, that he was scarcely satisfied, when Mr. Ota assured him that structures which could withstand the high winds, even typhoons, of Japan ought to be safe here, unless a cyclone should come along!

The Japanese workmen were merrily engaged in their labours, and seemed delighted to have a foreigner address them in their own tongue. They asked about the weather, which that morning was sharp and cold; and inquired anxiously about the snow and the cold of the coming winter. They attract, of course, a great deal of attention, and have been pictured in several dailies, which also contained descriptions of their unique methods of carpentry.

The foundations of the Hōdō (Phoenix Hall) are all laid, and the frame work of the north wing (which represents the Fujiwara epoch) is standing. The main building in the centre will represent the Tokugawa period, and the south wing is to represent the Asakura age. There are 17, and soon will be 25, mechanics at work on the grounds.

I also visited that day the Equinax village in the World's Fair grounds. These people were enjoying the bitter wind more than the Japanese, and looked very comfortable in their thick fur suits. When they arrived, they were 57 in number, but now count up to 59: three babies having been born, and one died, on the grounds. Some of them come from far northern localities, where they have lived in nothing but ice-houses or skin-tents; others have been accustomed to sod-houses; and some have occupied wooden huts. Here they will

all live in wooden cottages, which are now in process of erection. They are being gradually weaned from a meat diet, and are learning to eat and to like vegetables. The oldest, however, can not be induced to eat vegetables, and are homesick: but most of them are happy in their new surroundings. They attract crowds of visitors, and are well worth seeing; and they are themselves very curious to see Caucasians. Their managers are a little apprehensive of the effect on them of summer weather, and are wondering how to keep them sufficiently cool!

The Chinese are still successful, one way or another, in evading the Exclusion Act, and have recently been entering this country from Mexico in large numbers.

This little item has been going the rounds of the newspapers:—

The Mikado of Japan has no more floricultural little country to rule over. He is the sovereign of 40,000,000 people who live in 13,000 towns and villages.

Another paragraph informs us, with how much truth I know not, that the decline of Buddhism in Japan is evidenced by the fact, that in 1877 there were 3,737 temples, and now there are only 3,256,—most 400 less.

The influence of Christianity in Japan has been pictured by the following paragraph:—

TESTIMONY OF A JAPANESE LADY.

We Christian people whose husbands are Christians, are so happy because of their lives being so different to what they were before. Instead of spending their time at the theatre, or club, or gambling house, instead of looking upon us as slaves, they treat us as equals, and have family prayers with us.

The wife of the Korean Minister at Washington has joined the Presbyterian Church, and other members of the Legation are expected to follow.

The Methodist Episcopal Church of this country will spend this year on foreign missions more than \$700,000.

The American Baptist Missionary Union, in this centennial year of missions, will send out 81 missionaries, of whom 29 return to fields of labour after vacation, and 52 go out for the first time.

The New York Presbytery, after hearing the reading of the charges and specifications, and discussing technical questions, adjourned till November 28th, when the trial will begin. At Cincinnati the trial of Rev. Henry P. Smith is now going on, and seems likely to end in his acquittal.

It is possible that absolute closing of the World's Fair is not after all an assured thing, and that a compromise may be effected. At a recent meeting of the Board of Directors lengthy resolutions were passed by an almost unanimous vote to the effect that Congress be petitioned to reconsider its vote for Sunday closing, and to allow the gates to be open, with no running of machinery, merchandising, or unnecessary manual labour. The art gallery, horticultural building and exhibits of mechanical art would also be open, and religious services would be held within the Exposition grounds.

Some wealthy Chinese residents of America are planning for an immense theatre and restaurant near the World's Fair grounds. For this purpose the Wah Yung Company has been organized with a capital stock of \$80,000 in \$50 shares. It will be built of brick, stone and iron; will be three stories high and 97 by 100 feet. It will be part pagoda, part chalet, part modern Romanesque, decorated with vermilion and gold in all sorts of salamander and dragon designs. It will contain restaurants for both Chinese and American edibles; tea-rooms, tea-rooms, and other stores; and theatre parlours.

The vacant mission to Turkey has been filled by the appointment of David P. Thompson, of Oregon, and that to Italy by the appointment of William Pollock, of Pennsylvania. Neither appointee is well known.

The indictment of Labour Commissioner Peck, of New York, for destroying public records, has been declared illegal by the Supreme Court of that State. So ends the one dramatic episode of the political campaign.

The exact number of electoral votes which will be cast for each of the three leading Presidential candidates is not yet known. The official count, which will be needed to ascertain the exact status, is proceeding very slowly. The intricate Australian ballot, which, however, proved its efficiency in the late election, retards the count. California is now very close, but will probably give Harrison a very small plurality. Wyoming will, perhaps, give Harrison a few hundred plurality. Ohio also is in the doubtful column, with the chances in favour of 22 for Harrison and 1 for Cleveland. It happened that many voters, wishing to vote the straight ticket, instead of putting a mark before the party appellation, put the mark before the name at the head of the electoral list. By law such ballots are counted only for the candidates marked. Then the head man on each electoral ticket ran ahead of his fellows by several thousand votes. Inasmuch, therefore, as Ohio is not likely

Original from

to give more than 1,000 Republican plurality, one Republican elector is sure to be defeated by one Democrat.

The following table gives California and Wyoming to Harrison, and leaves Ohio in doubt:—

States.	Whole No. of votes.	Harrison.	Cleveland.	Weaver.	In doubt.
Alabama	11	11	—	—	—
Arkansas	8	8	—	—	—
California	9	9	—	—	—

Total	444	330	265	49	23
Necessary to a choice, 222.					

If Ohio is divided as indicated above, the result is Cleveland 268, Harrison 152, and Weaver 24. These last figures show Cleveland's lowest possible, and Harrison's highest possible, vote. Cleveland, therefore, at the lowest estimate, has a clear majority of 92 in the electoral college, and, without New York, would have a clear majority of 20 electors. It is very gratifying, therefore, to learn, that he could have been elected without the aid of Tammany.

The post-election lessons are numerous and interesting. The "Solid South" was true to Democracy; but the "Solid West" of Republicanism was broken. Illinois, Indiana, and Wisconsin were lost to the Democrats; Colorado, Idaho, Kansas, Nevada, and North Dakota were captured by the Populists; while Ohio (*sic*), California, Nebraska, Montana, Wyoming, Washington, South Dakota, and Oregon were uncomfortably close. The Prohibition vote was slightly increased; the Populists drew from all parties, particularly from the Republicans in the West, and thus practically defeated them in that section. It is also evident, that the people trusted Cleveland more than his party on the silver question, and the matter of State bank notes. His strong personality and independence won for him the victory; and his well-known stand on the question of tariff reform was an important factor. President Harrison, too, as a man enjoys the good opinion of all citizens for his sincerity, integrity, honesty, dignity, and ability; he was defeated only because he is a high-tariff Republican.

In case the Kansas legislature proves to have a Fusion majority, it is barely possible that Senator Perkin (Republican) may be succeeded by Mrs. Leese. Her name is being seriously considered in that connection.

This morning's papers brought the welcome news that the Homestead strike, which lasted almost six months and cost \$5,000,000, has been officially declared off. In the meeting of the Amalgamated Association the motion to that effect was carried by a vote of 101 to 91. The strikers, except the "black sheep," will all probably be taken back by the Carnegie Company. In the meantime the trial of Critchlow, one of the strikers, is going on in Pittsburgh; and the Senate committee of investigation is meeting in this city, but has not yet elicited any important testimony.

We have had several days of sharp cold, which some are inclined to attribute more or less to the comet (Biela's) which is careering around in close proximity to the earth.

Day before yesterday the first World Fair souvenir coin was struck off at the mint in Philadelphia, and delivered to an Exposition official. For this coin a bid of \$10,000 has been made. The four-hundredth, fourteen-hundred-and-ninety-second, and the eighteen-hundred-and-ninety-second, were also coined.

The chief of the foreign affairs department of the World's Fair has received word from Dr. H. N.

Allen, that the Korean government is actively engaged in preparing its exhibit, which will soon be shipped to Chicago.

Rev. Charles T. Wyckoff is advertised to deliver a lecture on "Japan and the Japanese" before the Stenographers' Club of this city.

Chicago, December 1st, 1892.

Minister Von Holleben is known among his associates in Washington, D.C., on account of his invariable good-humour, as "the man who laughs."

Rev. Doremus Scudder has accepted a call to become pastor of the East Congregational Church, Brooklyn, N.Y., and is now in that city.

At the close of a recent prayer-meeting of the Plymouth Church, Brooklyn, an informal business meeting was held to consider the subject of the church's relations with the American Board of Foreign Missions. Dr. Lyman Abbott stated that, as the Board is a "close corporation," it was a question not so much of theology as of liberty. But yet the Board, contrary to the belief of the Plymouth Church, had declared, that there was no hope for the heathen, and that God's mercy for him ended at death. Consequently the contributions of the church had been made under protest. On the motion of Dr. Abbott, it was voted that all of the next collection, unless otherwise designated, should go to "the Noyes mission" in Japan.

There are eight Japanese students this year at Harvard, one at Boston University, and one at the Mass. Institute of Technology.

There are nearly 300 female students in the Harvard Annex.

University Extension work, especially in connection with the University of Chicago, is rapidly growing, and permeating the general public with instruction and knowledge. That branch of university instruction has been appropriately called the missionary department of education. In Chicago and vicinity there are now some twenty-five centres, at which instruction is given at least once a week. The subjects include literature, political and social science, Biblical literature, history (American, English and general), science (natural and physical), political economy, ethics, and anthropology. This relates only to the lecture-study department; the class-work (evening and correspondence departments) are also flourishing.

President E. B. Andrews, of Brown University, Providence, R.I., was added to the body of the representatives of the United States at the International Monetary Conference, now in session at Brussels. India has two representatives, General Richard Strachey and Sir Guilford L. Molesworth.

Sir John C. Abbott, on the 25th ult., resigned his position as Premier of the Canadian Government, and Sir John Thompson was at once named by Lord Stanley as successor. The new Premier once held a similar position in Nova Scotia; has served in the Dominion Parliament, and was Minister of Justice under the late Sir John McDonald.

Lieut. and Mrs. Peary, of the recent Greenland expedition, have been in this city to confer with Chief Putnam of the Ethnological Department of the World's Fair concerning an exhibit illustrative of the life and customs of the Greenland Esquimaux, especially of the tribe known as the Arctic Highlanders. The Esquimaux already on the ground are from Labrador.

An interesting ceremony took place the other day at the Fair grounds. The site of the Turkish building was dedicated by the resident Turks with Moslem rites, in which the sacrifice of a sheep was an important element.

This is a reminder that about thirty concessions have been granted for "side shows" in connection with the World's Fair. These include model villages, streets and settlements of various nationalities, panoramas, a natatorium, a volcano, cocoa company, New England clam-bake, etc.

It now seems quite likely that the exhibits of Chinese merchants will exceed the estimates, and will need largely increased space. In fact, in every department of this already immense affair, the realization is rapidly outgrowing the expectation. There will not be anywhere in the Exposition much waste space; there will be much crowding. In conception, in preparation, in management, in realization, in success and influence, the World's Columbian Exposition will stand forth as unique and extraordinary.

At the recent annual meeting of the Knights of Labor, Grand Master Workman T. V. Powderley was re-elected.

Large numbers of the strikers have been received back to work in the Carnegie mills at Pittsburgh, Homestead, Beaver Falls, etc.; but many must submit to lower wages even than those against which they struck. Thus the great strike has resulted practically in a complete failure, but may prove beneficial as a moral lesson and an incentive to devise some means of reconciling the

opposing but really concurrent interests of capital and labour.

The Economic Fuel Gas Company is now supplying natural gas in the North and South Divisions of this city. It is proving very useful for both heating and cooking purposes, and is no more expensive than coal. It is brought here in pipes from Kokomo, Indiana; and, unless the coal combine stops its extortions, may to a great extent, even totally supersede anthracite coals.

A great deal of disappointment was felt in scientific circles because clouds prevented astronomers in this country from making careful observations of the comet on the 26th and 27th ult. Before those days there were some meteoric displays, which were expected to be magnificent about the 27th. It is now pretty generally believed that the comet is not Biela's. The superstitious and the wicked are greatly relieved, that the comet did not strike the earth, and thus put end to the present dispensation!

It is, however, probable that the proximity of the comet caused atmospheric disturbances, which manifested themselves, here and there, in cold and windy weather. In San Francisco Bay, particularly, the high winds caused heavy seas, which damaged wharves and produced collisions; and all along the Pacific coast, and inland in Northern and Central California, the storm raged. But the weather has since moderated, and is now very delightful. I should have stated also, that the comet brought the first snow of the season.

The following item shows the continued prosperity of the Canadian Pacific Railway:—

New York, Nov. 29.—The October statement of the Canadian Pacific Railroad shows gross earnings of \$3,112,763; operating expenses, \$1,088,260; net earnings, \$2,024,503, an increase of \$15,838. From Jan. 1 to October 30 the gross earnings were \$17,426,784; operating expenses, \$10,328,848; net earnings, \$7,097,936, an increase of \$455,465.

Rev. John W. Scott, D.D., the venerable father of Mrs. Harrison, has been unwell ever since the death of his daughter, and finally passed away November 29th "as quietly and as peacefully as a child falls asleep." He was 92 years old. Brief services are to be held in the White House this afternoon, and interment will be made tomorrow at Washington, Penn. Dr. Scott was a teacher during the prime of his life in Pennsylvania and Ohio.

Mrs. Annie Bessant, the apostle of theosophy, has arrived in this country, and will go about giving lectures on that subject. She claims that theosophy is "steadily gaining ground," as is indicated by the large space given to it by newspapers. That is not, however, a sure sign of healthy growth and purposes, but often an indication merely of notoriety and of a morbid popular curiosity.

The Briggs trial in New York City, and the Smith trial in Cincinnati, are both going on, but have not yet excited the public to any great extent. Dr. Briggs, in this own defence, claimed that the amendments to the original charges were irregular; and in several test votes he has scored victories. Dr. Smith, in defence, pleaded ambiguity in the charges.

The University of Chicago is elated over the fact that the Ogden bequest, which it was feared might not bring in more than \$300,000, will net about \$500,000. This will be a welcome assistance in founding the scientific school.

Mrs. Leese, whose name has been mentioned in connection with the Kansas Senatorship, has published the following statement:—

I shall not enter the race for the place. The office should seek the woman as well as the man. When I say I shall make no fight, I say it with this proviso: That I am not attacked solely because I am a woman. There is one very peculiar fact connected with my candidacy. I have received hundreds of letters of encouragement from men since the announcement of my candidacy, but not one from a woman. I naturally expected some encouragement from my sex. Single-handed and alone I have done more for woman's suffrage than all of them. I had a suffrage plank incorporated in the Populist's platform and I forced the Republican party to do the same thing. If the politicians see fit to attack me because of my sex, I shall fight this thing to a finish as a matter of principle.

There is a proposition to divide Kansas into two states, with perhaps a part of the Indian Territory included in the division.

President Harrison is hard at work on his message which he hopes to be able to transmit to Congress next Tuesday (6th instant).

The complexion of the next Congress is not yet accurately known. A Republican estimate cuts down the Democratic majority to about 80 with the following divisions:—Democrats 318, Republicans 128, Populists 8, Vacancies 2 (R.J.). In the two Rhode Island districts, as no candidate secured an absolute majority, there will be another election.

The official returns in Ohio elect 22 Republican, and 1 Democratic, electors. California is still doubtful; and North Dakota is so close, that Weaver may lose its four votes to Harrison. The right of Indians to vote will be a factor in the final result. Cleveland gets 7,125 plurality in Indiana, and 45,670 plurality in New York. It is a curious fact that from 1864 New York has never failed to

alternate in Presidential elections, as follows.—1864, Republican; 1868, Democratic; 1872, Republican; 1876, Democratic; 1880, Republican; 1884, Democratic; 1888, Republican; 1892, Democratic. [1896, Republican?]

The Wahi Mee Exposition Company, with a capital of \$1,500,000 in 300,000 shares of \$5 each, has been incorporated at Ogden, Utah. Its purpose is to establish at the World's Fair a Chinese village, tea-garden and café, bazaar, theatre, and joss-house.

Spain has appropriated an additional \$200,000 for World's Fair purposes; and will erect a building to be an exact reproduction of the famous exchange building at Valencia.

It is now doubtful whether the Liberal Arts Department will obtain a building for itself. It is, however, possible that the exhibits of ethnology, hygiene and sanitation will have a small building by themselves; and that the educational exhibit, then partly relieved, will have 150,000 square feet in the Manufactures Building, as originally contemplated.

The Nicaragua Canal Convention began its meetings yesterday in New Orleans, but has not yet got ten down to real work. Any report must, therefore, be postponed till the next letter.

LETTER FROM GERMANY.

(FROM A TRAVELLING CORRESPONDENT.)

Munich, November 15th.

Even in a rather hurried trip around the world from Japan to Germany by way of India, we can see evidences of the influence of Japan's taste and work. In Shanghai, the first stopping point, we observe Japanese wares in the shops, and we find Japanese articles adorning the houses. If a person living there wishes to send home a beautiful gift to a friend, he chooses something made, not by the Chinese, among whom he lives, but by the Japanese. When we get farther south to Hong-kong, we come across some of the handiwork of the Chinese, but the largest and finest art store in the whole town is filled with the products of Japanese labour. It is almost one of the foreign art stores reproduced from Yokohama, and all set out and arrayed with lacquer work, and kakemonos, and pottery ware, and carvings, and pictures, etc.

There are some very pretty, and unique specimens from the workshops of the "Celestial land." The paintings on rice paper are curious and attractive. The material, I suppose, is not made in Japan at all, at least I never saw any while there, but is of a soft, snowy whiteness. The designs chiefly represent Chinese life and manners, such as the different grades of mandarins, costumes, education, marriage, punishments. The brush used is like that found in every writing-box in Japan, and the painter dashes off the figures with wonderful quickness. The smaller sizes are sent home by the foreigners as Christmas greetings. They are more strange, than, but not nearly so durable as those made in Yokohama for a similar purpose. In Canton also, I was shown large establishments for silk work, for lacquer manufacture, for embroidery, bronze productions, ivory carvings. The demand for the last seems to be very large, if one might judge by the great quantity of specimens turned out. I was indeed sceptical whether so much ivory could be found in one town, and, as the Chinese have a wide reputation for skill in imitation, I enquired if the elephants hadn't been credited with many artificial teeth. But I was assured by impartial judges that it was nearly all genuine. In needle-work also there seems a steady call, as I saw some spacious show rooms set out with screens, covers, hangings, and curtains.

I was much interested in hearing the opinion of an old Canton merchant, in comparing the Chinese and Japanese works of art. He was an American, who could easily pass for an Englishman, and he had been in the Asia for some thirty years' and showed a pretty full acquaintance with the Far East. He said each was superior to the other in one direction. The Japanese had more taste, and the Chinaman had more skill. The Japanese excelled in design and the Chinaman in execution. The Japanese creations were more beautiful and the Chinese creations were more accurate. For instance, let a Japanese ornament a screen with his needle. He puts in one tree with possibly a bird on it. Let a Chinaman symbolise this idea with his needle and he thinks if one bird on the tree is beautiful, two birds will be more so, and half a dozen or more still better, and finally each branch has a feathery mass or two on it. The Japanese gives us something æsthetic and striking in its appeal to our senses. The Chinaman's efforts result in something grotesque and barbaric. But scrutinise both in their details, and it will be found that the Chinaman's stitches are more even and

regular, and he has followed the lines of his copy with more painstaking fidelity.

This was substantially his view. I give it for what it may be worth, as I am no judge in such matters. But, on my voyage, I heard another testimonial to Chinese handicraft that is in keeping with this belief in Chinese exactness of reproduction. A marine engineer, a Scotchman, going home from Singapore, where he had superintended Chinese workmen for several years, gave the fullest credit to this imitative faculty. He said he had given out the most delicate and intricate parts of machinery in his shop to Chinese mechanics, and the Chinamen had returned substitutes for the broken prices, just as faithful and true to the original as any English or Scotch mechanic on earth could do. He also declared that if he had a model to show what he wanted done, he would defy any European to surpass the Chinaman, and, in most instances, the Chinaman is better because he is more patient. But in his opinion the drawbacks to the Celestial were two; he had no power of originating, and he was far slower than his white brother.

In Singapore there is quite a colony of Japanese, and on the whole, they are prospering, so far as I heard. As was to be expected there were also to be found beautiful things from Japan. In Penang one could also see some evidences of Japan's art productions, and the same could be observed even in Colombo, where we would naturally look for the field to be fully occupied by the East Indians. But the greatest surprise of all for me was in Aden. There in this spot, so many thousand miles away from Japan, the most pretentious curio shop in all the town was filled with Japanese work, almost to the entire exclusion of all else. With the exception of a few ibex horns, some skins, and some shells and bows from the beach, all the cases were filled with lacquer, silk, kakemonos, kimonos, pictures, carvings, pottery, etc., from Japan. The dealer tried to pass them off as local productions, but this was too transparent to deceive anyone who had been in Japan half a day even. It is hardly necessary to say that the prices were such as to bring to mind the exaggerations of the "Arabian Nights."

In Egypt, Japan's influence is not so clearly seen, as art workers here are both numerous and low-priced, and they turn out articles that are in high demand. But in spite of such strong competition, I could see in some windows specimens that must have originated in that Far Eastern land of the Rising Sun. In one of the largest hotels, the entrance hall was adorned with vases, the exact counterpart of those in the shops in Yokohama. On the dining table also, the flowers rested in vessels inscribed with Chinese characters, and pictured with figures in flowing Japanese robes, flanked with the pine and bamboo. The most of these ornaments were not of the best quality, though of course they must have been dear by time they reached Cairo.

Even in Naples and Rome, I noticed on the dining tables some specimens of Japanese taste and labour. Here in Munich, the two large show windows of a pretentious establishment are set out with objects that remind me of my sojourn in Japan. I am not sure whether the lacquer displayed in Europe is really genuine Japanese work or not, as I have heard that there have been imitations of this in some parts of Europe.

But Japan comes most vividly and numerously before your eye in the *jinrikisha* which is found bowling along at every place around to Colombo. I did not see any in Aden, though I kept a sharp look out for them. I fear the natives of that barren, rocky point are a little too lazy to wheel a man around in that way, and besides, it would be too expensive, as runners must have water, and water there has to be paid for, to every mouthful even.

But the Chinaman, with all his name for tenacious, adhesive conservatism, has widely adopted this two-wheeled vehicle, and has introduced some modifications in it. He turns many a penny as a puller, and in Shanghai he is almost aggressive in his demands for "a fare," and will follow you as persistently as a blood-hound. But he was not entirely satisfied with the style of the Japanese "pullman car," and made some slight changes. It can easily be foreseen that with all his practical ways of life, all his variations would be in the direction of comfort and usefulness, rather than of taste and beauty. All his machines are a little larger, a little heavier, a little slower, a little more comfortable, and a little uglier, than those used in Dai Nippon. The back is higher, the cushions softer, the springs easier, and you have more room to spread yourself, and to stretch out your legs, than in those for common hire in the open ports of Japan. In one respect, we can certainly say he has made a distinct improvement in his adaptation. In Shanghai, many of these carriages have rubber tired, ball-gearing bicycle wheels. They are very large, and run easily and noiselessly along the gravelled streets; the

shafts also are set differently. They are longer and stand up higher, and the whole body of the vehicle seems to swing further backward, and a more agreeable position is thus obtained for your back. But no matter what kind the vehicle may be, whether high or low, the Celestial carries you along at a smooth gentle trot, with the same calm sedateness and seriousness of countenance that he does all things. He is sure to get you there, but he has none of the dash and strapping vigour of his Japanese brother. He is also larger and stronger, and he does not have to strain so much when he comes to a slight ascent or a little glutinous mud. He has set the fashion for all *jinrikisha* outside of Japan. You will find these carts the same after once leaving Kobe on your southward voyage, and you will sit behind the "pig-tailed" son of the Middle Kingdom whenever you ride in a *jinrikisha* until you get to India. It seems with him in this, as in all industries he enters, he is slow but he will eventually drive out nearly all competitors. This patient, plodding care makes itself felt in all other branches through the East till he gets to India. There it seems an unwritten but inviolable law of trade and labour, "thus far can you go and no farther." But even among the teeming millions of that peninsula, he has thrust himself in and gathered a slight foothold. In places he is the chief reliance of the foreigner for such skilled labour as carpentering and lathe-turning.

I also learned that in India, or in the Island of Ceylon at least, Japan through one of her natural products makes a material contribution to one of the great industries of the place. In the mountains of Ceylon, I thought I observed something familiar about the boxes in which the tea was being packed at a tea factory. On enquiry, I found that the boards had been brought all the way from Japan. Large quantities of tea are shipped every year, and thus Japan gets some good out of her rival in the tea trade. I believe most of the tea drunk in America comes from Japan. I don't know how it is packed into the boxes, but I hope it is done in a nicer-looking way than in Ceylon. There it is tramped down by the bare feet of half-naked men—and not at all clean-looking feet in several instances, but of course the process has nothing dangerous in it.

It was here in Ceylon also, at Kandy, away up in the mountains, that I found some hearty sympathy with Japan in her efforts to break the bonds of extra-territoriality. An Irish gentleman, who has spent more than a quarter of a century in Ceylon, showed a full appreciation of this question and of the work of the *Japan Mail* with regard to it. He expressed his admiration for "Captain Brinkley, who always speaks so ably and fairly for Japan in the columns of his paper." He thought England had shown much lukewarmness towards Japan's proposals and attributed it all to the influence of the merchant class who have been the controlling element for so many years in the English government. It was a pleasant surprise, at that distance, to meet one who understood this chief question in the international relations of Japan, and who was so decided in his sentiments of goodwill.

MARINE COURT OF INQUIRY.

THE "ZAMBESI"—"HOKUMON" COLLISION.

YOKOHAMA, DECEMBER 30TH, 1892.

The Court of Inquiry to investigate the circumstances attending the collision between the British steamship *Zambesi* and the Japanese steamship *Hokumon Maru*, which occurred on the 9th of December in Tokyo Bay below Tomioka, assembled to-day.

The Court was constituted as follows:—

JAMES TROUP, Esq., H.B.M.'s Consul, President.
ARTHUR HAYES-SADLER, Esq., Lieutenant, R.N., H.M.S. *Leander*.

DAVID STUART BAILEY, Esq., master of the British steamship *Tartar*.

E. J. LEBRAUD, Esq., Clerk of the Court.

Master-at-Arms Mr. ALFRED UNGER, R.N. H.M.S. *Leander*.

The Clerk of the Court read the various letters, documents, and log of the *Zambesi* in reference to the calling of the Court.

Mr. Lowder—I appear on behalf of the master, mates, and crew of the *Zambesi*. I have two Chinese witnesses to examine and have brought an interpreter, who attends at considerable inconvenience to his employer. I would like, with the permission of the Court, to have the Chinese witnesses examined first.

The President—The Court grants permission.

Kwong Cheong was sworn in as interpreter of Chinese.

Ah Soy, sworn said—I was on board the *Zambesi* on the 8th-9th December. I am a sailor on

board that ship. I went on watch at twelve o'clock. I was stationed on the forward bridge. I was on the lookout there. Shortly after going on watch I saw a white light. I can't say exactly at what time I saw it, but it was after the steamer had left the harbour. The light was on the port bow; when I saw it I struck the gong. I said nothing when I saw the white light, but when I said a red light I hollered: "Light on the port bow." I said this in English. I saw the white and red lights together. I looked at the lights on board my own ship then. I noticed that our own lights, the red and green, were burning very brightly. I have been to sea in English ships for three years. After I had seen these lights I saw a green light.

To the President—This was after seeing the red light.

To the Court—Soon after seeing the green light the ship was in collision.

Mr. Lowder—Very soon after?—Yes; immediately after.

The President—Did he see the red and the green lights together—all at the same time?—I saw the three together.

For how long?—A very short time.

Wong Ah Ying, sworn, said—I was on board the *Zambesi* on the night of the 9th December. I went on duty at 12 o'clock. I am helmsman-quarter-master. I was steering a course S. $\frac{1}{2}$ E. when I went on duty. I did not change my course from then till the time of the collision. While on duty I heard the gong sound once. This was about a quarter past twelve. When I heard the gong strike I looked forward and saw a white light. It was forward on our port bow. Soon after this I heard a man holla, and then I saw a red light. Immediately after I saw a green light. The collision occurred immediately after my seeing the green light.

The President—Did you hear that a man was missing—disappeared—out of the steamer, afterwards?—After the steamer had been into collision the men were checked and one was found missing.

When was that?—Three-quarters of an hour past twelve.

You did not know before that that a man was missing?—No, before that I had had no time.

After the collision took place what did you do?—I still attended to the wheel.

Did the ship stop or go off somewhere else?—The ship stopped.

For how long?—The ship stopped at the moment of collision, but after the collision we were going again.

In what direction?—The same course S. $\frac{1}{2}$ E.

How long did you go on that course?—A very short time; for soon afterwards the officer on the bridge gave me orders to "steady-port," and soon after the ship ran on shore.

For how long after the collision was the course S. $\frac{1}{2}$ E. kept?—For a very short time.

Could you say how many minutes or seconds?—I could not tell exactly, but it was for a very short time.

Had the shock of the collision any effect upon the compass?—Yes, the compass shook a little.

Mr. Lowder—I understand that the order "steady port" was given to him in order to prevent him from going to port. I should like to elicit from witness whether the beach upon which the ship was run lay right in front of him at the time of the collision, or whether the ship's head was turned either to the right or left in order to reach the land on which they beached her?

The President put the question and witness answered—The ship turned.

Lieut. Sadler—In which way?—To the East, but I could not tell which point.

The President—Is he quite sure of that?—The ship went on straight and then went to port. When the helm is turned to port the ship goes to starboard.

In which direction was the ship's head?—After the collision it pointed towards the land.

Ah Soy, recalled, said, in answer to the President, —I first knew that a man was missing after the ship had been beached.

Captain George Joseph Edwards, sworn, said—I am master of the *Zambesi*. I hold two master's certificates—one English and one Japanese. My English certificate is No. 504, Hongkong, which under existing rules is equal to a Board of Trade certificate. I was employed on board the *Zambesi* on the 8th-9th of December. We left Yokohama at night. At 11.34 p.m. I began to manoeuvre to turn my ship's head. I passed the light-ship at 11.47. I was in charge of the bridge myself. At the light-ship I shaped my course S. $\frac{1}{2}$ E. by the bridge compass, 2 degrees of error; told the second officer of the course, and seeing Kanonsaki light, distant 12 miles, said: "Just keep that light on your port bow a degree or so." Probably a quarter of an hour afterwards I saw, at a distance of 4 to 5 miles a bright light, and half a minute afterwards, through my glasses, saw the red light.

As my red light was opposed to her red I had not the slightest apprehension that anything could occur. About eight minutes afterwards, the ship being approximately about four lengths from me on the port bow, I suddenly saw her three lights, as she turned round, then her green. I jumped to the telegraph, remarking to the second officer, "What on earth is that fellow trying to do." I stopped the engine, and seized the whistle rope and blew a prolonged blast. I had no time to do anything to get out of the other vessel's way. We were struck on the port bow, as near as possible at right angles of the striking ship. I may say, I heard the bright red light reported some time after I had seen it from the bridge.

To Mr. Lowder—I saw it through my glasses first, then seven minutes or so afterwards with the naked eye.

To the Court—I said to the second officer, "Swing out the boats." The chief officer at this moment came up on deck, and I said to him, "A fellow has run into us, go forward and ascertain the damage and sound the bell." He came back and said: "The whole bow is stove in, there is 10 feet of water; she is hit about the collision bulkhead." By this time I could see that she was sinking forward, and having a fairly good local knowledge of the coast I decided to beach her. In fact, it was the only thing to be done, so I went full speed ahead and put my helm a port. Simultaneously, I told the purser to muster the passengers on deck and get them ready for the boats, to allow them no baggage. I did not steer any regular course, but was guided by the faint outline of Graham Bluff. I looked at the compass, after I had steadied her, and saw that her head was W. by N. $\frac{1}{2}$ N. I saw the other vessel just after the collision making towards Yokohama. Nothing passed between either of us. As I was making towards the beach the water gained so rapidly that I eased down, fearing that the bulkhead would go from the pressure of the water. I took the ground very easily, going very slow. After grounding, at which time she had 24 feet of water in the forehold, I put engines half-speed ahead for a short time, in order to ensure her not gliding off. I then mustered the crew and passengers; found one fireman missing and three hurt. I had a crew of 56 all told, and 146 Chinese passengers. The cargo was miscellaneous, principally flour, of which there was about 1,500 tons. I then sent the second officer to Yokohama in one of the life-boats; the third officer also went, as near as we could judge, to cruise round the scene of the disaster, in order to see if there was any chance of the missing man being found floating around. His name is spelt on the articles Seang Tai. I sent for a doctor to attend to the injured men. These men had been sleeping in their bunks along the side where the ship was struck and they were cut by the broken plates. The missing man had been sleeping in this place too. The doctor when he examined the injured men said that the only danger was that erysipelas might set in. I have some photographs of my own vessel and of the *Hokumon*, taken after the collision, they show the damage we received to our bows. I can identify the *Hokumon* from the photograph. I have seen the damages which she sustained and they are as the photograph depicts. The photographs were taken by an amateur and I obtained them from him.

The photographs were put in and marked. A and B were marked as photograph of the *Zambesi*, showing the damage sustained by her, C and D were photographs of the *Hokumon*, showing the damage sustained by her.

Mr. Lowder—Supposing you had put your engines full speed astern, instead of stopping them, when you saw the green light, what effect would it have had upon you?—It would have had the same effect as porting my helm. She would have paid off and I should have been struck further aft and should have gone down.

Supposing that the other vessel had held her course, at what distance would you have passed her?—About three of my own lengths.

What is your length?—333.6 feet.

What sort of a night was it?—Moonlight. I could see Sagami light over 12 miles away. It was a little cloudy. The moon was about two or three days after the full.

Were your lights trimmed?—They were burning brightly; they were fresh trimmed before leaving port.

To the Court—They are reported every half hour, and I had received one report at twelve o'clock, viz., "Lights burning brightly." I could see them from the bridge. When I ordered them to be taken in, after going or shore, I looked at them and noticed that they were burning brightly then.

To Lieutenant Sadler—I did not alter my course at all after sighting the light.

At what speed were you going?—About One

knots. There might have been a $\frac{1}{2}$ knot current with her, as it was ebb tide.

The President—Was there any other vessel near you at the time of the collision beside this one?—I saw no other.

What was the exact time of the collision?—Twelve fifteen. My knowledge of the time is taken from the engineer's log-book. The third officer when he came back three hours after I had dispatched him reported that he had seen no one.

To Lieut. Sadler—Sagami light should be Kanonsaki light. I made a mistake; I could not see Sagami light at that point. The true course would have been S. 11° E. had there not been 2 degrees of error.

Ernest Herbert Lawrance, sworn, said—I am second officer on board the *Zambesi*. I hold a master's certificate of competency—Board of Trade, issued at London—No 015924. I was on the bridge with the captain at the time of the collision. I relieved the third officer on the bridge at 12 o'clock. He reported a light ahead; it was Kanonsaki light. We were steering S. $\frac{1}{2}$ E. true, 2 degrees of Easterly error, that made the course by the standard compass on the bridge S. 11° E. Shortly after 12 o'clock—about seven or eight minutes past midnight—I sighted another bright light ahead. On taking the glasses I discovered a red light right beneath it. It was on our port bow. We kept on, steering a steady course, gradually approaching, and after about six or seven minutes, when the vessel was about four lengths off our port bow, he suddenly starboarded his helm, showing all three lights. The Captain at once remarked, "What on earth is that fellow doing," jumped to the telegraph and stopped the engines and blew one prolonged blast with the whistle. Before we had time to do anything else the other vessel came crashing into us on the port bow. I received orders from the Captain then to get the life saving apparatus and the boats ready. The chief officer then went up on the bridge—he had turned out without being called, having been awakened by the shock. I got the boats swung out with the assistance of the third officer and crew, and got them lowered level with the rail. After I left the bridge I could see the ship heading for the shore, this was while I was getting the boats out. As soon as the vessel was grounded I was sent away up to Yokohama in a boat to get assistance. I called at the office, secured assistance, and returned to the ship.

To Lieut. Sadler—The course was S. $\frac{1}{2}$ E. true, with 2 degrees of error.

To the President—You are sure you are correct that it was S. 11° E. by the standard compass on the bridge?—Yes, quite sure.

Captain Edwards, recalled,

Lieut. Sadler—Are you quite sure about the course, whether it was S. $\frac{1}{2}$ E. or S. 11° E.?—When I shaped the course it was S. $\frac{1}{2}$ E. or S. 11° E. by the bridge compass. It is really a straight course, but we keep off a point or so, so as to clear Saratoga spit.

Hardy A. Thompson, sworn, said—I was on duty as chief engineer of the *Zambesi* on the night of the collision. It took place at 12.15 a.m. by the engine-room clock.

To the Court—The third engineer stopped the engines, but I can't say whether they were stopped before the collision occurred. It seemed to me, as I was coming along the deck, that the engines stopped just as the other ship struck us. Both things happened together.

John King, sworn, said—I am third engineer of the *Zambesi*. I was on duty in the engine-room at the time of the collision. The exact time of the collision by the engine-room clock was almost 12.16 a.m. The engines were stopped ten or fifteen seconds before the collision.

Mr. Lowder said he had no other witnesses to produce. He had the chief officer in Court, but as he was not on deck at the time of the collision he did not propose to put him on the stand.

The Court adjourned at twelve o'clock for tiffin, and upon resuming,

Oka Kinjiro, master of the *Hokumon Maru* went into the box. He was cautioned and then deposed—I was in command of the *Hokumon Maru* on the night of the 8th-to-9th of December. She was from Nemuro bound to Yokohama. I know Kanonsaki light. I passed it at fourteen minutes past eleven o'clock that night. It was on my left side—port hand—at a distance of one mile. I was in command of the deck, standing at the port side of the bridge. It was not my watch at the time, but I was on the deck as I was in narrow waters. Passing Kanonsaki light my course was N.W. by N. 23 degrees westerly deviation by compass.

Lieut. Sadler—Was that your course to take you up to the Honmoku Light-vessel?—I steered for a point two cables distant of a red buoy light. I think it was a light placed there at the beginning of the year.

To the Court—A very heavy fog came on after that, and as I could not see very clearly I put the ship at half speed.

Lieut. Sadler—What was the course after passing the buoy?—I passed that buoy at two cables distant, and kept the same course until twelve o'clock.

To the Court—I was going at seven knots an hour at first, but when I went at half speed this was reduced to 3½ knots.

Lieut. Sadler—What lights did you see at twelve o'clock?—At twelve o'clock I saw the Kanonsaki light astern. At that time the weather was very variable—clearing and clouding. It was raining and clearing and foggy at times.

The President—What lights did you see ahead of you at twelve o'clock?—I did not see any.

Lieut. Sadler—What lights did you see ahead after twelve o'clock?—I saw lights ahead, first about a quarter past twelve; they were a white and a green light, and were about a point and a half on the starboard side. I did not see the lights until that time, as the fog only then lifted.

The President—Were you still steering that same course then?—I changed the course at midnight, before I saw the light, a point and a quarter W. of North. To the Court—Up to that point I had been going as before, now I changed it to N. by W. ¼ W. I did not change that course again between 12 and 12.15. At a quarter-past twelve I saw the white and the green lights one point and a quarter on the starboard bow. I was of opinion at that time that there would be no danger if I kept on my course, but as it was night and I suddenly saw those lights at intervals between fogs, I thought it better to exercise extra care, so I turned the bow of my ship one point to the left—I ported. I went on that course for some time. I thought that as I had changed my course one point in shore I was safe, but I saw these white and green lights coming in my direction as if the ship would strike me amidships. I was thinking what could be the meaning of this near approach when I suddenly saw the red and green lights of the other ship. As I was wondering what to do, I blew two blasts of my steam whistle to let them know that I was going to the left—I had no room to go to the right. I judged from the way the ship was bearing down upon me that I should be struck a little forward of amidships. At the time I blew the whistle I gave the order to the quartermaster to "hard-a-starboard," and the second mate, who was on the bridge with me, signalled to the engine-room, "stop," then "full-speed astern," at my direction. The other ship seemed at that time to be nearly stopped or going but slowly ahead. The ship struck me obliquely on the starboard side and passed on. When I gave the order to go astern, I blew three blasts of my whistle to let them know what I was doing. I think I had stopped at the time. This was at 12.20 a.m. After the other ship had struck me I sang out, saying that I was the *Hokumaru Maru* and asked for the name of the other ship. No reply came, but the other ship went off to my right. My ship's head was N.W. by W., that is, two or three points towards the N., but I could not tell positively.

To Lieut. Sadler—The starboard bow of my ship was smashed; the bow was twisted from starboard to port. The stem was broken and turned to port; it was broken and stuck to the side of the ship. I can't say to what extent, but I think it was damaged wording for 16 feet below the water.

The President at this point said that witness's statement had better be read over as some corrections were necessary he thought. The statement was accordingly read out. Some additions were made and the wording amended to the foregoing. At one point witness was about to refer to a paper in his hand, which he said was his private note of his courses, when the President asked him if he objected to producing the document for the benefit of the Court.

Witness said he had an objection to do so, as the paper was only for his private use.

Mr. Lowder—I demand the production of that document.

The President—You have no right to demand that, Mr. Lowder.

Mr. Lowder—I have no right to appear here?

The President—I did not say that. This is a matter for the Court alone to decide. There is only one party represented here, this is a one-sided case, and witness does not appear here as your witness.

Mr. Lowder—I submit, as a matter of law, that I have a right to demand from witness the production of that document for the benefit of the Court.

The President—I think you are not aware that the witness appears here through permission of the Department of Marine to submit such evidence to it as he was able to give is. He was not summoned by the Court to appear here; the Court had no power to do that.

Mr. Lowder submitted that as witness appeared in that Court to give evidence, he appeared as an ordinary witness before the Court, and as such should be treated in accordance with the rules of evidence prevailing in British Courts of Law.

The President—I don't think the Court has any power to compel him to produce any such document.

Mr. Lowder—I shall be content with your ruling, sir. I submit that I was quite within my rights to make the demand.

The President—If we can compel witness to produce the document then you can demand him to produce it, but as we cannot compel him to do so then you have no right to demand such a thing.

Mr. Lowder—By the rules you can compel him to produce it.

The President—What rules?

Mr. Lowder—The rules of the British Courts of Law appertaining to and in regard to evidence. That was my point.

The President—The Court cannot compel witness in this manner.

Mr. Lowder—If witness was within the jurisdiction of this Court then he would be amenable to the rules prevailing in this Court, but if witness in not within the jurisdiction of the Court then I am quite within my rights if I should ask the Court to strike out at my request the evidence which he has given. But, as I said just now, I submit to the ruling of the Court.

The President—Does witness object to produce the document.

Witness—Yes.

Mr. Lowder—Might I ask if the entries were made at the time of the collision or at a later date?

The President—I don't think that it matters. He has not made any reference to the paper yet. He has not used it before.

Mr. Lowder—I thought he was refreshing his mind from it during the whole of his statement.

The President—Oh, no, he was not. He was only first attempting to do so when you noticed it in his hand.

Mr. Kenny said that he had interpreted the whole statement to the witness and it was correct, word for word.

Mr. Lowder—Has the witness a certificate?—Yes, it is on my ship.

Before the collision could you see the *Honmoku* lightship?—I could not see it.

How far could you see the Kanonsaki light on that night?—I could see it off and on that night; sometimes I could not see it on account of rain and fog.

Do you keep an official log?—I keep a diary of navigation, an ordinary log. I only keep the one sailing log.

Where is this log-book kept?—The chief mate has charge of this log. He is responsible for it.

When is it written up?—From time to time.

Are you willing to produce your log to this Court?—I can't say of my own motion whether I can produce it or not to this Court.

The President—Does he want to obtain the permission of any authority?

Mr. Lowder—Whom does he want to consult?—This log is a book which I am not able to produce without first asking the permission of the Marine Department.

If the Marine Department gives you permission have you any objection to producing the log?—I have no objection myself to produce it.

The President—Is it in possession of the Marine Department?—It is on board my ship.

Mr. Lowder—Was there any moon that night?—There was a moon that night, but it was not clearly visible owing to the fog and rain.

Would the fact of it having been rainy or foggy that night, prior to the collision, appear in your log?—Yes, I have a record of all these things in my log. Rain or fog or collision, any of these things have to be entered in that book.

Now the master of the vessel with which you collided says that it was a bright, moonlight night without any mist or fog, do you deny that?—There was of course a moon, I suppose, but I could not see it on account of fogs. What the master of the *Zambesi* said does not concern me, as I only speak of what I saw.

Are fogs very frequent in December?—In Tokyo Bay they are independent of seasons.

Are they frequent in December?—I can't say positively that they do appear frequently.

Did you hear the whistle blown from the other ship?—No.

When you saw the other vessel on which side was she?—On the right—the green and the white lights were both on the right.

Did you see any other light before you saw the white and the green light belonging to the *Zambesi*?—No, I did not.

Were you not steering for a light?—No, I was not.

I thought you said that you was steering for the light on *Saratoga* spit?—I came up with that light before twelve o'clock. I passed it two cables off.

In order to make what light?—I intended to go on my course till 12 o'clock, then take bearings by the patent log to ascertain the position of the ship.

What was the next light you expected to see?—I think that was what my question was?—If it had been clear I could, upon that course, have seen the Yokohama lightships.

If it had been clear could you not have seen that light from the place where you collided?—If it had been clear I might have been able to have seen it.

How far could you see that night?—I cannot say how far I could have seen on that night because in that kind of weather near objects often look far away and distant objects look near. The fogs destroy the sense of distance.

Why did you change your course at twelve o'clock that night?—I changed it to make Yokohama.

Did you see anything at twelve o'clock to induce you to change your course, or did you know exactly where you were?—I knew my position, and I knew by altering my course then that I should make Yokohama.

Mr. Lowder asked if the Court intended taking any more witnesses that afternoon, as he had still several questions to ask and he was afraid he should not finish that day.

The President—We do not intend taking any further witnesses to-day. Might I ask on what grounds your questions will be based? Is it upon the credibility of the witness?

Mr. Lowder—Yes, it is.

The President—Will a quarter of an hour suffice? Mr. Lowder—I think not.

The President—There are still some five more Japanese witnesses to examine, if they all take as long as this one—

Mr. Lowder—Oh, he is, I think, the most important. I should not like my cross-examination to be curtailed.

The President—The Court cannot rule how far your cross-examination should go, or go so far as say that your questions are unnecessary upon certain points. I think, under the circumstances, the Court will now adjourn till half-past nine o'clock to-morrow morning.

The Court then rose.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."] London, December 24th.

There is growing consternation in Paris at the attitude of the socialists and dynamiters. A Bonapartist meeting has been held, and an envoy has been sent to Brussels to see Prince Victor about drafting a manifesto.

London, December 25th.

A resolution, prompted by Mr. Cleveland, will be introduced to Congress to empower the President to suspend purchases of silver whenever it is considered that circumstances might require that course.

London, December 26th.

Mr. Davitt, who was returned in the last election for the North Division of County Meath, has been unseated on petition through proof of undue clerical influence.

A dynamite outrage, committed outside Morley's offices in Dublin, has resulted in the killing of a detective and in inflicting great damage in the neighbourhood.

London, December 28th.

In consequence of the explosion in Dublin, the police detailed to the duty of guarding the public buildings in London have been greatly augmented in numbers.

An attempt will be made to involve President Carnot in the Panama Canal scandal.

[REUTER "SPECIAL" TO "JAPAN MAIL."] Kobe, December 29th.

Charles Edward Miller, put upon his trial to-day on a charge of larceny at the United States Court, was found guilty and sentenced to four years' imprisonment.

Nagasaki, December 30th.

Pilot Kichido, of the *Ravenna*, has been committed for trial by the Saibansho at this port on a charge of homicide. The officers of the *Ravenna* have been subpoenaed to appear at the trial.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets on Monday and Thursday evenings at the Club Rooms, No. 86, Main Street.

SOLUTION OF PROBLEM NO. 49.

WHITE. 1—R to K B 3
2—Q, Kt, B, or R mates accordingly.

Solutions of this problem will be acknowledged next week.

Omicron is credited with correct solution of No. 48.

PROBLEM NO. 51.

By J. C. J. WAINWRIGHT.

BLACK.

White to play and mate in two moves.

The problem in this issue forms the last in the competition for the prize offered at the beginning of the present year. The full score will be published at an early date.

SOLUTION OF PROBLEM NO. 3 (BY A. ANDERSEN) IN PRESIDENT'S PROMOTION COMPETITION.

White. 1—R to K sq. 2—P to K 4. 3—R mates at Q sq.

Correct solutions received from Shogi, W.H.S., O. Balk, Ed. Batavus, and H. L. Fardel.

What the solvers say:—"An instructive position;" "a very neat problem;" "very simple;" "not difficult;" "obvious."

G.S.—If Black plays P to B 4 in reply to B x Kt, there is no mate.

The festive season has apparently interfered with the usual attendance at the Yokohama Chess Club and but few players have frequented the Club Rooms. New Year and its customary visiting is also a disturbing time but doubtless Chess activity will revive ere long.

The veteran master Bird (doyen we believe of the English Chess players) continues his vigorous play. He has recently been engaged in a contest at Newcastle from which we give an example of the Queen's Fianchetto. The next home journals should give us news of Herr Lasker and of his reappearance in Europe.

Game played in a match between Messrs. Heywood and Bird.

QUEEN'S FIANCHETTO DEFENCE.

White (Mr. H.) 1—P to K 4th 2—P to Q 4th 3—B to Q 3rd 4—B to K 3rd 5—P to Q B 3rd 6—Kt to B 2nd 7—Castles 8—Kt to Q 2nd 9—Kt to K B 3rd 10—P to Q 4th

This seems a little premature, as his game is hardly developed enough. Q to Q 3rd and is a more attractive move.

11—P to Q 3rd 12—P to Q Kt 4th Without the greatest care this will also tend to weaken the Queen's side.

13—Q to B 2nd 14—B takes B 15—Q to Q 2nd

Well played! For if he takes the P the Kt comes in with effect, and if P to K 5th, then Kt to K B 4th, etc.

16—P takes P 17—P to R 5th 18—P takes P

Here we think P to R 6th gave White the better position, for in answer to B to B sq.; Kt to K 5th threatening at once Q B P and Kt to K B 4th, or B takes Kt P according to Black's play.

19—R takes R (ch.) 20—Kt to B 4th 21—R to K sq.

Kt takes Kt at once shutting the B out of play, was surely more correct.

22—Q P takes P 23—P to Kt 5th 24—Kt takes Kt 25—Q to K B 4th 26—Q to K 3rd 27—B to K 4th 28—Q takes B 29—R to R sq. 30—Q to B 2nd 31—Kt to Q 2nd

This wins his best Pawn. White has not played the ending so well as the early stages of the game, and the older master now outplays him and scores in good style.

32—Kt to B sq. 33—P to Q B 4th 34—Kt to K 3rd 35—R to R 7th 36—Q to Q sq. 37—R to Q 7th 38—R takes Q 39—R to Q 5th 40—K to R 2nd 41—R to Q 7th (ch.) 42—Kt to Q 5th (ch.) 43—R to K Kt 7th 44—R takes P 45—P to Kt 3rd 46—R takes P 47—Kt to Kt 6th 48—R to Kt 5th (ch.) 49—R to Q 5th (ch.)

White Resigns.

16—Kt takes P 17—K to B sq.

18—P takes P 19—B takes R 20—K to Kt 2nd

21—P to Q B 4th 22—P takes P 23—R to Q sq. 24—B takes Kt 25—P to B 3rd 26—Kt to B 2nd 27—B takes B 28—P to K 4th 29—P to B 4th 30—P to K 5th 31—Q to Q 2nd

32—Q takes P 33—Q to K sq. 34—Q to K 4th 35—R to Q Kt sq. 36—Q to Q 5th 37—Q takes Q (ch.) 38—Kt to K 4th 39—R to Kt 8th (ch.) 40—Kt to Q 6th 41—K to B 3rd 42—K to K 4th 43—Kt takes P 44—P to R 5th 45—P takes P (ch.) 46—R to Q B 8th 47—P to B 5th 48—K to Q 5th 49—K to K 6th

REPORTS.

The Japanese steamer *Omi Maru*, Captain F. Brown, reports:—Left Otaru the 20th December; had light easterly winds and fine weather. Arrived at Hakodate the 21st at 10 a.m. and left the 23rd at 8 a.m.; had fresh N.W. winds and snow squalls. Arrived at Oginohama the 24th at 7.30 a.m. and left at 12.30 p.m.; had moderate N.W. winds and fine weather. Arrived at Yokohama the 25th December at 1 p.m.

The Japanese steamer *Tokio Maru*, Captain Kenderdine, reports:—Left Kobe the 24th December at noon; had fine but cloudy weather and

moderate breeze till 4 a.m. on the 25th; thence had strong N.N.W. winds to Rock Island; thence to port had moderate northerly breeze with fine, clear weather. Arrived at Yokohama the 25th December at 6.15 p.m.

The British steamer *Gaelic*, Captain Pearne, reports:—Left Hongkong the 21st December at 6.47 p.m.; had light N.E. winds and fine weather to Yokohama; thence to port strong to moderate N.E. wind and clear weather. Arrived at Yokohama the 26th December at 6.21 a.m. Passage, 4 days, 21 hours, and 52 minutes.

The Japanese steamer *Kumamoto Maru*, Captain Olsen, reports:—Left Fushiki the 20th December; had strong N.W. winds and increasing with high N.W. sea; at 8 p.m. blowing a fresh gale with heavy snow squalls and increasing sea; at midnight decided to put into Yebisu Bay for shelter, which arrived at 0.40 on the 21st, blowing hard throughout the day; at 6.30 a.m. on the 23rd left Yebisu Bay had strong S.W. winds and increasing with very heavy sea running; at 8 p.m. blowing a whole gale with terrific squalls from N.W. and high dangerous sea; ship rolling and labouring heavily, shipping large quantities of water overboard; at 10.30 a.m. on the 23rd arrived at Hakodate, heavy snow squalls throughout the forenoon; at 6.20 a.m. on the 24th left Hakodate, had moderate variable winds and fine weather toward Kinkasan, which was passed at 7.30 a.m. on the 25th; thence to Imboye, strong N.W. winds and fine weather with very heavy N.E. swell, which was passed at 1 a.m. on the 26th; thence to port moderate N.W. winds and fine, clear weather. Arrived at Yokohama the 26th at 1.30 p.m.

The Japanese steamer *Saikio Maru*, Captain Conner, reports:—Left Shanghai the 20th December at 11.20 p.m.; anchored inside Woosung Bar on account of low tide; left again next day and crossed Woosung Bar at 1.40 p.m. with 16 ft. 5 in. of water on Bar, for Nagasaki, and arriving there the 23rd at 1.45 a.m.; experiencing on the passage light southerly winds with fine, clear weather; left there again for Shimonoseki the same day at 5 p.m. and arriving there at 7 a.m. on the 24th; coaled ship and left again for Kobe the same day at 11 a.m. and arrived at Kobe the 25th at 6.50 a.m. and leaving there for Yokohama the same day at 6.30 p.m. arrived here the 26th at 9.15 p.m.; experiencing light winds from N.E. to N.W. with fine, clear weather throughout the passage.

The British steamer *Prometheus*, Captain Webster, reports:—Left Shanghai the 23rd December; experienced fine weather and moderate to fresh N.N.W. breezes to noon on the 25th; thence light variable winds with overcast sky and rain to 11 p.m. on the 26th; thence to port moderate N.E. winds and fine weather.

The German steamer *Nuernberg*, Captain B. Blauke, reports:—Left Hongkong the 23rd December at 6.40 p.m.; had fine weather, moderate N.E. and N. winds and sea; in Van Dieman Straits, changeable winds, smooth sea, passing hail showers, and thunderstorms; from Siwo Point fresh N.W. to W. winds and rough sea, cloudy weather. Arrived at Yokohama the 29th December at 6.30 a.m.

The Japanese steamer *Hiroshima Maru*, Captain Walter, reports:—Left Kobe the 28th December at noon; had strong north-easterly winds and heavy sea to Oshima; thence light breeze and smooth sea and fine weather to port. Arrived at Yokohama the 29th December at 10 p.m.

The Japanese steamer *Fushiki Maru*, Captain Barstow, reports:—Left Shimonoseki the 27th December at 5 p.m.; passing Oshima the 28th at 11.13 p.m., strong breeze and heavy sea; at 8 a.m. on the 29th, experienced fresh gale with heavy sea and hard N.W. winds. Arrived at Yokohama the 30th December at 2.18 a.m.

LATEST COMMERCIAL.

IMPORTS.

Owing to the approaching holidays business has been almost at a standstill. Some native dealers have made extra efforts and have taken delivery of goods, thus closing up existing contracts, while others have bought sparingly but at full quotations. Little business is looked for during the next ten days, until the Japanese get thoroughly over the festive season.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirts—8 1/2 yds, 38 yds, 39 inches	\$1.75 to 2.35

Fin Plates, per box	5.00 to 5.20
Pig Iron, No. 3	1.25 to 1.30

KEROSENE.

The *Harewood* brought some 87,000 cases Russian oil, of which about 25,000 are for Kobe. We hear that the stock of oil in Kobe has run unusually low, and very high prices have been realized there.

QUOTATIONS.

Chenier	\$1.75 to 1.77 1/2
Comet	1.72 1/2 to 1.75
Devos	1.67 1/2 to 1.70
Russian Anchor	1.72 1/2 to 1.75
Russian Moon	1.70 to 1.72 1/2

SUGAR.

Market very quiet, dealers appearing to have enough stock to carry them over the New Year.

	PER POUND.
Brown Takao	—
Brown Manila	\$4.40 to 4.45
Brown Daitong	3.90 to 3.95
Brown Canton	3.95 to 4.00
White Java and Penang	5.80 to 5.90
White Refined	5.65 to 7.90

EXPORTS.

RAW SILK.

Our last was dated 23rd instant. Since then settlements on this market amount to 1,029 piculs, divided thus:—*Hanks*, 20 piculs; *Filatures*, 486 piculs; *Re-reels*, 435 piculs; *Kakeda*, 88 piculs. In addition to these figures direct shipments have been 161 bales, making the total business for export equal to 1,200 piculs.

The market remains active, but with less doing than during the previous week. There are many enquiries in hand for grades of silk which cannot be found, and our stock stands at 9,500 piculs less than it did on this day last year. Available supplies to date are also 4,350 piculs less, and the result is that holders of good silk are very strong; fully believing in their position, and that their silks will be worth good money after the turn of the year.

Buying has continued for both continents, and mail steamers bound east and west have good cargoes.

Prices for the higher grades have still further advanced, choice parcels and desirable assortments being at a decided premium.

Exchange has been steady, hardening a little at the close, and it seems as though we had touched bottom for the present.

There have been two shipping opportunities since we last wrote, the English and American mails of 24th and 29th instant. The former, steamer *Malwa*, carried 997 bales for Europe,

Original from

Contractors to the British Admiralty, Foreign Governments, Leading Steamship Companies, & Yacht Owners in all parts of the World.

STEAM LAUNCHES & YACHTS

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 40 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. We are also sole makers of the

KINGDON PATENT LIGHT PORTABLE ENGINE

Stock sizes, 1½ to 6 H.P. Burns less fuel, and gives three times the power, weight for weight, of any other engine. Awarded First Prize by Royal Agricultural Society England, 1890, in competition open to all makers. Illustrated Catalogue in English, French, or Spanish. Send for Copy to
